He sais, þis lond hight Bretayn, þat *now* has oþer name,
Ingland *now* is cald.
R. Brunne, p. 6.

Mischief hit makeþ. thei ben so meke *nouthe*.
Piers Plouhman. Vision, p. 139.

And he blesside God, and seyde, Lord, *now* thou levest thi seruaunt afir thi word in pes.
Wiclif. Luke, ch. ii.

And sayd, Lord, *nowe* thy servaunte depart in peace.
Bible, Anno 1551.

But therof nedeth not to speke as *nouthe*.
Chaucer. Prologue to the Canterbury Tales, v. 464.

But for all that yet *now* adaie,
In loue's courte to taken hede
The poore vertue shal not spede,
Where that the riche vice woweth, (wooth.)
Gower. Conf. Am. book iv. p. 112.

No word of visitation, as ye love me,
And so for *now* I'le leave ye.
Beaumont and Fletcher. Monsieur Thomas, act i. sc. 3.

Defects seem as necessary to our *nou-happiness* as to their opposites. The most refulgent colours are the result of light and shadows.

Glanvil. The Vanity of Dogmatizing, ch. xxiv. p. 238.

SAY. Stay, yet be pleas'd to think, and let not daring,
Wherein men *nowadaies* exceed even beasts,
And think themselves not men else, so transport you
Beyond the bounds of Christianity.
Beaumont and Fletcher. The Martial Maid, act v. sc. 1.

It [love] was a vestal, and a virgin-fire, and differed as much from that which usually passes by this name *now-a-days*, as the vital heat from the burning of a fever.

South. Sermons, vol. i. p. 66.

NO'WED, } Fr. *noue*. All on knots. *Nou*, a
NOWE, n. } knot.

Crashaw uses "*nowes*," if such, and not "*vowes*," be the correct reading, q. d. the marriage knot.

Ruben is conceived to bear three bars wave, Juda a lyon rampant, Dan a serpent *nowed*, Simeon a sword inpale the point erected, &c.
Sir Thomas Brown. Vulgar Errours, book v. ch. x. p. 302.

Thou shalt look round about, and see
Thousands of crown'd souls throng to be
Themselves thy crown, sons of thy *nows*;
The virgin births with which thy spouse
Made fruitful thy fair soul.

Crashaw. Steps to the Temple. Hymn to St. Teresa.

NOWEL. "*Noël*, in Fr. is derived from *natalis*, and signified originally a cry of joy at Christmas, *le jour natal de notre Seigneur*. It was afterwards the usual cry of the people upon all occasions of joy and festivity."
Tyrrwhitt.

Before him stant braune of the tusked swine,
And "*nowel*" crieth every lusty man.

Chaucer. The Frankeleines Tale, v. 11567.

NOWL. See NOLL.

NO'XIOUS, } Lat. *noxius*, from *noxa*, and that
NO'XIOUSNESS, } from *noc-ere*, to hurt, to harm.

Doing hurt or harm; hurtful, harmful, injurious, offensive, faulty, or in fault, guilty.

Again it is urged that nature has not only produced many *noxious* and poisonous herbs but also destructive and devouring animals, whose strength surpasseth that of men's.

Cudworth. Intellectual System, book i. ch. ii. fol. 78.

It is a sharp and historical speech touching the corruption and unsoundness of the present episcopacy and church government as also of the unlawfulness of their intermeddling in secular affairs, and using civil power, and the *noxiousness* of their sitting as members in the lord's house, and judges in that high court, &c.

Wood. Athenæ Oxonienses, vol. ii. fol. 48.

The huntsman ever gay, robust and bold,
Defies the *noxious* vapour, and confides
In this delightful exercise, to raise
His drooping herd, and cheer his heart with joy.

Somerville. The Chase, book i.

No stately trees at noon their shelter spread;
Save where two leagues remote a wood appears,
Embrown'd with *noxious* shade, the growth of years.

But both of them [pride and folly] are nuisances which education must remove, or the person is lost.

Id. Ib. vol. v. p. 25.

Common nuisances are of a species of offences against the public order and economical regimen of the state; being either the doing of a thing to the annoyance of all the King's subjects, or the neglecting to do a thing which the common good requires.

Blackstone. *Commentaries*, book iv. ch. xiii. p. 166.

NOY.
—
NUBIA.

NUBIA.

Name.

NUBIA,—a name unknown before the revival of Literature, and probably invented by Leo Africanus, or his editor Ramusio, in the first half of the XVIth Century, to designate the vast tract of country which lies between Egypt and Abyssinia,—comprehends the Meroë and Æthiopia of the Ancients. (Plin. *Nat. Hist.* vi. 35.) The Núbahs, called *Nubei Æthiopes* by Pliny, and *Nubæ* by Ptolemy, (*Geogr.* iv. 8.) occupied in the time of the first of those writers the Northern and North-Eastern parts of Abyssinia, and their principal city, called *Tenupsis*, must have been on the Blue River, or Abyssinian Nile, as Ptolemy places them near the *Aualitæ*, who inhabited the shore of the Red Sea. Nearly the same position is assigned to them by Agathemerus; (ii. 10.) but Ptolemy (iv. 8.) and Claudian (i. 254.) transfer them to the Western side of the Garamantic Valley, and consequently to the West of Fezzán, far to the North and West of their subsequent position. They are usually mentioned as neighbours of the *Blemmyes*, to whom places equally remote are assigned by writers of different Ages: it is therefore highly probable that both of them were like the present inhabitants of the African Deserts, migratory Tribes continually at war with their neighbours, and frequently changing their place of abode. The Núbahs, or *Nubæ*, by degrees made themselves masters of their Northern neighbours; and when Egypt was subdued by the Turks, the Nubians had established an Empire

along the banks of the Nile, from Bilák (*Philæ*) to the Desert of Goran, (Leo, p. 661.) extending probably to the confines of Kordofán one way, and as far as the borders of Abyssinia, the other. As Sennár has since been wrested from it, Nubia may be now considered as limited to the habitable tract reaching from the last Cataracts in the Nile to the union of its two branches, called by the Arabs the White and Blue Rivers: (Bahhr-el-abyad and Bahhr-el-azrak :) and as the whole of this tract is bounded to the East and West by Deserts varying in extent, it is in every direction but one cut off, by almost impassable regions, from all communication with other Countries. Physically considered, it falls into two great divisions; the Northern or Lower, and the Southern or Upper Nubia. The former is the narrow and barren valley formed by the Nile, where it forces its way through a broad belt of mountains; the latter, the elevated level, or rather the gentle declivity through which the river takes a wide and undulating sweep in approaching that barrier. Here it passes through large tracts of cultivable soil, extending in some places for a considerable distance on each side; and this was for several Centuries the most populous and flourishing Province of the Nubian Kingdom, and contained its Metropolis, Dóngola.

1. Lower Nubia, or the Valley of the Nile, between Lower the first and second Cataracts, is now subdivided into Nubia,

Extent.

NUBIA. the Wádí-el-Kunúz and the Wádí-el-Núbah. The former reaches from Oswán (*Syene*) to the Wádí-el-sebú', or from 24° to 23° North nearly, and the latter from that valley to the Wádí Halfah, just below the second Cataract, from 23° to 22° North through rather more than another degree of latitude. The whole is frequently called the Land of the Beráberah, (Berbers,) or Kunúz, as the original Nubians are called Berbers (*i. e.* Barbarians or Foreigners) by the Arabs, and the Northern part of Nubia was occupied by the Bení Kenz, (Children of Kenz,) a Tribe of Bedwin Arabs, soon after the Mohammedans invaded Egypt. But though called Beráberah by the Arabs, the Nubians do not appear to be of the same race as the Beráber, or Shulúh, who occupy Mount Atlas and its branches, from the Atlantic to the Egyptian Oases; for their Language bears no resemblance or affinity to the Akwál amázigh, (Leo, 18. Hæst. p. 136. Jones, in *Orat. Domin. Venture, Vocab. Berber. in Voy. de Horneman, par Langlès, p. 441.*) or "Freemen's Speech" spoken by all the Berber Tribes, and used in North Africa and Numidia from time immemorial, as is shown by the proper names of places in those Countries both ancient and modern; the Nubian Language, moreover, seems to bear no affinity to the Koptic or ancient Egyptian, or to any other African Language, of which Vocabularies are extant.

Language.

Cataracts.

Philæ.
Bilak.
Pilak-h.

The Cataract immediately above Oswán is now well known to be nothing more than a rapid, or series of small and broken cascades, occasioned by the many rocks and islets which obstruct the bed of the river in its passage through the granitic belt forming the natural division between Egypt and Nubia. At the head of this Cataract is the celebrated Island of *Philæ*, now considered, according to Burckhardt, (*Nubia*, 5.) as the first place in Nubia. Its ancient sanctity, the magnificence of its Temples, and the splendid remains of Egyptian architecture by which it is still adorned, have given to it, both in modern and ancient times, a celebrity which, with the exception of Thebes, few places even in Egypt have attained. This Island is, as Aristides the Orator observes, (tom. ii. 343.) in the middle of the river, and was, when he visited it, (in the II^d Century,) entirely covered with buildings. At an earlier period, fugitives from Egypt took possession of it, and for that reason it was claimed by the Egyptians; but being above the Cataract, it seems properly to appertain to Nubia, and as such, the Æthiopians maintained that it belonged to them. Under the Romans, it was the frontier town of Egypt, as is proved by Lucan, who calls it *Regni claustra Philæ*, (*Phars.* x. 313.) and by a multitude of other testimonies. That such was the case in the earliest Ages is shown by its name, for Bilák,* as it is called by the Arabs, is nothing more than the Egyptian word Pilak-h accommodated to their pronunciation; and it was natural for the Egyptians to call the last place on their Southern frontier, Pi-lak-h, *i. e.* "The Extremity," as that term was also applied to Alexandria, the Northern extremity of their Country. (Quatremère, *Mém.* i. 387.) From Pilak-h the Greeks easily formed their word *Philæ*. On the Eastern bank of the river is a village called El Birbé,† now the boundary of Egypt. The Island

itself measures only 1152 feet from North-West to South-East, and 408 feet in width, being 2700 feet in circumference; and it rises no more than 25 feet above the Nile when at its lowest level, but is never inundated. (Lancret, in *Descript. de l'Egypt. Antiq.* i. 1.) It was a place of pilgrimage, held in the greatest veneration by the Egyptians as containing the sepulchre of Osiris. None but Priests were allowed to touch its sacred soil,* and milk was offered up to the God, in a different dish, every day of the year. (Diod. Sic. i. 22.) Having been entirely covered with Temples, it contains the largest and best preserved assemblage of ruins within a given space, now to be found in all Egypt. (Lancret, p. 6.) An elevation at the Southern end affords a complete view of all the ruins; on the right a solitary, unfinished Temple, on the left long rows of columns leading to another and much larger one, dedicated to Isis. Before this there stood two obelisks, and its massive portals (*pylons*) are covered with bas-reliefs and hieroglyphic inscriptions. These buildings are 54 feet high and 118 broad, and therefore of much smaller dimensions than those of several other Temples in Egypt. The porticoes on each side connect these with inner portals, and the columns and other parts of the building are formed from the ruins of older edifices adorned with hieroglyphics; whence M. Lancret and other French savans concluded that the Arts must have begun to flourish at a period inconceivably remote, as this Temple they judged, from its style of decoration, to be at least 3000 years old; and it was built upon the ruins of buildings some thousands of years older. Three large and several smaller chambers lead to the *adytum*, or sanctuary, in which there is a niche covered with hieroglyphics, and designed, as is supposed, for a representation of the presiding Deity. The constellation of the Lion, which appears among these sculptures, was urged by French savans as an irrefragable proof of the vast antiquity of this Temple, which must have been erected, they maintained, more than 2500 years before the beginning of our Era, while Leo was the Sign in which the Sun entered at the Summer solstice; for these Astronomical tablets alluded, they said, without doubt, to the inundation of the Nile, which begins about that period. (Fourier, *Mém. in Description de l'Egypte.*) This discovery had the additional merit of giving powerful support to the extravagant chronology of the Egyptian Priests, and being completely at variance with that of the Jewish and Christian Scriptures, it was therefore eagerly adopted, and pompously detailed in "the Great Work" on Egypt, as one of the most valuable results of the glorious occupation of that Country by the French. There are some Greek inscriptions, indeed, on the Temple containing these Astronomical tablets; but who would trouble themselves with such modern additions as these inscriptions, which could scarcely be 2000 years old? They were manifestly added, it was said, to gratify the vanity of the Ptolemies, who suppressed the Egyptian Religion, and introduced that of the Greeks. Thus the Zodiacs at Denderah and Esnè, (Isnà,) if the Greek inscriptions on those Temples deserve credit, are not older than the time of Nero and Antoninus; but it is well known, said these Philosophers, that all knowledge and use of hieroglyphics was lost before Egypt became

NUBIA.

Astronomical tablets.

* Not Ialák, as in the *Geographia Nubiensis*, (p. 15. 17.) by an error of transcription; but Bilák, as it is once printed in the Arabic text, (p. 19.) and almost invariably written in the MSS. of the original Work of Idrisi.

† Birbá, pronounced Birbé, is the Egyptian word *pi-erphéi*, *i. e.* the Temple. (De Sacy, *Not. et Extr.* i. 270. *Obs. sur les Noms des Pyram.* p. 31. Quatremère, *Rech.* p. 278.) whence the hierogly-

phic character is called *pierpheuikon* and *berbáwiyyeh*, *i. e.* Temple-character.

* That was strictly true only of the Abaton, one of the adjacent islets.

NUBIA. a Roman Province. When, however, a diligent study of the Rosetta stone had furnished a clue to the meaning of those enigmatic figures, they unhappily repeated the same tale, and the names and titles of Nero appeared annexed to the planisphere of Denderah; while that of Esné, supposed to be some thousands of years older, bears the names of Claudius and Antoninus Pius. (Champollion, *Précis*, p. 5.) M. Letronne, moreover, has proved very satisfactorily (*Eclaircissements*, p. 91.) that Judicial Astrology, the casting of nativities, &c. were scarcely heard of before the first Century of our Era; in which, and the immediately following Ages, those vain Sciences, the favourites if not the offspring of Egypt, were peculiarly patronised by the Roman Emperors. The hieroglyphic inscriptions at Philæ refer to Ptolemy Epiphanes, the Emperors Augustus, Tiberius, Domitian, and Trajan. (Champ. *Précis*, p. 69.) The Great Temple was begun by Philadelphus, and finished by Euergetes II. and Philometor; but one of its *propylons* and the little Temple of Venus were erected by Nectanebus I. (Champ. *Bullet.* xii. 134.) To the East of the Great Temple there are remains of a small one dedicated to Venus by Ptolemy Euergetes, and his sister and wife, both named Cleopatra, about B. C. 125, (Letronne, *Recherches*, p. 93.) just at the same time as the Priests of Isis established on the Island presented a petition recorded, in Greek on the base, and in hieroglyphics on the obelisk placed before the little Temple of Isis, and brought from thence to this Country by Mr. W. J. Bankes. (Letronne, *Rech.* p. 297.) The Northern extremity is the only part of Philæ which is ever reached by the inundation, but it is almost entirely covered with ruins of various Ages: walls ornamented with triglyphs, the remains of a Roman triumphal arch, and sepulchral inscriptions and decorations of the Christians by whom these Temples were appropriated, mark here, as elsewhere in Egypt, at one glance, the gradual lapse of Ages. Its sides are almost everywhere cased with ancient and solid masonry, which is concave towards the water, as in the Island of Elephantiné, (Jomard, *Descr. de l'Egypte Ant.* i. 12.) and its position, as determined by the astronomical observations of M. Nouet, is in $24^{\circ} 3' 45''$ North and $32^{\circ} 54' 10''$ East, (*Mém. sur l'Egypte*, ii. 237.)

Debod.
Parembolè.
Tzitzî.
When approaching this Island, the river passes through a very narrow passage between granite rocks for ten or eleven miles, from the valley of Debót, where are the ruins of Tzitzî marked by walls and piers of granite in the river of Tzitzî, and at the Northern extremity of which there are considerable remains of a Temple, of which a correct notion may be formed from Burckhardt's plan, (*Nubia*, 127.) and Norden's (pl. cxlvi.) and Gau's plates. (*Antiq. de la Nubie*, pl. iv.) It has no sculptures externally, but several internally, and they are executed in a style which seems to show the decline of the Arts. (Burck. 128.) Debót is very nearly 16 Roman miles from Oswán, (*Syne.*) the distance marked in the Itinerary of Antoninus, between that place and Parembolè, (*i. e.* enclosure, or encampment,) the first military station beyond the confines of Egypt. The Temple was erected at different periods, and some parts of it are, as Mr. Hamilton justly conjectured, (*Egypt*, p. 43.) comparatively recent. The *cella*, or central chamber is the most ancient; the *secos*, front, and a side chamber on the left, near the entrance, with the three *propylons*, or portals, are more modern. Some parts of the front and vestibule were evidently

never finished. An inscription on one of the *propylons*, copied by Mr. Hamilton, shows that the Temple was dedicated to Isis and Serapis, and the synthronous Gods, by Ptolemy Philometor and his wife and sister Cleopatra, in the eighteenth year of his reign, (B. C. 164,) as has been very ably deduced by M. Letronne. (*Rech.* p. 39.) According to M. Champollion, (*Bullet.* xii. 257.) the most ancient part of the Temple was dedicated by Atharramon, a King of Æthiopia, to Ammon Rá, Lord of Tebot, and Hathor, (Venus,) and to Osiris and Isis, as synthronous but inferior Deities. It was continued, he adds, but not finished by Augustus and Tiberius. In the sanctuary there are fragments of a monolith Temple of rose-coloured granite, of the Age of the Ptolemies.

About five miles South of the Wádí Debót is the Déhmit, beginning of the Wádí Dehmít, the first part of a tract named Wádí el-mubárákát, (Vale of the Blessed,) from a branch of the Bení Kunúz, by whom it is occupied. Its uncultivated fields are overgrown with the officinal senna: and at Kardáseh, or Kartásh, Gartash. Kardassy. about four miles South of Dehmít, there are the remains of a Temple on a hill,* and the ruins of an ancient station close to the water's edge. (Burckhardt, *Nubia*, p. 122. Light, *Trav.* p. 59.) Only the portico remains, but two of its eight columns are no longer standing. It is much defaced, and its hieroglyphics are almost obliterated. Close to the river, South-West of the hill on which this Temple stands, there are extensive quarries of sandstone, which probably furnished the materials for the Temples of Philæ and in the intervening tract. The levelled sides of these quarries abound in unfinished sculptures and inscriptions, commemorative of the pilgrims who came to pay their devotions to the Ten-thousand-named Isis, the patroness of the place. (*Bullet.* xii. 256.) This explains at once why the head of that Goddess forms the capitals of some of the pillars of the Temple: many of the inscriptions of which have been ably illustrated by M. Letronne. (*Rech.* 481.)

At the distance of about six miles further South is Tafah. Táfah, the *Taphis* of the Ancients, opposite to which Teffah. Taphis. was *Contra-Taphis*, the places on each side of the river having usually the same name. (Burck. *Nubia*, 9.) Of both these towns there are still some remains, and the inhabitants are called Aulád-el-Nasará, (Children of Christians,) as being properly Beráberah, and not of Arabian origin. (Burck. *Ibid.* 121.) The rock here advances to the water's edge, and forms a perpendicular cliff. On the adjoining plain are the remains of *Taphis* and two small Temples, (Light, p. 60. Norden, pl. cxlvii. fig. 2.) neither of which have sculptures; but, as is easily seen by their style, says M. Champollion, (*Bullet.* xii. 956.) are of the Roman period. The larger certainly, perhaps both of them were used as Churches by the Nubians; and figures of Saints, Christian inscriptions, and an almanack have been daubed upon the walls. (Burck. *Nubia*, 121.) Táfah is separated by a mountain of sandstone on its Northern, and granite and feldspar on its Southern side, from Khortum, about six miles distant. Here a second ridge of granite rock crosses Nubia from East to West, and forms the Island of Darmút, and a slight rapid (*shelál*) in the river.

About seven geographical miles further South is El Kalábisheh, "the largest village," says Burckhardt, ElGalabshe. Talmis. (112.) "on the West bank of the river between Oswán

* Called by Norden (pl. cxlvii. fig. 1.) the ruins of Hindau, from a village a few miles to the South.

NUBIA.

and Derr." In the centre of it, occupying the whole space between the mountain and the stream, is the ruin of a very large and beautiful Temple; (Light, p. 64.) and about half a mile to the North-West of it, close by the quarries whence the stone used for its buildings was taken, there is a small one hewn out of the rock. The sculptures here are in a very rude, coarse style, but its bas-reliefs appear to represent very interesting Historical subjects, says Burckhardt. (117.) It is called Beit-el-wali, or Dar-el-wali (Governor's House) by the Arabs, and is so deserving of attention, that M. Champollion passed four days in the examination of its sculptures, which are, according to him, (Bullet. xii. 254.) in a very fine style. They represent the expeditions of Sesostri, in his youth, against the Arabs, Africans, Kúshí, (Æthiopians,) and Shari. (Bisháriyeh?) He appears presenting his Asiatic prisoners to his father Rhamses in one compartment; in another, the latter is represented in a triumphal car, striking an Arab, while the son brings the vanquished Chiefs into his presence. All these and the remaining bas-reliefs on the left wall of the principal chamber relate to the defeat of the Arabs. The right wall is decorated with similar memorials of victories over African nations. The suppliant Æthiopian King, presented by Sesostri to his father, the tables covered with chains of gold, panther-skins, bags of gold dust, logs of ebony, elephants' tusks, and ostriches' feathers, the train of captive Sharis, and the lions, panthers, ostriches, monkeys, and camelpards, which close the procession, immediately recall the passage in Diodorus, (i. 55.) in which that Historian says that Sesostri compelled the Æthiopians to pay "a tribute of ebony, gold, and elephants' teeth." All the remaining sculptures relate to the Gods to whom the Temple was dedicated, Ammon-Ra, and Cnuphis, his secondary form, and record the protection afforded by them to its founder, Rhamses II., who is represented in the sanctuary as suckled by Anucis, Patroness of Elephantiné, and Isis, the mistress of Nubia. The great Temple, mentioned above, is dedicated to Mandulis, or Malúli, Lord of Talmis. Mandulis was son of Isis by Horus, as Chons was son of Muth by Ammon-Ra; and the first of these Triads seems to have been considered by the Egyptians as a sort of incarnation of the last. El Kalábisheh, it should be observed, is on the site of Talmis, eight miles from Taphis, according to the Itinerary; and a Greek inscription on the walls of the Temple (Niebuhr, Inscr. Nub. 10.) expressly mentions Talmis as the name of the place. This edifice appears to have been twice rebuilt: its founder was Amenophis II., successor of Mæris; but it was restored under the Ptolemies, and lastly under the Emperors Augustus, Caligula, and Trajan. The mythological decorations of this remarkable Temple furnished M. Champollion with materials for some very ingenious theories respecting the Religious system of the Egyptians; and though from the short period which elapsed between his return to France and his lamented death, it is scarcely possible that he could have had leisure fully to develop his views, it will be a subject of deep regret if his papers should not furnish at least an outline of the observations on which these theories were founded. Mounds of rubbish on the Eastern bank of the river mark the site of Contra-Talmis, and the position of El Kalábisheh, as determined by Dr. Rüppell, is 23° 33' 1" North. M. Cailliaud places it in 23° 43' 42" North and 32° 54' 37" East. A ground-plan of the Temple is given by Burckhardt, (p. 113.) and by M. Gau. (Antiq. de la Nubie.)

Contra-Talmis.

To the South of El Kalábisheh,* ancient piers along the river, with reservoirs and quarries in the hills, show that the inhabitants were once in a flourishing condition; and at Dandúr, about fourteen miles higher up, there is a small Temple,† close to the water's edge, (Burck. 110.) constructed in the Age of Augustus but still unfinished. (Bullet. xii. 252.) Its sculptures relate to the incarnation of Osiris.

NUBIA.

Dandur.
Garsery.

The valley of Dandúr is separated by a promontory which advances to the river's edge from Kirsheh,‡ in 23° 31' 45" North 32° 56' 55" East, (Cailliaud, vol. iv. p. 166.) on the site of the ancient Tutzis, about eight miles distant. At the Northern extremity of the village there is a Temple excavated from the rock, executed, as Burckhardt remarks, (107.) in the infancy of sculpture, when the artist laboured to produce an effect, not by the grace, but by the size of his figures. It was dedicated, according to M. Champollion, (Bullet. xii. 251.) by Rhamses the Great, to Phthah, (Vulcan,) and has suffered much from time and Barbarians, (probably the Persians,) all excepting the excavated part having been destroyed. The large chamber is supported by six colossal statues in a very rude style, singularly contrasting with the finely executed bas-reliefs on the walls. Rhamses, deified as the son and the child of Phthah, is the divine personage most frequently represented in these sculptures. The Egyptian name of the place was Phthah-ei, or Thy-Phthah, (Abode of Phthah,) and therefore synonymous with Mem-phthah, or Memphis.

Girshe.
Tutzis.

At the distance of about twelve miles above Kirsheh, is Dakkeh, on the site of Pselcis, opposite to which, on the Eastern side of the river, Kobbán occupies the place of Contra-Pselcis. The Temple at Dakkeh is "one of the finest remains of antiquity that is met with in the Valley of the Nile." (Burck. 103, 104.) The first hieroglyphic inscription upon it which caught M. Champollion's eye, informed him that he was on sacred ground, dedicated to Thoth, Lord of Pselc: the Greek ones copied by different travellers, and explained by M. Letronne, (Rech. 83. 164. 371. 476, 477.) equally acknowledge the very great God Hermes (TONΘEON-MEΓISTONEPMHN) as the patron of the place; and it will be readily believed, as M. Champollion declares, that few monuments furnish such ample materials for illustrating the Mythological History of Hermes twice Great, as this Temple. All his transformations are here represented: first he appears as Har-hat, or Hermes Trismegistos, (thrice Great,) the Divine Wisdom personified; secondly, as Meuñ, or Reason; thirdly, as Ari-hos-nufi, the Parent of harmonious sounds; fourthly, as Pa-hit-nufi, the Possessor of a good heart; and lastly, as Thoth, the Earthly Hermes, or Divine Wisdom in an earthly form; he appears here, moreover, armed with a caduceus. The last chamber but one was constructed by Erkamen, King of Æthiopia, the Ergamenes of Diodorus, (iii. 6.) who put an end to the tyranny of the hierarchy by a cruel stratagem. The remainder of the Temple was formed by three of the Ptolemies, (Euergetes, I. and II. and Philopator,) and it was continued by Augustus. Near the pylon, or portal,

Dekke.
Pselcis.

* This name is an Arabic plural, the singular of which, Kulbúsh or Kilbúsh, does not appear to be a significant word, and might possibly be originally a proper name.

† Garsery in Light's Travels, p. 68. Norden, pl. cii.

‡ That Kirsheh is a name of some antiquity is evident from the fragments of Koptic MSS. found in Nubia by Mr. Legh, Travels, p. 155, 156. 4to. ed.

NUBIA. there are some remains of a former Temple constructed by Mœris, which show that the Religion of the Egyptians was not altered by all the changes of dynasty or the lapse of so many Ages. This is also the last place where there are any vestiges of Greek or Roman Art. Of the devastations made by the Persians there are continual traces, and many of the Temples now remaining in Egypt were erected by the Greek and Roman Princes to replace what the Persians had destroyed. A design of the Temple of Dakkeh is given by Norden (pl. cliv.) and by Capt. Light. (p. 70.) At Kórtí, (Kórtah, or Khortum,) about three miles South of Dakkeh, there are, near the river, the remains of a very diminutive and much mutilated Temple. It has few sculptures, and seems to have escaped M. Champollion's notice. The place is remarkable, as being anciently the most Northern Episcopal See in the Nubian Province of Macuria, (Quatremère, *Mém.* ii. 36.) and, consequently, a place of some note. About six miles South of Kórtah, begins the Wádí el Muharrakah, (Burned Valley,) in the middle of which, on a rocky hill overhanging the river, are the remains of *Hiero-sycaminus*; (the sacred Sycamore;) and three or four miles further North, the remains of an Egyptian Temple which has been used as a Christian Church. (Burck. p. 100.) It was dedicated to the Ten-thousand-named Isis, and the Sun Sarapis, as appears from an inscription scrawled in red ink on one of its walls. There are also some in the current Egyptian character, one of which Burckhardt has imperfectly copied. The district called *Dodeca-Schœnus*, (Twelve Ropes,) measuring 720 stadia, or 90 miles, terminated here.

Wadi
Seboua.

About 15 miles South of El Moharrakah is Wádí-el-sebú, (Vale of Lions,) which contains, on the Western side of the river, another fine relic of Egyptian architecture. The two *propylons*, like those at Kórneh, (a part of the ancient Thebes,) are separated from the river only by a narrow plain. (Light, p. 87. Norden, pl. clv.) The place derives its name from an avenue of sphinxes in front of the Temple which was half excavated from the rock and half built in front of it. It is, without contradiction, says M. Champollion, (*Bullet.* xii. 248.) the worst production of the Age of Rhamses the Great; and was dedicated by that Prince to Phré, (the Sun,) and Phthah, Lord of Justice; the columns beginning and ending the rows of sphinxes are statues of Sesostris in a standing posture; and his conquests over the nations North and South are represented on the outside of the *pylon*, but are now so much defaced as to be scarcely distinguishable. The greater part of the Temple is buried in sand; and its dilapidated state led Burckhardt to suppose it to be more ancient than the sculptures at Kúrneh and Karnak.

In a desert spot, about 21 miles in a straight line, but more than twice that distance along the bank of the river, which here makes a considerable sweep to the South and East, and not more than six miles by the shortest road from Tomás opposite to Derri, are the remains of a village called Hassáyá, or 'Amádeh,* and a fine Temple,

Hassaye, or
Amada.

* Hasáyá and 'Amádeh are Arabic words, erroneously spelt by Burckhardt and Cailliaud. The first is the plural of hisy, and signifies "pools of water filtered through sand lying upon a rocky bed;" the second is the plural of 'imád, "a column, lofty edifice," &c. The names in M. Cailliaud's list (iii. 349.) were furnished by some illiterate scribe, probably a Nubian, and are very often misspelled. Burckhardt is much more correct, but he was not well acquainted with the literal Arabic when he made this journey, and his ear sometimes deceived him.

"interesting," says Burckhardt, (p. 97.) "on account of its preservation, being almost entire." It has experienced the lot of most of the Nubian Temples, and "the walls of the cella have a thick coat of plaster, on which are paintings of Greek Saints." There is first (Champollion, in *Bullet.* xii. 247.) a kind of *pronaos* (vestibule) supported by twelve square pillars covered with sculptures, and four columns, which may be, not inaptly, styled proto-doric, as being the prototype of the Grecian Order bearing that name, and they are found only in the most ancient monuments of Egyptian architecture. This Temple was founded by Thouthmosis III., otherwise named Mœris, as appears from the inscriptions upon the jambs of the inner doorways; which, literally translated, are as follows: "The beneficent God, Lord of the World, (the Sun giving stability to the Universe,) Son of the Sun, (Thouthmosis,) the regulator of Justice, hath performed an act of devotion to his Father the God Phré, (the Sun,) God of the two heavenly mountains, and hath erected in honour of him this Temple of hard stone; he hath done this that he may have eternal life." The four chambers on the right and left of the sanctuary and a part of the vestibule were made by his successor Amenophis II., as is recorded in a long inscription on a vast block of stone (*stèle*) at the extremity of the sanctuary. Thouthmosis IV., the next in succession, completed the edifice by adding the *pronaos*. The sculptures here are much superior, says M. Champollion, (*Ib.* 247.) to those at Derri or even at Ibsambal.

Tómas is a large village inhabited by Arabs of the Tribe Gharbiyyeh, who established themselves in Nubia soon after their Countrymen invaded Egypt: and on the opposite side of the river, about five miles South-East of it, is El Derr, or Derri, considered in modern times as the Capital of Nubia, being the usual residence of the Káshifs, whose forefathers, profiting by the internal broils of the Mamlúks, the feebleness of the Turkish Páshás, and the natural strength of their territory, rendered themselves independent not long after the conquest of Egypt by the Turks. It is, however, nothing more than a village of about two hundred houses (Burck. 30.) overshadowed by a grove of palm-trees,* inhabited by the descendants of the Bosniac troops sent by Selim I., in 1517, to occupy these narrow defiles. On the declivity of a rocky hill, just behind the village, are the remains of a Temple apparently of remote antiquity, (Burck. p. 27.) but being excavated from the sandstone rock, still tolerably entire, Burckhardt's conjecture was not far from the truth, for M. Champollion (*Bullet.* xii. 245.) ascertained that it belongs to the time of Sesostris, of whose children its inscriptions contain an enumeration. It was dedicated to Amon-Rha and Phré invoked by the name of Rhamses, the peculiar patron of the family of Sesostris. The latitude of Derri, or Dirr, according to Dr. Rüppell, (p. 277.) is 22° 44' 21" North. Tomás, by M. Cailliaud's account, is in 22° 44' 45" North 32° 12' 34" East.

Toumas.

Derri.

About fifteen miles South-West of Derri is Ibrim, the ancient *Primis*, on an insulated rocky hill just above the river. The remains of some walls, Greek Churches, and a solitary granite column, are the only antiquities which Burckhardt supposed it now to retain, for its ruined castle was probably built in the Lower Empire; but M. Champollion (*Bullet.* xii. 243.)

* It appears very naked and comfortless in Norden's plate (clix.)

NUBIA. found four cavern-like excavations at the foot of the enormous mass of sandstone on which the castle stands, in the first of which is a sitting figure of Thouthmosis I., between Thóth, the Lord of Prim, (*Primis*.) and Saté, (Juno,) Queen of Elephantiné and Nubia. In the second, there is a statue of Mæris similarly placed, and in a bas-relief, on the right wall, Nahi Governor of the Southern Provinces, presenting the tribute due from them to that Sovereign. In the third cavern Osor-Saté presents the tribute from the South to Amenophis II., but the sculptures here are much defaced. The fourth cavern represents similar offerings made by an Æthiopian, as Governor of the South, to Sesostri. Near the 'Akabah el Fereik, (the rocky ascent over the barrier,) between 30 and 40 miles South-West of Ibrim, there is, perhaps, the most perfect of all the Nubian Temples; it is excavated from the side of a nearly perpendicular rock and accessible only by a very narrow and dangerous path. Its walls were plastered over by the Greeks and adorned with pictures of their Saints, especially St. George and the Dragon; but M. Champollion had this covering removed, and found that the Temple was dedicated to Thoth by Horus, son of Amenophis Memnon. He also had drawings made of three bas-reliefs of great mythological interest. (*Bullet.* xii. 137.) He erroneously calls it Jebel 'Addeh, for that hill, which is insulated and close to the water's edge, is nearly six miles beyond Fereik. On its summit is the Kal'ah 'Addeh, (Castle of 'Addeh,) similar in construction to that of Ibrim, but long since abandoned.

Acabah of
Fereyg.

Ebsambal.
Ibsamboul.

On the Western bank, nearly opposite to Fereik, are the celebrated Temples of Ibsambal, so well known by the accurate descriptions of Burckhardt (p. 88.) and Belzoni, (203. *seq.*) whose Herculean labours in bringing those remarkable monuments again to light, would be alone sufficient to command the gratitude of all who have any respect for works of ancient Art. The site of these splendid edifices is in 22° 19' 47" North, (Rüppell, 277.) or according to M. Cailliaud, in 22° 19' North and 31° 32' 54" East. Both the Temples are entirely excavated from the rock. The smallest, dedicated to Hathor, (Venus,) by Nofré-Ari, consort of Rhamse the Great, is immediately over the river, and is decorated in front by six colossal statues, each of about 35 feet in height, representing that Prince and his Queen with their children at their feet. These statues are finely executed, and the Temple itself is covered with beautiful bas-reliefs. On a tablet to the right, an Æthiopian Chief congratulates Sesostri on his having subjugated the Libyans; "but the Great Temple," says M. Champollion, "would be a wonder even at Thebes itself." Its entrance is adorned by four figures in a sitting posture, each of which is not less than 61 feet in height, all admirable portraits of Rhamse the Great. (Sesostri.) The interior is not less admirable; but its doorway is so blocked up with sand, as to be scarcely passable. It can be entered only by a person creeping on hands and knees through a small hole, and the heat and want of air within are such as to be almost insufferable. The thermometer rose, says the same traveller, to 115°. (Fahrenheit.) The first chamber is supported by eight pillars, against each of which there is a colossal figure of the same Prince 30 feet high: and on the walls there is a series of bas-reliefs relative to his conquests in Africa. One especially, representing him in a triumphal car, followed by bands of prisoners, Nubians, Negroes, &c. of the

natural size, is a composition of the greatest beauty and effect. The remaining chambers, sixteen in number, abound in fine bas-reliefs on Religious subjects, many of which are highly interesting and curious. The whole is terminated by a sanctuary, at the end of which there are four fine statues in a sitting posture, and greatly exceeding the natural size. They represent Anion-Rá, Phré, Phthah, and Rhamse the Great. The heat of the interior is not inaptly compared by M. Champollion to that of a Turkish vapour-bath. Six large historical tablets in the great chamber were copied by order of Messrs. Champollion and Rosellini; as well as a long inscription on a column in the interior of the Great Temple. It consists of a Decree of Phthah (Vulcan) in favour of Sesostri, and that Monarch's reply. (*Ib.* 141.) From Ibsambal, Southward to the Wádí Hhalfah, all the Eastern side of the river is a fertile valley of some width, except where the hills advance very near to the stream; the Western side is almost invariably sandy and barren; but it appears to have been well peopled formerly, and the ruins of churches and other buildings mark the site of towns and villages at no very distant period. At Serreh Gharbí (Western Serreh) there are the ruins of a small Temple, which has been successively converted into a Church and a Mosque. It has still the remains of some remarkable bas-reliefs, but is much decayed. (Burck. 87.) At the distance of 18 miles further, commences the Wádí Hhalfah,* opposite to Sukóit† on the Eastern bank. On the Western side are the remains of a fine and ancient Temple. (Burck. 85.) Three edifices may still be traced, according to M. Champollion: (*Bullet.* xii. 138.) the first and Northernmost, a small square building of no importance; the second a Temple of unburned brick and stone, with protodoric columns, dedicated to Hor-Ammon by Amenophis II., son and successor of Mæris. Two inscribed columns also (*steli*) of importance were found buried in the sand, one recording the adoration and gifts of Rhamse I., and another the consignment of all the Nubian nations, by their God Mandu, to the care of Osortasen of the XVIth Dynasty. Shamik, Osau, Shoat, Osharkin and Kós, are the only names still legible; but there were three others now entirely effaced. The third Temple, a little way further South, is in the same state of dilapidation. It was the principal Temple of the Egyptian city of Beheni, a place apparently of considerable extent, and was erected by Mæris, in honour of Jupiter Ammon and the Sun. (Amon-Ra and Phré.) At the Southern extremity of Wádí Hhalfah, on the Eastern side of the river, are the ruins of an ancient town, perhaps Bugorash or Bukoras, the Capital of Maris, the Northern Province of Nubia. (Quatremère, ii. 17. 32.)

Bujorash.
Bucoras.

The termination of the second Cataract is about a mile and a half South of Wádí Hhalfah, in 21° 53' 32" North and 31° 56' 46" East. It is called by the Arabs Jebel-el-jenádil. (The Mountain of Rocks.) "Between this place," says El Idrisi, (p. 21.) "and the city of Bilák‡ (*Philæ*) there are six days' journey by land, and four (more) by water on account of the bends in the

Second
Cataract.

* Probably from hhalfá, an aquatic herb.

† This is the Bakouy of Quatremère, (*Mém.* ii. 9.) and Takoa of Burckhardt; (p. 494.) more extraordinary corruptions of foreign names than this, are not uncommon in Eastern MSS.

‡ The epitomizer has here, by an awkward omission, made Idrisi say the reverse of what he meant to say; namely, that the black people went by water from Jenádil to Bilák, though he immediately

NUBIA.

river. The ships of the Blacks go backward and forward to and from Jebel-el-jenádil, for they can go no further in their way towards Egypt, because the Almighty hath been pleased to make this mountain small of ascent on the side of the Country of the Blacks; but its second face, that which looks towards Egypt, is exceedingly high; and the Nile runs down from its higher to its lower side with a great and tremendous stream; the water being obstructed in its course by stones heaped upon stones, and by devouring rocks." This exactly agrees with our modern accounts of the Batn-el-hajar, (Belly of Rocks,) and the Cataract itself. Burckhardt, who saw it before the rocks on the Eastern side had been blown up by Mohammed 'Alí's lághumjí báshí, (head miner,) in order to clear the passage, says, (p. 84.) "It is formed by a part of the stream only, at most twenty yards in breadth; its fall is more rapid, and the noise and foam greater than in any other place in the Batn-el-hajar, or than at the Cataracts of Oswán; still, however, it little deserves to be called a cataract or shelál.* There are three principal falls, or sloping rocks, one above another, over which the water descends with great velocity." The whole tract between the Wádí Hhalfah and Sukkót is called Batn, Dár or Wádí-el-hajar, a stony wilderness, with many rapids in the river, similar to those at Oswán. (Burck. 42.) The navigation was here interrupted for about 100 miles, till cleared as before mentioned by order of the present Páshá. A few narrow strips of level ground, watered by wheels, are cultivated in this barren tract, by an Arab Tribe called Omm-el-sherif, who say they came originally from Mecca.

Wady Semné.

The Western shore is less rugged, and was formerly well peopled, as is evident from the ruins of castles, churches, convents, and houses, which occur from time to time, all the way to Wádí Semneh, where the stream forces its way through a narrow passage, not more than fifty paces in breadth, formed by two rocks which project on the opposite sides. On the summit of these precipices there are ruins, and on the Western one the remains of a singular and ancient Temple. (Burck. 81.) The place is also called Altisi. The Nile forms a little port on its Western side, (Cailliaud, i. 339.) and the Temple, according to M. Cailliaud, is in 21° 29' 32" North and 30° 57' 24" East, in Dr. Rüppell's Map, in 21° 31' North and 31° 24" East. Plates of it and its sculptures are given by the former of those travellers, (ii. pl. xxiv.—xxvii.) and he remarks that the hieroglyphics on the front have been substituted for others which had been obliterated. The whole height of the walls is formed of only three layers of stones, so large are the dimensions of each block. The Temple is built of sandstone, and placed within an enclosure about 180 feet long and 60 wide. A little to the South-West there is another and not much larger enclosure which seems to have been filled with houses; and other mounds or remains of walls, Christian Churches, and ruins on the islands and opposite side of the river, show that there was anciently a town in this place. (Cailliaud, pl. xxiii.) On the Eastern side, M. Cailliaud, who crossed the river on a raft, found the remains of a larger Temple, which escaped Burckhardt's notice from his having crossed the ascent called 'Akabet-el-benát, and quitted, for a short time, the banks of the

afterwards says that their goods were disembarked at the Cataract, and carried thence on the back of camels to Oswán, nearly twelve days' journey at the caravan rate of travelling.

* This word probably means only "a rapid."

river. The sculptures and hieroglyphics are here finely executed, (ii. pl. xxvi. xxvii.) but the roof has fallen in, and the area is so choked up with sand and rubbish, that no entire tablets can be delineated. At Wádí Hhalfah the strata of rock change entirely. To that point sandstone prevails, beyond it greenstone and greywacke. These primitive rocks, says Burckhardt, (46.) continue throughout the Batn-el-hajar. Beyond Sirás, granite and immense masses of quartz occur, and the greenstone (primitive trap, or amphibolite,) is traversed everywhere by strata of quartz. "On our right," near Deír Solleh, (about 25 miles North of Sirás,) says M. Cailliaud, "arose black amphibolic or feldspar rocks, traversed by veins of rose-coloured feldspar. As soon as Mirkís is passed, sandstone is no longer seen, the soil is entirely primitive; granitic rocks furrowed by threads of micaceous schist, granite with white feldspar, and greenish feldspar rocks."

Primitive rocks.

About 25 miles in a South-Western direction from Sirás, across the 'Akabat-el-benát, a steep passage over the mountains, is Wádí-al-tíreh, containing the principal village in the Batn-el-hajar, opposite to some islands in the river. (Burck. 47.) In passing through the Wádí Ambikó,* 15 miles further South, the stream rushes impetuously over the rocks, and carries its foaming current to the distance of several hundred feet; there is nowhere, however, any fall that can properly be so called. The mountains of Ambikó appeared to Burckhardt to be the culminating ridge of the Batn-el-hajar. Between 15 and 20 miles up the river there are, on the Eastern bank, the ruins of 'Okameh, the last village of the Batn-el-hajar, but within the jurisdiction of Sukkót. Opposite to it on the Western side, Dr. Rüppell has noted the existence of a warm spring; this seems to mark this spot as the site of the Upper Maks, mentioned by Abú Seláh and other Arab writers as six days' journey above the termination of the second Cataract. (Quatremère, *Mém.* ii. 9. 32.) It was a garrison-town, and no one could pass through it without being strictly examined; even the King himself, for form's sake, was subjected to an examination. (*Id.* 10.) About 9 miles above 'Okameh is the Island of Kolbeh or Kulúb, separated from the Western bank, as Burckhardt supposes, (77.) by an artificial channel, which is dry in Spring. On this island there are the remains of a town and a Christian Church. The river is full of rocks as far up as 'Amarah, where there is a trifling Cataract, (Burck. 76.) the first in the Batn-el-hajar. The Southern extremity of this place is remarkable on account of a fine Temple. Six columns of its *pronaos* (vestibule) remain, the only specimens of Egyptian architecture, says Burckhardt, (54.) which I have ever seen, constructed of calcareous stone, all the rest being built of sandstone. It stands in 20° 48' North, according to Dr. Rüppell's observations, (*Reise*, p. 277.) about three miles North of the village of Eber, or Abri, on the West bank of the river, at 300 paces from the stream. Its columns have square bases, an almost unparalleled peculiarity in Egyptian architecture, and they are covered with narrow strips of bas-reliefs, separated by lines of hieroglyphics. The *cartouches*, or scrolls for Royal names, are, for the most part, left blank. Its foundations in some places appear very slight and inadequate to bear so heavy a superstructure; (Cailliaud, iii. 253. Burck. 54.) a circumstance observable in the Memno-

Wady al tyre.

nium at Thebes, and in other Egyptian buildings. (Cailliaud, ii. pl. xvi.—xviii.) At Fantau, on the Western bank, in $20^{\circ} 40' 28''$ North and $30^{\circ} 28' 24''$ East, M. Champollion found the remains of a town or village, and a Deir or Convent in a very perfect state. This is no doubt the ancient Episcopal City of Sáī, for the island opposite to it, one of the largest in the Nile, still bears the same name, and on its North-Eastern side there are the remains of a fortress, repaired by the Turks under Selīm I. Its walls, from 35 to 40 feet high, were formed of mud and fragments of ancient buildings; they are now completely in ruins, but many Turkish cannons still remain among the rubbish. The ruins of a Christian Church and a small Egyptian Temple are seen not very far from the Castle. Sáī is placed by Ibn Suleīm, the Historian of Nubia, just above the commencement of the second Cataract. (Quatremère, *Mém.* ii. 11.) "It is the residence," he says, "of a Bishop, and has a Birbá. (Egyptian Temple.) Beyond it is the District of the Sá-koludá, i. e. the Seven Governors; a tract exactly resembling that which is adjacent to the Country of the Moslims; (Egypt;) its cultivable ground being sometimes broad, sometimes narrow, and producing date-palms, mokls, (or dúms, i. e. the *Cucifera Thebaica*,) vines, and grain, some olives, and a few cotton trees." "From Amárah," a few miles below Sáī, says Burckhardt, (55.) "a wide plain opens, the Eastern chain making a wide circuit, while, to the West, the mountains terminate. The cultivable soil on the Eastern side is nearly one mile and a half in breadth; and between it and the mountains is a barren tract covered with small flints and pebbles, similar to that at Suez." The Island of Sáī, as M. Cailliaud informs us, (i. 367.) is about 7 miles long and 2 miles and a half broad. On its Eastern side there is a hill of some height, and near the water it is fertile, but in the interior, desert. When the Nile is at its lowest point this island is united with the Western shore by two small islets, the channels between them being then dry. On the Western side of the river the productive soil is here from 100 to 200 paces in width. At Nelwah, nearly opposite to the Island of Wási, there are a few relics of a Christian Church and an Egyptian Temple. (Cailliaud, ii. pl. xv. fig. 4.) At about 14 miles further South is Jebel Dúsheh or Dósh, a rocky hill of sandstone, marking the Southern boundary of Sukkot. Near its summit, there is a grotto containing some mutilated figures, and above it were found some hieroglyphical tablets. (Cailliaud, ii. pl. xv. fig. 1—3.)

Solib, or Soleb is the first village in the Dár-el-mahás,* and at Gúryen Tawah,† about 3 miles and a half to the South of it, are the ruins of a fine Temple, which Burckhardt, to his great regret, could see only from the Eastern side of the river. (74.) It has a considerable resemblance to the Memnonium at Thebes, is about 350 paces from the

* Without knowing how a well-informed native would spell the word Mahas, which has not been given either by Cailliaud or Burckhardt in the Arabic character, its meaning can only be conjectured. The phrase probably signifies "the district of the bend or deflexion in the river's course." As Mahas may be written in six, and Sukkot in eight different ways, it is by no means easy to determine which is to be preferred; especially as many words have provincial significations, which no Dictionary can supply.

† That M. Cailliaud's Map is in general accurate, cannot be doubted; but there is here a singular discrepancy between it and the data furnished by Burckhardt. That traveller was opposite to these ruins two hours before he reached Wáwí on his return; they are, therefore, six or seven miles South of that village, but M. Cailliaud places them half a league to the North of it.

river, with which it was anciently connected by a causeway, and is about 350 feet long, but from the adjoining heaps of rubbish seems to have been longer originally. The pylon was preceded by an avenue of sphinxes and lions with rams' (Cnuphis) or hawks' heads, (Phré,) and a fine portico led to the principal chamber, containing 48 columns. The due proportion of the columns, finish of the sculptures, and extent of the ruins, says M. Cailliaud, (i. 376.) all indicate a monument of the first rank. (ii. pl. ix.—xiv.) The site of these ruins, as determined by M. Cailliaud, (i. 381. iii. 345.) is $20^{\circ} 25' 45''$ North and $30^{\circ} 30' 32''$ East. Dr. Rüppell's observations give $20^{\circ} 26' 3''$ North and $29^{\circ} 37' 24''$ East. (*Reise*, 278.) This neighbourhood is much infested by wolves and hyænas; hippopotamuses and crocodiles abound in the river. Gúryen Tawah is marked as Phthur in M. Cailliaud's Map; but on what authority does not appear.* The next place in which there are any considerable ruins is Seseh, near the Isle of Aglas, about 40 miles to the South-East of Gúryen Tawah, and 18 miles South-East of Tináreh. Beside a large fortified enclosure, there are some remains of an Egyptian Temple, in $20^{\circ} 5' 54''$ North and $30^{\circ} 46'$ East; so soon would Burckhardt have ascertained that Soleb was not, as he had heard, (75.) "the most Southern specimen of Egyptian architecture." (75.) Of these ruins, which are in a very dilapidated state, M. Cailliaud has given delineations. (ii. pl. vii. viii.) The country here becomes more fertile, and is better cultivated; and Kúkeh, a few miles further up, is a large and handsome village; but the small stock of provisions possessed by its inhabitants had been so completely exhausted by the Páshá's troops, that no supplies were to be obtained there. The Eastern bank is here a complete desert; the cultivable soil being nowhere of any great width, or very productive. A little further South, another range of primitive rock, principally of rose-coloured and white granite, crosses from East to West, and occasions a very abrupt and singular elbow, almost at right angles, in the course of the river, which is here broken by many islands, some of them considerable ones, as far as the foot of the third Cataract.

At Hannek, a large village in $19^{\circ} 41' 30''$ North, near the boundary between Mahas and Donkolah, there is a small but dangerous Cataract; the river being here filled with rocky islets. The Tomb of a Mohammedan Saint, rather more than half a mile to the South of Hannek, on the Western, and Kabodi, a village rather more than a mile South, on the Eastern side of the river, mark the confines of the two Provinces. There is much cultivated ground about Hannek, and at a short distance to the South the landscape, for the first time, ceases to resemble that of Egypt. An immense plain of sand with tracts covered with grass and acacias, backed by a few scattered and very distant hills, opens to the West. Here the date-palms become rare, and the destructive white ant (*termes*) is first seen. This Cataract, which is of small extent, appears to be that mentioned by Ibn Suleīm, (Quatremère, *Mém.* ii. 12.) as the line of separation between the Provinces of

* The Royal scrolls, copied by M. Cailliaud, and interpreted by M. Champollion, show that this Temple was built by Amenophis II., eighth King of Manetho's XVIIIth Dynasty. The captives, whose names M. Cailliaud did not copy, are either Negroes, (pl. xiv. fig. 7—9.) or as M. Champollion supposes, the Hycsos or Arabian Shepherds from whose oppression Egypt was delivered by Amosis, the first King of the same Dynasty. (Cailliaud, iii. 249.)

NUBIA. Maris and Makorrah; (Macuria;) and if so, the fortress Istenún, (Στενον,) mentioned by him, is probably that of which remains still exist on the Eastern bank. (Cailliaud, i. 397. ii. pl. lxxx. fig. 2.) At Tombos, a little to the South on the same side, there are two hieroglyphic tablets on a granite rock near the river, and a fragment of a colossus of grey granite, prostrate among the rocks, about 100 paces to the East. (Cailliaud, ii. pl. vi.) The stream is, in this part of its course, divided into many channels by islands of various dimensions; the largest and most remarkable of which is named Argo. It is richly clad with verdure, and forms a delightful contrast to the dreary and almost contiguous wastes. Its Northern extremity is in 19° 32' 31" North, and the site of its colossal statues, about six miles to the North of its Southern extremity, is in 19° 22' 56" North and 30° 35' 19" East. (Rüppel, 278.) The faint traces of a large Temple are still visible; and the statues of grey granite now prostrate on the ground, were upwards of 21 feet high when erect. They are in the genuine Egyptian style, and little mutilated, but have no hieroglyphic inscriptions. (Cailliaud, ii. pl. ii.—iv. Rüppel, pl. i.) On the site of the Temple there are a few more fragments of Egyptian sculpture. The 'oshúr, (*Asclepias procera*), so common in these regions, abounds in the neighbourhood of these ruins; which are placed, according to M. Cailliaud, in 19° 22' 39" North, and a mile or two East of 30° 43' East. There are no remains of any importance between this place and Donkolah, the ancient and modern Capital of this part of Nubia.

Dongola. "Donkolah," says Abú Seláh, (Quatremère, ii. 33.) "the Capital of the Kingdom of Nubia, is a large city on the edge of the Nile. It has many Churches, large houses, and wide streets. The King's Palace is very lofty, and has many domes formed of red bricks like those of the houses in Irák." It was in a very different state when seen by M. Cailliaud, (ii. 19.) who places it in 18° 12' 58" North and 31° 7' 44" East. According to Dr. Rüppel its position is in 18° 12' 51" North and 30° 55' 27" East. It is commonly called Donkolah el 'ajúzah, (Old Dongola,) and is more properly a large village than a city. A rock, running from South-East to North-West, from 200 to 250 paces in length, and presenting a perpendicular cliff from 80 to 90 feet in height above the river, is the site on which this Capital stands. A steep and sandy path at its North-Western and South-Eastern extremities, leads up into the town, which appears almost like an assemblage of forts, as the principal houses are enclosed by sloping walls, 24 or 25 feet high, flanked with little square towers here and there. At the North-Western end of the town there is an old Christian Convent nearly 90 feet long, 60 broad, and 40 feet high: one of its upper chambers is now used as a Mosque. (Cailliaud, ii. pl. i.) Along the edge of the cliff, and down into the valley below, in the same direction, there are extensive ruins with some traces of Churches; on the East, ancient burying grounds. The elevated position of the place, on the summit of an isolated cliff, exposes it to the wind from every quarter; its streets are encumbered with sand from the Desert, which to the East is perfectly naked, and the whole appeared to M. Cailliaud almost abandoned, and little better than a heap of ruins: but he saw it immediately after the passage of the Páshá's army, when it had previously suffered from the followers of the Mamlúks, and the surrounding Country had been

desolated by their contests with the Sheikíyehs and Bedwin Arabs.

Between 62 and 63 miles North-East of Donkolah in a straight line, but nearly twice that distance along the bank of the river, which here makes a very large sweep to the South-West, is the hill called Jebel Barkál. It is a tabular mass of sandstone, rising abruptly and singly from the plain of the Desert, about half a mile from the water's edge, and measuring about 1350 yards in circumference. Its Southern side, facing the river, presents a perpendicular face nearly 200 feet high, broken, as is usual with sandstone rocks, by a number of rugged fissures which give it a picturesque appearance. Its position is in 18° 30' 51" North and 32° 8' East, according to M. Cailliaud; 18° 31' 41" North, according to Dr. Rüppel.* The outline of the South-Western angle of the rock is something like the profile of a human head, and Mr. Waddington seems to think that its form is the work of Art. M. Cailliaud, who has given a view of it, (i. pl. lviii.) considers that peculiarity as entirely accidental. On the tabular summit of this hill there are the remains of six Temples. (Cailliaud, i. pl. lx. lxx.) One is a small Temple in great measure excavated from the rock; it consists of five chambers, (pl. ix. fig. 1.) and is now entirely uncovered; its sculptures also are nearly obliterated. At about nine yards to the East of this, is the Temple called Typhonium by M. Cailliaud, which is the finest of all those at this place. The first chamber contains eight colossal statues, representing probably the God who is the reputed Father of the Deity, to the commemoration of whose birth this chamber is dedicated. (Champollion, *Bullet.* xvii. 263. 272.) Similar statues are seen in the chamber preceding the sanctuary. (Cailliaud, i. pl. lxxiv.) On the walls there are bas-reliefs representing a King and Queen presenting offerings to Ammon seated on a throne, with Isis behind him. This Sovereign, as appears from the scroll containing his name and titles, is no other than Tharaca,† called Taracus by Manetho, (of whose XXVth or Ethiopian Dynasty he is the third Prince,) Tharaca in the Septuagint, (2 Kings, ch. xix. ver. 9. *Isaiah*, ch. xxxvii. ver. 9.) and Tirhakah in the Hebrew text. (*Bullet.* xiv. 140.) The bas-reliefs on the walls represent the same Sovereign making offerings to Ammon, (pl. lxx.) accompanied by Horus and Thoth, (pl. lxxi.) or Isis and Horus. (Pl. lxxii.) The most remarkable of these sculptures is that on the Eastern side, where "The King, Lord of the World, (.) Son of the Sun, Lord of Regions, (Tharaca,) Giver of Life, Supreme like the Sun for ever," is presenting an offering to "Ammon-Ra, Lord of the Regions of the World," distinguished here by a ram's head crowned with a disk and two large plumes; to "Neith, Mother and Mistress of the Heavens," crowned with the royal Tiara, (*pschent*), and placing her hand on the shoulder of Ammon; to Phré, (the Sun,) distinguished by a hawk's head bearing a disk, and followed by Mandúlis, also having a hawk's

* That traveller has not given the longitude of Barkál; but allowing M. Champollion's difference of 90" between that place and Meraweh to the West of it, its position, according to Dr. Rüppel, will be 31° 37' 39" East of Greenwich.

† It appears from the interlined papyruses examined by M. Reuvens, (*Lettres à M. Letronne*), that the Greek Θ was expressed by TH in the hieroglyphic character; and Φ is rendered by PH in the scrolls on the Portico of Hermopolis, (Von Minutoli, *Reise*, tab. xiv.) containing the name of Philip Aridaeus, brother of Alexander the Great.

(Champollion, *Bullet.* i. 107.) This Temple, therefore, was dedicated by Tirhakah to Jupiter Ammon and his assessors, Neith, Aroëris, Mandulis, and *Hermes*, the especial Protectors of Nubia. The remains of another Temple, to the East of this, (Cailliaud, pl. lix.—lxiii.) adorned with bas-reliefs much defaced, near scattered fragments of two more, lead to a fifth of the same magnitude, almost buried by the fall of the sandstone rock, whence a part of it was excavated; but a sixth, about forty paces further to the East, is the largest of all. Though much injured and encumbered by rubbish, M. Cailliaud succeeded in making a plan of it.* (Pl. xiv. fig. 1.) Its length is about 484 feet, and it contained more than 84 columns, sphinxes, and altars, covered with fine sculptures. An altar of grey granite in the sanctuary, (Cailliaud, pl. lxv. lxvi.) is, with the exception of one side, well preserved; and on it is represented, performing an act of adoration, the King mentioned above, as founder of the first Temple, for he is qualified in the scroll over his head as the "King of an obedient people (Servant of the Sun and *Æsculapius*) ever living, Son of the Sun (Tharaca) ever living." (*Bullet.* i. 219.) On a hillock at a small distance to the South-East are the remains of buildings apparently of Grecian architecture, and this was probably the site of the ancient town. In the Desert to the West of the rock (Cailliaud, i. pl. 1.) there are thirteen Pyramids, with some vestiges of five more. They form two distinct groups at a small distance from each other, and differ from those previously known by having a small Temple with gateways (*pylons*) and enclosures, appended to one of their sides, and a raised border at each angle. (Cailliaud, pl. xlix.—lvii.) The largest is only 81 feet square at its base. These Pyramids, with the exception of a few small ones, are not solid, but merely mounds of earth and rubbish cased with stone; and their perpendicular height always exceeds the greatest diameter of their base. Most of them bear a close resemblance to those near Assûr, on the site of the ancient Meroë; (Rüppell, pl. v.) but the two largest and some small ones at Barkál, most of those at Núrí, and several others, the vestiges of which can be traced at Assûr, never had any Temples annexed, were solid masses of stone-work, and differ in no essential point from the Pyramids of Jízeh: they are for that reason supposed by M. Cailliaud to be more ancient than the rest. That Meroë was in the peninsula formed by the Astaboras, (Atbarah,) the Astagabas, (Dender,) and the Nile, is evident from Strabo; (xvi. 4. 8. p. 771.) and that it was above the junction of the Atbarah and the Nile is also proved by the same writer, (xvii. 1. 2. p. 786.) who says that the city of Meroë is 700 stadia (85 miles) above the confluence of the Nile and the Astaboras. "The Nile," he adds, on the authority of Eratosthenes, "after running Northward from Meroë 2700 stadia, (337½ miles,) turns back to the South, and after passing in a South-Western direction 3700 stadia (462½ miles) till it has nearly reached

* Dr. Rüppell also has given a plan of this Temple (pl. ii.) with a copy of the sculptures on the basis of the great altar, (pl. iv. fig. 1. a, b, c,) and a Lion couchant, the emblematic figure of King Mac... whose name and titles are expressed in the scrolls on the Lion's breast. (*Ibid.* tab. iii. fig. 1.)

the parallel of Meroë, advances a good way into Libya; and taking another sweep regains the Northerly direction of its course, and runs 5300 stadia (662½ miles) to the Great Cataract winding a little to the East, and 1200 stadia (150 miles) to the smaller Cataract near Syene." Eratosthenes, therefore, was acquainted with the extraordinary curvatures in the course of the Nile; but Pliny, (*Nat. Hist.* vi. 35.) on the authority of the travellers sent to explore the Country by Nero, says, that at the distance of 360 miles Westward from the confluence of the Nile and the Astaboras, was *Napata*, the last city taken by Publius Petronius, who was sent by Augustus to chastise the *Æthiopians*. Now, as that General advanced only 970 miles beyond *Syene*, and *Napata* was the last place which he reached, its distance is clearly determined; but Barkál, according to M. Cailliaud, (iii. 226.) who followed the edge of the river, is just 960 miles above *Oswán*; its identity with *Napata*, therefore, seems to be well established; its distance, moreover, along the course of the river, from Assûr, being very nearly 360 miles, affords a fresh corroboration of the same point. Ptolemy (iv. 5. p. 113.) places *Napata* on the Eastern side of the river, and from that place, or rather from the Eastern boundary of its territory, says Pliny, (*Ibid.*) to the Red Sea, is a journey of three days, through a region very productive of gold, and possessing reservoirs of rain water in very many places. *Rebátát*, the present name of the Country where the river turns suddenly to the West and South, may possibly be an alteration of *Napata*. At Núrí, or Núr, nearly opposite to Barkál, on the Eastern side of the river, there is another assemblage of Pyramids, fifteen of which are much larger than the rest. (Cailliaud, i. pl. xlvii.) One of them, which measures 146 feet at its base, is nearly double the size of any of the rest; but generally considered, they differ little from the middle-sized Pyramids at Sakkáreh. They are constructed in the same manner as those in Egypt, their facings being of sandstone nicely levelled, while the interior is filled with blocks of a puddingstone, (greywacke,) formed of quartzose pebbles slightly agglutinated. All these Pyramids have their angles turned exactly to the four cardinal points. Though the outer coating of several has been removed, or fallen off, there are no signs of their having been violently broken open. They were probably the Royal sepulchres of *Napata*.

At a distance from Barkál of rather more than 280 miles along the banks of the river, is *El Mekheir*, the chief place in the modern territory of *Dár-el-Berber*, (Land of the Strangers,) which extends from the Isle of *Direkeh* and the *Wádí el Homár*, where the Nile is obstructed by a numerous group of rocky islands, to *Umm-kedik*, just above its confluence with the Atbarah, and the Northern limit of the tropical rains, as well as the boundary of the peninsula of Meroë. At a little more than 100 miles to the North-East of Barkál, the Nile takes a sudden sweep round by North-West to the South-West, its course having previously been nearly North by West. In the interval between Barkál and this bend in the river, marked by the Island of *Mokrát*, 22 miles in length, and one of the largest in the whole of the river's course, there are several ruins of ancient fortresses, and one or two places which must have been the site of considerable towns; but the whole is now thinly peopled; and to the South of the bend, little ground, beyond a narrow strip on the banks of the stream, is capable of cultivation. A wide extent of

NUBIA.

Ruins.

NUBIA. barren sand, more or less level, is seen on both sides, which when traversed by a strong Southerly wind obscures the air with clouds of scorching dust, and renders the short passages from one reach of the river to another very hazardous. Thus at Abú Ahmed, on the bend of the river, M. Cailliaud met a caravan from Wádí el-sebú' to that place, which had been reduced to the last extremity from being detained in the Desert two days beyond the usual time, by the prevalence of a violent South-West wind, which raised the mercury in the thermometers to near 119° of Fahrenheit's scale. (iii. 186.) Lower Nubia terminates at the junction of the Nile and Atbarah; and as the Country to the South of that point, called in modern Maps Upper Nubia, and long since divided into the Principalities of SHENDI and SENNAAR, differs materially with respect both to its physical condition and present inhabitants from Nubia Proper, an account of it will more properly come under those heads; a brief review, therefore, of what is known respecting the History of the Nubians, and some remarks on the characteristics by which they are distinguished from the neighbouring nations, is all that need be added here.

Blemmyes.

Nobatae.

Conversion
of Nubia.

Of the extent and power of ancient *Æthiopia*, little was known to the Greeks and Romans, and as the Hebrew Scriptures mention foreign nations only incidentally, little can be gleaned from them respecting that Country, which was very remote from Judæa, and had little intercourse with its inhabitants. That the *Æthiopians* were in all probability of the same race as the Egyptians, has been already noticed in this Work, (*ÆTHIOPIA*, 645.) and that they, at some period, possessed the whole region lying between Egypt and the South of Habesh, or Abyssinia, seems almost certain. But that Abyssinia was severed from *Æthiopia* by the Arabs, whose descendants still sit on the throne, before the commencement of our era, is not improbable; and that the *Blemmyes* and other savage Tribes occasionally possessed a considerable part of the Country called Nubia, is manifest from the inscription at *Talmis*, one of the few Historical documents respecting that Country which still remains. The Nubians themselves appear to have been for many Ages one of the predatory and migratory Tribes inhabiting the vast African Deserts. But, under Diocletian, a portion of the Valley of the Nile was assigned to the *Nobatae*, (*i. e.* *Nubæ* or Nubians,) on condition that they repressed the incursions of the *Blemmyes*, who occupied the Country at a distance from the river between *Elephantiné* and *Axum*. (*i. e.* between Egypt and Abyssinia.) (Procopius, *De Bello Persico*, i. p. 59.) The *Nobatae*, therefore, were in the latter part of the IIIrd Century established nearly throughout the whole extent of the ancient *Æthiopia*, and were evidently more powerful and civilized than their neighbours the *Blemmyes*. The latter, in the beginning of the Vth Century, as is learnt from Olympiodorus, (*ap. Photium in Bibliotheca*.) occupied the whole of Lower Nubia, as far as *Primis*, (*Ibrím*.) and their subjection by Silco, "King of the *Nubades* (*i. e.* *Nobatae*) and all the *Æthiopians*," recorded in the inscription, a part of which still exists at *Talmis*, (*El Kalábisheh*.) took place, as M. Letronne shows, (*Journal des Savans*, 1825,) on very probable grounds, in the middle of the VIth Century.

The Nubians were converted to Christianity, according to the Syriac Ecclesiastical Writers, (*Assemani, Bibl. Orient.* ii. 330.) by the zeal of Julian, a Jacobite

priest, who, by the aid and intrigues of the Empress Theodora, reached the Nubian Court before his orthodox rival, despatched at the same time by Justinian. The Monophysite heresy was thus firmly established in Nubia, and its Churches were always subject to the Patriarch of Alexandria, till the Christian Faith was entirely supplanted by Mohammedanism in the XVth Century. (Quatremère, *Mém.* vol. ii. p. 120.) The extent of the Nubian Kingdom, after the subjection of the *Blemmyes* by Silco, equalled that of the *Æthiopians* in the most flourishing period of their Empire, except while Egypt itself was annexed to their dominions, for the Ecclesiastical division of Nubia into Provinces, found in an ancient MS. by Wansleb, (*Hist. de l'Eglise d'Alex.* p. 29.) comprehended three Provinces; the third of which, Ni-Examites, (*i. e.* *Axomitæ*.) extended apparently to Aksúm in Habesh. It is probable, however, that as the Abyssinians belonged to the same sect as the Nubians, they were included in the same Province of the Alexandrian Patriarchate, and this enumeration may therefore contain the Abyssinian as well as the Nubian Sees. The names of the Nubian Provinces occur also in other Koptic MSS., which, compared with the account of Ibn Suleïm, show that they were these: 1. Marís; 2. Macuria; (*Makorra*;) and 3. Albadia, or Almodia. ('Alwah.) 1. Marís, which signifies in Koptic the Southern Country, (*Abdillatif, par De Sacy*, p. 13.) was an Egyptian not a Nubian name, given probably to that part of Nubia which, in the Vth Century, was possessed by the *Blemmyes*; but its boundaries seem to have varied at different periods. Ibn Suleïm says in one place, (Quatremère, ii. 12. Burck. p. 495.) that it terminated at Nestú, (probably Moshó,) just beyond the third Cataract; and in another place, (Quatremère, ii. 17. Burck. p. 497.) that the Province of Makorra begins at Táfa, one day's journey from Oswán. This seems to have been the more ancient subdivision, as the distance shows that he is speaking of *Taphis*; and it is evident from the inscription at *Talmis*, that the latter was the last place in the territory of the *Blemmyes*. On the other hand, Moshó is still, as in Poncet's time, the frontier town of Donkolah, and the limit of the Marísí dialect of the Nubian Language, (Burck. p. 523.) as is also said by Ibn Suleïm (Quatremère, ii. 12.) to be the case with respect to the other boundary of this Province. The Capital of Marís was Bukhorásh, or Bucoras,* a city less than ten days' journey distant from Oswán, (Quatremère, ii. 17. Burck. p. 497.) and therefore in or near the Wádí Hhalfah. It is probably the Abú Jorásh noticed by Abú Seláh, in his *History of the Convents in Egypt*, (Quatremère, ii. 31, 32.) which was on Mount Dhendhán, (Burck. p. 39.) about 25 miles North of Sukkóí, near the second Cataract. Bú jorásh, says that writer, is a fine and populous city, the residence of a Bishop, and it contains a Monastery bearing the same name.

Abou Djé-
rasch.

* Written Bujorásh almost invariably, and probably correctly, in the MSS. of El Makrízî, Abú Seláh, &c., for the Bucoras of Wansleb (*loc cit.*) might also be sometimes pronounced Bugoras, which would be written with a *jim* (*i. e.* the letter *j*) by the Egyptian Arabs, who commonly pronounce that letter (as their forefathers did) like our hard *g*. The *káf* (*k*) has a nearly similar sound, but it proceeds from the back of the mouth and is slightly guttural. As a single point over the letter converts the *jim* (*j*) into *khá*, (*kh*.) the alteration here adopted is perfectly admissible, especially as this name is spelt in so many different ways in the MSS. (Burck. p. 522. note 5.)

2. Macuria, called by the Arabs Makorrah, was the central Province of Nubia, and Donkolah was not only its Capital, but the Royal residence. 3. To the South of it was 'Alwah, at present called Berber, of which the first town was called Abwáb, (the Gates,) on the Eastern bank of the Nile. "Its Capital, Sóbah, was near the confluence of the White and Green Rivers," (the Western and Eastern branches of the Nile,) says Ibn Suleim, (Quatremère, ii. 23. Burck. p. 500.) "to the East of the Northern extremity of the large island (or peninsula) comprehended between those two rivers." The position of Abwáb cannot now be easily ascertained; the Southern is therefore more doubtful than the Northern boundary of Macuria; but from another passage in the same Work, (Quatremère, ii. 17.) it seems possible that the confluence of the Nile and the Atbarah was the point of separation between those two Provinces. There also the two great branches of the Nubian People met: the Núbahs, whose Capital was Donkolah, and the People of 'Alwah, who "built the great city of Sóbah." (Quatremère, ii. 29.)

Dialects.

History of Maris.

The Province of Maris, taken in its most contracted sense, as the interval between the first and second Cataract, seems to have been sometimes called Nubia; (Quatremère, ii. 16.) but that name probably belonged to the whole of the narrow valley between the first and third Cataracts, and Moshó was most probably the boundary of Maris, or Nubia Proper and Macuria, being also the limit of the two Dialects formerly and still current to the South of Egypt. (*Id.* p. 12.) The Marísí "was that now called Kenzí, and spoken in the Wádí el Kunúz from Oswán to Wádí el sebú;" the Núbí being the Makorri of the Arabian writers, or the Dongolese dialect.* These Tribes, though sprung from a common origin, were continually at war with each other, and were probably first united under Silco, about a century before the Musulmáns invaded Egypt. Their Kings for a considerable time baffled the efforts of those ambitious and sanguinary zealots to obtain a footing in their Country. Taking advantage of their narrow defiles and impassable Cataracts and Deserts, they placed strong garrisons and trusty commanders in the few fortresses which it was necessary to maintain, and "the Lord of the Mountain," as the Governor of Maris was styled, suffered no Moslim or other stranger to pass beyond his castle without a most rigid scrutiny. (Quatremère, 9, 10.) They could not, however, entirely secure themselves from the encroachments of their Northern neighbours; and, according to the Arabian Historians, (Quatremère, *Ib.* p. 42.) were reduced, at the siege of Donkolah by 'Abd-allah, Viceroy of Egypt, in A. H. 31, (A. D. 652,) to sue for Peace,† on condition of delivering up to the Moslims 360 slaves every year at the port of Al Kasr, (the Castle,) just opposite to Philæ, and the frontier town of Maris. This tribute, termed *bakt*, appears to have been originally a convention for the purpose of obtaining slaves; for the Musulmáns on their part were bound to deliver a certain quantity of wine, grain, pulse, clothes, and horses in return for the slaves brought by the Nubians. Cyriac, son of Zachary, who reigned in the first half of the IXth Century, was sent to Baghdád on an embassy to the Khalif Mo'tasim

* See the vocabularies of these Dialects collected by Burckhardt, Seetzen, Von Minutoli, Cailliaud, Pacho, Rifaud, and Scholtz.

† The Treaty then made is given by Makrizí: (Quatremère, ii. 43.) but its authenticity is perhaps disputable. According to it 'Alwah (Albadia) was not comprehended in Nubia.

bi-llah, who received him with great honour, and somewhat diminished the amount of the tribute. About the middle of the same century, when Cyriac was on the throne, the Nubians were much injured by the predatory attacks of a party of Arabs under the command of Abú 'Abd-er-rahmán el 'Omarí, supposed to be a descendant of the Khalif 'Omar. (Quatremère, ii. 59.) He was, however, driven out of Nubia by the stratagems and treachery of Zachary, one of Cyriac's sons, and at length entrapped and murdered by the Chief of a hostile Arab Tribe, towards the close of that century. In A. H. 359, (A. D. 970,) 'Abdallah ibn Suleim, the Historian of Nubia, was sent on an embassy to Donkolah, to invite the King to release himself from paying tribute by embracing Islám. In the curious dialogue which he held with this Prince, the extent and population of the Nubian dominions are clearly admitted; (*Ibid.* 83.) but the superiority of the Egyptians in civilization and opulence is equally acknowledged. The unhappy Nubians, however, who were cut off from all intercourse with any Christian Power except Abyssinia, had soon to contend with a worse foe than the Sultán of Egypt. A branch of the great Tribe of Rebí'ah, descendants of 'Adnán, established in Yemámah, came over into Egypt about A. H. 240, (A. D. 855,) and having soon dispersed themselves over the whole Country, some of their families settled in the Deserts bordering on the Upper Egypt. From being the foes they gradually became the allies of their neighbours the Bojahs, got possession of the gold mine of 'Ollákí, and founded a town called El Nemánesh, where they dug some wells. One of their Chiefs, Abú Makárim Hibet-Allah, having established himself at Oswán, and captured the rebel Abú Rakwah, received the greatest honour from Hákim bi-emri-llah, who raised him to the rank of Emír, and gave him the title of Kenz-el-daúláh, (Treasure of the Empire,) an appellation and dignity which became hereditary in his family, and gave them the name of Kunúz. They do not appear to have had any great success against the Nubians as long as the Fatimite Khalifs of Egypt retained their authority; and even on the extinction of their power, when the garrisons were withdrawn from Oswán, we find the Nubians invading Egypt with large armies. Thus in the reign of Saladin, (Saláh-el-dín,) A. H. 568, (A. D. 1173,) they besieged the Emír Kenz-el-daúláh in that city with so considerable a force that he applied to the Sultán for aid. In consequence of this, Shems-el-daúláh, Saladin's brother, was sent into Nubia, and took the fortress of Ibrím after a siege of three days. "That city," says Abú Seláh, (in his *History of the Convents in Egypt*,) "had a citadel on the top of a hill very strongly fortified. It contained a fine Church dedicated to the Virgin Mary, and covered by a dome, over which there was a large cross." The Musulmán Prince converted this Church into a Mosque, caused its cross to be burnt, and carried off all its treasures. But when the Arabian Historian adds that the number of his prisoners was 700,000, that writer's accuracy may be reasonably doubted, and it may be hoped that Shems-el-daúláh was satisfied with selling the Bishop of Ibrím as a slave, without previously putting him to the torture for the purpose of extracting a disclosure of his treasures. (Quatremère, ii. 89.) The fortress was settled, as a fief, on Ibráhim the Kurd, one of the Sultán's officers, but he kept it for only two years. Donkolah was at this time, according to the report of an Ambassador sent by Shems-el-daúláh to the King of

NUBIA.

NUBIA. Nubia, in a very wretched state, having no building of any magnitude except the Royal Palace.

Kenouss or
Kensies.

The Kunúz, who had at this time established themselves at Oswán, were genuine Arabs, and had the virtues as well as the defects of the race from which they sprang. When they had rebelled against Saladin in A. H. 570, (A. D. 1175,) and were driven out of Oswán by his forces, Poems in praise of their leaders were found among the spoils; especially one which had been rewarded by a gift of 1000 dinárs, (£600,) and a water-wheel of the same value. "In truth," says Makrízî, "the children of Kenz were very generous Emírs; their praises were resounded on all sides, and the hope of partaking of their bounty brought many strangers to their abode. The illustrious and excellent Abú-l Hasan, ibn Haram, composed a Biographical Work recording their noble qualities, and the names of those who had been their guests, or had celebrated their praises." It is probable that their hostility to the Nubians was occasionally checked by the Sultáns of Egypt, or by a community of interests when the dread of those potentates rendered an alliance with the Nubian Sovereigns expedient; for they were not masters of the tract now bearing their name, till some centuries later than the Age of Saladin. The dissensions continually arising among the Nubian Princes themselves, contributed, probably, more than any other cause, to the subversion of their power. In A. H. 674, (A. D. 1276,) Shekendeh, nephew of David, king of Nubia, came to Caíro to entreat the Sultán to interpose and repress the injustice of his uncle. Backed by a large army of Musulmán, he succeeded in placing himself on the throne, and repaid the Sultán for his aid, by engaging to pay a yearly tribute of 3 elephants, 3 camelopards, 5 female panthers, 100 fawn-coloured dromedaries, and 100 choice beeves. One half of the Royal revenue was to be paid to the Sultán, and the other expended in the support and protection of Nubia; "the Mountainous Province," about one quarter of the whole Kingdom, being, on account of its proximity to Oswán, ceded in perpetuity, and unconditionally, to the Sultán of Egypt. (Quatremère, ii. 98.) The capitation, also, rated at one dinár (12s.) per head, was then first imposed on every Nubian who would not embrace the Faith of the conquerors. The captives were so numerous that a slave could be bought for three dirhems, (2s. 6d.) and there were 10,000 for whom no purchasers could be found. Ten years afterwards Ador, King of "the Gates," (El-Abwáb, i. e. 'Alwah,) sent an embassy to the Sultán, imploring his protection, and offering an entire submission to his authority. It appears from this and other passages in which 'Alwah (Albadia) is mentioned, that it had long been separated from the Kingdom of Nubia. Of the expedition under Kuláún in A. D. 1282, which ended in the reestablishment of the deposed Prince, through the servile devotion of his Chiefs, there are ample details in the Arabic Historians. (Quatremère, ii. 109.) In the early part of the following Century, the rivalry of the Nubian Princes (who, if not misrepresented by Arab Historians, were a most depraved and faithless race) again made their Country the theatre of war, and set Musulmán armies in array against each other in the plains of Donkolah. Kenz-el-daulah, Chief of the Arabs bearing his name, after various defeats, imprisonments, and hair-breadth 'scapes, was chosen King of Nubia. (A. D. 1318.) Five years afterwards, he was, for a short time, deposed; but seems subsequently to have had undis-

turbed possession of the throne. The native Princes, however, regained the sovereignty of the Southern Provinces, for in 767 (A. D. 1366) a deputation from the King of Donkolah was sent to Caíro, to complain of the depredations and excesses of the Bení Kenz and other Arabs. A large army was immediately despatched, the rebels were defeated, and as Donkolah was now quite deserted by its inhabitants, the fortress of Derr* was fixed upon for the Royal residence. The inhuman cruelty with which the Kenzí prisoners were treated by the Sultán's Commander at Oswán, irritated instead of repressing their kinsmen, who, stimulated by a thirst for vengeance, soon retaliated on the inhabitants of that ill-fated town the horrors of which their friends had been the victims. Only twelve years afterwards similar unjustifiable and ill-judged severities produced the like disastrous consequences; and at the close of the XIVth Century the Hawárahs (a Berber Tribe) and the Bení Kenz seem to have been completely masters of the Country round Oswán, which was totally ruined in the conflict between those Tribes in the beginning of A. H. 815. (A. D. 1412.) It was at that time, probably, that the Kunúz were driven back upon Nubia, of which they had long been the real Sovereigns. But the Southern Provinces were still governed by native Princes, for Násir-el-dín, King of Donkolah, was driven by his nephew to seek for succour at Caíro, in A. H. 800, (A. D. 1397,) his title, however, seems to show that he had abjured the Christian Faith: the total extirpation of which, in Nubia, renders its continuance in Abyssinia the more remarkable. With respect to the condition of the Nubians in the XVth Century little can be gathered from the imperfect abstracts of the Arabian Historians hitherto published. The turbulence and insubordination of the military Commanders under the Mamlúk Sovereigns of Egypt, the elements of internal disorder interwoven in the very constitution of their Government, their continual exposure to attacks from the Franks on one side, and the Turks on the other, all combined to withdraw their attention from the Southern parts of their dominions; and to leave the Arabs in undisturbed possession of the Nubian confines. But the "law of retaliation," so rigidly observed by the Arabs, the parent of never-ending feuds and hostilities, contributed no doubt to retard the downfall of the throne of Dongola, by preventing the Arab Tribes from uniting, and thus assembling a body of warriors which could cope with the Nubian forces. In A. D. 1419, the Christians at Caíro were subjected to burthensome exactions and fresh humiliations by way of reprisal for the ill usage inflicted on the Musulmán by the King of Dongola; and in A. D. 1423, when Iram Is-hák, Sovereign of that Country, heard that the Church of Jeruslam had been shut up, he avenged the cause of Christianity by massacring most of his Musulmán subjects, confiscating their property, and reducing their wives and children to slavery. (Deguignes, *Hist. des Huns*, iv. 314. 320.) Christianity, therefore, was not extinct in Southern Nubia, in the middle of the XVth Century, nor had the Kingdom of Donkolah then ceased to exist: the present inhabitants of the Countries further South, moreover,

NUBIA.

* Daw or Adwá in most of the Arabic MSS.: but nothing is more common in them than blunders in foreign names, and no error more likely to arise, than this; *r* and *w* being easily mistaken for each other in the Arabic character. It is odd that the true orthography and position of *Daw*, (i. e. Derr,) escaped the sagacity of Burckhardt; but he seems to have looked only cursorily into the passage of the Kitáb-el-sulúk, cited by M. Quatremère. (ii. 117.)

NUBIA. cannot trace the chronology of their Kings further back than the latter end of that period, (Cailliaud, ii. 255.) so that the Faith of Mohammed cannot have been exclusively established there for much more than three centuries.

That the Kunúz were ultimately subdued by their more powerful neighbours the Jawáberehs and Gharbiyyehs, (a branch of the Berber Tribe of Zenátah,) and that the latter were nearly overpowered by the former is extremely probable; but that either of those Tribes sent an agent to Constantinople (Burck. 183.) to seek for aid from Sultán Selím, is a tradition which deserves no credit. That they applied to his Viceroy in Caíro is not unlikely, and that their dissensions facilitated the progress of the Bosniac soldiers sent to garrison the Nubian fortresses, cannot be doubted. To the Commanders of those troops, the fortress of Oswán, Ibrím and Sáí seem to have been granted as military fiefs, subject to the Páshá of Egypt, to whom was paid the Mírí or Imperial tribute, not to the Mamlúks, who never possessed any sovereignty beyond the boundaries of Egypt. The descendants of these Bosniac soldiers still enjoy the immunities granted by Selím II. and never revoked by his successors; and are distinguished from the Arabs and genuine Nubians, by the title of Kal'ah-jí (Castleman,) or Osmán-lí. (Ottoman.) The light brown tint of their complexion, and the character of their features, clearly mark their Northern origin; and their Aghás, (officers,) before the occupation of the Country by the troops of Mohammed 'Alí, were entirely independent of the Káshifs, or hereditary Governors of Nubia, in virtue of fermáns, which made them accountable to no one but the Sultán himself. The present Páshá, who has boldly set at naught every principle of law and equity, and swept away at one blow every title to property, private or public, throughout his dominions, is not likely to have regarded fermáns of which the Court at Constantinople scarcely knows the existence, and which it has not the power to enforce. But the rocks and sands of Nubia will always be its defence; it is too poor to excite the cupidity even of Mohammed 'Alí, and intercourse with the more civilized natives of Egypt and other strangers, will be of material advantage to the Nubians, especially if a better administration of the law repress the brutal and ruinous depredations to which they have been so long exposed; (Burck. 94.) their condition, therefore, which can hardly be rendered worse, will probably be improved by their subjection to Egypt.

Language.

The present inhabitants of Nubia are divided, as Burckhardt was informed, (p. 25. 132.) into two branches; and the tracts inhabited by them are named accordingly: the Northern part, from the Cataract to the Wádí-es-sebú', Wádí-el-Kunúz; (the Valley of the Kunúz or Kenzies;*) the Southern part from the termination valley to the Northern limits of Donkolah, Wádí-el-Núbah. (The Valley of the Nubians.) The whole are called by the Egyptians, not by themselves, Beráberah, (the plural of Berber, signifying Barbarians in the classical sense of the word, i. e. foreigners.) They speak different dialects of the same Language, which appears to have no affinity either with the ancient Egyptian or

* Burckhardt spells these words Kensí and Kenous, but the erroneous pronunciation of the illiterate natives, or his own ear deceived him. The origin of the name Kenzí, and the orthography of such writers as Makrízí and Abú-i Mahásin, leave no doubt as to the way in which those words ought to be spelt.

Western Berberí.* "It has," says Burckhardt, (p. 26.) "no Arabic sounds whatever, and is spoken all the way from Edfú to the Wádí el sebú', many of the Kunúz having settled in later times in Upper Egypt." The Government of the Bosniac Káshifs was as bad as it possibly could be; though their oppression was seldom extended to the persons of their subjects, whom they were contented to fleece and starve. The fields of the Nubians are watered by means of wheels, to the broad surface of which small pots are attached, which alternately raise the water from the well or cistern, and pour it into a spout by which it is conveyed into the proper channels. Dhurrah, or millet, (*Sorghum vulgare*), is reaped in December and January, next follows a crop of barley, and lastly a second crop of dhurrah. Tobacco is another vegetable universally cultivated, and used either with nitre (*natron*?) as a quid, or for the purpose of smoking. In the villages, round huts of mud or loose stones, in the genuine African style of building; in towns, houses round an open court in the Asiatic and Egyptian fashion, are the habitations of the Nubians. Half a dozen earthen jars and dishes, a hand-mill, a hatchet, and some sticks to form a loom, are the whole furniture of these huts. A blue linen (cotton?) shirt, or a woollen cloak, and a white linen cap "with sometimes a few rags," to represent the *sash* of a turban, are all the attire of the men; the women are wrapped up in linen (cotton?) rags or black woollen gowns, and adorned with ear-rings and bracelets of glass or straw. Tassels of glass or stones on the back of their flowing tresses, are either decorations, or amulets, or both; silver or copper rings adorn the ancles of the wealthy. To the South of Derr, nothing but a very small appendage round the waist is worn by either sex, and children everywhere go naked. An ear-ring in the right ear, worn by the young, a string of beads round the neck, a bundle of amulets in leathern cases tied round one of the arms, and a crooked knife bound just above the left elbow, are invariable additions to the clothing of the men. Their weapons are a nabbút or club shod with iron, a lance and round shield, or long lozenge-shaped target. The latter is covered with hippopotamus-skin, and is proof against a lance or sabre. Firearms and ammunition are very scarce. Bread of millet (dhurrah) ill ground and ill baked, and a very small quantity of animal food, constitute their whole diet: but they make up for this abstinence by the use of date-wine (*agua ardiente*) and búzah, (beer, v. De Sacy, *Abdillatif*, p. 572. *Chrest. Arab.* i. 149. 2d edit.) which is "pale and muddy, but very nutritious." Except dates and a few grapes, no fruit is seen in Nubia. The climate, though oppressively hot, is not unhealthy, owing, no doubt, to its dryness, for it is evidently the union of extreme heat and moisture which causes the insalubrity of most Tropical Countries. The small-pox, when prevalent, is extremely fatal, but the Plague is unknown; nor will this surprise any one who has observed that extremes of heat or cold always arrest the progress of that disease, which, though so

* Burckhardt observes, (p. 25.) that the natives of Berber, which lies on the Eastern side of the river immediately above its confluence with the Atbarah, "are sometimes considered as belonging to the Núbah;" and Seetzen, who collected a copious vocabulary of each dialect, at Caíro, received Burckhardt's Kenzí, as the Language of Donkolah, and his Núbah, as the Berber dialect; but Burckhardt, as he passed through the Countries where each dialect is used, could not be mistaken as to their proper localities.

NUBIA. Common in Turkey, is scarcely known in Persia. The Nubians are well-made, muscular, strong and handsome, with thick but not woolly hair, no whiskers, and little beard, a mere lock hanging from the chin, as represented in the Egyptian statues. The women are sometimes handsome, and have generally a sweet expression of countenance and engaging manners; the outdoor work is done by the men, that indoors by the women. "Of all the women of the East," says Burckhardt, (p. 145.) those of Nubia are the most virtuous; and this is the more praiseworthy, as their vicinity to Upper Egypt, where licentiousness knows no bounds, might be expected to have some influence upon them. During my stay at Esné, girls came every morning to my lodging to offer milk for sale; the Egyptians boldly entered the court-yard and uncovered their faces, a behaviour equivalent to an offer of their persons; but the Nubians (of whom many families are settled at Esné) stood modestly before the threshold, over which nothing could induce them to step, and there they received the money for their milk without removing their veils. A Nubian wife is bought for 12 mahbúbs; (= 36 piastres = 37s. ;) an 'Abábideh is worth six camels, but three of them are given back as the bride's dowry. The husbands are very jealous, and, on the slightest suspicion of infidelity, carry their wives to the river's side in the night, lay open their bosom with a knife, and throw them into the water, "to be food for the crocodiles." Prostitutes, female or male, so universally met with in Egypt, were seen nowhere in Nubia, except at Derr, and the detestable vices so much fostered by the Mamlúks, were unknown there beyond the families of the execrable Káshifs. Coarse woollen mantles and mats, drinking-cups and dishes woven from the leaves of the date-palm, are the only manufactures known to the Nubians. They are fond of singing, and have very sweet airs, which they accompany on the tombúrah, a five-stringed mandoline covered with gazel skin. Kind-hearted, honest, (a virtue rare among savages,) hospitable, and inquisitive, the Nubians appear to be a people, who, with a better Religion and a better Government, would rank among the happiest and most estimable of mankind. Their Christianity, indeed, to judge from the atrocities committed by their Princes, had little more than the outward form of one of the worst corruptions of the Christian Faith; but their adherence to the Religion of their forefathers under such manifold and powerful temptations to abjure it, must command the respect of all who profess that Faith, and as the crimes of the Nubian Kings are known only by the testimony of Mohammedan writers, their Political and Religious opponents, those charges must be received with great circumspection: the more so as the Nubians were gifted with qualities which made them dangerous foes. "They are," continues Burckhardt, (p. 147.) "of a much bolder and more independent spirit than the Egyptians, and ardently attached to their native soil. At Caíro, where they are much employed as porters, they are preferred to the Egyptians on account of their honesty. They are not disposed to commercial pursuits or to wander from their native village, and except they have lived in Egypt, are Musulmán only in name; Alláhu akbar (God is great!) being the only prayer they know." The narrow valley of the Nile, from Oswán to the Southern boundary of the Dár-el-

National character.

Women.

Mahás, measuring about 500 miles in length, and half a mile in breadth, is supposed by Burckhardt (p. 148.) to have a population of 100,000 souls; but this estimate is evidently much too high, and perhaps one-third of that number would be nearer the truth.

Of the Arabs inhabiting the Eastern Nubian Deserts, the principal Tribes are the 'Abábideh and the Bishá-riyyeh. The first who occupy the Desert between Koseir and Derr, escort the caravans from Egypt to Berber, and are celebrated for their fleet camels, (*hajín*.) deal largely in Senà-Mekkeh (*i. e.* Senà of Mecca, the officinal Sena) and charcoal. They have a bad reputation, and are esteemed very faithless. Those who encamp near the Bisháriyyeh, speak their Language, which Bruce erroneously supposed to be the same as that of the people of Donkolah. (*i. e.* 90. 8vo. edit.) Their principal Tribes are El Fokará, El 'Ashábát, and El Meleikáb; and many have settled on the Eastern bank of the Nile, in Upper Egypt. (Burck. 148.) They are continually at war with the Ma'áziyyeh and Atáwineh Arabs who inhabit the Desert between Koseir and Suweis (Suez) on the North; and with the Bishá-riyyeh on the South. The latter are not of the Arab but of the Bojah race, whose Tribes extend from Sawákin to Masauwah opposite to Mokhá. They deal in Senà of the best quality, sheep, and ostrich-feathers, have no cattle but sheep and camels, are very fond of blood and raw meat, most adroit and notorious thieves, and very treacherous to strangers, though kind, hospitable, and honest to each other. Their principal Tribes are the Ahmed-áb, Batra, 'Alí-áb, Kámhet-áb, Hamdora, Eri-áb, Hazz, Modúr-áb, Kameíl-áb, and El 'Amárer, often at war with each other, and very wild and superstitious: a lad whom Burckhardt met with at Esné (p. 151.) ran away as soon as some questions were asked about his Language, imagining that the inquirer meant to contrive spells for injuring his Countrymen; just as some of the Sawáhil from the coast of 'Ajám near Cape Guarda fuy, and serving in the corps of Sháhín Beg at Jizeh, when Seetzen asked similar questions, took him for a conjuror who wished to rob them of their mother Tongue. NUBILE. **NUBILE**, It. and Fr. *nubile*; Lat. *nubilis*, from *nub-ere*, id est *operire*, to cover; *nubis instar*. See **CON-NUCULA.** **NUBIAL.**

Marriageable; of age for marriage.

The cowslip smiles, in brighter yellow dress'd,
Than that which veils the *nubile* virgin's breast.

Prior. *Solomon*, book i. *Knowledge*.

NUCIFRAGA, from the Latin *nux*, a nut, and *frango*, I break. Brisson, Temm.; *Nutcracker*, Latham. In *Zoology*, a genus of animals belonging to the family *Coraciidae*, order *Passeres*, class *Aves*.

Generic character. Beak long, conical, straight, slender at the point; upper mandible rounded, not having any projecting ridge, and longer than the lower, but both terminating in an obtuse, depressed point; nostrils basal, round, open, and hidden by hairs which project forwards; feet having three toes in front and one behind, the outer joined at the base, the middle shorter than the tarsus; wings pointed, first quill of moderate length, second and third shorter than the fourth, which is the longest.

This genus was included by Linnæus among the Crows, but separated from them by Brisson, and is the only European species which connects the Crows with the Woodpeckers, which it resembles not only in manners but also in the form of the beak of many foreign Woodpeckers, whilst it differs from the Crows in having the beak long and its point depressed, which in them is compressed, and thus has an instrument which answers the purpose of the long, extensible, pointed tongue of the Woodpeckers.

N. Caryocatactes, Briss.; *Corvus Caryocat.* Lin.; *le Casse Noir*, Buff.; *Nutcracker*, Lath. Length thirteen inches; bill two inches long and horn-colour; upper part of the head and back of the neck black; general colour sooty-brown varied on the back with large, triangular, white spots; under parts more white, the white running longitudinally on each feather; greater wing-coverts tipped with white; rump white; quills of the tail terminating in a large white space, the other part black; legs horn-colour. In the female the brown has a reddish tinge. The Nutcracker is very rare in England, but common in Germany, also in Sweden and Denmark, inhabiting the woods of mountainous districts. In some Countries it is a regular bird of passage, in others at intervals of some years only. It feeds on insects, but more commonly on their larvæ, in search of which, like the Woodpecker, it climbs trees, and pierces their bark by repeated strokes with its bill; it also eats walnuts, acorns, the seed of pine-cones, and sometimes eggs and young birds. It lives in holes in the trees, and lays five or six eggs of a tawny-grey colour, slightly spotted with light greyish-brown.

See Temminck, *Manuel d'Ornithologie*; Pennant, *British Zoology*.

NUCLEOLITES, in *Zoology*, a genus of *Echino-dermata*.

Generic character. Body oval, or cordiform, slightly irregular, convex, composed of a solid crust, and divided into compartments, radiating from the summit to the base; mouth subcentral; anal aperture above the margin.

All the species are fossil.

NUCULA, in *Zoology*, a genus of *Acephalous Mollusca*.

Generic character. Shell bivalve, inequilateral; beaks approximate; hinge line bent in the middle, with a spoon-shaped, projecting tooth at the angle; and nu-

merous, lateral, sharp-pointed teeth; ligament external; NUCULA. margin crenulated, or plain.

Type of the genus, *Arca nucleus*, Linnæus. Turton, *Britt. Bivalves*, pl. xiii. fig. 4. Several species, four of which are found on the coasts of Britain in a recent state, and upwards of twenty in a fossil condition.

NUDARIA, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. Palpi two, minute, curved upwards, squamous, triarticulate, the two basal joints of equal length, the terminal minute, cylindric; *maxillæ* longer than the head; *antennæ* simple in both sexes, ciliated beneath in the males; the basal joint robust, elongate, with a dense, hairy tuft; head with a dense fascicle of hairs between the antennæ; *thorax* not crested; *abdomen* pilose, slender in the males, with a tuft at the apex; more robust in the females, with the tip rather conical; wings slightly deflexed, more or less elongate, rounded posteriorly, diaphanous, pilose; legs rather slender, naked, the two posterior *tarsi* with spurs at the apex. *Larva* exposed, hairy; *pupa* obtuse.

Type of the genus, *Phalæna Att. mundana*, Linnæus. *Nu. senex*, Stephens, *Illust. Britt. Entomology*, (Haust.) vol. ii. p. 84. pl. xviii. fig. 2. Four species, three of which are British; they frequent damp hedges, and are crepuscular in their period of flight.

NUDITY, Fr. *nud*, *nudité*; It. *nudo*, *nudità*; Sp. *nudo*, *desnudez*; Lat. *nuditas*, from *nud-us*, naked, *quasi ne dutus*, hoc est, *non indutus*. (See Vossius, in *v. Exuo*.)

Nakedness, bareness.

The world's all title-page; there's no contents;
The world's all face; the man who shows his heart,
Is hooted for his nudities, and scorn'd.

As I am desirous of adjusting the pretensions of the three Le Fevres, and should be unwilling to attribute to either of the wrong what his modesty might make him decline, I am inclined to bestow the nudities on Roland. (Le Fevre.)

Walpole. *Anecdotes of Painting*, vol. iii. ch. i. p. 52.

NUGA'CIOUS, Lat. *nugax*, *nugatorius*, from *nugæ*, as applied to any thing trifling and frivolous. Vossius derives from the Hebrew and Syriac, with whom the word meant *mæror*; then funeral verses were so called, and, from their character, any trivial verses or tales; any thing trivial.

Trifling or trivial; frivolous, idle; impertinent, insignificant.

'Tis these *nugacious* disputations, that have been the great hindrance to the more improvable parts of learning.

Glanvil. *The Vanity of Dogmatizing*, ch. xvii. p. 165.

But such arithmetical *nugacities* as are ordinarily recorded for his, in dry numbers, to have been the riches of the wisdom of so famous a Philosopher, is a thing beyond all credit or probability.

More. *The Defence of the Philosophic Cabbala*, ch. i. p. 82.

As for the received opinion, that putrefaction is caused, either by cold, or peregrine, and preternatural heat, it is but *nugation*.

Bacon. *Natural History*, Cent. ix. sec. 836.

It has happened to me more than once, that a sentence, which seemed at first to contain something highly ingenious and profound, when translated into words familiar to me, appeared obviously to be a trite or a *nugatory* proposition.

Stewart. *Philosophy of the Human Mind*, ch. iv. sec. 4. p. 201.

NUISANCE. See **NOY**.

NUISANCE, in *Law*, signifies any thing that worketh hurt, inconvenience, or damage. Nuisances are of two kinds, *private* and *public*. A *private* Nuisance is defined to be any thing done to the hurt or annoyance of the lands, tenements, or hereditaments of another; a *common* or *public* Nuisance is an offence against the

NUI-SANCE.

NUI-
SANCE.
—
NULL.

public, either by committing or doing a thing which tends to the annoyance of all the King's subjects, or by omitting to do a thing which the common good requires. The following are specimens of *Private Nuisances*:—corrupting the air in the vicinity of another man's house with noisome smells, as by carrying on the trade of a tanner or tallow-chandler; erecting a smelting-house so near the land of another that the vapour kills his corn and grass; obstructing a water-course so that the mill of another is deprived of its regular supply of water. These and the like are injurious only to individuals, and not to the community at large. In some cases the Law allows the aggrieved individual to *abate* the Nuisance; *i. e.* to pull down and remove the object by which he is annoyed. As in the above-mentioned case of the water-course, the miller may enter upon the land of the person who erected the Nuisance, and restore the water-course to its original condition. The abatement, however, must be effected peaceably; and it is a dangerous remedy, because if the abator does more than is requisite for the purpose of abating the Nuisance, he becomes a trespasser, and is liable to an action. The more usual remedy is, instead of abating the Nuisance, to bring an Action for damages against the person who erected it, and, if the Nuisance be not removed, a second Action, and if necessary a succession of Actions may be brought for continuing it, until it be removed. There are two other remedies called an *Assize* of Nuisance, and a Writ of *quod permittat prosternere*, which it is unnecessary to explain, as they are out of use.

Common Nuisances are, as we have seen, of two kinds, Nuisances of *commission*, and Nuisances of *omission*, both of which may be exemplified by the common instances of Nuisances to a highway. If a person digs a hole in a highway, or lays a log of wood across it, he *commits* a Nuisance, by which all the King's subjects are aggrieved, because the highway is open to all. If in consequence of a common Nuisance of this description an individual receives a special injury, (as if his horse fall into the hole, or stumble over the log, and be hurt,) the injured individual may bring an Action for damages. But unless a particular injury be sustained, no Action will lie against the person who committed the Nuisance; but the offence is considered to be a misdemeanour, and the offender may be proceeded against by indictment, and, if found guilty, may be punished by fine and imprisonment. Neglecting to repair a highway is an instance of a Nuisance of *omission*: and the inhabitants of the Parish, or other persons, who ought to repair the road, may be indicted. If the inhabitants of the Parish be found guilty, a fine is imposed upon them, which may be levied on any one or more of them, and is applied to the repair of the road under Stat. 13 Geo. III. c. 78. The individuals upon whom the fine is levied may be reimbursed by a rate upon the Parish. It is usual not to levy the fine, if the Parish will forthwith put the road into proper repair. The great distinction, therefore, between a Private and a Public Nuisance is, that the latter, except in particular cases, is punishable only by indictment, while the former is never punishable by indictment, but, like other Civil injuries, forms the subject of a Civil action.

NULL, *v.* See to ANNUL. Fr. *nul*, *nullité*; It. *nullo*, *nullità*; Sp. *nulo*, *nullidad*; Lat. *nil*, *nihil*, nothing. To null, To bring or reduce to nothing; to a thing of no force or worth; to render invalid, worthless, or inefficient; to invalidate.

NULL.
—
NUM.

The pope being minded & determined to give sentence for the invalidity and nullity of the king's first pretended matrimony, hath conceived and established in his own conscience a firme and certaine opinion and persuasion, that he ought of iustice and equity so to do. Fox. *Martyrs*, fol. 979. King Henry VIII.

Thy fair enchanted cup and warbling charms
No more on me have power, their force is null'd.
Milton. *Samson Agonistes*, l. 935.

There is a principle in the world, that does tug stoutly and resolutely against the mechanick laws of matter, and forcibly resists or nulls one common law of nature for the more seasonable exercise of another. More. *Antidote against Atheism*, book iv. ch. ii.

The kinds of ciphers, besides the simple ciphers, with changes, and intermixtures of nulls and nonsignificants, are many, according to the nature or rule of the infolding: wheel-ciphers, key-ciphers, doubles, &c. Bacon. *On Learning*, book ii. p. 83.

As for example, if the generality of the guides of Christendom should be grosse idolators, bold nullers or abrogators of the indispensable laws of Christ by their corrupt institutes.

More. *Defence of the Moral Cabbala*, fol. 182.

The augures, or soothsayers, had found, that some token or other of the birds (in which, and all sorts of their divination, the Romans were extremely superstitious) had not only foreshewed little good, when they were chosen, but had also nullified the election.

Ralegh. *History of the World*, book v. ch. ii. sec. 8. fol. 605.

It is not the three-headed hell-hound Cerberus, not the river of teares and weeping, Cocytus, which cause the fear of death to be infinite and interminable: but it is that menacing intimation of nullity or not-being, and of the impossibility to return again into a state of being, after men once are gone and departed out of this life; for there is no second nativity nor regeneration, but that not-being must of necessity remain for ever, according to the doctrine of Epicurus

Holland. *Plutarch*, fol. 497.

After many sessions, on the twenty-third of May, (1533) sentence was given with the advice of all that were there present, declaring it only to have been a marriage *de facto*, but not *de jure*, pronouncing it null from the beginning.

Burnet. *History of the Reformation*, vol. i. p. 240. Anno 1533.

It is to pull Christ down from the cross, to degrade him from his mediatorship; and in a word, to nullify and evacuate the whole work of man's redemption. South. *Sermons*, vol. ii. p. 292.

And thus having shown the nullity of this argument I think it is clear that Christ descended not into purgatory, for that which is not, cannot be descended into. Id. *Ib.* vol. vii. p. 9.

NULLIFIDIAN, having no faith, (*nulla fides*), faithless.

A solifidian christian is a nullifidian pagan; and confutes his tongue with his hand. Feltham. *Resolve* 47.

NUM, *v.* Usually written numb. Skinner
NUM, *adj.* derives from the old English verb,
NUMMEDNESS, to nimm; A. S. *nim-an*, to take
NUMNESS, away. See BENUM and NIM. Num,

In dayely communication the mater sauoureth not, excepte it be
as it were seasoned with horrible others, as by the holye blode of
Christe, his woundes, whiche for our redemption he paynfully
suffred, his glorious harte, as it were *numbles* chopped in pieces.

Sir Thomas Elyot. The Governour, book iii. ch. vii.

NUMENIUS, Brisson, Temm.; Curlew, Pen. In
Zoology, a genus of animals belonging to the family
Longirostres, order *Grallæ*, class *Aves*.

Generic character. Beak long, slender, arched, and
compressed, its tip hard and slightly obtuse; upper
mandible extending beyond the lower, rounded towards
the tip, grooved through three-fourths of its length; nos-
trils lateral, linear, and situated in the grooves; space
between eye and beak covered with feathers; legs slender,
naked above the knee; three toes in front, connected as
far as the first joint, one behind articulated on the tarsus,
and touching the ground; wings of moderate length,
the first quill longest.

The birds forming this genus were included by Lin-
næus among the *Scolopaces*, and by others among the *Ibes*,
from both of which, however, they distinctly differ both
in form and habits. They are very shy, frequent the
sea-coast and districts covered with dry mud, but always
in the neighbourhood of water or marsh, feeding on
earth-worms, slugs, terrestrial and aqueous insects.
During Summer they retire to mountainous and unfre-
quented parts, where they pair and breed. They emi-
grate in large flocks, but during breeding time live only
in pairs; their flight is high and long continued. They
moult but once a year, and the only distinction between
the young and old birds is the slighter curve and shortness
of the beak of the former.

N. Arquatus, Briss.; *Scolopax Arquata*, Lin.; *le*
Courlis, Buff.; *Curlew*, Pen. Two feet in length, and
sometimes more; breadth three feet and a half; bill five
inches long, upper mandible blackish-brown, lower flesh-
coloured; plumage light ash, marked on the neck and
chest with longitudinal brown spots, and some feathers
of these parts tinged with ferruginous; belly white,
marked with narrow black lines; dorsal and scapular
feathers black, in the middle edged with ferruginous;
tail whitish-ash, striped transversely with brown bands;
legs bluish-grey. The tinge in the female more ashy
and the ferruginous less clear. This species is said to
be very common in Asia; it is a bird of passage on the
Dutch, French, and English coasts, and very common
in many parts of Europe. It builds in dry places, most
commonly in the grass which grows in the heath and
mud; often also on the downs by the sea-side; it lays
four or five eggs olive-coloured, with brown and blackish
spots and wavings.

NUMBER.

NUME-
NIUS.

NUME-
NIUS.

N. Phæopus, Briss; *Scolopax Phæopus*, Gmel.; *le Petit Courlis ou Courlieu*, Buff.; *Whimbrel*, Pen. About sixteen inches long, and sometimes less; bill two inches and three-quarters long, blackish, but red towards the base; all the plumage light ash, with longitudinal brown stripes on the neck and chest; upon the middle of the head a longitudinal, yellowish-white stripe, having on each side a brown one of double the breadth; under parts white; back and scapulars deep brown in the middle, edged with light brown; tail ashy-brown, striped obliquely with brown bands; legs leaden coloured. These birds are less common on the English coasts than Curlews; they visit Spalding, where they are called *Curlew Knots*, in large flocks in April, but leave that place in May; Pennant suspects it is by this route that they pass to the Scotch Highlands which he considers their breeding place. They are birds of passage in the temperate and Southern parts of Europe, and Temminck states that they breed in the Arctic Circle and in Asia. From whatever part of the World they are brought they resemble each other closely in the colour of their plumage.

N. Longirostris, Wils.; *Long-billed Curlew*. Twenty-five inches in length, and three feet three inches in extent; bill eight inches long, and nearly straight for half its length, and curving considerably towards its extremity, which ends in an obtuse knob overhanging the lower mandible; its colour black, except towards the base of lower mandible, which is pale flesh-coloured; general colour of plumage above black, spotted and barred along the edge of each feather with pale brown; chin, line over eye, and circle around it, pale brownish-white; neck reddish-brown, streaked with black, spots on breast more sparing; belly, thighs, and vent plain rufous; primaries black on the outer edge, pale brown on the inner and barred with black; shaft of outer one white; other part of the wing pale reddish-brown, undulated with black; tail slightly rounded, herring-boned with black; legs and naked thighs pale light-blue or leaden. This species is by some considered as merely a variety of the European, but Temminck agrees with Wilson in making it distinct. Is said to breed in Labrador and the neighbourhood of Hudson's Bay; and has a loud whistling note.

N. Borealis, Temm.; *Scolopax Borealis*, Wils.; *Esquimeaux Curlew*. About eighteen inches long, and thirty-two in extent; bill four inches and a half, black towards the tip and purplish at the base; upper part of the head dark brown, divided by a narrow brownish-white stripe; back of neck streaked with dark brown, front of neck and breast pale brown; upper part of body pale drab centered and barred with dark brown, and edged with spots of white on the outer vanes; first three primaries black, with white shafts; rump and tail-coverts barred with dark brown; belly and vent white, the latter zig-zagged with brown lines, legs and naked thighs pale lead colour. From the beginning of August to the beginning of September they are found on the hills about Chatteux Bay on the Labrador coast, keeping on the open grounds, and feeding on the *Empetrum nigrum*; they arrive at Hudson's Bay in April or early in May, breed to the North of Albany fort among the woods, return in August to the marshes, and disappear entirely in September, when they return to the shores of New Jersey.

See Temminck, *Manuel d'Ornithologie*; Pennant, *British and Arctic Zoology*; Wilson, *American Ornithology*.

NUMERATE, v. }

Dryden. Absalom and Achitophel.

I would, in particular, recommend this author's method of recollecting dates, by substituting letters for the *numeral* cyphers; and forming these letters into words, and the words into verses.

Stewart. Philosophy of the Human Mind, part ii. ch. v. sec. 6. p. 460.

On Coins the *numerals* are often placed in retrograde order; which makes no difference in the value, as every letter is appropriated to its number.

Pinkerton. On Medals, vol. ii. p. 205. *Appendix*, part i. No. 2.

It was always found, that the augmenting of the *numeral* value did not produce a proportional rise to the prices, at least for some time.

Hume. Essay 3. vol i. p. 284.

Numeration is the reading of any number in words that is proposed or set down in figures.

Hutton. Course of Mathematics, &c. vol. i. p. 6.

NUMERIA, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. *Palpi* two, distinct, subhorizontal, compressed, acuminate, projecting beyond the forehead; triarticulate, the basal joint somewhat robust, curved; the second elongate, slightly attenuated at the tip; terminal very minute, placed obliquely; *maxillæ* short. *Antennæ* moderate, each joint in the male, excepting four or five at the apex, producing on either side a short, incurved, ciliated twig; and of the females distinctly produced within, facing a serrated edge; head small; eyes globose; *thorax* slender, slightly squamous; wings entire, pulverulent, the anterior with a transverse dolabriform fascia in the middle, the hinder margin obscurely angulated; the posterior rounded; *abdomen* slender, acute at the apex in the females. *Larva* with ten legs, elongate, geometric, slightly attenuated in front; head deeply emarginate, the eighth segment with two, and the tenth with one tubercle; *pupa* formed in a folliculus.

Type of the genus, *Phalæna geometra pulveraria*, Linnæus. Albin, pl. xcvi. fig. d—f. Three species, one of which is indigenous.

NUMIDA, so called from its original Country, Lin.; *Pintado*, Penn. In *Zoology*, a genus of animals belonging to the family *Gallidæ*, order *Gallinacæ*, class *Aves*.

Generic character. Beak short and rather strong, the upper mandible curved, convex, and vaulted, its base covered with a naked skin falling on either side as a kind of wattle; head bare or feathered, having on the forehead either a bony crest or a tuft of feathers; nostrils lateral in the circle, and separated by cartilage; tail short and pendulous, consisting of fourteen or sixteen quills; wings short, the first three quills graduated and shorter than the fourth; tarsi smooth, the three front toes connected together by membrane, the hind toe articulated with the tarsus, no spurs.

The birds composing this genus are natives of Africa, but some of them are now spread over almost the whole Globe: they live wild in the Southern part of the African Continent, congregating in large flocks during the day-time about the marshes and rivers in search of food, and at night roosting in the forests. The partial webbing of their feet adapts them to the marshy districts in which they feed; but the shortness

of their wings prevents them from flying well or to any great distance. They feed on land and water insects, worms, snails, &c., and destroy buds and flowers. They utter a shrill note similar to the creaking of a door on its hinges, and are very restless and quarrelsome.

N. Meleagris, Lin.; *le Peintade*, Buff.; *Guinea Pintado*, Pen. Rather larger than our common Cock, measuring from the beak to the tip of the tail twenty inches; the wings when folded extend an inch beyond the origin of the tail, which is short and depressed, so that it gives to the body a very rounded form; on the top of the head is a bony crest, somewhat resembling a helmet, and covered with a bluish-red skin; at the base of the bill, on either side, is a wattle, bluish in the male and red in the female; the upper part of the neck is not feathered, but sparingly covered with a few straggling hairs, and the skin ashy-blue; the general colour of the plumage is blackish-blue, with spots of white of a more or less rounded form, which from their resemblance to pearls have led to the name *Pearly Hen*, often applied to this Pintado. The chest, however, is ashy-blue, without any spots; the primary alar quills are white, the others of similar colour to the body, spotted, and streaked longitudinally with white; the beak horn colour; legs reddish-brown, and claws yellow. The Pintado is native of the Western coasts of Africa, especially towards the Southward, from the Cape of Good Hope to Guinea, where in the wild state it lives in large flocks, several broods consorting together, and during day-time visiting the marshes and rivers in search of food and to quench their thirst, but at night retiring to the woods, in the trees of which they roost. From this source they have been spread nearly over the whole Globe, and become thoroughly domesticated, in which state their size exceeds, as is usual, those which are wild.

They are restless and noisy birds uttering a harsh, shrill croak, which Latham has compared to the noise of a door creaking on its hinges, and corresponding to the syllables *ceuh-ceuh*, pronounced violently, and in a shrill tone. Eternal plagues of a poultry-yard, the Pintados attack immediately upon their entrance every kind of bird, and keep up with them a continual warfare; and Temminck states that he has been obliged to give up attempting to breed them in the woods, in consequence of their quarrelsome disposition, driving away the Pheasants which had previously fed there. They often roll themselves in the dust to get rid of the insects with which they are infested, and scratch up the ground like other poultry, but do not persevere so earnestly in seeking for food, and therefore require to be fed with grain regularly once or twice a day. When in the fields they feed on grasshoppers, snails, worms, and ants, and also destroy both buds and flowers; they eat more than common poultry, probably on account of the shortness of their alimentary canal.

One male is sufficient for eight or ten Hens, which lay about the latter end of May, or the beginning of June, from sixteen to twenty-four eggs; the shells of which are very hard, of a yellowish-white colour, spotted with little brown dots. They do not sit well, and it is therefore better to put the eggs under a Common Hen, which sits more closely and takes better care of the young ones when hatched. They burst the shell in three weeks and three or four days; are extremely delicate, require especial care to rear, and should be put in a dry situation, where insects are plentiful. Till they

NUMIDA.

NUMIDA. have become six months old they have neither crest nor wattles, and the time at which they begin to appear is a critical period for the young Pintados.

There can be no doubt that the Guinea Pintado is the bird which was known to the Greeks and Romans by the name *Meleagris*, which, however, has been applied wrongly by the older Naturalists as the generic title of the Turkeys, and has been so firmly established by use, that confusion only would be excited by attempting any change. The following description of the *Meleagris* given by Athenæus, after Clytus Milesius, a disciple of Aristotle, is strikingly characteristic of the Guinea Fowl, or Pintado; he says, "They want natural affection towards their young; their head is naked, and on its top is a hard, round body, like a peg or nail; from its cheeks hangs a red piece of flesh like a beard; it has no wattles like common poultry; its feathers are black, spotted with white; it has no spurs, and both sexes so nearly resemble each other as not to be distinguishable at sight." Varro and Pliny also take notice of their spotted plumage and the gibbous substance on their heads. Into these birds the Ancients believed the sisters of Meleager were changed, and the spots on their plumage to be the trace of their tears.

N. Mitrata, Pallas; *le Peintade Mitrée*, Tem.; *Mitred Pintado*, Lath. About the same size as the preceding; the tarsus three inches long, the middle toe with the claw rather more than two and a half; in the adult bird the tubercle on the head rises about an inch and a half above the skull; two little membranes originate at the angle of the upper mandible, and a third extends along the naked part of the neck; the tubercle, the top of the head, the space between the eyes and beak and the tips of the wattles are blood-red, the other naked part of the neck is light blue tinged with violet, and slightly sprinkled with light and dark hairs; the black colour of the plumage deeper, and the white spots more regular than in the last species; the great quills are not white, but of the same colour as the rest of the plumage; the lower part of the neck and the chest blackish-grey, with narrow, transverse streaks; the beak yellowish-red; the legs and claws blackish-grey. It has been found wild in the Islands of Madagascar, and also on the Southern part of the African Continent. In habits it resembles the Guinea Pintado, and utters the same shrill, disagreeable cry.

N. Cristata, Pall.; *le Peintade Cornal*, Tem.; *Cornal Pintado*. Not so large as either of the preceding; its horn-coloured beak has a bluish cere in which are placed the nostrils; it has no throat-wattle, but a little skinny appendage, or longitudinal fold, on each side of the lower jaw; the throat, upper part of the neck, and occiput are covered with bare skin, deep blue on the back and sides, becoming greyish about the ears, and crimson on the front of the neck; and upon the bare skin are a few very delicate black hairs; the top of the head has a large crest of black feathers with very delicate webs, the greater part of which falls back upon the nape, whilst those in front, at the base of the upper mandible, incline to the bill; all the plumage is black, the neck and the upper part of the chest unspotted, but the other parts dotted with little bluish-white dots, not bigger than a grain of millet seed, and surrounded with a narrow circle of very light blue; the primaries are blackish-brown, the secondaries partly of that colour, and having four longitudinal stripes along the stem; three or four of these feathers have a broad,

VOL. XXV.

white band, which edges the whole length of the outer web; the other secondaries, which are nearer the body, are streaked longitudinally with bluish-white; the tail is waved with bluish-white on a black ground; the legs blackish. This species is found in the Great Namaquoi, and the interior of Guinea, where they live in flocks of some hundreds, and at daybreak and towards evening make the deserts ring with their harsh and discordant cries. Their habits are like those of the preceding species.

See Linnæi *Systema Naturæ* a Gmelin; Temminck, *Histoire Naturelle Générale des Gallinacés*; Pennant, *British Zoology*.

NUMIDIA, or the Land of the *Numidæ*, appears anciently to have comprehended the whole of the Northern coast of Africa between the Rivers *Molochath*, or *Mulva*, (Mulúyah, or Mulwiyyah,) and *Tusca*, or *Rubricatus*. (Wádí-l-Berber.) The Southern neighbours of the *Numidæ* were the *Gætuli*, probably the Fúlaks, or Fellátaks of modern times, and the *Melāno Gætuli*, (Black Gætulians,) inhabiting the banks of the Niger, *i. e.* the genuine Negroes, who appear to be still receding before the Africans of the tawny race. The *Numidæ*, whose name was converted into *Nomades* by the Greeks, in order to accommodate it to their own language, were, at the time of the Punic War, subdivided into two principal States, the *Massæsyli*, or Western, and the *Massyli*,* or Eastern Numidians. The first of these subdivisions is celebrated in History as the Kingdom of Syphax; the second, as that of Massinissa; and as the former was reduced to the rank of a Roman Province by the Emperor Claudius and named *MAURITANIA Cæsariensis*, it has been already noticed in this Work, (*supra*, 48.) The latter, called the New Numidia by Ptolemy, (*Geogr.* iv. 3.) and Numidia, without any distinctive epithet, by Pliny, (*Nat. Hist.* v. 2.) has been denominated Numidia Proper by Cellarius, (*Notitia Orbis Antiq.* iv. 5. 5. tom. ii. p. 899.) as being that part of Africa to which the name of Numidia was for the longest period and most invariably given. Its Western boundary was the River *Ampsagas*, (now called Wádí-l-kabír, the Great River, as being the largest in that neighbourhood,) which flows into the sea through a narrow valley, implied by the term Wádí, in 36° 58' North and 6° 16' East. A little to the West of its mouth is Cape *Tretum*, (Strabo, xvii. p. 829. 832. Ptolem. *Ibid.* p. 97.) called Seb'ah Ruus (Seven Heads) by the Arabs, and Bugiaroni by the Italian sailors, one of the largest and most prominent headlands on that part of the coast, and forming the Western extremity of the Numidian Gulf, (*Sinus Numidicus*,) bounded on the East by Rás-el-hadíd, (Iron Head,) a little to the West of *Culucitanum*.† (*Tabula Peutingeriana*, and D'Anville's Map.) On the Eastern side of *Tretum* was the Greater *Collops* or *Cullu*, (Plin. v. 2.) called by the Arabs El Koll.‡ About 30 miles to the South of which was *Rusicada* or

* *Massyli* and *Massæsyli*, evidently compounds of the same word, were distinctive epithets of cognate Tribes, and probably significant terms. If, as is probable, the Berbers are the descendants of the ancient Numidians, their Language, when sufficiently known, will, perhaps, afford a clue to the meaning of these names. The penultima of *Massyli* and *Massæsyli* is made short by Dionysius, (*Perieg.* v. 187.) but long by the Latin writers. (Silius Ital. xvi. 170. Luc. iv. 682. Martial. ix. 23. 14.)

† *Culucitanum* seems to be the Little Collops of Ptolemy, 1° 40' East of *Rusicada*; but if so, that Geographer has transposed *Collops Parva* and *Tacatya*, which was probably 20' East, instead of West of Kullukitan, or Little Collops.

Rusicada.	Rusicade, (Sucaicada, Leo, p. 538.) called Stora* in the sea charts, says Shaw. (p. 47.) The shore here makes a considerable sweep; and, about 35 miles to the East, the gulf is terminated by the narrow mountainous headland of Rás-el-hadid, (Iron Cape,) running out to the North-West. To the East of it, about 30 miles, is the <i>Tacatua</i> of Pliny, (v. 2.) and <i>Tacatya</i> of Ptolemy, (iv. 3.) a neighbouring promontory being now called Rás Tagodeit. This mountainous tract, which extends to the neighbourhood of Bónah, was evidently the <i>Pappua Mons</i> of Procopius, (<i>De Bello Vandal.</i> ii. 4.) which forms many bold promontories, and has deeply indented shores. Its Eastern extremity, the Horse's Head, (ἵππου ἄκρα, Scylax, <i>Peripl.</i> p. 150.) is now called Rás-el hamrà. (Red Cape, Mavera† in Captain W. H. Smyth's Chart.) A smaller promontory a little to the South of it, supposed by Shaw to be the <i>Stoborum</i> of Ptolemy, separates the harbour of <i>Hippo Regius</i> . (Bónah, or Bilád-el-'unnáb, i. e. the Land of Lotus-berries.) That city, called "Royal," from its having been a favourite residence of Kings, (Sil. Ital. iii. 259.) is celebrated by Ecclesiastical writers as the Episcopal See of St. Augustin. It stands near the mouth of a considerable stream, formed by two others now called Bú-jímah and Seibús, both uniting, before they fall into the sea, at the extremity of a marsh, formerly, in all probability, a part of the harbour of <i>Hippo</i> , (Shaw, p. 47.) The Seibús is the <i>Ubus</i> of the Peutingerian Table, and the <i>Armua</i> of Pliny, according to Dr. Shaw; but that is evidently the <i>Armoniacum flumen</i> of the same ancient Map. <i>Tabraca</i> , or <i>Thabraca</i> , according to the same authority, was 55 miles to the East of that river, which agrees within a mile or two with the distance between Tabarkah and the Wádi-l-mafragh (Empty River) of the Arabs. <i>Tabraca</i> , as it is still called, was a Roman colony and an Episcopal See, with a small harbour, enclosing an island bearing the same name: a small lake fed by a streamlet from the South, and in all probability a part of the ancient port, is nearly opposite to it on the main land. Tabrakah was a populous and flourishing place in the Xth Century, (Al Bekrí, <i>Not. et Extr.</i> xii. 513.) having then a navigable river and many fine remains of ancient buildings; about two centuries later, Idrísí‡ (<i>Clim.</i> iii. part ii.) described it as "a fortified town on the sea-shore, thinly inhabited, having a port capable of receiving ships." A little to the East of Tabarkah is the river called Wádi-l-zein, in modern times; but Wádi-l-Berber (Berber River) by Leo Africanus, (738.) who mentions this port as "a deserted haven." The faithless character of the neighbouring Arabs is expressly assigned by Idrísí as the principal cause of its ruin.	followers of Publius Sittius, it was called <i>Colonia Sittianorum</i> , and from Cæsar himself <i>Cirta Julia</i> . It was still a flourishing city in the beginning of the IVth Century, when having been seized by the rebellious competitor for the throne, Alexander, it fell under the sanguinary vengeance of Maxentius, (Gibbon, ii. 216.) and was completely laid waste in A. D. 311. Having been repaired by order of Constantine the Great, it received, in honour of him, the name of <i>Constantina</i> , by which it is still called. The splendid remains of its ancient buildings were delineated by Bruce, and his drawings of them, (i. 33.) now in the collection presented by him to the King, "are," he says, (<i>Trav.</i> i. 62.) "the most magnificent offering in their line, that was ever made by one subject to his Sovereign." The greatest part of Kostantinah was built "on a peninsular promontory," says Dr. Shaw, (<i>Trav.</i> p. 60.) "inaccessible on all sides except to the South-West." This promontory is a good mile in circuit, a little inclined to the South, but presenting on its Northern side a perpendicular precipice of at least 600 feet in height. It was nearly surrounded by a bend of the <i>Ampsagas</i> , (El Rumál or Su-jmar,) which here flows through a very narrow, deep, and precipitous ravine, on the Eastern side of it.* An ancient tomb near it has been described by the Comte de Caylus in the <i>Memoirs of the Academy of Inscriptions</i> . (xxvi. 334.) Most of the fine remains at Kostantinah were wantonly destroyed in the late war between Algiers and Tunis. Nearly due South of <i>Cirta</i> , about 70 miles, was <i>Lambæsa</i> , where, according to Bruce, (i. 35.) 100 Latin Inscriptions attest its having been anciently the " <i>Lambæsesium Colonia</i> ." At the modern Medráshem, or Mál-Káshim, a few miles to the North-West, there is "a very remarkable sepulchral monument" noticed by Shaw, which, according to Bruce, (i. 34.) is nothing less than the tomb of Syphax and the other Kings of Numidia: a drawing of it is to be found in his collection. The range of mountains, called <i>Audus</i> by Ptolemy, (<i>Ibid.</i> p. 98.) and <i>Aurasiust</i> by Procopius, (<i>De Bello Vandal.</i> i. 18. ii. 13. vi. 7.) is described by him as thirteen days' journey South of Carthage, extremely lofty and abrupt but crowned with a rich and extensive table-land, abounding in springs, groves, gardens, fields, and meadows, a sort of earthly paradise. It still preserves its ancient name, and is called <i>Aúrás</i> by the Arabs, being a branch of <i>Atlas</i> and the natural division between Numidia and <i>Gætolia</i> . The remains of <i>Lamesba</i> are to the West of <i>Lambæsa</i> ; at a place, if D'Anville was rightly informed, still called by the same name, <i>Lamesbeh</i> . <i>Bagasis</i> , on the River <i>Abigas</i> , and Eastern declivity of Mount <i>Aurasiust</i> , (Procop. <i>loc. cit.</i>) was also called <i>Bagai</i> , according to D'Anville, (<i>Geog. Anc.</i> iii. 94.) and appears to be the <i>Baghái</i> of the Arabs, a fortified city with a walled suburb in the XIIth Century, (Idrisí, <i>Geography</i> , <i>Clim.</i> iii. part ii. MSS.) provided with <i>bázárs</i> ; but its suburbs were then uninhabited on account of the mischief done by the neighbouring Arabs. It was considered as the first place on the Eastern side of "the Land of Dates." (Bilád-el-tamr, commonly called Bilád-el-jeríd.) Its inhabitants were supplied with water by a stream coming from the South-East, (El Kiblah,) and from wells of fresh water.	NUMIDIA.

* Skikada, in Captain Smyth's excellent Chart of this Coast, is the name of a small island at the Northern extremity of the harbour of Ustórah; Sukai-kadah, therefore, was probably on the harbour to the West of that island, and not at Ustórah.

† Mavra for Mavro, "Black," in modern Greek?

‡ In his large Work, but omitted in the printed Epitome translated under the title of *Geographia Nubiensis*.

§ Kirthé, or Kartha, signified "City" in the Punic and Phœnician tongues.

* Accounts of its remains are given by Shaw.

† Cellarius, unless *Austrasiust* (*Geogr. Antiq.* iv. 5. § 52. tom. ii. p. 914.) be a misprint for *Aurasiust*, considered the latter as a corruption of the former.

NUMI-
DIA.

Its territory contained extensive plains, and had formerly many hamlets and villages; "but there is little of all this at present," says Idrisi. "The surrounding country was inhabited by Berbers, who employed Arabs as their labourers, and were governed by their own Sheikhs. It is only a few miles distant from Mount Aurás, which is nearly twelve days' journey in length, and its inhabitants are masters of all their neighbours." About 85 miles North-East of Búgháí, on a large stream flowing into the Bagradas, was *Thebeste*, (Augustin, *Contra Donatist.* vi. c. 38,) or *Theveste*, (Ptolemy, iv. *Itin. Antonin.*) the Tebessah or Tibsah of the Arabs. It is, according to Idrisi, (*Clim.* iii. part i. MSS.) six days' journey distant from Bujayah; and is described by Leo Africanus, (p. 547.) as a strong city built by the Romans, on the frontiers of Numidia, 200 miles South of the Mediterranean Sea. In his time, it still contained many fragments of ancient buildings and inscriptions, was surrounded by a thick grove of walnut trees, and remarkable for the coarseness, inhospitality, and insubordination of its inhabitants. El-dabbagh, an Arabian Poet, born at Malaga, recorded their worthlessness in an epigram given by Leo, (p. 548.) in which he says, it could boast of nothing but its clear stream, its walnut trees, and city walls, which are compared by Leo to those of the Colossæum at Rome; and the vast blocks of red stone, of which they are formed, were taken, he justly supposes, from a neighbouring mountain, the excavations of which were believed by the populace to have been formed by Giants.

The *Bagradas*, now called *Mejradah*, or *Mejerdah*, springs (Leo, p. 738.) from Mount *Mampsarus*, a continuation of *Aurás*, and runs with a winding North-Easterly course into the sea not far from Carthage, and about 40 miles to the North of Tunis. It is often greatly swelled by rains and impassable, especially near its mouth. The greater part of its course lay in the Province of *Zeugitana*, or *Africa Propria*, to which most of the large towns near it belonged. On the Southern side of the *Sujerás*, one of the larger tributaries to the *Bagradas*, about 80 miles nearly due North of *Thebeste*, was *Tagaste*, or *Thagaste*, a Roman Colony, and the birthplace of St. Augustin; it is now, according to Dr. Shaw, called *Tejilt*: and on the opposite side of the same river, about 40 miles nearly due West, was *Tipasa*, (now *Tifash*, Idrisi, *Geogr. Nub.* p. 82.) 83 miles nearly due East of *Cirta*, according to the ancient Itineraries. It is situated in a fine plain, watered by a rivulet, which passes close by the town; (Shaw, p. 64.) but does not appear to contain any relics of antiquity. It is an ancient city, says Leo, (p. 547.) built by the Africans, on the side of a chain of mountains, about 150 miles South of *Bónah*. It is still populous, and adorned with beautiful houses, but was ruined by the Arabs; and, in Leo's time, was used by the *Hawárah* Tribe of Berbers as a granary for their corn; they were, however, at length subdued by the King of *Túnis*, and *Tifash* was completely ruined. To the North-West of *Tipasa*, 40 or 50 miles, at the confluence of the *Ubus* and one of its larger tributaries, was *Tibilis*, a Roman town mentioned by St. Augustin; and a little to the North-East of it were the *Aquæ Tibilitanæ*, or warm-baths of *Tibilis*, now called *Hamaám*, (Shaw, p. 64.) and situated in the district of *Búkalawán*, near the River *Seibús*. (*Ubus*.) Forty or fifty miles West, and a little to the South of *Tibilis*, at the confluence of the river passing by *Cirta* and the *Ampsagas*, was *Milevum*, or *Mileum*,

an Episcopal city often mentioned by St. Augustin and the Ecclesiastical writers, and celebrated on account of the Council against the Pelagians held there A. D. 416. It was 25 miles North-West of *Cirta*, according to the Itinerary of Antonine: and is now called *Milah*, being celebrated for the abundance and excellence of its fruits, particularly its pomegranates. (Shaw, p. 63. Idrisi, *Clim.* iii. part i. MSS.) The distance of about 40 miles from *Milevum* to the sea along the course of the *Ampsagas*, completes the circuit of Numidia Proper.

Gætulia seems in very ancient times to have comprehended all *Nigritia*, at least all that part of it which is North of the Niger; (Plin. v. 4.) it was subsequently confined to the country on the Northern borders of the Desert, (*El Sahrà*), and was little known to the Greeks and Romans, and therefore imperfectly defined. It seems to have occupied nearly the same space as the *Bilád-el-jerid* (Land of Palms) of the Arabian Geographers. Though mentioned by ancient writers as distinct from the Country of the *Massyli*, *Massæsyli*, and *Mauri*, it is not clear that they were nations of an entirely different race from the *Gætulians*; and their migratory and warlike habits agree so well with those of the Berbers who have for many Centuries inhabited the greater part of Mount *Atlas* and the whole of the Desert between it and *Negroland*, that it is not improbable that all the Northern Africans were anciently derived from one common stock, some branches of which, though much reduced by the successive irruptions of foreigners, *Phœnicians*, *Romans*, *Goths*, and *Arabs*, still flourish in their native wilds and mountains, and preserve in their Language an imperishable evidence of their priority of possession, over those who have so long possessed their shores by the more disputable right of conquest.

At Nevers, but few years ago,
Among the *nuns* o' th' Visitation,
There dwelt a parrot, though a beau,
For sense of wondrous reputation.

Cooper. *Ver Vert*, can. 1.

NUNCHION. Browne's manner of writing the word (*noonshun*) has suggested, that it was the name of a meal or refreshment taken when labourers retreated to *shun* the heat of *noon*; but Cotgrave (in *vv. Reciné*,

Ressie) and Sherwood write *nuncion* or *nuncheon*, and speak of it as an *afternoon's* repast: the application, however, of *noon* in earlier times was to a period of the day which was subsequently called *afternoon*; i. e. after mid-day or meridian; but still during even an increase of heat. *Cion*, or *chion* seems an easy corruption of *shun* in speech, and the mode of writing may have been adopted in conformity to our common termination in *cion*, *sion*, or *tion*. This repast is now more commonly called *lunchion*, q. v. See also *NOON*, *NOONING*, and especially the Quotation from Milton, book v.

That harvest-folkes (with curds and clouted creame,
With cheese and butter, cakes and cates ynow,
That are the yeoman's from the yoake or cove)
On sheafes of corne were at their *noonshun's* close,
Whilst by them merrily the bag-pipe goes.

Browne. *Britannia's Pastorals*, book ii. sc. 1.

In which he carri'd as much meat
As he and all the knights could eat,
When, laying by their swords and truncheons,
They took their breakfasts, or their *nunchions*.

NU'NCIATURE, } *ciare*, to bring or bear something
NU'NCIO. } new. *Nuncius*, from *véos*, new,
quia aliquid novi apportet.

One who bears *news*; who makes known; a messenger of *news*; generally a messenger, a delegate.

A certaine restraint was giuen out charging his *nuncios* and legates, (whom he had sent for the gathering of his first fruites of the benefices vacant in the realme,) &c.

Fox. *Martyrs*, fol. 336. Edward II. Anno 1308.

They who knew him (Pope Alexander) but little, had very much esteem for him, as a man of wisdom and extraordinary civility, upon which account the princes of Germany, who had known him during his *nunciature*, were exceedingly pleased with his promotion.

Clarendon. *On Papal Usurpation*, ch. ix.

Where now the great descendant holds the place
To unclothe the gates of pardon and of grace;
And all the *nuncios* of th' ethereal reign,
Who testified the glorious death to man.

Hoole. *Jerusalem Delivered*, book xi.

A **NUNCIO**, says Wicquefort, (lib. i. cap. 2. *ad fin.*) is to the Pope what an Ambassador is to a secular Prince, there being of them both ordinary and extraordinary. The Nuncio is the Representing Minister particularly, the *Internuncio* the Envoy Extraordinary. The French nicely distinguished his authority. When in May, 1665, the Parliament registered the Pope's Bull against the Jansenists, who had denied his Infallibility, the Nuncio printed it on his own authority, assuming the Quality of Nuncio to the King and Kingdom of France. The Parliament upon the appearance of the Paper arrested the Printer, and seized his goods; stating that if the Nuncio had been sent to the *Kingdom*, it would have been to exercise a jurisdiction; whereas he had none; being sent only to the *King*, that is the Sovereign of the State. (Lib. i. c. 7. *ad fin.*) The Nuncio at Venice claimed by prescription a right to receive the first visit from the last comer among other Ambassadors, contrary to usual custom; and in the time of Henry IV. of France a dispute on this point arose between the Courts of Rome and Paris, which was deemed of sufficient importance by each to justify special instructions to their respective Envoys, enjoining them to beware how they gave way. The Diplomats nevertheless had a strong inclination to see each other, and the French Minister proposed that the Nuncio should come and visit his wife the Ambassadrix. The

NUN-
CHION.

NUNCIO.

NUNCIO. Nuncio accordingly went, and the French Ambassador having done the honours of his house, gave out that he had received the first visit. The Nuncio denied this assertion, and proved its falsehood by declaring that he had gone in his ordinary dress, whereas if his visit had been to the Ambassador he would have been attired suitably to his quality with the Rochet and Camail. The French Ambassador then went to the Nuncio's privately, as he designed it to be understood, in his cloak, and with a small retinue. But this was a false move by which the Nuncio greatly profited; for not having any wife who could be visited, he received and announced this visit as one of ceremony to himself. This mistake, says Wicquefort, with unmoved gravity, does not impress us strongly with an idea of "the genius" of M. de Fresne, (the French Ambassador,) "and most certainly on this occasion he committed an unpardonable fault." The Spanish Minister acted far more discreetly when the Nuncio made him a similar proposition of visiting his wife. He signified in return that it was absolutely necessary to pass through his own apartment in order to go to that of his lady. (Lib. i. c. 21.) Such were the diplomatic occupations of Ambassadors in the XVIIth Century.

NU'NCUPATE, v. } Fr. *nuncupatif*; from the
NUNCUPATION, } Lat. *nuncupare, nomine vo-*
NUNCUPATIVE, } *care, to call by name, to nomi-*
NUNCUPATORY. } *nate, formed from nomen and*
capere. Vossius.

But images been goddess by *nuncupation*, and they been neither living ne true, ne euerlasting.

Chaucer. *The Testament of Loue*, book i. fol. 294.

Wherefore he determined rather to retourne with his assured gaine, then to tary the *nuncupative* duke's vsure and vncertaine victory, and so he reculed again into Scotland,

Hall. *Henry VII. The eleuenth Yere.*

But how doth that will [Saint Peter's] appear? in what tables was it written? in what registers is it extant? in whose presence did he *nuncupate* it? it is no where to be seen or heard of.

Barrow. *Works*, vol. i. part ii. *The Pope's Supremacy*, fol. 98.

By his *nuncupatory* will he left all his estate to that Coll. amounting to 648*l.* 17*s.* 2*d.*

Wood. *Athenæ Oxonienses*, fol. 452.

These testaments are divided into two sorts; written, and verbal or *nuncupative*, of which the former is committed to writing, the latter depends merely upon oral evidence, being declared by the testator *in extremis* before a sufficient number of witnesses, and afterwards reduced to writing.

Blackstone. *Commentaries*, book ii. ch. xxiii. p. 500.

NUNDINATION, "Fr. *nundination*, a trafficking in fairs and markets." Cotgrave. Lat. *nundinæ, i. e. novendinæ*, fairs or marts held every *ninth day*. Applied generally to

Trafficking; bargaining, selling.

Witness their penitentiary tax wherein a man might see the price of his sin beforehand; their common *nundination* of pardons; their absolving subjects from their oaths of allegiance.

Bishop Bramhall. *Schism Guarded*, p. 149.

NUNNEZIA, in *Botany*, a genus of the class *Dioecia*, order *Hexandria*, natural order *Palmæ*. Generic character: calyx three-leaved; corolla, petals three: female flower, stigma three-cleft; drupe one-seeded.

One species, *N. fragrans*, a palm, native of Peru.

NUPHAR, in *Botany*, a genus of the class *Polyandria*, order *Monogynia*, natural order *Nymphaceæ*. (Decandolle.) Generic character: calyx five or six leaved; petals many, inserted with the stamens into the receptacle, externally nectariferous; stigma sessile, radiated; capsule fleshy, many-celled, superior; seeds numerous.

A genus divided from *Nymphæa*, containing six species: four are natives of North America, and two, the *N. lutea* and *minima*, of England: they are water plants; the flowers of all the species are yellow.

NUPTIAL, adj. } Fr. *nuptial*; It. *nuziale*; Sp. *nupcial*; Lat. *nuptialis*, from *nuptiæ*, and this from *nub-ere*, to cover, and therefore *nupta* (*i. e. nubila, nubla*) is *femme couvert*. See **CONNUBIAL**, and **NUBILE, ante**. Dr. Burgess contends that *nubo* was really the same word as *nuo*, (the digamma merely changed into *b*,) and originally signified *annuo, assentior*, to assent or consent: it is only in composition that *nuo* remains in the Latin Language.

Of or pertaining, belonging or relating to marriage or matrimony; connubial.

The noun is usually written with the plural termination *s*. Shakspeare writes it without.

DUKE. Shee should this Angelo haue married; was affianced to her oath, and the *nuptiall* appointed.

Shakspeare. *Measure for Measure*, fol. 72.

Here in close recess
 With flowers, garlands, and sweet-smelling herbs
 Espoused Eve deckt first her *nuptial* bed,
 And heav'nly quires the Hymenæan sung.

Milton. *Paradise Lost*, book iv. l. 710.

The Timnian bride
 Had not so soon preferr'd
 Thy Paranymp, worthless to thee compar'd,
 Successour in thy bed,
 Nor both so loosly disally'd
 Their *nuptials*.

Id. *Samson Agonistes*, l. 1023.

Around the tree I rais'd a *nuptial* bower,
 And roof'd defensive of the storm and shower:
 The spacious valve, with art inwrought, conjoins,
 And the fair dome with polish'd marble shines.

Pope. *Homer. Odyssey*, book xxiii.

He [Earl Athelwold] then besought me, for some little space
 The *nuptials* might be secret; many reasons,
 He said, induc'd to this: I made no pause,
 But resting on his prudence, to his will
 Gave absolute concurrence.

Mason. *Elfrida*.

NUREMBURG, or more properly **NURNBURG**, a District of the Kingdom of Bavaria, has a superficial extent of 803 square British miles, and a population of 52,000 persons. The soil is light, but highly cultivated, the Country abounds with manufactories, and the inhabitants are remarkable for their skill and industry both in agriculture and commerce. It contains the two large towns Nuremburg and Furth.

Nuremburg, the Capital of the District, is situated in a highly cultivated plain, watered by the river Pegnitz, which divides the town into two parts. It is enclosed by a ditch and a double wall having 119 towers and seven gates. The streets are wide and well paved, but irregularly built, and the paintings which cover the outsides of most of the houses produce a singular rather than a pleasing effect. The Reichsfeste, or Imperial Citadel, an antique building, occasionally the residence of the Emperors, has a well 536 feet deep, and is adorned by a valuable collection of Paintings. The Town House, built in 1619, is a fine building in the antique style. This City contains eight Churches, of which the Cathedral of St. Sebald and that of St. Lawrence are most worthy of notice. Some of these Churches contain several valuable Paintings, and the stained glass windows of St. Clare's date as far back as 1278. Though much fallen from its former commercial prosperity, it is

NUPHAR.
NUREM-
BURG.

**NUREM-
BURG.** still a place of great trade, which maintains 350 mer-
cantile houses. Its trade in cutlery is greater than that
of any other place in Germany. Among many other
eminent men it has given birth to Albert Durer and
Martin Behaim, whom the zealous patriotism of his
Countrymen represents as the rival of Columbus in his
claim to the discovery of the New World. It is certain
that he invented the Terrestrial Sphere, and perhaps by
that piece of scientific mechanism suggested the course
pursued by the illustrious navigator.

Nuremburg was made a free City in 1427, and then
divided with Augsburg the extensive commerce which
supplied the central parts of Germany with foreign wares.
The diversion of commerce into the hands of sea-faring
Powers, the ruinous influence of a jealous municipality,
consisting of a few families, and the ravages of war,
caused its gradual decay. During the Revolutionary
War its imaginary independence was formally abolished,
and it was incorporated with the dominions of the King
of Bavaria. Its population, amounting to 27,000, for
the most part profess Lutheranism, which is also the
established Religion of the Municipality.

Nuremburg lies in latitude 49° 24' North, longitude
11° 4' East.

NURSE, v. } Contracted from *nourish*, *nourice*;
NURSE, n. } Fr. *nourrice*; It. *nutrice*. To nurse
NU'RSER, } is to *nourish*, *i. e.*
NU'RSERY, } To foment, to foster, to cherish, to
NU'RSLE, } hearten, to encourage, to strengthen
NU'RSLING, } or invigorate; to support or main-
NU'RTURE, n. } tain, to sustain, bear, train, or bring
NU'RTURE, v. } up. To nurse is more especially ap-
plied when that which is *nursed* is young or sickly. To
nurse a child, a patient, or sick person; to supply them
with the *nourishment*, aliment, care and attention re-
quired by their condition.

To þe kyng of Hongari þys sely chýldren tueye
He sende hem vor to *norýsy*.

R. Gloucester, p. 315.

þys children were wel gonge ysend to Solomon þe kyng
Of þe lasse Brutayne, to gode *norýsyng*e
þe kyng hem *norýsede* wel.

Id. p. 238.

Gentille of *norture*, & noble of lynage
Was non þat bare armure, þat did suilk vassalage.

R. Brunne, p. 188.

Hir name is Helianore, of gentille *norture*,
Bigond þe se þat wore was non suilk creature.

Id. p. 213.

But we weren maad litle in the myddil of ghous, as if a nurse
fostre hir sones.

Wiclif. 1 Tessal. ch. ii.

We were tender amonge you, euen as a *norss*e cherysheth her
children.

Bible, Anno 1551.

Hire thoughte that a ladie shuld hire spare,
What for hire kinrede, and hire *nortetrie*,
That she had lerned in the nonnerie.

Chaucer. The Reves Tale, v. 3965.

Why should such spight be *nursed* then by thought?

Wyat. To his Ladie, Cruel ouer her Yelden Lover.

So they let Rebecca their syster go with her *norse*.

Bible, Anno 1551. Genesis, ch. xxiv.

I haue been now almost this fourtie yeares, not a geaste, but a
continually *nursyng*e in maister Bonuice house.

Sir Thomas More. Workes, fol. 1456. *Letters, &c. while a Pri-
soner in the Tower.*

Understande therefore in thyn hert, that as a man *nourtereth* his
sonne, euē so the Lord thy God *nourtereth* the.

Bible, Anno 1551. Deuteronomium, ch. viii.

They haue taught him *nurtour*, but he would not hearken vnto
them

Bible, Anno 1551. Deuteronomium, ch. xxi.

No, since this soile which with great spirits abounds,
Can hardly nurse her nurcelings all in peace,
Then let us keep her bosom free from wounds,
And spend our fury in some forraine place.

Stirling. To Prince Henry.

So soone as Night had with her pallid hew,
Defaste the beauty of the shyning skye,
And reft from men the worldes desired view,
She with her nurse adowne to sleepe did lye.

Spenser. Faerie Queene, book iii. can. 2.

See where he lyes inherced in the armes
Of the most bloody *nursser* of his harmes.

Shakspeare. Henry VI. First Part, fol. 114.

Joy to you both. ye double *nursery*
Of arts! but Oxford, thine doth Thame most glorifie.

Spenser. Faerie Queene, book iv. can. 11.

Whether ye list him traine in cheualry,
Or *nourse* up in lore of learn'd philosophy.

Id. Ib. book vi. can. 4.

Whom thus at point prepared, to prevent
A little *noursling* of the humid ayre,
A gnat, unto the sleepe shepherds went.

Id. Virgil. Gnat.

As a bad nurse, which fayning to receive
In her owne mouth the food ment for her chyld,
Withholdes it to herself, and doeth deceive
The infant, so for want of *nourture* spoyld.

Id. Faerie Queene, book v. can. 5.

Some peasants not t' omit the nicest care,
Of the same soil their *nursery* prepare,
With that of their plantation; lest the tree
Translated, should not with the soil agree.

Dryden. Virgil. Georgics, book ii.

What should we think of a man who should preach to a *nursery*
of trees, and propose rewards to those that should grow up straight,
and punishments to those that should grow crooked?

Jortin. Dissertation 1. p. 5.

Leave not to vile weeds
This friendly office; whose false kindness chokes
Or starves the *nurslings* they pretend to shade.

Dodsley. Agriculture, can. 2.

NURSIA, in Zoology, a genus of *Brachyurous Crus-
tacea*.

Generic character. Shell rhomboid, produced ante-
riorly, with the sides posteriorly dentate-emarginate;
legs angulated, the anterior pair depressed, much larger
than the others, with the fingers very much deflexed;
external *pedipalpi* with the outer footstalk dilated; *ab-
domen* of the male with the penultimate joint, bearing a
tooth-like process near the apex.

Type of the genus, *N. Hardwickii*, Leach, *Zool. Misc.*
vol. iii. p. 20. Inhabits the Indian Ocean.

NUT, v. } A. S. *hnut*; Ger. *nuss*; D. *noot*;
NUT, n. } Sw. *noet*. The Fr. *noix*; It. *noce*; Sp.
NU'TGALL, } *nueza*; from the Lat. *nux*. Our own
NU'TMEG, } word, Ihre suspects, may be so called
NU'TBROWN. } from its roundness, *hnott*, in the Is-
landic, signifying *globus*; but *hnott* in the A. S. is
smooth, and from the smoothness of the shell, this fruit
may have received its name.

Nut-meg; Fr. *muguelle*, *noix muguelle*; It. *noce
moscada*; Sp. *nuez moscada*; *nux moschata*; from the
(musky) sweetness of its scent.

And trees there were great foison,
That baren *nuts* in hir season,
Such as menne *nutmegs* call,
That swote of savor been withall.

Chaucer. The Romant of the Rose, p. 181.

NURSE.
NUT.

NUT.
—
NUTRI-
MENT.

And *notemuge* to put in ale
Whether it be moist or stale,
Or for to lain in cofre.
Chaucer. The Rime of Sire Thopas, v. 13693.

And so recorde I my lesson,
And write in my memoriall,
What I to hir telle shall
Right all the matter of my tale,
But all nis worthe a *nutte* shale.
Gower. Conf. Am. book iv. p. 98.

Twixt faire and foule therefore, twixt great and small,
A louely *nutbrowne* face is best of all.
Gascoigne. In prayse of the browne Beautie, Mrs. E. P.

A. W. went to angle with Will. Staine of Mert. Coll. to Wheately
Bridge, and *nutted* in Shotover by the way.
A. Wood. Life of himself, (under 1652,) p. 73.

As may be also observed in other vegetable excretions; whose
magrots do terminate in flies of constant shapes; as in the *nutgals*
of the outlandish oak.

Sir Thomas Brown. Vulgar Errors, book ii. ch. vii.

New milk in *nut-brown* bowls is duly serv'd,
For daily drink; the rest for cheese reserv'd.
Dryden. Ovid. Met. book xiii.

Let us imagine every wheel in this following figure to have a
hundred teeth in it and every *nut* ten.

Wilkins. Archimedes, book i. ch. xx. p. 167.

While now your hospitable board
With cold sirloin is amply stor'd,
And old October, *nutmeg'd* nice,
Send us a tankard and a slice.

Warton. The Oxford Newsman's Verses for the Year 1770.

NUTATION, Lat. *nutatio*, from *nutare*, to nod.
The nodding, bending, dropping, or dipping.

So from the midmost the *nutation* spreads,
Round and more round, o'er all the sea of beads.
Pope. Dunciad, book ii. v. 409.

What subject of human contemplation shall compare in grandeur
with that, which states the tides, adjusts the *nutation* of the earth,
&c.
Wakefield. Memoirs, p. 101.

NUTRIMENT, } See NOURISH, and NURSE.
NUTRIMENTAL, } Fr. *nutritif*; It. *nutrimentale*,
NUTRI'TIAL, } *nutritivo*; Sp. *nutrimental*, *nu-*
NUTRI'TIOUS, } *tritativo*; Lat. *nutrimentum*, from
NUTRITIVE, } *nutrire*, to nourish.
NUTRITURE, } *Nutrimet*, immediately from
NUTRICATION. } the Lat., and *nourishment*, cor-
rupted through the French, are the same word, and
have the same meaning.

Chapman renders *Διμήτερος ἀκτὴν*, Hom. II. xiii.
v. 322. Ceres *nutritious*. See in *v.* to *Pash*.

Beside the remarkable teeth, the tongue of this animal [came-
leon] is a second argument to overthrow this airy *nutrication*; and
that not only in its proper nature, but also its peculiar figure.

Sir Thomas Brown. Vulgar Errors, book iii. ch. xxi.

Envy sucks poison out of the fairest and the sweetest flowers,
and, like an ill stomach, converts the best *nutriment* into the worst
and rankest humours.
South. Sermons, vol. v. p. 384.

Diana praise [muse] that in darts delights;
Lives still a maid; and had *nutritiall* rights
With her borne-brother, the fair-shooting sunn.
Chapman. Homer. Hymn to Diana, part iii. fol. 117.

Fix'd like a plant on his peculiar spot;
To draw *nutrition*, propagate, and rot,
Or meteor-like, flame lawless through the void
Destroying others—by himself destroy'd.
Pope. Essay on Man, epis. ii. l. 64.

Thus the Israelites had leanness in their bones, together with
their quails, the hidden *nutritive* power of the divine benediction
being withheld.
South. Sermons, vol. ix. p. 44.

The stomach, urg'd beyond its active tone,
Hardly to *nutrimental* chyle subdued
The softest food.

Armstrong. The Art of preserving Health, book ii. Diet.

While good Eliza to the fugitives
Gave gracious welcome; as wise Egypt erst
To troubled Nilus, whose *nutritious* flood
With annual gratitude enrich'd her meads.

Dyer. The Fleece, book iii.

NUXIA, in *Botany*, a genus of the class *Tetrandria*,
order *Monogynia*. Generic character: calyx four-cleft;
corolla, one petal, four-cleft; stamens fixed in the throat
of the corolla; stigma truncated; capsule fleshy, two-
seeded.

Two species, *N. verticillata*, native of the Isle of
Bourbon, and *N. elata*, native of Jamaica.

NUZLE. See NOZLE.

NYCTANTHES, in *Botany*, a genus of the class
Diandria, order *Monogynia*. Generic character: co-
rolla salver-shaped, segments emarginate; capsule two-
celled, two-parted.

One species, *N. arbor tristis*, native of the East Indies.

NYCTERIBIA, in *Zoology*, a genus of *Homalop-*
terous insects.

Generic character. *Antennæ* wanting; head attached
to the anterior margin of the thorax upon which it rests;
thorax depressed, undivided, suborbicular, with a central
groove to receive the head; wings none; *abdomen* six
jointed, the terminal joint largest, and producing a se-
tigerosus style and two laminæ beneath; legs lateral, com-
pressed; *coxæ* small; *femora* broad, ovate; *tibiæ* short,
subovate, pilose; *tarsi* long, five-jointed, the basal joint
very long, three following minute, obtrigonal, the
terminal one dilated, and bearing two recurved claws;
at the base of the middle legs on each side is a dark
ciliated appendage.

Type of the genus, *Pediculus Vespertilionis*, Linnæus;
N. Latreillii, Curtis, *Brit. Ent. pl. 277*. Of this ex-
traordinary and singular genus of insects three species
have been discovered, two of them in Britain; they
inhabit Bats, and run about under their fur with amazing
rapidity: from the want of antennæ, and the extraor-
dinary position of their mouth, they offer great obstacles
to our arrangements, but they nevertheless appear to
approximate towards the *Hyppoboscidae*, with which
family they agree in their parasitic habits.

NYCTERIS, from the Greek *νυκτερίς*, from *νύξ*,
night, Geoffroy. In *Zoology*, a genus of animals
belonging to the family *Cheiroptera*, order *Sarcophaga*,
class *Mammalia*.

Generic character. Incisive teeth, above four, con-
tiguous, fixed in a movable, intermaxillary bone, below
six; cuspid large and distinct; molar four on a side in
each jaw; cheek-pouches perforated at bottom to give
passage to air into the cellular membrane; from the
forehead to the tip of the nose a deep longitudinal
groove, in front of which are the nostrils, each termi-
nating in a small longitudinal canal, and generally closed;
ears longer than the head; skin very loosely connected
with body, and forming a bag around the animal; tail
as long as the body, enveloped in membrane, and termi-
nating in a bifid vertebra; feet five-toed, the long toes
of the fore feet without claws.

The animals composing this genus are remarkably
distinguished from the others of the same family by the
ease and elegance of their flight, and by the power they
possess of inflating their skin with air so as to render

NUTRI-
MENT.
—
NYC-
TERIS.

NYC-
TERIS.NYCTI-
CEIUS.

themselves specifically lighter, in which respect they have some analogy to Birds. This curious property was pointed out by Geoffroy St. Hilaire, and he has given the following description of it. The skin is connected to the body of the animal only at certain parts by a very loose and slight cellular tissue, into which the air being introduced between the skin and the flesh, gives it the same appearance as the inflated veal often observed in butchers' shops. The cellular tissue is seen only about the entrances to the cavities of the body, and along the sides of the trunk, so that the skin is entirely loose on the back, chest, and belly. At the bottom of each cheek-pouch is a small aperture, by which the air-bag communicates with the mouth. By opening the nostrils the air enters and expands the chest, which being filled, the nostrils and mouth are closed, the air forced into the cheeks during expiration, and thence into the air-bag, from which it cannot return, on account of the contraction of a circular muscle about the orifice, and large valves in the neck and back. In passing to the air-bag the air does not at once proceed to it, but runs first in front of the ears, then into the frontal sinus, from which it passes to the top and back of the head and neck, whence it is finally emptied into the large bag on the back. It thus by repeated gulps of air inflates itself till it assumes nearly the form of a round ball, and as Geoffroy says, "in this state the animal resembles a balloon, to which is attached wings, a head, and feet." The teeth of the Nycterides very nearly resemble those of the true Bats, except in the incisive of the upper jaw being placed in one continuous row without being set in pairs, and separated by a gap. The termination of the tail in a bifid piece like a reversed T is also a peculiar character of this genus, and distinguishes it from all the other Bats.

N. Daubentonii, Geoffr.; *Campagnol Volant*, Daubenton; *Vespertilio Hispidus*, Lin.; *Daubenton's Nyctere*. Not quite an inch and a half in length including the head, which measures five lines; ears oblong, and measuring three-quarters of an inch; tail nearly as long as the body and head; extent of wings seven inches and a third; frontal groove edged with long hairs; skin reddish-brown above, and tawny-white beneath; the ears, alar and caudal membranes tinged with blackish and reddish-brown. From Senegal.

N. Geoffroyi, Desm.; *le Nyctère de la Thébaïde*, Geoffr.; *Geoffroy's Nyctere*. Nearly two inches long from the nose to the root of the tail; extent of wings nine inches; ears wide, and not quite an inch long; tail not longer than the body; fur soft and fine, light brown above, and ashy beneath. Desmarest considers that the Thebaid Nyctere described by Geoffroy, and a specimen brought from Senegal by M. Huzard, are of the same species, the only differences being a slight variation in the proportions of the head which is shorter, the ears longer, the less size of the terminal wart on the lower jaw, and the lighter colour of the fur in the Thebaid than in the Senegal specimen.

N. Javanicus, Geoffr.; *Javan Nyctere*. Is the largest of the genus, measuring two inches and a half from the tip of the nose to the origin of the tail; the colour is bright ferruginous on the upper parts, and reddish-ash beneath. From Java.

See Geoffroy, *Annales du Muséum d'Histoire Naturelle*, vol. xx.; Desmarest, *Mammalogie*.

NYCTICEIUS, from the Greek νύξ, night, Rafinesque. In *Zoology*, a genus of animals belonging to

the family *Cheiroptera*, order *Sarcophaga*, class *Mammalia*.

Generic character. Incisive teeth, above, two, separated by a wide space approximated to the cuspid and sharply indented; below, six, truncated, cuspid, without tubercles at their base.

This genus, founded by Rafinesque, so nearly approaches the *Vespertiliones*, except in the disposition of the incisive teeth, that Temminck almost doubts the propriety of separating them.

N. Humeralis, Rafin.; *Black-shouldered Bat*. Three inches and a half long from the tip of the nose to the tip of the tail, which equals the length of the body, and strongly mucronated; ears oval, longer than the head, and blackish, as is also the snout; eyes small, and hidden in the hair; colour, grey beneath, deep brown above, with black shoulders; all the membranes blackish. From Kentucky.

N. Tessellatus, Rafin.; *Netted Bat*. Four inches long from the nose to the tip of the tail, which equals the length of the body, and is tipped with a wart; nose bilobed; ears nearly hidden in the fur; colour bay above, tawny beneath, with a narrow yellowish colour, and the arm-pits white; wings reticulated and dotted with ferruginous spots. From Kentucky.

N. Noveboracensis, Tem.; *Atalapha Americana*, Rafin.; *New York Bat*, Pen. Two inches and a half in length from the nose to the root of the tail, which is an inch and three-quarters long; extent of wings ten inches and a half; head, body, and whole of the upper surface of caudal membrane, covered with very soft, long, tawny hair, which is lightest on the head and shoulders; belly paler; a white spot on the base of each wing, which themselves are dusky. From New York, and also from New Zealand.

N. Brevipellis—*Vespertilio Temminckii*, Horsfield; *Temminck's Bat*. Total length four inches and a half, of which the head measures one inch, and the neck, body, and tail divide the rest in equal proportions. It is distinguished by the shortness of its fur, which is very soft, delicate, silky, and closely applied to the skin; on the head and forehead it is shorter, but on the throat and chest longer; it is dark brown above, and dusky greyish-brown beneath, with a rufous streak extending laterally from the nose to the tail; the membranes brown, and tinged with tawny. From Java.

Temminck imagines that when the genus *Vespertilio* is properly looked over, there may be some more species to be added to this genus.

See Rafinesque, *Prodrome de Sornologie*; Temminck, *Monographies de Mammalogie*; Horsfield, *Zoological Illustrations of Java*.

NYCTIPITHECUS, from νύξ, night, and πίθηκος, an ape, Spix; *Douroucouli*, Humboldt. In *Zoology*, a genus of animals belonging to the family *Simiidae*, order *Quadrumanæ*, class *Mammalia*.

Generic character. Incisive teeth four in each jaw, the middle upper flattish and little prominent, the outer smaller, triangular, and rather set back; lower incisive rather wide on their edge, and close set in a semicircular form; cuspid moderate sized, and equal in both jaws; molar six on a side in each jaw, with slightly pointed crowns; nose flat; cheeks prominent, but face very small; orbits very large; top of the head flattened; ears distinct, flat, and hairy; body slender and covered with woolly hair; tail longer than the body, and not prehensile; hind legs longer than fore legs; claws

NYCTI-

THECUS.

NYCTIPI- short, compressed, slightly pointed, that of the great toe
THECUS. slightly flattened.

NYMPH.

This genus is the same as that named improperly by Humboldt *Aotus*, as in neither species are the auricles either deficient or small. In appearance and gesture the *Nyctipithec*i much resemble Cats, and hence Buffon has called them *Singes du nuit à face de Chat*. They are entirely nocturnal, for which their large sparkling eyes admirably adapt them, but they cannot bear the light. Fred. Cuvier has named the genus *Nocthora*. They are natives of South America. They form the link between the Monkeys and Lemurs, and occupy, in the New World, the place of the *Stenopes* in the Old World.

N. Vociferans, Spix; *Nocthora Trivirgata*, Fred. Cuv.; *Brown Douroucouli*, Humboldt. About seventeen inches long from the nose to the origin of the tail, which is more than a foot in length; ears almost entirely covered with hair; on the forehead two white spots, and another, less distinct, below each eye; on the forehead are three black stripes, which extend far back on the head; all the body brown, but paler on the belly, half the tail nearest its root red, the other half black. Is found in the forests of Solimöens, near Tabaturga, and Mainas; it is very timid and coy, and remarkably delicate in its habits; and much resembles the Tarsiers and Bats of Madagascar.

N. Felinus, Spix; *Black-tailed Douroucouli*. About seventeen inches long from the nose to the root of the tail, which itself is fourteen inches in length. The visage is very similar to that of a Cat, and the face small; the eyes are very large and red; the mouth wide; above the eyes are two triangular tawny-white spots; the cheeks and top of the head covered with black hairs, which as they pass back form three bands wider than in the last species, and unite on the vertex; face, lower eyelids, lips, and chin velvety-white; ears oblong and naked, except at their edge; body slender, the fur covering its upper surface very close, deep ash colour at the tip, ferruginous and black at the base; under part of the body, lower part of the thighs, and upper arms hairy, and inclining to ferruginous; tail almost entirely black, except at its root, where it is rusty-grey above, and ferruginous beneath. Found in the neighbourhood of the Capital of Para.

NYDYOT, *i. e.* an idiot, a nidiot.

Or els so foolyshe, that a very nodypoll *nydyote* myght be ashamed to say it.

Sir Thomas More. *Workes*, fol. 709. *The Second Part of the Confutation of Tyndall*.

Thus having sung, the nymphish crew,
Thrust in among them thronging,
Desiring they might have the due
That was to them belonging.

Drayton. *The Muses' Elysium*. *Nymphal* 9.

If chance with nymph-like step a virgin pass,
What pleasing seem'd, for her now pleases more,
She most, and in her look sums all delight.

Milton. *Paradise Lost*, book ix. l. 452.

There dwells below a race of demi-gods
Of nymphs in waters, and of fawns in woods:
Who though not worthy yet in Heaven to live,
Let them at least enjoy that earth we give.

Dryden. *Ovid. Metamorphoses*, book i.

NYMPH.

NYSSA.

NYMPHÆA, in *Botany*, a genus of the class *Polyandria*, order *Monogynia*, natural order *Nymphaeaceæ*. Generic character: calyx four or five leaved; petals many, inserted upon the germ beneath the stamens; stigma radiated, sessile, nectariferous in the centre; capsule fleshy, many celled, many seeded, superior.

A genus of splendid water plants, containing nineteen species, mostly natives of the Northern hemisphere. The most remarkable are *N. lotus*, the sacred Lotus of the Egyptians; *N. cærulea*, the beautiful Blue Water Lily of Egypt; and the well-known White Water Lily, *N. alba*, which is not only a native of England, but is generally dispersed throughout Europe and North America.

NYMPHANTHUS, in *Botany*, a genus of the class *Monoecia*, order *Monandria*. Generic character: male flower, calyx multiplex; corolla none; anthers large, four-celled: female flower, calyx multiplex; no corolla; capsule compressed, triangular, three-celled, two-seeded.

Five species, natives of Cochinchina. Louriero.

NYMPHIDIUM, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. Palpi two, long, biarticulate; first joint very long, slightly pilose; antennæ subclavate; body short.

Type of the genus, *Hesperia Caricæ*, Fabricius. About thirty species, natives of the tropical regions.

NYMPHON, in *Zoology*, a genus of *Annulose* animals of uncertain situation.

Generic character. Body composed of four leg-bearing segments, the first produced into a head-like process contracted behind, on which a tubercle, having two eyes on each side, is placed: rostrum cylindric, tubular, shorter than the body, inserted into the under part of the first segment; mandibles longer than the rostrum, composed of two equal joints, the second of which is furnished with curved fingers which meet along their whole inner ridge, their points abruptly hooked; palpi six-jointed, longer than the rostrum, inserted beneath the mandibles, the second joint elongate; legs eight; coxæ triarticulate; femora uniarticulate; tibiæ also uniarticulate; tarsi triarticulate; the basal joint very long; claws simple. Female with a ten-jointed organ upon which the eggs are borne.

Type of the genus, *Phalangium grossipes*, Linnæus; *N. gracile*, Leach, *Zool. Misc.* vol. i. pl. xix. Of these extraordinary animals about ten species have been discovered in the British seas.

NYSSA, in *Botany*, a genus of the class *Dioecia*, order *Pentandria*, natural order *Combretaceæ*. Generic character: hermaphrodite flower, calyx five-parted; no corolla; one pistil; drupe inferior: male flower, stamens ten.

Five species, natives of the Carolinas.

NYSSAN-
THES.
OAK.

NYSSANTHES, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Amaranthaceæ*. Generic character: calyx four-parted, irregular, the two exterior segments unequal; bractea spiny; stamens united at the base; anthers two-celled; stigma capitate; capsule one-seeded.

Three species, natives of New South Wales.

NYSSIA, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. Palpi two, very short, triarticulate, densely embedded in silken hairs; *maxillæ* obsolete. *Antennæ* curved, strongly bipectinated in the males; each joint producing a ciliated twig on each side; pubescent in the females; head small, deeply inserted in the *thorax*, which is stout and woolly: wings thick and small in proportion to the body, the hinder margin entire; totally wanting in the females: *abdomen* robust, conic, pilose. *Larva* with ten legs, cylindrical, looping, slightly attenuated at each end, smooth and a little tuberculated; head hemispherical; *pupa* naked, subterranean.

Type of the genus, *Geometra hispidaria* of the *Vienna Catalogue*; *Ph. Ursularia*, Donovan, *Brit. Ins.* vol. xiii. pl. 447. Four European species, one of which is indigenous, appearing in woody places towards the end of March.

NYSSON, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* inserted beneath the middle of the face, rather short, a little incrassate, with the second and third joints short, and subequal; mandibles simple, not dentate; *labrum* not or scarcely exerted; wings four, anterior with the second submarginal areolet petiolated; *abdomen* ovate-conic, with a short petiole; legs moderate; *tarsi* slender, furnished with small pulvilli and claws.

Type of the genus, *N. spinosus*, Latreille, *Hist. Nat. des Crust. et des Ins.* vol. xiii. p. 305. Twelve or fourteen European species, of which four are indigenous: they frequent sandy and gravelly hedge-banks and flowers.

There was lately an avenue of four leagues in length, and fifty paces in breadth, planted with young *oaklings*.

Evelyn, book i. ch. ix. sec. 3.

Around her head an *oaken* wreath was seen
Inwove with laurels of unfading green.

Falconer. The Shipwreck, can. 1.

OAKHAMPTON, or OKEHAMPTON, an ancient Borough in the County of Devon, in a sequestered valley on the borders of Dartmoor Forest, surrounded by hills, and intersected by the river Oke. Baldwin de Brioniis, a Norman follower of the Conqueror, was rewarded by a grant of land in the Western part of Devon, of which County he was appointed Hereditary Grand Sheriff, and built a Castle at Oakhampton as his principal residence. In the reign of Henry II. the Barony passed to the Courtenay Family, by marriage; with which it remained till the attainder of Henry Courtenay, Marquess of Exeter, by Henry VIII., when the Castle and Park were laid waste. The ruins of the Castle stand about a mile South-West from the town, on a high mass of rock washed on one side by the river; the area which they cover is extensive, and the keep is still lofty. The Church is situated on an opposite eminence. In the

OAK
HAMP-
TON.
—
OASIS.

market-place is an ancient Chantry. The Borough returned two Members to Parliament from the 28th Edward I. to the 7th Edward II. Its privilege was then suspended till the year 1640. The chief manufacture of the town is serges, and it otherwise derives some profit from being on the high road from Exeter to Launceston and Falmouth. Population, in 1831, 2055. Distant 195 miles W. from London, 21 W. from Exeter.

OAKUM. Skinner writes it *ockam*, and calls it, "old cables untwisted and torn in pieces, tow or hemp wherewith they stop the seams of ships to exclude the water."

In the South seas, the Spaniards do make *oakam* to calk their ships, with the husk of the coconut, which is more serviceable than that made of hemp, and they say it will never rot.

Dampier. Voyages, vol. i. p. 295. (Anno 1686.)

OAR, v. } A. S. *ar*; Sw. *aera*; perhaps from the
OAR, n. } A. S. *eri-an*; Sw. *æria*, *arare*, to ere, to
OA'RY. } plough, to ply. To ply the *oars* is a common expression; and Skinner suggests the Lat. *arare*, because it (the *oar*) divides or cuts the waters into furrows.

Oary; shaped or employed as *oars*.

Ne no geste or straunger, ne carfe yet the hie sea, with *oores* or with shippes.

Chaucer. Boecius, book ii. p. 419.

His bold head
'Boue the contentious waves he kept, and oared
Himself with his good armes in lusty stroke
To th' shore.

Shakspeare. Tempest, fol. 7.

These arms shall be my *oars*, with which I'll swim.
Beaumont and Fletcher. The Sea-Voyage, act i. sc. 1.

The swan with arched neck
Between her white wings mantling proudly, rowes
Her state with *oarie* feet.

Milton. Paradise Lost, book vii. l. 440.

Swift from the tree, the floating mast to gain,
Sudden I dropt amidst the flashing main;
Once more undaunted on the ruin rode,
And *oar'd* with laboring arms along the flood.

Pope. Homer. Odyssey, book xii.

Haste, then, for ever quit these fatal fields,
Haste to the joys our native country yields;
Spread all your canvass, all your *oars* employ,
Nor hope the fall of heaven-defended Troy.

Id. Ib. Iliad, book ix.

Here all the feather'd troops retreat,
Securely ply their *oary* feet,
Upon her floating herbage gaze,
And with their tuneful notes resound her praise.

Somerville. Fable 12.

The Paladin, who felt the rushing streams,
Forsook the orc, and *oar'd* with nervous limbs
The billowy brine, while in his hand he bore
The anchor's cable till he reach'd the shore.

Hoole. Orlando Furioso, book xi. l. 260.

Name.

OASIS, (Herodotus, iii. 26.) or **Auasis**, (Strabo, ii. p. 130. xvii. p. 813.) is, as Strabo observes, (xvii. p. 791.) (*De Urb. in v.*) an Egyptian word, signifying a small inhabited tract entirely surrounded by vast Deserts, like an island in the Ocean. There are many of them, he adds, in Libya, but three are adjacent to Egypt, and subject to it. In the Language of the Kopts, (*Ægyptii*) *wahe* signifies "an habitation,"* and the Arabs, whose

* M. Champollion the Younger (*L'Égypte sous les Pharaons*, ii. 283.) has ably illustrated this subject, and shown the true meaning and Etymology of the word; but when he says that *Neuache* signified in the Egyptian Language, "the Oases," he has only given the supposed plural of *Uahe*, for which he had no positive authority from any Koptic writings now extant. Though the name is, at present, found only in the Koptic Vocabularies, its accuracy cannot reasonably be questioned.

written character was better calculated for the expression of Egyptian sounds than the Greek, have preserved the word unaltered; for these tracts are still called by them, *Wáh*, or with the article, *El-Wáh*, and in the plural, *El-Wáhát*, i. e. the Oases. Though several of these "islands in the Desert," as they are appropriately called by the Arabs, (Abulfedá, *Africa*, p. 9.) as well as by the Greeks, (Herod. *loc. cit.*) were known to the latter as well as the former. They were usually divided into three groups: (Strabo, xvii. p. 791.) the first, or greater, nearly in the parallel of Abydus, (*Id. Ib.* p. 813.) but separated from it by a distance of three days' journey across the Deserts; the second, or smaller, in the parallel of the Lake Mæris; and the third at the Oracle of Ammon. The latter also, says Strabo, "are very excellent places of abode, and the former had abundance of water, wine, and other necessities of life." These divisions correspond nearly with those of the Arabs, the Exterior, Interior Oasis, and that of Síwah; but these names appear to have been applied differently at different periods; and as the ocean of sand surrounding these isles has often prevented the Egyptians from holding any intercourse with their inhabitants, their number, extent, and position are very imperfectly defined both by the Arab and the Greek Geographers.

The Valley of the Nile is enclosed, as is well known, by two parallel ranges of mountains; "that on the Eastern side is called," says Idrisi, (*Clim.* ii. part iii. in a passage omitted in the printed Epitome,) "Jebel Jálút el Berberí, the Mountain of Goliath the Berber, because his army was defeated near it, to which he and all his horsemen fled. This range separates the Land of El-Jofár and El-Bahreín from the dwelling-places of the Bení Helál, as far as the Land of Santariyyeh. The whole of the upper part of this Country, beginning from the Northern part of the Land of the Tájawín, is a Desert filled with moving sands, carried about by the winds from place to place. These sands extend from the upper part of the Exterior Oasis to Sijilmásah and the sea." This, therefore, is the Great Libyan Desert, the third region of Africa, above that inhabited by wild beasts, i. e. the woody declivity of Mount Atlas. (*Θηριώδης Λιβύη*. Herod. ii. 32.) It was aptly compared by Cneius Piso to a leopard's skin, (Strabo, ii. p. 130.) the spots on which were the small fertile and habitable tracts called by the Egyptians *Auases*, (*Wáhe*), or fixed abodes, to distinguish them from the spots watered only by wintry torrents where the wandering Tribes occasionally find pasturage for their flocks.

The Greater Oasis, the only one to which Herodotus gives that name, (iii. 26.) was, according to him, seven days' journey West of Thebes. Strabo says (xvii. p. 813.) it is at the same distance across the Deserts, from Abydus. (El Birbé between Farjút and Hú.) It is therefore the *Wáh-el-khárijah* or Outer *Wáhh* of the Arabs. Its fertility and luxuriance, enhanced probably by the dreariness of the surrounding Deserts, are distinctly implied by its Greek denomination of the "Isle of the Blessed." (*Μακάριον νῆσος*.) Its excellent fruits, harvests twice in the year, and delightful climate are extolled by Olympiodorus, who lived in the Vth Century: (*Photii Biblioth. Cod.* lxxx. p. 191.) it was therefore a desirable place of banishment, unless, as may be reasonably supposed, its climate and fertility were exaggerated. Its principal town is called Oasis by Herodotus, and Hibis or Ibis in the Imperial Register; (*Notitia Imperii*;) whence it appears that it was

OASIS.

Greater
Oasis.

Oasis.
Hibis.
Ibis.

OASIS. attached to the Province of Thebaïs. By the earlier writers, it was sometimes considered as a part of Libya, sometimes as belonging to Egypt. Being much exposed to the incursions of the wild and migratory Tribes inhabiting the surrounding Deserts, the Oases were often desolated; thus in a letter written by Nestorius, from Ibis, in the first half of the Vth Century, he complains that the Blemyes or Mazices had plundered the Oasis and massacred many of its inhabitants; (Euagrii, *Hist. Eccles.* i. 7. Niceph. xiv. 36.) and in the time of Idrisi, seven hundred years later, it appears likewise to have been uninhabited.

From more detailed accounts of modern travellers we learn that the Great Oasis consists of three fertile spots placed in a line running nearly due North and South, for about 2° of latitude, from 24° to 26° North, and separated by the Jebel Ramliyah (Sandy Mountain) from the Upper Egypt. The principal place near its Southern extremity is Kasr-el-hajar, (Castle of the Stone,) the ancient Cysis, near which there are the ruins of a Temple: * other less considerable ruins mark

Abú Saïd, a little way to the North-East, as a place of some antiquity, and Maks, to the West of it, is evidently, as its name indicates, the Custom-house on the Egyptian frontier. Dúsh-el-kal'ah is a small castle with its attendant hamlet to the North-East of Maks on the road to Beiris, a village inhabited by about six hundred people, who have well-watered fields and plantations enclosed by groves of dums and date-trees. (*Cucifera Thebaïca*, and *Phœnix dactylifera*.) A warm spring is the source whence most, if not all, of the water here found is supplied. About 28 miles further North is Búlák,† another village blessed with springs and containing about 400 inhabitants. "It is a wretchedly poor place," says Mr. Browne, (*Trav.* p. 203.) "the houses being only small square pieces of ground inclosed with a wall of clay or unburnt bricks, and generally without a roof." A desert tract, of about 15 miles in extent, separates it from El Khárijeh, or more properly El Wáh-el-Khárijeh, i. e. "The Exterior Oasis," the chief place in this sand-girt isle, and doubtless Herodotus's "City of Oasis." (iii. 26.) At Kasr'-ain-el-zayán, (i. e. the Castle of the Ornamented Spring,) a few miles North-East of Búlák, there are the remains of an Egyptian Temple, (Edmonstone, pl. vii. viii. p. 66.) "of elegant proportions and excellent masonry:" it consists of one large chamber leading to two small ones, the larger of which was the *adytum* or sanctuary. This Temple, as appears from a Greek inscription over the entrance, was dedicated to "Amenebis, (i. e. Ammon-Neb, or Cneph,‡) the very great God of Tchonemyris, and the other Deities worshipped in the same Temple," and rebuilt, both sanctuary and vestibule, in the third year of Anto-

ninus Pius, on the 18th of Messori. (12 Aug. A. D. 140.) About two miles to the West of this are the remains of a larger Temple, called by the Arabs Kasr-el-Kuweitah, (i. e. the Castle of the Little Flock,) and serving as a fortification for a village built within its area. (Edmonstone, pl. vi. p. 65.) The Temple consisted of three large and three small and parallel chambers, of which the central one was the sanctuary: only that and the principal apartment being adorned with hieroglyphics. In front there are the remains of a *pylon* or gateway and portico, much defaced and choked up with the hovels of its present inhabitants. Three or four miles further North, at the village of Jináh, or Jinákh, there is a hot spring strongly impregnated with iron and sulphur, and a stream of chalybeate water crosses the road between that village and the ruins just described.

The finest remains, however, in the Oases are about five miles North-East of Jináh at El Khárijeh itself. This place, the largest in the Oasis, lies in a valley surrounded by sandstone rocks, with the dreary and rugged sides of which, its groves of date-trees, Thebaïc palms, and acacias, form a striking and agreeable contrast. As it was visited by both Poncet and Browne, and by the latter twice, it seems at first surprising that neither of them discovered the fine remains with which it is adorned: but they had joined a caravan of native merchants, and having no expectation of such relics in so remote a spot, scarcely noticed by the Ancients, except as a place of exile, they possessed no clue which could lead to the discovery. The latter also, at the outset of his journey, might be apprehensive of impeding his progress by betraying too much curiosity. The ruins are, moreover, two or three miles to the North-West of the town, screened by palm-groves, and not sufficiently elevated to be visible except to a person close at hand. The nearest Temple is on an eminence about one mile and a half to the North of the town, and is now called El Nadárah.* It is only 31 feet long, and 20 feet 8 inches wide, and one of its four sides is entirely destroyed: its sculptures, now much mutilated, were in a good style. At a short distance to the North-West are the remains of the largest Temple in this Oasis, in 25° 28' 30" North, and 29° 39' 1" East.† (Cailliaud, i. 232.) The beauty of its position, overshadowed by dúm-palms and acacias, and backed by naked cliffs of sandstone, is very striking, and is well represented in Mr. Masters's sketch; (Edmonstone, pl. v. p. 63.) its ground plan and magnitude are also distinctly shown by the other plates (pl. ix. x. p. 70.) in Sir Archibald Edmonstone's narrative. It stands due East and West, is preceded by a *dromos* or court, contains two chambers beside the sanctuary, and is adorned in front with colossal figures and hieroglyphics. The wall of the inner parts of the first chamber is covered with stucco on which hieroglyphics were painted. The third chamber is smaller, but ornamented in the same manner; and the sanctuary, which is nearly 21 feet long, is, "as usual, richly carved and blackened with smoke." It is the only part of the building of which

Great
Temple.

* Dedicated to Serapis and Isis by the people of Cysis in the nineteenth year of Trajan, A. D. 116. (Letronne, *Recherches*, p. 229.) M. Letronne names Dúsh-el-kal'ah as the place where this inscription was found: but Kasr-el-hajar is the nearest spot at which the ruins of a Temple are marked in M. Cailliaud's Map.

† This name, which occurs elsewhere in Egypt, is evidently the Egyptian *Pi-lákh*, (i. e. The Boundary,) which in one instance was changed into Philæ by the Greeks. M. Langlès, in his Dissertation on the Oases, (*Voy. de Hornemann*, p. 379.) has by an unlucky oversight applied Makrizi's account of the Island of Búlák (Philæ) to this place in the Exterior Oasis. (El Wáh-el-Khárijeh.)

‡ On the identity of Ammon and Cneph, or Cnuphis, see Letronne, (*Recherches*, p. 368.) A complete illustration of this inscription is also given by him, (*Ibid.* p. 236.) but M. Letronne had been anticipated in several points by Sir Archibald Edmonstone. (*Journey*, p. 69.)

* Kasr-el-nadárah (the Castle of Beauty, or of the Tamarisk,) according to M. Cailliaud, (iii. 350.) but from Sir A. Edmonstone's way of spelling the word, it may possibly be El Nádirah; (the Rare Castle;) the former is, however, most probably right.

† "From three meridian altitudes and five lunar distances:" unfortunately till M. Cailliaud's original data appear, the singular coincidence between his results and those of Dr. Rüppell (*Reisen in Nubien*, p. 275.) will cause his determinations to be received with some degree of mistrust.

OASIS. the roof remains. There are three gateways, belonging probably to three enclosures, on one of which a sculptured scene, supposed by the traveller just cited to represent a "banquet of Osiris," is in reality an offering of different viands made to Jupiter Ammon, (here a beardless youth,) by an Egyptian Sovereign, (the founder of the Temple,) whose name is doubtless written in the hieroglyphic character above. On the last and lowest of these propylæa there is a very long Greek Inscription, which has been carefully transcribed by Mr. Hyde (*Classical Journal*, No. 45, 46. vol. xxiii. p. 156.) and M. Cailliaud, (iii. 394.) and translated and restored by Dr. Young, (Edmonstone, p. 75.) and more completely by M. Letronne. (Cailliaud, iii. 395.) From it we learn, that in the first year of the reign of Galba (A. D. 68) a Decree was issued by Tiberius Julius Alexander, Præfect of Egypt, assuring the inhabitants of that Province of his especial attention to the redress of their grievances, which appear to have arisen chiefly from the extortions practised by the revenue-officers. This Decree, which throws much light on the public administration of the Country under the Roman Emperors, is dated 6th of July A. D. 68, and is preserved entire in this remarkable inscription, which consists of no less than sixty-six lines, and has been very little injured. On the South-Eastern corner of the same building is another long inscription, containing a letter from the Præfect of Egypt to the General commanding the Oasis, and the recital of a similar Decree, bearing date the 1st of February, A. D. 49. (Edmonstone, p. 99. Cailliaud, iii. 388.) The termination of this is too much mutilated to be easily restored.

Necropolis.

El Gabaret.

On a height a little further to the North and East than the Great Temple is an extensive Necropolis, called by the Arabs El Keibawât. (Edmonstone, pl. xii. p. 108. Cailliaud, ii. pl. xxxiii. xxxiv.) It contains not less than 200 or 300 buildings of unburned brick, of various sizes, scattered about without any order; they are usually square, crowned with a dome and surrounded by a corridor, and are, therefore, much like the Kubbehs or oratories erected over the tombs of Mohammedan Saints and Princes. One has evidently been used as a Christian Church, but in the centre of each there is a large square hole in which a mummy had once been placed. There are also many inscriptions, Greek, Koptic, and Arabic, on the walls, but generally illegible. These Tombs are the more remarkable, as they bear no resemblance to any others in Egypt. In a valley to the North-East, separated from this Oasis by a desert tract of sand on a bed of sandstone impregnated with oxide of iron, nine miles in extent, is an ancient and deserted Castle built of unburned bricks and nearly choked up with sand; it is called Kasr bîr el-hajar, (Rock-well Castle,) and is probably a Roman structure. Eight or nine miles further Northward are two more such buildings; the third is not a mile beyond the second, and being placed upon a rock is visible at some distance: it is called Kasr jebel-el-sont. (Acacia-Hill Castle.) A plan of it is given by M. Cailliaud. (ii. pl. xlii. fig. 3.) Nine miles beyond this Castle the ascent of the Western Egyptian chain begins. It is here calcareous, and about 700 feet in perpendicular height. Its summit is a very extensive undulating table-land, always furrowed in lines nearly due North and South. After traversing this desert tract in a North-Eastern direction for about 100 miles, the traveller reaches the crest of the Eastern declivity, which is not more than 380

Kasr bîr el-hajar.

Kasr jebel-el-sont.

feet above the Valley of the Nile, for this mountainous ridge rises gradually to the West and South. (Cailliaud, i. 237.) Sir Archibald Edmonstone, who crossed this mountain by a less oblique course from El Khârijeh to Farjût, reached the summit of the Eastern declivity in about thirty-six hours, and was not more than two hours in descending into the Valley of the Nile.

Under the head of OUAH an account of the remaining Oases will be given.

See the authorities for EGYPT and NUBIA; and Sir A. Edmonstone, *Journey to two of the Oases*, Lond. 1822, 8vo.; and Ideler, *Ueber die Oasen*, in the *Fundgruben des Orients*, Wien. v. y. fol. iv. 393.

OATH.

OATH.
OBELISK.

Than honesty to honesty ingaged
That this shall be, or we will fall for it.
Shakspeare. Julius Cæsar, fol. 115

You are not *othable*,
Although I know you'll swear, terribly swear,
Into strong shudders, and to heavenly agues
Th' immortal Gods that heare you.

Id. Timon of Athens, fol. 91.

It is probable, that at first, *oaths* were only used upon weighty and momentous occasions, yet in process of time they came to be applied to every trivial matter in common discourse.

Potter. Antiquities of Greece, vol. i. book i. ch. vi. p. 247.

But whatever be the form of an *oath*, the signification is the same. It is "the calling upon God to witness, i. e. to take notice of what we say," and it is "invoking his vengeance, or renouncing his favour, if what we say be false, or what we promise be not performed."

Paley. Moral Philosophy, book iii. ch. xvi. p. 1.

OBAMBULATION, Lat. *obambulatio*, from *ob-ambulare*, to walk about. Vossius derives the prep. *ob* from *ὀπη*, or *ὀπὸ*, or *ἐπι*, and Butler decides for the last: and observes that it sometimes merely increases the signification, as *dorm-ire*, to sleep, *ob-dormire*, to sleep upon sleep; i. e. to sleep soundly.

A walking about, a continued or repeated walking.

Impute all these *obambulations* and night walks to the quick and fiery atoms, which did abound in our Don.

Gayton. Don Quixote, (1654.) p. 217.

OBDORMITION, Lat. *obdorm-ire*, to sleep soundly. See **OBAMBULATION**.

A sleeping soundly; a sound or continued sleep.

A peaceable *obdormition* in thy bed of ease and honour.

Hall. Contemplations, book iv.

OBDUCE, Lat. *ob-ducere*, to draw over, *ob*, over, and *ducere*, to draw.

To draw over, to cover; to conceal.

No bird, or terrestrial animal exhibits its face in the native colour of its skin but man; all others are covered with feathers, or hair, or a cortex that is *obduced* over the cutis, as in elephants and some sort of Indian dogs.

Hale. Origination of Mankind, ch. ii. sec. 1. fol. 65.

OBDU'RE, *v.*

OBDU'RACY,

OBDU'RATE, *v.*

OBDU'RATE, *adj.*

OBDU'RATELY,

OBDU'RATENESS,

OBDU'RATION,

OBDU'REDNESS,

OBDU'RENESS.

Lat. *ob-dur-are*; to harden greatly; *ob*, upon, augmentative, and *dur-are*, to harden.

To harden greatly; to be or cause to be hard, firm; to render impenetrable or inflexible: stubborn, obstinate, unbending, unyielding: callous, insensible.

So that where the Holy Ghost sayth, I will *obdurate* the hart of Pharao, they will take vpon them to learne and to teach the Holy Ghost to speak better, and to say to this maner: I will suffer Pharao to be *indurated*, but I will not doe it, but my easyness, my softnes, whereby that I shall suffer him, shall bryng other men to repentaunce, but Pharo shal it make more obstinate in malice.

Burnes. Workes, fol. 279. Freewill of Man.

Some such were *obdurate* in malice.

Sir Thomas More. Workes, fol. 503. The First Part of the Con- futation of Tyndall.

But what doe I suggest to the *obdured* hearts of wilfull sinners, the sweet and gracious remedies of a loving fear? the preservative is for children, sturdy rebels must expect other receipts.

Hall. Works, vol. iii. fol. 80. The Remedy of Prophaneness, book ii. sec. 11.

What shal we say then to those *obdured* hearts, which are no whit affected with public evils? *Id. Sermon 33. Psalm 60.*

Leo. A good conclusion,

The obduracie of this rascal makes me tender.

Beaumont and Fletcher. The Custom of the Country, act iv. sc. 1.

But what *obdurate* heart was ever so perverse,
Whom yet a lover's plaints with patience could not pierce?

Drayton. Poly-obion, song 18.

This reason of his was grounded upon the *obdurateness* of men's hearts, which would think that nothing concerned them, but what was framed against the individual offender.

Hammond. Works, vol. iv. fol. 687. Sermon 19.

To what an height of *obduration* will sinne lead a man, and of all sins, incredulity?

Hall. Works, vol. i. fol. 836. Contemplations, book iv. Of the Plagues of Egypt.

Yea, to such a height of atheous boldness and *obduration* are the ruffians of our time grown, that they boast of it as their greatest glory, to fear nothing; neither God nor devil.

Hall. Sermon 42. 1 Peter, ch. i. v. 17.

If we be less worthy than thy first messengers, yet what excuse is this to the besotted world, that through *obdurednesse* and infidelity it will needs perish.

Id. Works, vol. ii. fol. 336. Sermon preacht to the Lords.

Oh the sottishness and *obdureness* of this sonne of perdition! How many proofes had he formerly of his Master's omniscience.

Id. Ib. fol. 246. Contemplations. Christ Betrayed.

The ear is wanton and ungoverned, and the heart insolent and *obdurate*, till one is pierced, and the other made tender by affliction.

South. Sermons, vol. iv. p. 88.

But (he has) much, on the contrary, to make him suspect and doubt that he may deny it him, and revenge the provocations of a wicked life with impenitence and *obduration* at the time of death.

Id. Ib. vol. ix. p. 207.

OBEDIENCE. See **OBEY**.

O B E L I S K.

OBELISK, Fr. *obelisque*; It. and Sp. *obelisco*; Lat. *obeliscus*; Gr. *ὀβελίσκος*, from *ὀβελός*, and that from *βέλος*, *sagitta*, an arrow. The word is sufficiently explained below, and is also applied to a mark or sign, used in printing, shaped like a dagger.

The place where he was slaine, is named after him vnto this day, and called Camestone, where is an *obeliske* set vp in memorie of the thing.

Holinshed. History of Scotland, vol. v. p. 261.

Full in the midst an *obelisk* ascends,
And high in air the watry column sends.

Boyce. The Triumphs of Nature.

An **OBELISK** is a monument originally Egyptian, shaped pyramidally, not always equilateral, and with a base very small in proportion to its height; or as it is described by Ammianus Marcellinus, *Est autem Obe-*

liscus asperrimus lapis, in figuram metæ cuiusdam sensim ad proceritatem consurgens excelsam; utque radium imitatur gracilescens, paulisper specie quadratâ in verticem productus angustum, manu levigatus artificii. (xvii. 4.)

Without entering into the hopeless labyrinth of Egyptian Chronology, Obelisks may be reasonably esteemed Great antiquity. among the most ancient, if not the most ancient monuments in the World. In whichever of the 1535 years the extremes of which, according to Bryant, touch the boundaries of the different periods which have been assigned to the reign of Sesostrius, we place that ambiguous Monarch, he can scarcely approach within ten centuries of the Christian era, and probably is much more remote; and an antiquity almost equally great is

OBE-
LISK.

assigned to Sothis, Ramises, Phero, and Nuncoreus, other reputed founders of Obelisks, of whom little more than the names have been transmitted to us. It is from Diodorus Siculus that we hear of two Obelisks raised by Sesostris, each 120 cubits in height, upon which he sculptured a calculation of the resources of his Empire, of his revenues, and of the nations which he had subdued. (i. 57.)

the top of
an Obelisk

In our notice of EGYPT we have incidentally mentioned numerous Obelisks; in that of ALEXANDRIA we have spoken of the celebrated *Cleopatra's Needles*, one of which we may hope ere long to find naturalized in London. They have little perhaps to do with Cleopatra; the common Arabic name given to all Obelisks is *Messalet Pharaum*, Pharaoh's needles, Pharaoh being the general name of the Egyptian Kings. We shall in this place confine ourselves to a short account of some of those Obelisks which the magnificence of Augustus and his successors transported to Rome. Of these, P. Victor enumerates six large and forty-two smaller. Two in the Circus Maximus, one in the Vatican, one in the Campus Martius, and two in the Mausoleum of Augustus. (*Ap. Grævii, Thes. iii. 108.*)

Pliny tells us that "about Syrene (Syene) in the Province of Thebais there is a marble, (thereupon called *Syrenites*), which sometimes they called *Pyrrhopæilos*; the Kings of Egypt in times past (as it were upon a strife and contention to exceed one another) made of this stone certaine long beames which they called Obeliskes, and consecrated them unto the Sun, whome they honoured as a God; and indeed, some resemblance they carrie of Sunne beames, when they are made to the forme of Obeliskes, and the very Egyptian name implieth so much. The first that ever began to erect these Obeliskes, was Mitres King of Egypt, who held his Royall seat and Court in Heliopolis, the Citie of the Sunne; where he was admonished by a vision so to doe. And thus much may appeare by the inscriptions of certaine letters engraven upon the said Obeliske: for those characters, formes, and figures that we doe see enchased in them be the verie letters that the Egyptians use themselves. After him, other Princes also set up more of these Obeliskes in the abovenamed Citie; and namely, King Sochis for his part, foure in number, those carying in length eight and fortie cubits apeece. And Ramises (in whose reign Troy was won by the Greekes) erected an Obeliske fortie cubits long, in the said Citie: but beeing departed from thence, (for that he tooke pleasure in another cittie, where sometimes stood the royall pallace of King Mnevis,) he pitched on end another Obeliske, which carried in length an hundred foot wanting one, and on every side four cubits square.

"It is said, that Ramises abovenamed kept twentie thousand men at worke about this Obeliske: the King himself in person, when it should be reared on end, fearing lest the engines devised for to raise it and hold the head thereof between Heauen and Earth, in the rearing should falle, and not be able to beare that monstrous weight; because he would lay the heavier charge upon the artificers that were about this enterprise, upon their uttermost perill caused his owne sonne to bee bound unto the top therof, imagining also, that the care of the enginers who undertooke the weighing up of this Obeliske, over the young Prince, for fear of hurting him would induce them also to bee more heedfull to preserve the stone. Certes this Obeliske was a peece of worke so admirable, that when King Cambyses

had woon the Citie where it stood by assault, and put all within to fire and sword, having burnt all before him, as far as to the very foundation and underpinning of the Obeliske, commaunded expressly to quench the fire; and so in a kind of reverence yet unto a masse and pile of stone, spared it, who had no regard at all of the citie besides." (Holland, xxxvi. 8, 9. Hardouin, 14.)

Concerning this story of Ramises, Dr. Burton, in describing the Obelisk now standing in the area in front of St. Peter's, appears to have fallen into error. That Obelisk is generally believed to be one of two erected by a King whom Herodotus calls Phero, and Pliny Nuncoreus, and to him, instead of to Ramises, is ascribed by Dr. Burton the cruel expedient of providing for the safety of the monument at the hazard of his son. (*Antiquities of Rome, 234. 1st Ed.*)

Pheron, son of Sesostris, is said by Herodotus to have dedicated two Obelisks in the Temple of the Sun, in consequence of his recovery from ten years' blindness, by a very singular ophthalmic lotion not admitted in any modern Pharmacopœia. Each of these monuments consisted of a single stone, 100 cubits in height and eight in diameter; and one of them was brought to Rome by Caligula in a ship, the enormous size of which is thus recorded by Pliny. "As for the Fir-tree which serued for a mast in that huge ship which by the commandment and direction of C. Caligula the Emperor transported and brought out of Egypt, that Obeliske which was erected and set up in the Vaticane hill, within the Cirque there, together with the foure entire stones which bare up the said Obeliske as supporters; it was seene of a wonderfull and inestimable height above all others; and certaine it is that there was neuer known to flote upon the sea a more wonderfull ship than it was. She received 120,000 modij of Lentils for the very ballast; she tooke up in length the greater part of the left side of Hostia harbour: for Claudius the Emperor caused it there to be sunke, together with three mightie great piles or dams founded upon it, and mounted up to the height of towers, for which purpose there was brought a huge quantitie of earth or sand from Puteoli. The maine bodie of this maste contained in compasse foure fadom full." (Holland, xvi. 39. Hardouin, 76.) Suetonius also has noticed the sinking of this ship by Claudius, in order to make a platform upon which piles might be driven as the foundation of a Pharos. (20.)

The Circus of Caligula, afterwards called the Circus of Nero, was the first spot in which this monument was erected on its arrival in Rome, and that position is now marked by a square stone in the passage leading from the Sacristy to the Choir in St. Peter's. "This," says Pliny in another place, to which we have before alluded, (Holland, xxxvi. 11. Hardouin, 15.) "is the onely Obeliske knowne to have been broken in the rearing. This was hewen and erected in Ægypt by Nuncoreus, the sonne of Sesostris, which Nuncoreus caused another to be set up of 100 cubits in height, and consecrated it unto the Sunne, after he had recovered his sight upon blindness, according as he was advertised by the Oracle, which remaineth at this day."

Notwithstanding the difference of names in the Egyptian King, Herodotus (ii. 111.) and Pliny in this place clearly speak of the same Obelisk. Whether Pliny really stated that it was broken in its erection by Caligula appears a matter of doubt. The reading which Hardouin gives from numerous MSS. is *ex omnibus*

unus omnino factus est imitatione ejus quem fecerat Sesostridis filius; by which words, if he so wrote, Pliny implied that the Obelisk in question was formed after the model of that raised by the Son of Sesostris. Most of the printed Editions give *fractus est in molitione, quem, &c.*, upon which Hardouin confidently remarks, *haud dubiè inutile ac falsò. Nam qui vidère ac diligenter exploravere, integrum adhuc esse renunciant. Not. et Em. ad Libri xxxvi. No. ix.* Kircher, however, maintains that it has been broken, because the proportion of the height to the diameter of the base is not the same as in other Obelisks, viz. 10 to 1; (*Obel. Pamphilius*, p. 52.) and Fontana himself, in his elaborate Work *Della trasportatione dell' Obelisco Vaticano*, notices that the apex has been fractured and fitted in again.

Transported
by Sixtus V.
to the front
of St. Peter's.

Sixtus V., before he attained the Pontificate, is said frequently to have expressed great admiration of this Obelisk, and to have wished himself Pope, if it were but that he might have the power of restoring it to its ancient splendour. At length, in 1586, one of his first works after possession of the tiara was the removal of his favourite monument to its present magnificent site in front of St. Peter's, under the direction of Fontana; from whose account of its elevation many authentic particulars may be derived. It had never been overthrown, as it sometimes is said to have been, by Totila, but it was so far buried that the inscription on its base, notifying its dedication to Augustus and Tiberius, was no longer visible. *DIVO CÆS. DIVI JULII F. AUGUSTO TI. CÆS. DIVI AUG. F. SACRUM.* Its weight was estimated at 993,537 pounds; 46 cranes, 600 men, and 140 horses were engaged nearly twelve months in its removal, and the whole cost amounted to about £9000. "So great," says Dr. Burton, "was the interest excited by this undertaking, and so much importance was attached by the Pope to the solemnity of its execution, that during the elevation of the Obelisk, it was ordered that no person should speak under pain of death. One of the Bresca family of the ancient Republic of St. Remo being present at the time, and seeing the ropes on the point of breaking from the great friction, violated the order for silence by calling for water. The Pope, instead of inflicting the sentence upon him, asked him to name his reward. He selected the privilege of supplying palms for the Papal Chapel on Palm Sunday: a privilege which is still claimed by the Bresca family. A Painting of the operation of the removal is now in the Vatican Library, in which the seizing of this man by the guards is represented."

"It has been found, that this Obelisk does not actually stand where the architect intended it. For if a line be drawn from the centre of the Dome of St. Peter's through the middle door, it will not cut the Obelisk, but will pass about eleven feet to the South of it. The error is ascribed by some to Fontana himself; by others, to Moderno, the architect employed by Paul V., who did not join on the new building in a right line with that which had been erected before by Michael Angelo.* The Obelisk is of red granite. Fontana makes the whole height 180 palms, (132 feet,) which includes the pedestal and all the ornaments at the top. Without these it is 113 palms. (84 feet.) It now serves as the gnomon to a meridian. There is a tradition, that the ashes of J. Cæsar were in a gilt ball at the top

* A mistake somewhat similar to that which renders it impossible that the façade of the New Council-Office at Whitehall should ever be finished.

of it. But Fontana says in his Work, that this is certainly a mistake. There was such a ball, but nothing of any kind was found within it." (*Antiquities of Rome*, 235.)

The loftiest Obelisk in Rome, 109 feet high without the base and pedestal, 11 in breadth at the bottom, made of one solid piece of red granite, and covered with Hieroglyphics, stands in front of St. John Lateran. Dr. Burton first says that "Ramises, King of Egypt, erected it in Thebes;" (227.) yet after mentioning four Obelisks made by Sothis, four others by Ramises at Heliopolis, and that erected by the same King at Muevis, which we have already described from Pliny, Dr. Burton adds, "that the Obelisk in front of St. John Lateran may have been one of these." (228.) Ammianus Marcellinus, from whom we derive its History, does not give the name of the King by whom it was originally constructed; but he states that Augustus did not attempt its removal from Egypt, touched with a Religious scruple, because it was specially dedicated to the Sun. Constantius, however, thinking that there could be no impiety if he placed it in Rome, in *templo mundi totius*, undertook, A. D. 357, the task which Augustus had renounced. According to Dr. Burton, "he had it conveyed down the Nile from Thebes," and if he was supported in this statement by Ammianus, we might reasonably believe that it was, as Dr. Burton thinks above, the Obelisk erected in that City by Ramises; but the words from Thebes do not exist in the Latin Author; *quo convecto per alveum Nili*, is all that is said by Ammianus. It remained in the harbour of Alexandria till the death of Constantius in 361, and its remaining early History shall be given in the inflated words of the original. *Quo convecto per alveum Nili, projectoque Alexandria, navis amplitudinis antehac inusitata edificata est, sub trecentis remigibus agitanda. Quibus ita provisus, digressoque vitâ Principe memorato, urgens effectus intepuit: tandemque serò impositus navi, per maria fluentaque Tibridis velut paventis, ne quod pæne ignotus miserat Nilus, ipse parum sub meatu sui discrimine manibus alumnis inferret, defertur in vicum Alexandri, tertio lapide ab Urbe sejunctum: unde chamuleis impositus, tractusque lenius, per Ostiensem portam piscinamque publicam Circo illatus est Maximo. Sola post hæc restabat erectio, quæ vix aut ne vix quidem sperabatur posse compleri: erectisque usque periculum altis trabibus, ut machinarum cerneret nemo, innectuntur vasti funes et longi, ad speciem multiplicium liciorum cælum densitate nimia subtexentes: quibus colligatus mons ipse effigiat scriptilibus elementis, paullatimque id per arduum inane protentus, diu pensilis, hominum millibus multis tamquam molendinarias rotantibus metas, cavè locatur in mediâ, eique sphaera superponitur ahenæ, aureis laminis nitens: quâ confestim vi ignis divini contactâ, ideoque sublatâ, facis imitamentum infigitur æreum, itidem auro imbracteatum, velut abundantî flamma candentis.* xvii. 4.* He then gives from Hermapion a Greek interpretation of the Hieroglyphics. If the version be correct, Ramises (Ραμέσις) was the founder of the Obelisk, but the City in which he raised it

* Mr. Fosbrooke, in his *Encyclopædia of Antiquities*, (i. 17.) when referring to this passage of Ammianus Marcellinus, has strangely stated that he is "speaking of the erection of the Obelisk at Constantinople;" and he also cites *Hist. Aug. ii. 346.* What that work is we know not; if the *Historiæ Augustæ Scriptores* be intended, it is almost needless to say that Ammianus Marcellinus is not included among those Writers.

OBE-
LISK.

most probably was Heliopolis. When Sixtus V. intrusted the restoration of this Obelisk to Fontana, and transported it to its present site in 1588, it was shattered into three pieces, and lay twenty-four palms under ground. It is probably this Obelisk which Tertullian describes while denouncing the Circus, in his barbarous semi-Latin, as *Obelisci enormitas Soli prostituta*. (*De Spectaculis*, viii.)

An Obelisk "hewed and squared by commaundement from Sesostriis," and therefore of more ancient date than either of those above described, is stated by Pliny (Holland, xxxvi. 10. Hardouin, 15.) to have been erected by Augustus in the *Campus Martius*. He estimates its height, exclusive of the pedestal, at 116 feet 9 inches, and adds, that in the characters engraven upon it, "a man may see all the Philosophie and Religion of the Ægyptians, for they containe the interpretation of Nature." The passage which follows is by no means easy of interpretation, but it clearly points to some Astronomical use made of this Obelisk, either as a sun-dial or as a meridian line. But even in Pliny's time it had ceased to be true; and he gravely doubts regarding this change, "Whether the course of the Sun in it selfe bee not the same that heretofore, or be altered by some disposition of the heavens: or whether the whole Earth be somewhat removed from the true centre in the midst of the World, which I heare say is found to be so in other places." This Obelisk was dug up in 1748, and was erected in the Piazza di Monte Citorio, by order of Pius VI. in 1792. Kircher describes it as 73 feet 4 inches in height.

Besides the Obelisk erected by Constantius in the Circus Maximus, there was another on the same spot, which Pliny informs us was raised there by Augustus. "As touching the said Obeliske which Augustus Cæsar, late Emperor, erected in the great Shew-place or Cirque at Rome, it was first cut off the rocke by Semneserteus, King of Ægypt, in the time of whose raine Pythagoras sojourned in Ægypt, and the same containeth 125 foot and 9 inches, besides the foot or base of the said stone." From its inscription we learn that Augustus raised it in u. c. 763. In 1589 it was conveyed by Sixtus V. to the Piazza del Popolo, where it now stands. It is 80 feet high, including the base; the stone is red granite.

Clement XIII. carried from the Gardens of Sallust to the Lateran an Obelisk, 48 feet in height without the pedestal, and Pius VI., in 1789, placed it in front of the Trinita de' Monti. The *Obeliscus Pamphilius*, upon which Kircher has written a Dissertation replete with Learning, is supposed by him to be one of the four which Pliny tells us were erected by Sothis, and to have been brought from Egypt by Caracalla. Thus far all is conjectural; its name *Pamphilius* is borrowed from the Pamfili Family, to which Innocent X. belonged. That Pontiff employed Bernini, in 1649, to restore its five fragments, and place them in his great Fountain in the Piazza Navona, where it rises to the height of 54 feet upon a base of rock in itself measuring 40 feet.

The Mausoleum of Augustus has furnished modern Rome with two Obelisks. One placed by Sixtus V., in 1587, in the front of Sta. Maria Maggiore; the other by Pius VI. on the Monte Cavallo. They are without Hieroglyphics, and each, exclusive of the pedestal, is 48 feet high. They are said to have been originally made in the reign of Smarres and Erapius, A. C. 1028, and to have been brought to Rome by Claudius, A. D. 57; and if this be true, they are briefly noticed by Pliny.

VOL. XXV.

(Hardouin, xxxvi. 14.) A much smaller Obelisk than any of those above mentioned, being only a few feet in height, is mounted on the back of an elephant, made by Bernini in front of Sta. Maria sopra Minerva; and another found near the Temple of Isis was first placed before the Church of S. Macuto, and afterwards transported by Clement XI. to the Fountain in the Piazza della Rotonda. (The Pantheon.) In all there are eleven perfect Obelisks at Rome.

Besides these may be named the Obelisk in the Hippodrome at Constantinople; two at Florence of small dimensions; one before the Cathedral at Catana; one in the Borghese Palace at Velitri; and one at ARLES in Provence, which we have already mentioned in our notice of that town. In the collection of Sir James Tylney Long at Wanstead was the apex of an Obelisk purchased from Captain Lethieullier, by whom it was brought from Alexandria in 1722. It is engraved by Alexander Gordon in his Twenty-five Plates of Egyptian Antiquities.

Exclusive of the very curious Work of Dominico Fontana, which we have already mentioned, in which he gives an account of his own method of moving and erecting the Vatican Obelisk, the great taste which Sixtus V. manifested for the decoration of his Capital gave rise to many other contemporary Works on Obelisks, among which such as have fallen in our way are *Degl' Obelisch di Roma di Monsig. Michele Mercati*, Protonot. Apostolico, Roma, 1589, an elaborate Dissertation. *Trattato di Camillo Agrippa Milanese di trasportar la Guglia in su la Piazza di San Pietro*, Roma, 1583, a rejected proposition. *Discorso di M. Filippo Pigafetta d'intorno all' Historia della Aguglia et alla ragione del muoverla*, Roma, 1586, a brief account of the Obelisk itself and of Fontana's machinery. *Ordo Dedicationis, &c.* by Petrus Galesinius, Proton. Apost. Romæ, 1586, a programme of the ceremonial. *Petri Angeli Bargæi Commentarius de Obelisco*, Romæ, 1586, to which are appended two Books of Latin verses, some praising the Obelisk and others the Pope; and a *Libellus* on the composition of Anagrams by Gulielmus Blancus Albiensis; and lastly, a *Dialogo* by Cosimo Gaci, which we are very little able to describe. But the reader who wishes to go more deeply into the study of Obelisks than the narrow limits of our pages permit us to lead him, will do well to consult the splendid folio *De Origine et Usu Obeliscorum*, published by a Dane, Giorgio Zoega, at Rome, in 1797. The subject is exhausted in his 655 pages.

Obelisks, more rude in form and smaller in dimensions than those of Egypt, were raised by the Scandinavians. Olaus Wormius, in his *Monumenta Danica*, (lib. i. c. 9. p. 63.) has given a cut of one of these in the Diocese of Berg, nine cubits (*ulnæ*) high. It stands in a Cemetery, and it has a Cross sculptured on it, so that it is probably a monument to some deceased Christian. Popular tradition, however, affirms that it covers the grave of a Giant, and that it is the blade of his sword (the hilt being under ground) converted into stone by the lapse of time.

*Ὀβελίσκος is twice used by Diodorus Siculus in a sense differing from that commonly accepted. Once in its original bearing as a little spit. In describing the cookery of the Gauls, he says they have ὀβελίσκοι πλήρεις κρεῶν ὀλομερῶν, (v. 28.) which love of entire joints is not cherished by their modern descendants, notwithstanding its former existence is corroborated by Posido-

nus in Athenæus. (iv. 36.) In another place Diodorus has puzzled his commentators. He is speaking of a flood at Rhodes, which proved very destructive on account of the water-courses having been neglected, τῶν δ' ἐν τοῖς τεύχεσιν οβελίσκων συμφραχθέντων. (xix. 45.) Rhodoman here interprets οβελίσκων as *tubi*, the pipes of the drains; but Wesseling, with more reason, inquires what necessity there is for departure from the primary signification; the mouth of the drains issuing from the

walls were protected by *spikes*, a very common defence, and these being choked by foreign substances carried down by the flood, hindered its free passage. A grating of this sort at Nismes is very lucidly described in the classical Latinity of De Thou. *Fons ille quem dixi inter arcem et Carmelitanam portam decurrit, in quam per canalem admittitur portâ humili clathris ferreis obse- ratâ.* (xlii. 7.)

OBE'SE, } Fr. *obesité*; Lat. *obesitas*, from ob-
OBE'SITY. } *esus*, *pinguis*, *crassus*, fat, gross, *ob*, and
esus, from *ed-ere*, to eat. Vossius suggests that it may be so used because *ad edendum aptum, cōque vescis ani- mantibus propriè conveniens*. There seems little room for doubt; *ob*, (aug.) and *edere*, to eat, to feed; and *ob-esus*, consequently, fed much, fed highly; and hence, Excessively fed or fat; fat to a diseased excess; mor- bidly fat or fleshy. The word is principally used by Medical Writers.

The author's counsel runs upon his corpulency, just as one said of an over-*obese* priest that he was an Arminian; grant, quoth a second, that he be an Arminian, I'll swear he is the greatest that ever I saw.

Gayton. *On Don Quixote*, (1654,) p. 8.

On these many diseases depend; as on the straitness of the chest, a phthisis; on the largeness of the veins, an atrophy; on their smallness, *obesity*.

Grew.

OBEY, v. } Fr. *obeir*; It. *obedire*; Sp. *obe-*
OBE'YER, } *decer*; Lat. *ob-edire*, (*ob*, and
OBE'DIENT, } *audire*, to hear,) to hearken or

OBE'ISCHE, } Our old writers used *obeissant*
OBE'ISANT, } and *obeissance* immediately from
OBE'ISANCE. } the French. *Obeissance* is also
applied to an act denoting *obedience*, or

Submission, or subservience; reverence or respect; to a bow, or courtesy.

Under his *obedience*, am we echone.

Piers Plouhman. *Vision*, p. 159.

As it semeth nouht pfitness in cyties for to begge
Bote he be *obediencer*, to pry our oþr to mynstre.

Id. *Ib.* p. 80.

What newe doctrine is this? for in power he commaundith to unclene spirits & thei *obeyen* to him.

Wiclif. *Mark*, ch. i.

What newe doctrine is this; for he commaundeth y^e foul spirits with power, & they *obeye* him.

Bible, Anno 1551.

Witen ghe not that to whom ghe ghyuen ghou seruauntis to *obeie* to, ghe ben seruauntis of that thing to which ghe han *obeyed*? either of synne to deeth, either of *obedience* to rightwysnesse.

Wiclif. *Romaynes*, ch. vi.

To whosoever ye comit yourselues as seruautes to *obey*: his seruautes ye are to whom ye *obey*: whether it be of synne vnto deathe, or of *obedience* unto righteousness.

Bible, Anno 1551.

For whi therefore I wroot this that I knowe ghure preef whether in alle thingis ghe ben *obedient*.

Wiclif. 2 *Corynthians*, ch. ii.

I wryte, that I myght know the profe of you whether ye should be *obedyent*.

Bible, Anno 1551.

And whanne he was Goddis sonne he lernyde *obedience* of these thingis that he suffride, and he broughte to the ende is maad cause of euerlastinge heelte to alle that *obeischen* to hym.

Wiclif. *Ebruis*, ch. v.

And though he were God's sonne, yet learned he *obedience*, by tho thinges whiche he suffered, & was made perfit and the cause of eternall saluation vnto all them that *obey* him.

Bible, Anno 1551.

And we ben witnessis of these wordis and the Hooli Goost whom God gaf to alle *obeischynge* to hym.

Wiclif. *The Dedis of Apostlis*, ch. v.

And we are his records cōcernynge these thinges and also the Holy Goost whom God hath giuen to them that *obey* him.

Bible, Anno 1551.

And ay she kept hir fadres lif on loft
With every *obeissance* and diligence,
That child may don to fadres reverence.

Chaucer. *The Clerkes Tale*, v. 8106.

Now how that a woman shuld be subget hire husbond, that telleth Seint Peter, first in *obedience*.

Id. *The Persones Tale*, p. 166.

She sayde: "Lord, and lith in your plesance,
My child and I, with hertely *obeissance*
Ben youres all, and ye may save or spill,
Your owen thing: werketh after your will."

Id. *The Clerkes Tale*, v. 8378.

And *obeysant*, ay redy to his hond,
Were all his lieges.

Id. *Ib.* v. 7942.

Take hede now of this greate gentilman,
This Troian, that so well her please can,
That faineth him so true and *obeising*,
So gentill, and so privie of his doing.

Id. *The Legend of Good Women*, v. 1264.

So that a man maie sothely telle,
That all the worlde to gold *obeith*.

Gower. *Conf. Am.* book v. p. 125.

In euery place in euery stede,
What so my lady hath me bede,
With all myn herte *obedient*
I haue ther to be diligent.

Id. *Ib.* book iv. p. 103.

Lo thus he wanne a lustie wife,
Which *obeisant* was at his will.

Id. *Ib.* p. 97.

The people stode in *obeissance*
Under the rule of gouernance.

Id. *Ib.* *Prologos*, p. 8.

For the which cause the See of Rome tooke great indignation against the said Albigenses, and caused all their faithful Catholickes and *obedienciaries* to their church to rise vp in armour, and to take the sign of the holy crosse vpon them, to fight against them.

Fox. *Martyrs*, fol. 870. *King Henry VIII.*

I meane as thus lo, yf we of oure owne frowardnes wrye not a contrary way, but be readye *obediently* to folowe hys most blessed will and pleasure.

Sir Thomas More. *Workes*, fol. 1365. *A Treatyce vpon the Pas- sion.*

Reign thou in Hell thy kyngdom, let mee serve
In Heav'n God ever blest, and His divine
Behests *obey*, worthiest to be *obey'd*.

Milton. *Paradise Lost*, book vi. l. 185.

That thou art happie, owe to God;
That thou continu'st such, owe to thy self,
That is, to thy *obedience*; therein stand.

Id. *Ib.* book v. l. 522.

OBEY.
—
OBFUS
CATE.

But say,
What meant that caution join'd, if ye be found
Obedient? can we want *obedience* then
To Him, or possibly His love desert.
Milton. Paradise Lost, book v. l. 514.

As there is no power in the world but owes most naturally an *obediential* subiection to the Lord of Nature, so even the will it self is naturally and essentially subject to the determination of the Lord and Author of it.

Hale. Origination of Mankind, ch. i. fol. 38.

[I] twentie yeers haue bene your wife,
And borne your children, and
Haue lou'd and liu'd *obediently*,
And vnsuspected stand.

Warner. Albion's England, book viii. ch. xxxviii.

Or, lastly, why may wee not conceive that though spirits have nothing material in their nature, which that fire should work upon, yet by the judgement of the Almighty Arbitrer of the world, justly willing to torment, they may be made most sensible of paine, and, by the *obedible* submission of their created nature, wrought upon immediately by their appointed tortures.

Hall Works, vol. ii. fol. 79. Contemplations, book iii. Christ among the Gergesenes.

Love and *obedience* to her lord she bore;
She much *obey'd* him, but she lov'd him more:
Not aw'd to duty by superior sway,
But taught by his indulgence to *obey*.

Dryden. Eleonora.

There is no such way of giving God the glory of his infinite knowledge, as by an *obediential* practice of those duties and commands which seem most to thwart and contradict our own.

South. Sermons, vol. ix. p. 338.

There sat the Powers in awful synod plac'd;
They bow'd, and made *obeisance* as she pass'd,
Through all the brazen dome.

Pope. Homer. Iliad, book xv.

The eye must do *obeisance* to the window, and discourse submit to sensation.

South. Sermons, vol. viii. p. 164.

Yet to whate'er above was fated,
Obediently he bow'd his soul,
For what all-bounteous Heav'n created,
He thought Heav'n only should control.

Cooper. A Father's Advice to his Son.

OBFI'RM, } Lat. *ob-firm-are*, (*ob*, aug. and
OBFI'RMATE, } *firm-are*; — *firmus*, i. e. *stabilis*,
OBFIRMA'TION. } constant.) See CONFIRM.

To strengthen greatly; to be or cause to be obstinate or obdurate.

They do *obfirmate* and make obstinate their minds for the constant suffering of death.

Sheldon. Miracles of Antichrist, (1616,) p. 16.

The *obfirmed* soul will hold out, and scorns so much as to look of what colour the flag is.

Hall. Works, vol. iii. fol. 79. The Remedy of Prophanesne, book ii. sec. 11.

The one walks on securely and resolutely, as *obfirmed* in his wickedness.

Id. Ib. vol. iii. fol. 673. Satan's Fiery Darts Quenched, dec. 3. temp. 3.

But when Christ had been preached, all the *obfirmation* and obstinacy of mind, by which they shut their eyes against that light, all that was choice, and interest, or passion, and was to be rescinded by repentance.

Taylor. On Repentance, ch. ii. sec. 2. p. 71.

OBFUSCATE, or } Fr. *obfusquer*, or *offusquer*;
OFFUSCATE, } Lat. *ob*, (aug.) and *fusc-are*,
OBFUSCA'TION. } *παρά τὸ φῶσκ-ειν*, *ustulare*, to scorch, to singe. *Obfusco* is used by Latin Writers of the Lower Ages:—to give or have the colour of any thing scorched; to give a dark or gloomy hue or colour.

To darken, to obscure. *Lindsay, Complaint of Scotland*, uses "*obfusquis* the beymis of the sonne." See *Jamieson*.

Whereby the fame of all our estimation, whiche all kynges and princes haue conceiued in vs, partly obtained, by the vertue and prowess of our noble ancestors, and partly atcheued by our owne peines and forward actes; shall now bee *obfuscate*, vtterly extinguished, and nothing let by.

Hall. Edward IV. The seventh Yere.

So in the sowles of men is ingenerate a lime of science, whyche with the mixture of a terrestriall substaunce is *obfuscate*, or made darke.

Sir Thomas Elyot. The Governour, book iii. ch. xxii.

If passion and prejudice do not *obfuscate* his reason and judgment.

Waterhouse. Apology for Learning, p. 93.

From thence comes care, sorrow, and anxiety, *obfuscation* of spirits, desperation, and the like.

Burton. Anatomy of Melancholy, fol. 202.

Disdaining and despising all vice and laziness, which *offuscate* and diffame the children of good houses.

Woodroephe. French Grammar, (1623,) p. 364.

Is this the honour which man hath by being a little world, that he hath these earthquakes in himself, sudden shakings; these lightnings, sudden flashes; these thunders, sudden noises; these eclipses, sudden *offuscations*, and darkenings of his senses, &c.

Donne. Devotions, p. 6.

OBJE'CT, v.

O'BJECT, n.

OBJE'CTABLE,

OBJE'CTION,

OBJE'CTIONABLE,

OBJE'CTIVE,

OBJE'CTIVELY,

OBJE'CTIVENESS,

OBJE'CTOR.

Fr. *objicer*; It. *obbiettare*;
Sp. *objetar*; Lat. *objec-ere*, *objectum*, to throw against, (*ob*, and *jac-ere*, to throw or cast.)

To throw or cast against, or at; to put or place against, to oppose; to put or place in opposition; to state or urge, in opposition.

An *object*; any thing put or placed, laid or lying against; *sc.* the senses, the perceptions, the thoughts; any thing presented to the thought or mind; to which the mind directs itself, or attends to; any thing proposed or purposed, intended, aimed at, or kept in view.

Y^e Kinges mother *objected* opely against his marriage, as it wer in discharge of her conscience.

Sir Thomas More. Workes, fol. 60. Richard III.

Because pilgrimages be amonge other proues testified by myracles, the messenger dothe make *obiection* against those myracles, partely lest they be fayned and vntrewe, partely lest they be done by the deuill yf they be done at all.

Id. Ib. fol. 124. A Dialogue concerning Heresies, &c.

Theyr scholasticall diuinitie must make *obiections* agaynst euery truth, be it neuer so playne with pro and contra.

Tyndall. Workes, fol. 471. The Supper of the Lord, &c.

To thee no reason; who knowst only good,
But evil hast not tri'd: and wilt *object*
His will who bound us?

Milton. Paradise Lost, book iv. l. 896.

This kind of feare hath two eyes fixed on two diuers *objects*, so had this of theirs: one eye looked upon the raine and thunder; the other looked up to the God that sent it.

Hall. Works, vol. i. fol. 436. An Holy Panegyricke.

It is as *objectable* against all those things, which either native beauty or art afford.

Bishop Taylor. Artificial Handsomeness, p. 145.

An embassage of the Treueri attended, whereof Tullius Valentinus was the chiefe man, a principall firebrand of the warre: who with a premeditate oration applied to the Romans all those *obiections*, wherewith mightie monarchies are vsually charged.

Savile. Tacitus, book iv. ch. xviii. fol. 173.

And if this one small near piece of Nature still affords new matter for our discovery; where or when should we be ever able to search out all the vast treasures of *objective* knowledge that layes within the compass of the universe?

Hale. Origination of Mankind, ch. iv. sect. 2. fol. 156.

So that Aristotle's first mover, is not properly the efficient, but only the final and *objective* cause of the heavenly motions, the

OBFUS-
CATE.
—
OBJECT.

OBJECT. immediate efficient cause thereof being *ψυχή και φύσις*, soul and nature.

OBJURATION. *Cudworth. Intellectual System*, book i. ch. iii. fol. 170.
Aristotle's immovable mover being understood by him, not to move the Heavens efficiently, but only *objectively* and finally, *ὡς ἰσχυρισμὸν*, as being loved. *Id. Ib.* book i. ch. v. fol. 412.

There is no motion, quality, or operation of external bodies, but what hath accommodated it to a faculty in sense receptive of it: Is there such a motion or *objectiveness* of external bodies which produceth light or colour, figure, vicinity, or distance? the faculty of sight is fitted to receive that impression or *objectiveness*, and that *objectiveness* fitted and accommodated to that faculty. Is there that motion or *objectiveness* that causeth sounds? the faculty of hearing is fitted to be receptive of it, and that *objectiveness* or motion (or whatever it is) fitted to make an impression upon that faculty.

Hale. Origination of Mankind, ch. i. fol. 1.

Let the *objector* but honestly and impartially examine and observe himself, and he will need no other evidence of this truth but his own experience to satisfy him, that all those effects proceed from an active regnant principle within him, distinct from the *moles corporea*, or the contemplation thereof. *Id. Ib.* ch. i. fol. 32.

Prayer, of all other acts of a rational nature, does most peculiarly qualify a man to be a fit *object* of the divine favour, by being most eminently and properly an act of dependence upon God.

South. Sermons, vol. ii. p. 91.

It ought not to be the leading *object* of any one, to become an eminent metaphysician, mathematician, or poet; but to render himself happy as an individual, and an agreeable, a respectable, and an useful member of society.

Stewart. Philosophy of the Human Mind. Introduction, part ii. sec. 1. p. 23.

OBISIUM, in *Zoology*, a genus of *Arachnida*.

Generic character. *Palpi* very large, pediform, terminated by a didactyle hand; body cylindrical; *thorax* composed of one segment; mandibles porrect; eyes four; *abdomen* very large, oval; legs slender.

Type of the genus, *O. trombidoides*, Leach, *Zool. Misc.* vol. iii. pl. 141. fig. 2. Several species, found beneath the bark of decaying trees, or under stones; five at least indigenous.

O'BIT, } Fr. *obit*; Lat. *obit-us*, death, from
OBI'TUARY. } *obire*, (sc. *supremum diem*.) (to pass his last day,) to die. It is applied to

A ceremony to the dead; an obsequy, a funeral rite.

Many men shall care little for *obites* within a while.

Sir Thomas More. Workes, fol. 880. *The Apology*.

To thee, renowned knight, continual praise we owe,
And at thy hallow'd tomb they yearly *obits* show.

Drayton. Poly-obion, song 13.

Soon after was a flat black marble stone laid, with a little inscription thereon, containing his name, title, and *obit*, as also his age when he died, which was 58.

Wood. Athenæ Oxonienses, vol. ii. fol. 735.

OBJURGATION, } Fr. *objurguer*, -ateur, -ation,
OBJU'RGATORY. } -atoire; Lat. *ob-jurg-are*, to strive or contend against, (*ob*, and *jurgare*, to strive,) consequentially,

To reprove or reprobate, to rebuke, to reprimand, to chide severely.

If there be no true liberty, but all things come to pass by inevitable necessity, then what are all interrogations and *objurgations*, and reprehensions, and expostulations?

Bramhall. Against Hobbes.

Now, letters, though they be capable of any subject, yet commonly they are either narratory, *objurgatory*, consolatory, monitory, or congratulatory.

Howell. Letter 1. book i. sec. 1.

The concluding sentence brings back the whole train of thought to the incident in the first verse, (*Matt. xv.*) viz. the *objurgatory* question of the Pharisees, and renders it evident that the whole sprung from that circumstance.

Paley. Evidences, vol. ii. ch. iv. p. 106.

OBLA'TE, } Fr. *oblation*; It. *oblazione*; Sp. *ob-*
OBLA'TION. } *lacion*; Lat. *oblatio*, from *oblatus*,
past participle of *offerre*, to bring or bear against, or before, in presence, to present. See **OFFER**.

An offering or presentment: generally used when such offering is made in reverence or adoration.

But, in conclusion, both garrisons and the inhabitants, oppressed with much penury & extreme famine were coacted to render the city upon reasonable conditions to them by the French King sent and oblating.

Hall. Henry VI. The thirty-first Yere.

Of all things in special procure vs the suffrages and blessed oblation of the holy masse, whereof no man living so well can tell the fruits, as we that here feel it.

Sir Thomas More. Workes, fol. 338. *The Supplication of Souls*.

They had beene earnestlie and manie times told, that unlesse they would be baptised, they might not be partakers of the sacred oblation.

Holinshed. The Historie of England, vol. i. book v. ch. xxiv. p. 603.

This oblation of an heart, fixed with dependence on, and affection to him, is the most acceptable tribute we can pay him, the foundation of true devotion and life of all religion.

Locke. The Reasonableness of Christianity.

Yet Hector's ashes from his urn she bore,

And in her bosom the sad relic wore:

Then scatter'd on his tomb her hoary hairs,

A poor oblation mingled with her teares.

Dryden. Ovid. Metamorphoses, book xiii.

OBLATE, Lat. *oblatus*, as applied to figure, is contradistinguished from *prolate*, (*pro-ferre*, *pro-latum*,) drawn out, extended, beyond; (sc. a perfect sphere or spheroid;) and is applied, when such figure is opposed or stopped in its spherical formation; and, consequently, compressed, flattened; sc. at two opposite extremities; i. e. at the poles.

The equilibrium that was supposed to be amongst the parts will not, therefore, now subsist in a spherical figure, but will be destroyed by the inequality of their gravitation, till the water rise at the equator and sink at the poles, so as, by a greater height at the equator, to compensate the greater gravity at the poles; and till, by assuming an intermediate height in the intermediate places, the whole earth become of an *oblatus* spheroidal form, whose diameter at the equator will be the greatest, and the axis the least, of all the lines that can pass through the center.

Maclaurin. Sir Isaac Newton. Philosophical Dissertations, book iv. ch. vi.

OBLATRATON, Lat. *oblattare*, to bark at. See **LATRANT**.

Barking, snarling at; railing, scolding.

The apostle fears none of these curish *oblattrations*; but condemning all impotent misapprehensions, calls them what he finds them, a forward generation.

Hall. Works, vol. ii. fol. 341. *Sermon preached to the Lords*.

OBLICATION, Fr. *oblacter*, to oblectate, to rejoice. *Oblectation*, delight, Cotgrave. Lat. *oblectare*, to rejoice or delight. See **DELECTABLE**.

Joy, pleasure.

A man that hath not experienced the contentments of innocent piety, the sweetnesss that dew the soul by the influences of the spirits, and the ravishings that sometime from above do shoot abroad in the inward man, will hardly believe there are such *oblentions* that can be hid in godliness.

Feltham. Resolve 66.

OBLIGE, v.

OBLIGE'E,

OBLIGEMENT,

OBLIGER, or

OBLIGOR,

OBLIGINGLY,

OBLIGINGNESS,

OBLIGATE,

OBLIGATION,

OBLIGATORY,

OBLIGATORILY. }

Fr. *obliger*; It. *obligare*; Sp. *obligar*; Lat. *oblig-are*, (*ob*, and *lig-are*, to bind; Gr. *λυγ-εἶν*.) See **DISOBLIGE**.

To bind, to constrain, to force, to compel; to bind, hold, or cause to be beholden, (by some act of kindness or service;) to gratify, to lay under or impose a debt of gratitude; and consequently,

Obliging; conferring or bestow-

OBLATE.
OBLIGZ.

OBLIGE. ing kindness, civility; complying, complaisant; having a disposition to please or gratify.

Among the common people, to *oblige* is the more usual word.

See the Quotations from Paley.

"Brut," he seyde, "þou art now þe best body þat ys,
For þe noble kyn, of wom þou art, & for þi prowes ywis,
Ych *oblige* me to þe, and my kyndom al so."
R. Gloucester, p. 12.

And hed hym alsauþ to hym to Gloucestre wende,
And made hym *oblygacion*, & costage hym gan sende.
Id. p. 391.

— þei *obliged* þem to gyue
Fourti þousand pound, at his pes to lyue.
R. Brunne, p. 88.

R. said his skille, "lordynges, þis is resoun
Bitwex vs if ge wille mak *obligacioun*,
þat I be your aller broþer & ge in my bandoun,
þat non faile oþer."
Id. p. 162.

And therefore we *oblige* and binde us to our frendes, for to do all his will and his commaundements.

Chaucer. The Tale of Melibee, p. 118.

For to make oure *obligation* and bond as strong as it liketh unto youre goodnesse, that we moun fulfille the will of you and of my lord Melibee.
Id. *Ib.*

He sayd he wolde pardon them of all their trespasses, and woulde quite the of the gret some of money, that they wer bound vnto hym by *oblygacion* of olde tyme.

Lord Berners. Froissart. Cronycle, vol. i. ch. xlv. p. 63.

But before the releasement therof, first he was miserablie compelled (as hath beene declared) to giue ouer both his crowne & scepter to that antichrist of Rome for the space of fiue daies, & as his client, vassall, feudarie & tenant to receiue it againe of him at the hands of another cardinall being bound *obligatorilie*, both for himselfe and his successors.

Fox. Martyrs, fol. 230. *King John. Letter to the Pope*.

Were it I thought death menac't would ensue
This my attempt, I would sustain alone
The worst, and not perswade thee; rather die
Deserted, then *oblige* thee with a fact
Pernicious to thy peace.

Milton. Paradise Lost, book ix. l. 980.

And Numa appointed an oath unto the Romans, say Plutarch and Livy, as the chiefest *obligation* unto faith and truth.

Grew. Cosmo Sacra, book iv. ch. ii. fol. 158.

Others decry them as a Judaical law, partly ceremonial, partly judicial; and therefore either now unlawfull, or, at least, neither *obligatory*, nor convenient.

Hall. Works, vol. iii. fol. 830. *Cases of Conscience*, case 8.

I will not resist, therefore, whatever it is, either of divine or human *obligement*, that you may lay upon me; but will forthwith set down in writing, as you request me, that voluntary idea, which hath long in silence presented itself to me, of a better education.

Milton. Works, vol. i. fol. 135. *Of Education*.

Which truly I should fear, but that it is the natural property of the same heart, to be a gentle interpreter, which is so noble an *obliger*.

Reliquiæ Wottonianæ, p. 453.

He tels them, *Gal. v. 2.* that Christ shall profit them nothing; upon this ground, that Christ coming, as the substance typified by those legal institutions, did consequently set a period to the *obligingness* of those institutions.

Hammond. Works, vol. i. fol. 232. *Of Will-Worship*.

Gay, modest, artless, beautiful and young,
Slow to resolve; in resolution strong;
To all *obliging*, yet reserv'd to all.

Walsh. Pastorals, Eclogue 4.

i. No power can *oblige* any farther than it can take cognizance of the offence, and inflict penalties, in case the person *obliged* does not answer the *obligation*, but offends against it.

South. Sermons, vol. v. p. 228.

'Tis all in vain, deny it as I will,
"No, such a genius never can lie still;"
And then for mine *obligingly* mistakes
The first lampoon Sir Will or Bubo makes.

Pope. Prologue to the Satires, l. 279.

A man is said to be *obliged*, "when he is urged by a violent motive resulting from the command of another."

Paley. Moral Philosophy, vol. i. book ii. ch. ii. p. 59.

And from this account of *obligation* it follows that we can be *obliged* to nothing, but what we ourselves are to gain or loose something by; for nothing else can be a "violent motive" to us.

Id. Ib. p. 61.

The various duties which have now been considered, all agree with each other in one common quality, that of being *obligatory* on rational and voluntary agents; and they are all enjoined by the same authority,—the authority of conscience.

Stewart. Outlines of Moral Philosophy, p. 309.

And if the condition be possible at the time of making it, and afterwards becomes impossible by the act of God, the act of law, or the act of the *obligee* himself, there the penalty of the *obligation* is saved; for no prudence or foresight of the *obliger* could guard against such a contingency.

Blackstone. Commentaries, book ii. ch. xx. p. 340.

OBLIQUE, } Fr. *oblique*; It. *obliquus*; Sp. *ob-*
OBLIQUA'TION, } *liquo*; Lat. *obliquus*; of unsettled
OBLI'QUELY, } etymology; the Gr. *λοξός*, (which
OBLI'QUITY. } Martinius prefers,) has the same sig-
nification, from *λέχ-ειν*, to incline.

Inclining, bending, diverging, sloping; deviating from a right line, from right; from rectitude.

At Paris the sunne riseth two houres before it riseth to them under the equinoctiall, and setteth likewise two houres after them, by means of the *obliquitie* of the horizon.

Hakluyt. Voyages, &c. vol. iii. fol. 50. *The Temperature of Regions*.

For that the love we bear our friends,
Though ne'er so strongly grounded,
Hath in it certain *oblique* ends,
If to the bottom sounded.

Drayton. The Muses' Elysium. Nymphal 3.

His natural affection in a direct line was strong, in an *oblique* but weak; for no man ever loved children more, nor a brother less.

Baker. Henry I. Anno 1135.

On each side four continual watch observe,
And under one great captain jointly serve,
Two fore-right stand, two cross, and four *obliquely* swerve.

P. Fletcher. The Purple Island, can. 2.

But to exact againe what once is given,
Is Nature's meere *obliquitie*! as Heaven
Should aske the blood and spirits he hath infus'd
In man, because man hath the flesh abus'd.

Ben Jonson. The Vnder-wood. An Elegie, fol. 203.

And, that he might their aim decline,
Advanc'd still in an *oblique* line.

Butler. Hudibras, part i. can. 3.

[Your schools] with one confederate voice assert,
That matter by necessity descends
In lines direct, yet part *obliquely* tends.

Blackmore. Creation, book iv.

There can be no such thing in Nature as an honest and lawful envy; but it is intrinsically evil, and imports in it an essential *obliquity*, not to be taken off, or separated from it.

South. Sermons, vol. v. p. 373.

The change made by the *obliquation* of the eyes, is least in colours of the densest than in thin substances.

Newton. Optics.

If Mr. Hogarth did not commence direct hostilities on the latter, [Mr. Wilkes,] he at least *obliquely* gave the first offence by an attack on the friends and party of that gentleman.

Walpole. Anecdotes of Painting, vol. iv. ch. iv. p. 169.

Deformity of heart I call
The worst deformity of all.
Your cares to body are confin'd,
Few fear *obliquity* of mind.

Cotton. Pleasure. Vision 2.

OBLIGE,
OBLIQUE

OBLITE-
RATE.
—
OBLI-
VION.

OBLI'TERATE, } Fr. *obliterer*; It. *obliterare*;
OBLITERA'TION. } Sp. *obliterar*; Lat. *obliterare*,
quod est oblinendo delere atque inducere; Vossius, (in *v. Litera*.) who (in *v. Oblitero*) has no doubt that *obliterare* means *literis aliquid superducere, ut priores deleantur*.

To deface, to efface; to blot out, rub or wear out; destroy the form or figure of.

I do not doubt but that the image which the soul perceives is that in the eye, and not any other corporeally produced to the inside of the brain. (where colour and figure would be so strangely depraved, if not quite obliterated.)

More. *The Immortality of the Soul*, book ii. ch. x. fol. 105.

When we forget things; either the impressions are obliterated, or the images dissolved into their first principles, or exterminated from the brain, with the current of the animal spirits into the nerves.

Grew. *Cosmo Sacra*, book ii. ch. iii. fol. 43.

Considering the many mutations and casualties of wars, transmissions, especially that of the general flood, there might, probably, be an obliteration of all those monuments of antiquity that immense ages precedent at some time have yielded.

Hale. *Origination of Mankind*, ch. ii. sec. 2. fol. 138.

The sin of Judah is said to be writ upon the table of their hearts; as if their memory of, and affection to, it could scarce be obliterated.

Dr. Whitby. *On the Five Points*, dis. 3. ch. iii. sec. 5. p. 249.

That plea refuted, other quirks they seek—
Mercy is infinite, and man is weak;
The future shall obliterate the past,
And Heav'n, no doubt, shall be their home at last.

Cowper. *Truth*.

Cause, from being the name of a particular object, has become, in consequence of the obliteration of that original signification, a remarkable abbreviation in language.

Beddoes. *Observations on the Nature of Mathematical Evidence*, p. 96.

OBLI'VION, } Fr. *oblivion*; It. *obblivione*; Sp.
OBLI'VIOUS, } *oblivido*; Lat. *oblivio*, from *obli-*
OBLI'VIOUSNESS. } *viscor*; and this (Vossius) from
the ancient *liviscor*; Martinius forms it from *oblivi*, the præterperfect of *oblinere*, to blot out, to obliterate; *quia quorum obliviscimur, ea velut obliiscuntur ut legi non queant*. And it is applied to

Effacement or obliteration from the mind or memory; forgetfulness; dismissal from, negation or privation of, memory or remembrance.

Whiche ryngge bare of *obliuon*
The name, and that was by reason,
That where on a finger it sate,
Anone his loue he so foryate,
As though he had it neuer knowe.

Gower. *Conf. Am.* book iv. p. 99.

I shall be greatly condemned as a man verie lightlie bent, and rather desirous to continue in the fresh remembrance of my follies, than content to cancell them in *obliuion* by discontinuance.

Gascoigne. *To the Youth of England*.

But I dwell here nowe in a schoole of *obliuiousnesse*.

Fox. *Martyrs*, Anno 1555. *Conference between M. Latimer and Dr. Ridley*, fol. 1565.

Pensifeness and *obliuiousnesse* made them ignorant in the thyng that they knew.

Udall. *John*, ch. xiii.

I wonder what *obliuiousness* is come vppon hym, that he so cleaueth vnto the doctors, whome he affirmed before eyther to make no mention of it, or els very seldome.

Frith. *Workes*, fol. 51. *Answer vnto Fisher, Byshop of Rochester*.

But such as neither of themselves can sing,
Nor yet are sung of others for reward,
Die in obscure *obliuion*, as the thing
Which never was, ne never with regard,
Their names shall of the later Age be heard.

Spenser. *The Ruines of Time*.

But wherfore let we then our faithful friends,
The associates and copartners of our loss,
Lye thus astonish't on th' *oblivious* pool,
And call them not to share with us their part,
In this unhappy mansion.

Milton. *Paradise Lost*, book i. l. 271.

Wher's your horn? answer to me for that.

GREN. An't like you, sir, I was *oblivious*.

Beaumont and Fletcher. *The Knight of the Burning Pestle*, act iv. sc. 1.

Let dark *oblivion*, and the hollow grave,
Content themselves our frailer thoughts to have.

Waller. *Upon the Death of my Lady Rich*.

Down her pale cheek new streaming sorrow flows;
Till soft *oblivious* shade Minerva spread,
And o'er her eyes ambrosial slumber shed.

Pope. *Homer. Odyssey*, book xix.

In England for many years past, this doctrine has sunk into complete *oblivion*, excepting as a monument of the follies of the learned.

Stewart. *Philosophical Essays*, Es. 3. p. 117.

O'BLONG, *adj.* } Fr. *oblong*; It. *oblungo*; Sp.
O'BLONG, *n.* } *oblongo*; Lat. *oblongus*; (*ob*, aug.
and *longus*.) long, the length exceeding the breadth; and thus longer than broad or wide. Savile (see the Quotation from Gordon) renders the Lat. *oblongus*, not *oblong*, but *long*; and Holland, in Pliny and Livy, *long*, and *long-fashioned*.

Britain is by Livy and Fabius Rusticus, compared in shape to an *oblong* shield, or a broad knife with two edges.

Gordon. *Tacitus. Life of Agricola*.

The best figure of a garden is either a square or an *oblong*, and either upon a flat or a descent; they have all their beauties, but the best I esteem an *oblong* upon a descent.

Sir William Temple. *Works*, vol. iii. p. 234. *On Gardening*.

But with regard to nature, it seems as much avoided, as in the squares and *oblongs* and strait lines of our ancestors.

Walpole. *Anecdotes of Painting*, vol. iv. ch. vii. p. 280.

O'BLOQUY, } Lat. *obloquium*, from *ob-loqui*, to
O'BLOCUTOR. } speak against, to gainsay.

A gainsaying; ill or evil saying, calumny; detraction; reproach. And see the Quotation from Barrow.

From the great *obloquy* in which hee was soo late before, hee was sodainelye fallen in soo greate truste.

Sir Thomas More. *Workes*, fol. 44. *Richard III*.

There be dyverse (*oblocutors*) which, by report of his enemyes, saye, that he would never have set forth such thinges as he promysed.

Bale. *Preface to Leland's Itinerary*.

Think you not then, poor women had not need
Be well advis'd, to write what men should read;
When being silent, but to move awry
Doth often bring us into *obloquy*.

Drayton. *The Countess of Salisbury. To the Black Prince*.

For the word *καταλαλιῶν*, according to its origination, and according to some use, doth signifie all kind of *obloquy*, and so may comprize slander, harsh censure, reviling, scoffing, and the like kinds of *speaking against* our neighbour; but in stricter acceptation, and according to peculiar use, it denoteth that particular sort of *obloquy*, which is called detraction, or backbiting.

Barrow. *Works*, vol. i. fol. 262. *Sermon 19*.

It was his destiny to render to his people those great and splendid services, which excite public applause and gratitude; and to perform at the same time those humbler duties, which, though perhaps more meritorious, are more obscure, and sometimes produce more *obloquy* than acknowledgment.

Eustace. *Italy*, vol iv. ch. i. p. 17.

OBLUCTATION, Lat. *obluctatio*, from *ob-luctari*, to struggle against—*ob*, and *luctari*.

A struggling or striving against. The same author, (Fotherby,) in the same Work, also uses *luctation*. "A diligent *luctation* and contention with ourselves." p. 418.

OBLI-
VION.
—
OBLUC-
TATION.

OBLUC-TATION. He hath not the command of himself to use that artificial *obluc-tation*, and facing out of the matter which he doth at other times.
Fotherby. Atheom. (1622,) p. 125.

OBREP-TION.

OBMUTESCENCE, (see *MUTE, ante*.) Lat. *obmutescens*, present participle of *ob-mutescere*, to become dumb in speech.

Dumbness of speech.

But a vehement fear naturally produceth *obmutescence*; and sometimes irrecoverable silence.

Sir Thomas Brown. Vulgar Errours, book iii. ch. viii. p. 155.

Compare christianity as it came from Christ, with the same religion as it fell into other hands; the hair shirt, the watchings, the midnight prayers, the *obmutescence*, the gloom and mortification of religious orders, and of those who aspired to religious perfection.

Paley. Evidences, vol. ii. part ii. ch. ii. p. 60.

OBNOXIOUS, } Lat. *obnoxius, obnoxiosus*; *ob*
OBNOXIOUSNESS, } *noxam pœnæ obligatus*; subject
OBNOXIOUSLY, } to punishment for a fault or crime. See *MARTINIUS*.

Subject, liable, or exposed, to punishment; generally, subject, liable, or exposed; faulty, offensive; blamable.

Think but how poor thou wast, how *obnoxious*,
Whom a small lump of flesh could poison thus.
Donne. Funeral Elegies. Of the Progress of the Soul.

But made hereby *obnoxious* more
To all the miseries of life,
Life in captivity
Among human foes.

Milton. Samson Agonistes, l. 107.

But, oh, ye tutelar spirits, ye well know our weakness, and their strength; our silliness, and their craft, their deadly machinations, and our miserable *obnoxiousness*.

Hall. Works, vol. iii. fol. 964. The Invisible World, book i.

Every man is loath to be an informer, whether out of the envy of the office, or out of the conscience of his own *obnoxiousness*.

Id. Ib. fol. 807. Cases of Conscience, dec. 2. case 5.

Their earthly mould *obnoxious* was to Fate,
Th' immortal part assum'd immortal state
Dryden. The Hind and the Panther, part i.

Our *obnoxiousness* to the curse of the law for sin, had exposed us to all the extremity of misery, and made death as due to us, as wages to the workman.

South. Sermons, vol. xi. p. 144.

So far indulge; 'tis fit besides, that man,
To change *obnoxious*, be to change inur'd.
Armstrong. The Art of preserving Health, book ii.

OBNUBILATE, } Lat. *obnubilare*, to cover with
OBNUBILATION, } clouds, (*nubibus*.) As the
Fr. *obnubiler*. To obnubilate, make cloudy, obscure or darken, as clouds do the sky. *Cotgrave*.

If they [his virtues] be like a clear light, eminent; they will stab him with a but of detraction: as if there were something yet so foul, as did *obnubilare* even the brightest glory.

Feltham. Resolve 50. fol. 89.

Let others glory in their triumphs and trophies, in their *obnubilation* of bodies coruscant; that they have brought fear upon champions.

Waterhouse. Apologie for Learning, p. 175.

OBOLARIA, in *Botany*, a genus of the class *Didynamia*, order *Angiospermia*. Generic character: calyx five-cleft; corolla bell-shaped, four-cleft; capsule one-celled, two-valved, many seeded; stamens in the divisions of the corolla.

One species, *O. Virginica*, a small herbaceous perennial, native of North America. *Nuttal*.

OBREPTION, Lat. *obrepere*; to creep slyly; (*ob*, aug. and *repere*, to creep.)

Fr. *obreption*; obreption, the creeping or stealing to a thing by crafty means; the getting or obtaining thereof by dissimulation or private cousenage; *Cotgrave*; who

also uses the adjective *obreptitious* in *v. Obreptice*; and *Delpino* in *v. Obrepticio*.

Sudden incursions and *obreptions*, sins of mere ignorance and inadvertency.

Cudworth. Sermons, p. 81.

OBRIMUM, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Palpi* four, unequal, terminal joint elongate, of the maxillary subfusiform-truncate; of the labial ovate-truncate; *antennæ* pilose, slender, first joint robust, second subglobose, third and fourth slender, of nearly equal length, fifth elongate, sixth and following shorter, and of nearly equal length with each other; head broad, trigonal; eyes truncate; *thorax* longer than broad, with the sides produced in the middle; body elongate, subcylindric; *elytra* rounded at the apex; *femora* abruptly clavate; *tibiæ* slender, single.

Type of the genus, *Cerambyx cantharinus*, *Linnaeus*; *Ob. cantharium*, *Curtis, Britt. Entom. vol. ii. pl. xci.* Five species, two of them British; they inhabit decaying trees, upon which their larvæ subsist.

OBSCE'NE, } Fr. *obscene*; It. *osceno*; Sp. *ob-*
OBSCE'NELY, } *sceno*; Lat. *obscenus*; of uncertain
OBSCE'NENESS, } Etymology. *Vossius* and *Marti-*
OBSCE'NITY, } *nus* collect the opinions of pre-

ceding writers. *Ob* is negative, *Varro* says, of *scæva*: *Ea dicta ab scævâ, id est, sinistra; quod quæ sinistra sunt, bona auspicia existimantur. De Ling. Lat. lib. vi.* In common usage it is

Abominable, inauspicious; offensive, foul, lewd.

The guilty serpents, and *obscener* beasts,
Creep, conscious, to their secret rests;
Nature to thee does reverence pay
Ill omens and ill sights removes out of the way.

Cowley. Hymn to Light.

As when wee avoid losse by it, and escape *obsceneness*, and gaine in the grace and property, which helps significance.

Ben Jonson. Discoveries, fol. 118.

The Heathen Poets did nominate, inuocate, adire, adore, and supplicate these idoles, and discourse of all their genealogies, villanies, and *obscenities*.

Prynne. Histrio-Mastix, part i. act iii. sc. 1.

The Masoreths, and Rabbinical Scholiasts not well attending, have often us'd to blur the margent with *keri* instead of *ketiv*, and gave us this insulse rule out of their Talmud, that all words which in the law are writ *obscenely*, must be chang'd to more civil words.

Milton. Works, vol. i. fol. 115. An Apology for Smectymnus.

Sudden, our bands a spotted pard restrain;
Then, arm'd with tusks, and lightning in his eyes,
The boar's *obscener* shape the god belies.

Pope. Homer. Odyssey, book iv.

I wish, at least, our sacred rites were free
From those pollutions of *obscenity*.

Dryden. Juvenal. Satire 6.

Then, on a lofty beam, the matron ty'd
The noose dishonest, and *obscenely* dy'd.

Pitt. Virgil. Æneid, book xii.

OBSCU'RE, *v.* } Fr. *obscurcir*; It. *oscurare*;
OBSCU'RE, *adj.* } Sp. *obscurer*; Lat. *obscurare*,
OBSCU'RE, *n.* } from *obscurus*; *ob*, and (*obsolete*)
OBSCU'RELY, } *scurus*, from *σκῆυρος*, and this from
OBSCU'RENESS, } *σκῆυα, umbra*. See *Vossius*, and
OBSCU'RITY, } *Scheid. in Lennep, p. 899.*
OBSCURA'TION, } To dim or darken; to cloud,

to hide, to be or cause to be gloomy; less distinguishable or discernible; difficult to be perceived or discovered. The adjective is also applied as equivalent to Unknown, unnoticed; mean, base.

— Loue is right of such nature
Now is faire, and now *obscure*,
Now bright.

Chaucer. The Romant of the Rose, p. 210.

OBREP-TION.

OB-SCURE.

OB-
SCURE.
—
OBSE-
CRA-
TION.

Behold and I shall now the cloude remoue
Which ouercast thy mortal sight doth dim :
Whoes moisture doth *obscure* all thinges aboue.
Surrey. Virgil. Æneis, book ii.

And therefore [he] euer so laboured to set his wordes in such
obscure and doubtful fashion that he mighte haue alwaye some
refuge at some starting hole.
*Sir Thomas More. Workes, fol. 554. The Second Part of the
Confutation of Tyndall.*

Bust. I must not : 'twill break his heart to hear it.
Jul. How ? there's bad tidings : I must *obscure* and hear it.
Beaumont and Fletcher. The Maid of the Mill, act iv. sc. 1.

Boy. I must be plain then, come I know you are Maria : this thin
vail cannot *obscure* you.

Id. The Little Thief, act iv. sc. 1.

— Oft on the bordering deep
Encamp their legions, or with *obscure* wing
Scout farr and wide into the realm of night,
Scorning surprize.

Milton. Paradise Lost, book ii. l. 131.

— Who shall tempt with wand'ring feet
The dark unbottom'd infinite abyss
And through the palpable *obscure* find out
His uncouth way.

Id. Ib. book ii. l. 410.

The body of Richard after many indignities and reproaches (the
dirigies and obsequies of the common people towards tyrants) was
obscurely buried.

Bacon. King Henry VII. fol. 2.

Thou may'st in after-ages live esteem'd,
Unburi'd in these lines, reserv'd in pureness ;
These shall entomb those eyes, that have redeem'd
Me from the vulgar, thee from all *obscureness*.

Daniel. Sonnet 41. To Delia.

These questions of predestination, being perplexed, thorny, and
troublesome through their *obscureness*, may, without all detriment
of salvation, be either unknown or discussed.

Hall. Via Media, The Way of Peace, vol. ix. p. 827.

Understanding hereby their cosmical descent, or their setting
when the sun ariseth, and not their heliacal *obscuration*, or their in-
clusion in the lustre of the sun.

Sir Thomas Brown. Vulgar Errours, book vi. ch. iii.

Thy gifts thou in *obscurity* dost waste
False friends thy kindness, born but to deceive thee.

Drayton. Idea 10.

His fiery cannon did their passage guide,
And following smoke *obscur'd* them from the foe :
Thus Israel, safe from the Egyptian's pride,
By flaming pillars and by clouds did go.

Dryden. Annus Mirabilis.

Now bolder fires appear,
And o'er the palpable *obscurement* sport,
Glaring and gay as falling Lucifer.

Pomfret. Dies Novissima.

When all the instruments of knowledge are forbid to do their
office, ignorance and *obscurity* must needs be upon the whole soul.

South. Sermons, vol. iii. p. 64.

But the dark mantle of involving time
Has veil'd their beauties, and *obscur'd* their rhyme.

Langhorne. Genius and Valour.

— Thus ever fix'd
In solitude, may I, *obscurely* safe,
Deceive mankind, and steal through life along,
As slides the foot of Time, unmark'd, unknown.

Mallet. The Excursion, can. 1.

OBSECRA'TION, } Fr. *obsecration* ; Sp. *obse-*
O'BSECRA'TORY. } cracion ; Lat. *obsecratio* ; from
obsecrare, to pray earnestly, (*ob*, aug. and *sacer* ; see
CONSECRATE.) *Quasi per sacra vel a sacris orare*.

An earnest prayer or beseeching.

The verb to *obsecrate* is given by Dr. Nott in his
Glossary to Sir Thomas Wyatt : it has not occurred to
us in the Poems.

That these were comprehended under the *sacra*, is manifest from
the old form of *obsecration*.

Stillingfleet.

Oh that we could at last now entertain that gracious and *obse-*
cratory charge of the blessed Apostle of the Gentiles. (1 Cor. i. 10.)
Hall. Works, vol. iii. p. 588. The Peace Maker, sec. 26.

O'BSEQUY, } Fr. *obsequieux* ; Lat. *obsequi-*
OBSE'QUIOUS, } osus, *obsequium*, from *obsequi*, to
OBSE'QUIOUSLY, } follow closely, (*ob*, aug. and *sequi*,
OBSE'QUIOUSNESS. } to follow.) Hence *obsequious*.

Following closely, observantly, servilely ; observant,
attentive to, complying, yielding ; subservient, servile.

To youth me oweth to be *obsequious*,
Nou I begin thus to worke for his sake
Which may the seruence of loue aslake
To the louer, as a mitigatiue.

Prologue to the Remedy of Loue. Imputed to Chaucer.

With all faythfull *obsequy* worshippe hym therfore that created
heauen and earthe in wonderfull strength and bewty.

Bale. Image, part ii. sig. l. 7.

He came vnto the kynges grace, and wayted vppon hym, and
was no man so *obsequyous* and seruiceable.

Tyndall. Workes, fol. 368. The Practice of Popish Prelates.

Hee kept a strait hand on his nobilitie, and chose rather to
aduance clergie-men and lawyers, which were more *obsequious* to
him, but had lesse interest in the people.

Bacon. King Henry VII. p. 241.

I find one of them *obsequiously* making ready for thy coming
out of those chambers of death, upon thine Easter morning ; roll-
ing away that massy stone, whiche the vain care of thine adversaries
had laid.

*Hall. Works, vol. iii. fol. 947. The Great Mystery of Godliness,
sec. 10.*

Mos. 'Tis true, that, sway'd by strong necessitie,
I am enforc'd to eate my carefull bread
With too much *obsequie*.

Ben Jonson. The Fox, act iii. sc. 2.

— Let neither
Too much *obsequiousness* teach them insolency,
Nor any ill usage brand us with incivility.

Shirley. The Merchant's Wife, act i. sc. 2.

"Sweet pleasing sleep !" (Saturnia thus began,)
"Who spread'st thy empire o'er each god and man ;
If e'er *obsequious* to thy Juno's will,
O Power of slumbers ! hear, and favour still."

Pope. Homer. Iliad, book xiv.

He fell in love with Omphale, Queen of Lyda, and in order to
win her affections by his *obsequiousness*, condescended to change
the hide for a suite of purple, and the club for a distaff.

Lewis. Statius, book x. l. 970, n.

When theatres for you the scenes forego,
And the box bows *obsequiously* low :
How dull the plan which indolence has drawn,
The mossy grotto, or the flow'ry lawn !

Shenstone. To a Lady, October 7, 1736.

The common people have not yet contracted that *obsequiousness*
and submission, which the rigour of their government, if no revolu-
tion occurs to redress it, must in time reduce them to.

Observer, No. 21.

O'BSEQUY, } Fr. *obseques* ; Sp. *obsequias* ;
OBSE'QUIOUS, } Lat. *obsequiæ*, introduced as equi-
OBSE'QUIOUSLY. } valent to *exsequiæ*. See EXE-
QUIES ; from *ex-sequi*, to follow out, *sc.* the funeral pomp
to burial. And hence *obsequy*.

The funeral procession ; the funeral rites or solemn-
ities.

Obsequious and *obsequiously* are used by Shakspeare
from the noun in this application.

And to the ladies he restored again
The bodies of hir housbondes that were slain,
To don the *obsequies*, as was tho the gise.

Chaucer. The Knights Tale, v. 995.

QUY.OB-
SERVE.

I wil that there be ordeyned ij. tapers of ij. lb. every taper, and ij. candilstycks of the wax-chaundeller, and they do be sett at my grave and to brenne the tyme of the hole *obsequy*.

Fabyan. Preface, p. viii.

The corps was conveyed from Pomfret to London; where it lay with open face in Saint Paul's three days, and after a solemn *obsequy*, was had to Langly, and there meanly interred.

Daniel. History of Civil Wars, book iii. note 7.

Scarce was his body lapp'd up in the lead

Before his doleful *obsequies* were done,
When England's crown was set on Edward's head.

Drayton. The Legend of Pierce Gaveston.

But you must know, your father lost a father,
That father lost, lost his, and the seruiuer bound
In filial obligation, for some terme
To do *obsequious* sorrow.

Shakspeare. Hamlet, fol. 154.

But vncle draw you neere,
To shed *obsequious* teares vpon this trunke.

Id. Titus Andronicus, fol. 52.

ANNE. Set downe, set downe your honourable load,
If honour may be shrowded in a herse;
Whil'st I a while *obsequiously* lament
Th' vntimely fall of vertuous Lancaster.

Id. Richard III. fol. 174.

And, that the princely *obsequies* might be
Perform'd according to his high degree,
The steed, that bore him living to the sight
Was trapp'd with polish'd steel, all shining bright,
And cover'd with th' achievements of the knight.

Dryden. Palamon and Arcite.

OBSE/RVE, v.

OBSE/RVABLE,

OBSE/RVABLY,

OBSE/RVANT, *adj.*OBSE/RVANT, *n.*

OBSE/RVANCE,

OBSE/RVANCY,

OBSERVA/TION,

OBSERVA/TOR,

OBSE/RVATORY,

OBSE/RVER,

OBSE/RVINGLY.

See CONSERVE. Fr. *observer*;
It. *osservare*; Sp. *observar*; Lat.
ooservare, to keep carefully, (*ob*,
aug. and *servare*, to keep.)

To keep or hold, *sc.* in sight,
to behold; to watch, to guard;
to note or notice, to attend to, to
mark or remark; to regard.

This maner of woman, that *observen* chastitee, must be clene in herte as wel as in body and in thought.

Chaucer. The Persones Tale, p. 167.

Right so this god of loues hypocrite
Doth so his ceremonies and obeisance
And keepeth in semblaunt alle his *observance*;
That souneth unto gentillnesse of love.

Id. The Frankeleines Tale, v. 10830.

And axeth by what *observance*
She might moste, to the plesance
Of god, that nightes reule kepe.

Gower. Conf. Am. book i. p. 23.

I will *observe* the lawe, that nature gaue to me,
To conquer such as will resist, and let the rest go free.

Surrey. Song. Of a Ladie that refused to daunce with him.

That the true *observation* of the sabaoth consisteth not onely in abstaining from bodely labours: and that to a christien mā, euery day is the sabaoth and not onely the seuenth day.

Barnes. Epitome of his Workes, fol. 367.

I do loue
To note, and to *observe*: though I live out,
Free from the active torrent, yet I'd marke
The currents, and the passages of things,
For mine owne private use; and know the ebbs
And flowes of state.

Ben Jonson. The Fox, act ii. sc. 1. fol. 406.

That wrong, by order, may grow right by this;
Sith right th' *observer*, but of order is.

Daniel. History of Civil Wars, book vii.

VOL. XXV.

It hath one *observable* generall resolution of the whole body of the Lords and Commons, warranting it in King John's reign, even then when they all took up arms to enforce him to confirm the great Charter itself, which our opposites cry out to be violated by the Parliament's moderate seisesures, onely by way of distresse or sequestration.

Prynne. Treachery and Disloyalty, part iv. p. 29.

And here was an end of all the troubles of this king; in whom it is *observable*, that loving his ease so well as he did, he should run voluntarily into such troubles, especially at home, upon so small occasions as he did.

Baker. King John, Anno 1216.

And therefore also it is prodigious to have thunder in a clear sky, as is *observably* recorded in some histories.

Sir Thomas Brown. Vulgar Errours, book ii. ch. v. p. 98.

Therein the hermite, which his life here led

In streight *observance* of religious vow,
Was wont his howres and holy things to bed.

Spenser. Faerie Queene, book vi. can. 5.

And as wholesome meat corrupteth to little wormes; so good formes and orders corrupt into a number of petty *observances*.

Bacon. Essay 17. p. 98.

Of their weight they were so curious and *observant*, that they had them [lamprey] weighed many times at their very tables in the presence of their guests.

Hakewill. Apologie, book iv. ch. vii. sec. 6.

Such *observants* they are thereof that our Sauour himselfe beeing to set down the perfect idea of that which we are to pray and wish for on earth, did not teach to pray or wish for more, than onely that heere it myght bee with vs, as with them it is heauen.

Hooker. Ecclesiasticall Politie, book i. sec. 4. fol. 10.

If we come to later years, both in England and in foreign parts, the *observer* of the Bills of Mortality before mentioned [Dr. Hakewill] hath given us the best account of the number that late plagues have swept away.

Hale. Origination of Mankind, ch. ix. sec. 2. fol. 213.

There is some soule of goodnesse in things euill,
Would men *observingly* distill it out.

Shakspeare. Henry V. fol. 83.

10 Sep. 1676. Din'd with me Mr. Flamstead the learned astrologer and mathematician, whom his maty had establish'd in the new *Observatorie* in Greenwich Park, furnished with the choicest instruments. An honest, sincere man.

Evelyn. Memoirs, vol. i. p. 486.

But pardon too, if zealous for the right,
A strict *observer* of each noble flight,
From the fine gold I separate the allay,
And show how hasty writers some times stray.

Dryden. The Art of Poetry, can. 4.

She may be handsome, yet be chaste, you say.
Good *observer*, not so fast away.

Id. Juvenal. Satire 10.

I am inclined to think, that Ovid had so great an attention to poetical embellishments, that he voluntarily declined a strict *observance* of any astronomical system.

Garth. Preface to Ovid's Metamorphoses.

Ev'n now she shades thy evening-walk with bays,
(No hireling she, no prostitute to praise,)
Ev'n now *observant* of the parting ray,
Eyes the calm sun-set of thy various day.

Pope. To the Earl of Oxford.

In my small *observations* of mankind, I have ever found, that such as are not rather too full of spirit when they are young, degenerate to dulness in their age.

Dryden. Dedication to the Georgics.

Since the obligation upon Christians, to comply with the religious *observance* of Sunday, arises from the public uses of the institution, and the authority of the apostolic practice, the manner of *observing* it ought to be that which best fulfils these uses, and conforms the nearest to this practice.

Paley. Moral Philosophy, vol. ii. book v. ch. viii. p. 92.

OBSE/SS, v. } Lat. *obsidere, obsessus*, to set against,
OBSE/SSION, } to beset, (*ob*, and *sedere*.)
OBSI/DIONAL. } To beset, to besiege.

In *possession*—the Evil Spirit was supposed to enter

OBSSESS. into possession of the body of the demoniac : in *obsession*, to beset or besiege him from without.

OBSTACLE.

Obsidional. See the Quotation from Pliny.

Nowe it is to be feared that where maiestie approacheth to excesses, & the mind is *obsessed* with inordinate glorie, lest pryde, of all vices mooste horyble, shulde sodeynly entre and take prisoner the harte of a gentyllman called to auctoritie.

Sir Thomas Elyot. The Governour, book ii. ch. iv. fol. 103.

Melancholy persons are most subject to diabolical temptations and illusions, and most apt to entertaine them, and the Deuill best able to worke upon them. But whether by *obsession*, or *possession*, or otherwise, I will not determine, 'tis a difficult question.

Burton. Anatomy of Melancholy, fol. 53.

CORV. Grave fathers, he is *possest*; againe, I say,
Possest : nay, if there be *possession*,
And *obsession*, hee has both.

Ben Jonson. The Fox, act v. sc. 12.

The same was called also an *obsidional* coronet or *seige-garland*, namely, when some captaine had forced the enemies to raise the seige and dislodge, and thereby saved either a whole town or campe from utter shame and finall destruction.

Holland. Plinie, vol. ii. ch. iv.

OBSIGNATE, } Lat. *obsignare*, to mark strongly,
OBSIGNATION, } (*ob*, aug. and *signare*, to mark or
OBSIGNATORY. } sign.)

To mark strongly or firmly; to confirm by marking, signing, or sealing; to confirm, to ratify.

This the Spirit of God does work in all his servants; and it is called the spirit of *obsignation*, or the confirming spirit, because it confirms our hope, and assures our title to life eternal.

Taylor. Sermons. Of the Spirit of Grace, part i. p. 4.

As circumcision was a seal of the covenant made with Abraham and his posterity; so keeping the sabbath did *obsignate* the covenant made with the children of Israel after their delivery out of Egypt.

Barrow. Works, vol. i. fol. 169. An Exposition of the Decalogue.

Yea they are the builders of that house, founding it by initial conversion, rearing it by continued instruction, covering and furnishing it by sacramental *obsignation* of divine grace.

Id. Ib. Sermon 11. vol. i. fol. 169.

Merely *obsignatory* signs.

Dr. Ward to Bishop Bedel. Parr's Letters of Usher, p. 441.

OBSOLESCENT, } Lat. *obsolescens, obsoletus*;
OBSOLETE, } *obsolescere, ob, solere*, to grow
OBSOLETENESS. } or become, to be, lost, &c.
through disuse; (*obs*, and *oleo*, from Gr. *ὀλλύω*, or *ὀλλύμι*, to lose, to destroy.)

Becoming disused; coming into disuse.

Whereby it hath come to pass, that many words and phrases, becoming *obsolete*, have been exchanged by the collators of the copies, for others more in use, in the age and country wherein they lived.

Grew. Cosmo Sacra, book v. ch. i. fol. 291.

He [Waller] attained, by a felicity like instinct, a style, which perhaps will never be *obsolete*.

Johnson. Life of Waller.

All the words compounded of *here* and a preposition, except *hereafter*, are *obsolete* or *obsolescent*.

Id. Dictionary, in v. Hereout.

The reader is therefore embarrassed at once with dead and with foreign languages, with *obsoleteness* and innovation.

Id. Works, vol. ii. p. 110. Proposals for Printing the Works of Shakspeare.

O'BSTACLE, } Fr. *obstacler, obstacle*; It. *osta-*
O'BSTANCY. } *colo*; Sp. *obstaculo*; Lat. *obsta-*
culum, from *ob-stare*, to stand against, to oppose, or resist.

An opposition or resistance, stoppage, hinderance, or impediment.

— Sire, so ther be non *obstacle*
Other than this, God of his hie miracle,

And of his mercy may so for you werche,
That er ye have your rights of holy cherche,
Ye may repent of wedded mannes lif,
In which ye sain ther is no wo ne strif.

Chaucer. The Marchantes Tale, v. 9533.

Now if we should fayne a purgatory, it were not possible to imagine a greater *obstacle* to make vs feare & flye from death.

Frith. Workes, fol. 30. An Answer to Rastal's Dialogue.

Because an *obstacle*, by nature earthly and foul, doth not receive the pure clearness of light: alluding to that most divine light, which only shineth on those minds, which are purged from all worldly dross, and human uncleanness.

Raleigh. History of the World, book i. sec. 7. fol. 7.

It doth indeed but irrita reddere sponsalia, annul the contract: after marriage it is of no *obstancie*.

Ben Jonson. The Silent Woman, act v. sc. 3.

— They guide a troop of slaves,
Our missile-weapon'd helots, to observe,
Provide, forewarn, and *obstacles* remove.

Glover. Leonidas, book ii.

OBSTETRICATE, } Lat. *obstetricari*; *obste-*
OBSTETRICATION, } *trix, ab obsidendo*. Vossius
OBSTETRICK, } thinks *ob* is here equivalent
OBSTETRICIOUS. } to *ad*, *obstetrix*, quasi *adse-*
trix, quia adsideat parturienti; because she sits or continues sitting with or close to one who is bringing forth.

To assist in bringing forth; to aid or help at a birth or production.

Nature does *obstetricate*, and do that office of herself when it is the proper season.

Evelyn, ii. 6.

There he must lie in an uncouth posture, for his appointed month, till the native bonds being loosed and the doors forced open, he shall be by an helpful *obstetrication* drawn forth into a larger prison of the world; there indeed he hath elbow-room enough.

Hall. Works, vol. iii. fol. 492. The Free Prisoner, sec. 8.

Yet is all humane teaching, but maientical, or *obstetricious*.

Cudworth. Intellectual System, book i. ch. iv. fol. 693.

Or see him guard their pregnant hour;
Exert his soft *obstetric* power;
And, lending each his lenient hand
With new-born grubs enrich the land.

Shenstone. Moral Pieces.

O'BSTINATE, } Fr. *obstine*; It. *ostinato*; Sp.
O'BSTINACY, } *obstinado*; Lat. *obstinatus*, from
O'BSTINATELY, } *obstinare*, to stand against, to
O'BSTINATENESS. } persist, (*ob*, and *stanare* or *stinare*, from *stare*.)

Persisting, (sc. in self-will, in opinion;) self-willed, stubborn, firm, immovable, inflexible. See the Quotation from Elyot.

For tristesse is of suche a kynde,
That for to maintene his folie
He hath with hym *obstinacie*,
Whiche is within of suche a slouth.
That he forsaketh all the trouth
And wöll to no reason bowe.

Gower. Conf. Am. book iv. p. 121.

For where a man is *obstinate*
Wan hope falleth at laste,
Whiche maie not longe after laste,
Till slouth make of hym an ende.

Id. Ib.

And so was he after much fauour shewed him, & much labour charitably taken for the sauing of him delyuered in conclusion for his *obstinacie* to the seculare handes.

Sir Thomas More. Workes, fol. 346. The Confutation of Tindall. Preface.

Obstinacie is an affection immouable, fyxed to wylle, abandonynge reason, which is ingendred of pryde, that is to say, whan a manne esteemeth so moche him self aboute any other, that he re-

OBSTA-
CLE.

OBSTI-
NATE.

OBSTINATE. puteth his owne wytte onely, to be in perfection, and contemneth al other counsell.

Sir Thomas Elyot. The Governour, book iii. ch. xv.

OBSTRUCT. God is not able to shewe suche mercy vnto them that *obstinately* fal from the truth, and become enemyes to the Holy Ghost.

Bible, Anno 1551. Hebrues, ch. vi. notes.

Whom against the *obstinatenesse* of the said William Swinderby we thought good to receiue, and did receiue.

Fox. Martyrs, fol. 434. Richard II. Anno 1391.

So war both sides with *obstinate* despite,

With like revenge; and neither party bow'd.

Daniel. History of Civil Wars, book vi.

For Vespasian himselfe, at the beginning of his empire, he was not so *obstinately* bent to obtaine vnreasonable matters.

Savile. Tacitus, book ii. ch. xiv. fol. 91.

For if the souldiers presently after thir victory had directly repared to Rome, whiles they were in courage and hart, by reason of their late good successe, beside a naturall *obstinateness* in them, the matter would not have bin ended so quickly.

Id. Ib. book iii. ch. xiv. fol. 133.

For every degree of *obstinacy* in youth is one step to rebellion.

South. Sermons, vol. v. p. 24.

With powers united, *obstinately* bold

Invade him, couch'd amid the scaly fold.

Pope. Homer. Odyssey, book iv.

OBSTREPEROUS, } Lat. *obstreperus*, from *ob-*
OBSTREPEROUSLY, } *strepere*, to make a noise at
OBSTREPEROUSNESS. } or against; (*ob*, and *strepere*,
to make a noise.)

Noisy, clamorous; loudly, turbulently or confusedly noisy, or clamorous.

JUL. *Obstreperous* carle,

If thy throat's tempest could o'erturne my house,

What satisfaction were it for thy child.

Beaumont and Fletcher. The Maid in the Mill, act iii. sc. 1.

A numerous crowd of silly women and young people, seemed to be hugely taken and enamour'd with his *obstreperousness* and undecent cants.

Wood. Athenæ Oxonienses, vol. ii. fol. 578.

There are, who, deaf to mad ambition's call,

Would shrink to hear th' *obstreperous* trump of fame;

Supremely blest; if to their portion fall.

Health, competence, and peace.

Beattie. The Minstrell, book i.

OBSTRUCTION, found hitherto only in Milton: Lat. *obstrictus*, from *obstringere*, to tie fast, to fasten, (*ob*, and *stringere*.) See **CONSTRAIN**.

A tying or fastening; binding; bond or obligation.

Whom so it pleases him by choice

From natural *obstruction*, without taint

Of sin or legal debt.

Milton. Samson Agonistes, p. 457.

OBSTRU'CT, v. } Fr. *obstruer*; It. *obstruire*;
OBSTRU'CTER, } Lat. *obstruere*, to build against,
OBSTRU'CTION, } (*ob*, and *struere*, to build.) See
OBSTRU'CTIVE, adj. } **CONSTRUCT.**

OBSTRU'CTIVE, n. } To build up against, to heap
up against, to block up, to stop up; to oppose, to put or
place in the way of, to hinder.

Both Sin, and Death, and yawning Grave at last,

Through Chaos hurl'd, *obstruct* the mouth of Hell,

For ever, and seal up his ravenous jaws.

Milton. Paradise Lost, book x. l. 636.

And who [Sir Phelim O'neal] was of all the most eminent as in quality, so in crime (had he been judged by a lawful authority) as having been one of the principal leading men in that insurrection, and likewise one of the chief *obstructors* of the union.

Baker. Charles II. Anno 1654.

Open aire (which they call *aer perflabilis*) doth preserve: and this doth appear more evidently in agues, which come (most of them) of *obstructions*, and penning the humours, which thereupon putrifie.

Bacon. Natural History, Cent iv. sec. 331.

CLA. Death is a fearfull thing.

ISA. And shamed life, a hatefull.

CLA. Ay but to die, and go, we know not where,

To lie in cold *obstruction*, and to rot.

Shakspeare. Measure for Measure, fol. 71.

Some except hony; to those that are cold it may be tolerable, but *Dulcia se in bilem vertunt*, they are *obstructive*.

Burton. Anatomy of Melancholy, fol. 70.

The second *obstructive*, which I shall mention, is that of the fiduciarie, having resolved faith to be the only instrument of his justification, and excluded good works from contributing any thing toward it, proceeds to define his faith to be a full perswasion, that the promises of Christ belong to him, or an assurance of his particular election.

Hammond. Works, vol. i. ch. xiii. fol. 480. Of Fundamentals.

'Tis he th' *obstructed* paths of sound shall clear,

And bid new music charm th' unfolding ear.

Pope. Messiah.

Yet I have no such enemies to fear,

My sole *obstruction* is my father's hair;

His purple lock my sanguine hope destroys,

And clouds the prospect of my rising joys.

Crowall. Ovid. Metamorphoses, book viii.

If e'r thy youth has known the pangs of absence,

Or felt th' impatience of *obstructed* love,

Give me, &c.

Johnson. Irene, act iii. sc. 3.

The North, impetuous, rides upon the clouds,

Dispensing round the Heav'n's *obstructive* gloom.

Glover. On Sir Isaac Newton.

OBTAIN, } Fr. *obtenir*; It. *ottenere*; Sp. *ob-*
OBTAINABLE, } *tener*; Lat. *obtinere*; to hold or
OBTAINMENT. } keep, (*ob*, and *tenere*, to hold. See
CONTAIN.)

To hold, or keep the hold or possession; to get or gain, the hold or possession; to get, to gain, or win, to acquire, to procure.

Wherefore he exhorted them to turne vp their myndes to loue God, which was a thing farre excellling all the cōing that is possible for vs in this life to *obtaine*.

Sir Thomas More. Workes, fol. 7. The Life of John Picus.

I come with resolution to *obtain* a suit of you.

CAL. A suit of me! 'tis very like it should be granted, sir.

Beaumont and Fletcher. The Maid's Tragedy, act iii.

The default therefore will be found in the law itself; which is neither able to punish the offender, but the innocent must withal suffer; nor can right the innocent in what is chiefly sought, the *obtainment* of love or quietness.

Milton. Works, vol. i. fol. 307. The Doctrine and Discipline of Divorce.

The subjects we speak of being so the productions of the chymist's art, as not to be otherwise, but by it *obtainable*; it seems but equitable to give the artists leave to name them as they please.

Boyle. Works, vol. i. p. 522. The Sceptical Chymist.

Now this prayer and intercession for them implies the possibility of their receiving forgiveness; and such a possibility doth presuppose in God a disposition to grant it, and consequently a satisfaction provided, such as God will accept, and such as will avail to their benefit, provided they do their parts towards the *obtainment*.

Dr. Whitby. On the Five Points, dis. 2. ch. ii. sec. 2.

OBTEND, Lat. *ob-tendere*, to stretch out against; (*ob*, and *tendere*; Gr. *τείνειν*, to stretch.) See **DIS-TEND**.

To stretch or spread out against, to offer, to object.

'Twas giv'n to you, your darling son to shrowd,

To draw the dastard from the fighting crowd,

And for a man *obtend* an empty cloud.

Dryden. Virgil. Æneid, book x. v. 125.

OBTENEBRATION, Fr. *obtenebrer*, to obtenebrate, obscure, darken, Cotgrave. It. *ottenebrare*; Lat. *obtenebrare*; to keep in darkness; (*ob*, and *tenebræ*, darkness.)

Darkness, obscurity.

OB-
STRUCT.

OBTE-
NEBRA-
TION.

OBTE-
NEBRA-
TION.

For in every megrim, or vertigo, there is an *obtenebration* joyned with a semblance of turning round.

Bacon. *Natural History*, Cent. viii. sec. 725.

OBTUND.

OBTE'ST, } Fr. *obtester*; Lat. *obtestari*; *ob*,
OBTESTATION. } and *testari*; Gr. *θέσθαι*; to put or place; *sc.* any one, to see or observe, to watch.

To call upon to witness; to invoke, to adjure, to conjure, to beseech, to supplicate.

In Savage, to call upon to *witness*; *sc.* in bravery.

We earnestly beseech and humbly *obtest* your lordships in the bowels of Jesus Christ, and by the vows of God which are upon you.

Baker. *Charles I.* Anno 1647.

And so from St. Peter's *attestation* to their wickednesse, we descend to his *obtestation* of their redresse, save your selves.

Hall. *Works*, vol. ii. fol. 344. *Sermon preached to the Lords of the High Court of Parliament.*

If with himself at variance ever-wild,
With angry heaven how stands he reconcil'd?
No penitential orisons arise;
Nay, he *obtests* the justice of the skies.

Savage. *The Wanderer*, can. 5.

But, hateful of the wretch, Eumæus heav'd
His hands *obtesting*, and this prayer conceiv'd.

Pope. *Homer. Odyssey*, book xvii.

OBTRECTATION, Fr. *obtrection*; Lat. *obtrectatio*, from *obtreclare*, to *traduce*, and, consequently, to blacken; *sc.* the character; (*ob*, and *tractare*, from *trahere*, *tractum*, to draw.) See DETRACTION.

A blackening, *sc.* the character; calumny, slander.

It is otherwise in Scripture termed, to rail or revile, to use bitter and ignominious language; to speak contumeliously; bring railing accusation, or reproachful censure; to use obloquy or *obtrection*; to curse, that is, to speak words importing that we do wish ill to a person.

Barrow. *Works*, vol. i. fol. 227. *Sermon 16.*

OBTRU'DE, } Lat. *obtrud-ere*, to thrust against,
OBTRU'DER, } (*ob*, and *trud-ere*, to thrust.) See
OBTRU'SION, } DETRUDE, INTRUDE.
OBTRU'SIVE. } To thrust against, to force in the way; to put or place offensively, in the way.

Nor were his actions to content the sight,
Like artists' pieces plac'd in a good light
That they might take at distance and *obtrude*
Something into the eye that might delude.

Cartwright. *On the Death of Lord Stafford.*

If, therefore, he *obtrude* upon us any public mischief, or withhold from us any general good, which is wrong in the highest degree, he must do it as a tyrant, not as a king of England, by the known maxims of our law.

Milton. *Works*, vol. i. p. 398. *An Answer to Eikon Basilike.*

He never reckons those violent and merciless *obtrusions*, which for almost twenty years he had been forcing upon tender consciences by all sorts of persecution.

Id. *Ib.* fol. 397.

Her vertue and the conscience of her worth,
That would be woo'd, and not unsought be won,
Not obvious, not *obtrusive*, but retir'd.

Id. *Paradise Lost*, book vii. l. 504.

O thou! whom age has taught to understand,
And heaven has guided with a favouring hand!
On god or mortal to *obtrude* a lie,
Forbear, and dread to flatter as to die.

Pope. *Homer. Odyssey*, book xiv.

Experience teaches that [plain speaking] is too frequently under bad management, and *obtruded* on society out of time and season in such a manner as to be highly inconvenient and offensive.

Observer, No. 55.

OBTU'ND, v. } Fr. *obtundre*; It. *ottuso*; Sp. *ob-*
OBTU'SE. } *tuso*; Lat. *obtun-dere*, *obtusum*, to beat against, (*ob* and *tundere*, to beat.)

To beat against, and, consequently, to blunt or stop the edge; to dull, to deaden.

Certainly they [John a Nokes and John a Stiles] were the greatest wranglers that ever lived, and have fill'd all our law-books with the *obtunding* story of their suits and trials.

Milton. *Works*, vol. i. fol. 302. *The Doctrine and Discipline of Divorce.*

And so of their figures; we know, that all salts are angular, with *obtuse*, right, or acute angles.

Grew. *Cosmo Sacra*, book ii. ch. v. fol. 54.

Thou must outlive
Thy youth, thy strength, thy beauty, which will change
To wither'd, weak, and gray; thy senses then
Obtuse, all taste of pleasure must forgoe.

Milton. *Paradise Lost*, book xi. l. 541.

Bastings heavy, dry, *obtuse*,
Only dulness can produce;
While a little gentle jerking
Sets the spirits all a-working.

Swift. *To a Lady*. (1726.)

If by any accident an opprobrious clamour reaches their ears, [*i. e.* men of high rank,] flattery is always at hand to pour in her opiates, to quiet conviction, and *obtund* remorse.

Johnson. *Rambler*, No. 172.

OBVENTION, Lat. *obvenire*, *obventum*, to come against, or in the way of; Fr. *obvention*.

"A meeting with: coming against, happening or chancing unto." Cotgrave.

At which time (when the country grows more rich and better inhabited) the tythes and other *obventions* will also be more augmented and better valued.

Spenser. *View of the State of Ireland*, vol. viii. p. 504.

OBVERSANT, Lat. *obversari*, to be, or be placed before or in the presence of. Used by Bacon as equivalent to

Conversant; familiar with; *sc.* because frequently before us.

And the third is example, which transformeth the will of man into the similitude of that which is most *obversant* and familiar towards it.

Bacon. *Works*, vol. iii. p. 255. *Letter 109. To Sir Henry Saville.*

OBVERT, Lat. *obvertere*, to turn against, (*ob*, and *vertere*, to turn.)

To turn against; to place opposite.

This leaf being held very near the eye, and *obverted* to the light, appeared so full of pores, that it seemed to have such a kind of transparency, as that of a sieve, or a piece of cypress, or a love hood.

Boyle. *Works*, vol. i. p. 729. *Experimental History of Colours*, part iii. exp. 9.

O'BVIATE, v. } Fr. *obvier*; It. *obviare*; Sp. *ob-*
O'BVIATING, n. } *viar*; Lat. *obviare*, to be or come
O'BVIOUS, } in the way. (*via*.)

O'BVIOUSLY, } To be or come in the way; to
O'BVIOUSNESS. } meet; to withstand, to prevent.

Obvious; meeting; preventing; lying in the way; and, consequently, evident, manifest.

For the *obviating* of this difficulty I have willingly declined that instance against the eternal succession of mankind that purely consists upon the account of additional accessions to the latter end, as I may call it, of eternal duration.

Hale. *Origination of Mankind*, ch. vi. sec. 1. fol. 122.

For such vast room in nature unpossess'd
By living soules, desert and desolate,
Onely to shine, yet scarce to contribute
Each orb a glimpse of light, convey'd so farr
Down to this habitable, which returns
Light back to them, is *obvious* to dispute.

Milton. *Paradise Lost*, book viii. l. 158.

And therefore if after all this long scene of fallacy and imposture, (so infinitely dishonourable to our very nature,) we would effectually *obviate* the same for the future.

South. *Sermons*, vol. v. p. 155.

OBTUND.

OBVI
ATE.

OBVI-
ATE.
—
OCCA-
SION.

If she [Fortune] reclaims the temporary boon,
And tries her pinions, fluttering to be gone;
Secure of mind, I'll *obviate* her intent,
And unconcern'd return the goods she lent.
Prior. Henry and Emma.

The hero's bones with careful view select:
Apart, and easy to be known, they lie
Amidst the heap, and *obvious* to the eye.
Pope. Homer. Iliad, book xxiii.

Slight experiments are more easily and cheaply tried: I thought
their easiness or *obviousness* fitter to recommend than depreciate
them.
Boyle.

The following outlines will, I hope, not only *obviate* this incon-
venience; but will allow me in future a greater latitude of illustration
and digression than I could have indulged myself in with propriety
so long as my students were left to investigate the chain of my doc-
trines by their own reflections.

Stewart. Outlines of Moral Philosophy. Preface, p. 6.

The other system which makes virtue a mere matter of prudence,
although not so *obviously* unsatisfactory, leads to consequences which
sufficiently shew that it is erroneous.

Id. Ib. art. 3. (215.) sec. 6. p. 149.

OBU'MBRE, v. } Fr. *obumbrer*; It. *obumbrare*;
OBU'MBRATE, } Sp. *obumbrar*; Lat. *obumbrare*,
OBUMBRA'TION. } to overshadow, (*ob*, and *umbra*, a
shade.) See ADUMBRATION.

"To *obumbrate*, overshadow, cast a mist over, darken,
obscure." *Cotgrave.*

Or half the blisse who coude write or tell,
Whan the Holy Ghost to thee was *obumbrd*.
A Balade in Commendation of our Lady. Imputed to Chaucer.

Not meaning that his fleshe was first in heauen, and so sent
downe from thense, as some heretikes haue ere thys holden an opi-
nion, but that his body was in the blessed Virgin his mother by the
heauenly *obumbracion* of the Holy Ghost.

*Sir Thomas More. Workes, fol. 1068. Answer to the Poysoned
Boke, &c.*

OCCA'SION, v. } Fr. *occasionner*; It. *occasio-*
OCCA'SION, n. } *nare*; Sp. *occasionar*; Lat. *occa-*
OCCA'SIONABLE, } *sio*, (*ob*, and *casus*, from *cad-ere*,
OCCA'SIONAL, } to fall,—*casus se offerens*, Vos-
OCCA'SIONALLY, } *sius*.) Applied to
OCCA'SIONATE, } The time or season, the cir-
OCCA'SIONER. } cumstance or state of circum-
stances or events, in or at which any thing does or may
fall out or happen; time or circumstance, fit, suiting or
opportune, convenient or becoming; suitable, adapted
or appropriate; fitting, befitting, becoming or requiring;
and hence applied as equivalent to

Accident or incident, opportunity, seasonableness;
convenience, concurrence; and further to urgency, exi-
gency.

For that that I do, and that that I schal do is that I kitte awaei
the *occasioun* of hem that wolen *occasioun*, that in the thing in which
thei glorien they be foundun as we.

Wiclif. 2 Corinthians, ch. xi.

Neuerthesse what I do, that wyll I do, to cutte away *occasyon*
from them whych desyre *occasyon*, y^e they mighte be founde lyke
vnto vs in that wherin they reioyce.
Bible, Anno 1551.

For that she wolde fleen the compaignie,
Wer likely was to treten of folie,
As is at festes, and revels, and at dances,
That ben *occasions* of daliances.

Chaucer. The Doctoures Tale, v. 12017.

The Kynges cōmaūded questes to be charged of knyghtes and
esqyres that dwelled in the countre aboute, and to endyte all suche
persones as were *occacyoners* & executors of that dede.

Fabyan. Henry III. Anno 1272.

But one sabboth is past, since my meditations were *occasioned* to
fix themselves upon the gain, which God's children make of their
sins.
Hall. A consolatory Letter to one under Censure.

Wherevpon they were proclaimed rebels and put to the horne,
which *occasioned* William Douglass the chancellor's great enimie,
to gather a power and spoil the lands of this William Creighton.

Holinshed, vol. v. p. 783. The Historie of Scotland

"Mad man," said then the palmer, "that does seeke

Occasion to wrath, and cause of strife;

Shee comes unsought, and shonned followes eke."

Spenser. Faerie Queene, book ii. can. 5.

For *occasion* (as it is in the common verse) turneth a bald noddle,
after she hath present her lockes in front, and no hold taken.

Bacon. Essay 21. p. 125.

This time I could not spend in idleness. I therefore, very will-
ingly set myself to translate my *occasional* meditations into Latin.

Hall. To the Clergy of the Diocese of Exeter.

So hath my muse according to her skill

Discovered the soul in all her rayes,

The lowest may *occasionate* much ill.

More. Song of the Soul, part ii. book iii. can. 1. stan. 34.

But he, [Enoch] like others, eat and drank, and slept, recreated
occasionally his mind, and moderately enjoyed the pleasures of con-
jugal society: and yet all these things did not hinder his walking
with God.

Hall. Enoch. Translated by Brown.

The fourth and last rule that I shall mention for the compleating
of our direction about this duty is, that a reproof be not continued or
repeated after amendment of that which *occasioned* the reproof.

South. Sermons, vol. vii. p. 155.

Particularly this practice [keep the heart with all diligence,
&c.] will fence us against immoderate displeasure *occasionable* by
men's hard opinions, or harsh censures passed on us.

Barrow. Works, vol. iii. fol. 142. Sermon 13.

All of these writers have, in my opinion, been *occasionally* misled
in their speculations, by a want of attention to the distinction between
first principles, properly so called, and the fundamental laws of hu-
man belief.

Stewart. Philosophy of the Human Mind, vol. ii. ch. i. sec. 3. p. 89.

OCCECATION, Lat. *ob-cæcare*, to blind, to darken,
(*cæcus*, of unknown etymology.) See CECITY.

Blindness, darkness.

It is an addition to the misery of this inward *occaecation*, that it
was ever joyned with a secure confidence in them whose trade and
ambition is to betray their soules.

Hall. Works, vol. ii. part ii. fol. 141. Occasional Meditations, 57.

O'CCIDENT, } Fr. *occident*; It. and Sp. *occi-*
OCCIDE'NTAL. } *dente*; Lat. *occidens, plaga, in quâ*
sol occidit; (*ob*, and *cadere*;) where the sun goes down
or sets, which we call

The West.

O firste moving cruel firmament,
With thy diurnal swegh that croudest, ay,
And hurtlest all from est til *occident*,
That naturally wold hold another way.

Chaucer. The Man of Lawes Tale, v. 4717.

And the remenaunte of the line, fro the aforesaied *orientall* vnto
the bordure, is cleped the weste line, or the line *occidentall*.

Id. The Astrolabie, p. 455.

Thy swift hors restreine

Lowe vnder erthe in *occident*,

That thei toward thorient

By circle go the longe weie.

Gower. Conf. Am. book iv. p. 119.

Your lordship must take a ruler, or a compasse, and set one foot
of the compasse vpon the land or coast whose longitude you would
know, and extend the other foot of the compasse to the next part of
one of the transuersall lines in the orientall or *occidentall* part.

Hakluyt. Voyages, &c. vol. i. fol. 215. M. Robert Thorne.

There is no more such masters: I may wander

From East to *occident*, cry out for seruice,

Try many, all good: serue truly: neuer

Finde such another master.

Shakspeare. Cymbeline, fol. 390.

For if (as the name *oriental* implyeth) they shal account that part
to be East whereever the sun ariseth, or that West where the sun is
occidental or setteth; almost half the year they (the Poles) have
neither the one or the other. (East nor West.)

Sir Thomas Brown. Vulgar Errours, book vi. ch. vii. fol. 381.

OCCA-
SION.
—
OCCI-
DENT.

OCCI-
SION.
—
OCCUPY

OCCISION, Lat. *occisto*, from *occidere*, to beat or strike violently, (*ob*, and *cedere*.) and, consequently, to slay; Sp. *occision*; It. *occisione*; Fr. *occision*: an *occision*, killing, slaying, Cotgrave.

This kind of *occision* of a man, according to the laws of the kingdom, and in execution thereof, ought not to be numbered in the rank of crimes. *Hale. History of Pleas of the Crown*, ch. xlii.

OCCLU'DE, } Lat. *occlud-ere*, to shut or close.
OCCLU'SION. } To shut up closely, to confine or fasten up.

Ginger is very common in many parts of India, growing either from root or seed, which in December and January they take up, and gently dried, role it up in earth; whereby *occluding* the pores, they conserve the natural humidity, and so prevent corruption.

Sir Thomas Brown. Vulgar Errours, book ii. ch. vii. fol. 109.

To make man there are many acts must procede, first a meeting and copulation of the sexes, then conception, which requires a well-disposed womb to retain the prolific seed, by constriction and *occlusion* of the orifice of the matrix.

Howell. Letter 30. book i. sec. 3.

OCCRUSTATE. See **INCRUST**.

To harden, to be or cause to be obdurate or obstinate.

And to arme and *occrustate* themselves in this devilish apostacy, [they] secretly foment in their own breasts, and endeavour to convey into others, that hideous monster of atheism and infidelity.

More. Defence of the Moral Cabbala, ch. iii. fol. 182.

OCCU'LT, } Fr. *occultar*, *occulte*; It. *occulto*;
OCCULTA'TION. } Sp. *ocultar*, *oculto*; Lat. *occulto*, from *occulo*, to cover, *sc.* as seeds or roots are covered in tillage, (from *ob*, and *col-ere*, to till.) See Vossius and Martinius.

Covered over, concealed, hidden; undiscovered, unknown.

I prythee, when thou see'st that acte a-foot,
Euen with the verie comment of my soule
Obserue mine vnkle: if his *occulted* guilt
Do not it selfe vnkennel in one speech,
It is a damned ghost that we haue seen.

Shakspeare. Hamlet, fol. 267.

For first when the sunne approacheth unto them with his beames, they be hidden and no more seene: likewise, after his departure they shew themselves againe: and as the one, me thinkes, might have been more aptly called an apparition then a rising, so we should have framed our tongue in common speech to have tearmed the other *occultation*, rather than setting.

Holland. Plinys, vol. i. ch. xxv.

Because some may pretend, that the plastick nature is all one with an *occult* quality, we shall here show how great a difference there is betwixt these two.

Cudworth. Intellectual System, book i. ch. ii. fol. 154.

Ay, but where and what kind of thing then is this strange *occult* quality called ill nature, which makes such a thundring noise against such as have the ill luck to be taxed with it?

South. Sermons, vol. vi. p. 103.

In order to prepare the way for the mechanical inquiries of the moderns, it was necessary to begin with exposing the futility of the scholastic explanations of phenomena, by *occult* qualities, and Nature's horror of a void.

Stewart. Philosophical Essays. Preliminary Dissertation, ch. ii. p. lxx.

O'CCUPY, } Fr. *occuper*; It. *occupare*; Sp.
O'CCUPIER, } *ocupar*; Lat. *occupare*, to take, to
O'CCUPYING, n. } keep, *sc.* hold or possession of, (*ob*,
O'CCUPANT, } aug. and *capere*, to take.)
O'CCUPANCY, } To take or seize, to hold or keep
O'CCUPATE, } possession of; to possess, to use, to
OCCUPA'TION. } employ; to engage.

Ich am *ocupied* eche day. haly day and oþer
Wt ydel tales atten ale.

Piers Ploukman. Vision, p. 111.

Lo thre yeeris ben sithen I cam sekinge fruyt in this fyge tree
and I fynde noon, therefore kitt it down wherto *occupieth* it the erthe?
Wiclif. Luke, ch. xiii.

And thei foundun not what thei schulden do to him, for al the
puple was *occupied* & herde hym. *Id. Ib.* ch. xix.

Wo *occupieth* the fyn of our gladnesse.

Chaucer. The Man of Lawes Tale, v. 48045.

But he that is idel, and casteth him to no businesse ne *occupation*
shal falle into poverté, and die for hunger.

Id. The Tale of Melibeus, p. 116.

But loue his hert hath so through seased
With pure imaginacion,
That for none *ocupacion*,
Whiche he gan take on other side,
He maie not flitte his herte aside.

Gower. Conf. Am. book iv. p. 96.

Then shal youth leaue labour and al *ocupacion*.

Sir Thomas More. Workes, fol. 313. *The Supplication of Soules*.

Jauan, Tubal and Mesech wer thy marchauntes, which broughte
the menne, and ornamentes of metall for thy *occupyinge*.

Bible, Anno 1551. Ezechiel, ch. xxvi.

To be short, said he if I should take this sum of money and
occupy it not, it is as much as I had it not: on the other side, if I
occupy it, I shall make all the city speak ill of the king and me
both.

Sir Thomas North. Plutarch, fol. 629. *Phocian*.

Whiche law if it were now executed vpon all officers & *occupiers*
whatsoever, there would not be so much wealth and substance, so
great riches and treasure raked vp together in the possession of some
few men.

Holinshed. Henry III. Anno 1258.

Then, whose shall those things be which thou hast provided?
perhaps strangers, perhaps (as in case of undisposed lands) the
occupants, perhaps a false executor's, perhaps an enemy's.

Hall. Works, vol. iii. fol. 558. *The Balm of Gilead*.

Drunken men are taken with a plain defect, or destitution in
voluntary motion, they reel; they tremble, they cannot stand, nor
speak strongly. The cause is, for that the spirits of the wine
oppress the spirits animal, and *occupate* part of the place, where
they are; and so make them weak to move.

Bacon. Natural History, Cent. viii. sec. 724.

Whereas of late yeares a great compasse hath yeilded but small
profit, and this onelie through the idle and negligent *occupation* of
such, as dailie manured and had the same in *occupieng*.

Holinshed. The Description of Britain, vol. i. ch. xvii. p. 184.

These were their learned speculations
And all their constant *occupations*,
To measure wind, and weigh the air,
And turn a circle to a square.

Butler. A Satire on the Royal Society.

As the world by degrees grew more populous, it daily became
more difficult to find out new spots to inhabit without encroaching
upon former *occupants*: and, by constantly *occupying* the same indi-
vidual spot, the fruits of the earth were consumed and its spontaneous
produce destroyed, without any provision for future supply or suc-
cession.

Blackstone. Commentaries, book ii. ch. i.

As we before observed that *occupancy* gave the right to the tem-
porary use of the soil, so it is agreed upon all hands that *occupancy*
gave also the original right to the permanent property in the sub-
stance of the earth itself; which excludes every one else but the
owner from the use of it.

Id. Ib.

OCCU'R, v. } Fr. *occurre*; It. *occorrere*; Sp.
OCCU'RRENT, } *occurrir*; Lat. *occurrere*, to run
OCCU'RRENCE, } against, (*ob*, and *curre*, to run. See
OCCU'RSION. } **CONCUR**, **INCUR**.)

To run against, to encounter; to meet with, to go to
meet; to offer or present itself, to appear to; to fall in
the way of, to befall, to happen.

And as concerning the advancement of your diets, I shall
travail for the new signature of your warrant for the same as soon
as any opportunity shall *occur* for the same.

Sir Thomas Wyatt. Cromwell to Sir Thomas Wyatt, 22d Feb. 1538.
Let. 1. p. 430.

OCCUPY.
—
OCCUR.

OCCUR.

Here we have no notable news and *occurrences* but do look daily to have of you.

OCELLARIA.

Sir Thomas Wyat. *Cromwell to Sir Thomas Wyatt*, 13th Feb. 1539. Let. 19. p. 345.

The king's pleasure is, that you shall send a speedy answer hereof, and therewith signify such *occurrences* as have happened in those parties, since the writing of your last letters.

Id. Ib. Let. 10. p. 332.

There doth not *occur* to me, at this present, any use thereof, for profit.

Bacon. Natural History, Cent. v. sec. 401.

He [Galba] took the meane way, suppressing the letters, and not entering into the cause any further, reserving to gouerne himselfe in the rest as euent and *occurrences* should lead and direct him.

Savile. Tacitus, fol. 1. The Ende of Nero.

When I am dead and forgotten, the world will be as it is, the same successions and varieties of seasons, the same revolutions of heaven, the same changes of earth and sea, the like *occurrences* of natural events, and humane affaires.

Hall. Works, vol. iii. fol. 701. Select Thoughts, Cent. i. iv.

MER. My five years' absence hath kept me stranger
So much to all the *occurrences* of my Country,
As you shall bind me for some short relation
To make me understand the present times.

Beaumont and Fletcher. Beggar's Bush, act i. sc. 1.

How is it imaginable, that those active particles, which have no cement to unite them, nothing to keep them in the order they were set, yea, which are ever and anon justled by the *occurrence* of other bodies whereof there is an infinite store in this repository, should so orderly keep their cells without any alteration of their site or posture, which at first was allotted them.

Glanvil. The Vanity of Dogmatizing, ch. iv. p. 35.

But before I begin that, I must *occur* to one specious objection both against his proposition and the past part of my discourse.

Bentley. Sermon 1. p. 22.

When fear does not, in sudden or hazardous *occurrences*, discompose his mind, set his body a trembling, and make him unfit for action, or run away from it, he has then the courage of a rational creature.

Locke. Works, vol. iii. fol. 53. Of Education, sec. 115.

O'CEAN, *n.* } Fr. *ocean*; It. and Sp. *oceano*;
O'CEAN, *adj.* } Lat. *oceanus*; Gr. *Ὠκεανός*, perhaps
OCEANICK. } from *Ὠκός*, swift, and *ναίειν*, *flutare*,
to flow. See Vossius and Martinius. Bochart gives it an Eastern origin. See in Lennep.

The main sea; any thing wide, extended, or immense, as the main sea.

She driveth forth into our ocean,
Thurghout our wide sea.

Chaucer. The Man of Lawes Tale, v. 9425.

But thilke sea whiche hath no wane,
Is cleped the greate *ocean*;
Out of which arise and come
The hie floudes all and some.

Gower. Conf. Am. book vii. p. 207.

He had subdued the Orient, visyted the *ocean* sea, and fulfilled all that mannes mortalitie was able to perfourme.

Brende. Quintus Curtius, book x. fol. 303.

— The sun who scarce up risen
With wheels yet hov'ring o'er the *ocean* brim
Shot parallel to the earth his dewey ray.

Milton. Paradise Lost, book v. l. 140.

After sailing twenty days in that winding dangerous channel, to which he gave his own name, and where one of his ships deserted him, the great Southern *Ocean* opened to his view, and with tears of joy he returned thanks to Heaven for having thus far crowned his endeavours with success.

Robertson. History of America, vol. ii. book v. p. 395. (1521.)

But we had now been so often deceived by these birds, that we could no longer look upon them, nor indeed upon any other *oceanic* birds, which frequent high latitudes, as signs of the vicinity of land.

Cook. Voyages, vol. vi. book i. ch. iii.

OCELLARIA, in *Zoology*, a genus of *Polypi*.

Generic character. Substance stony, flattened like a membrane, variously bent, subinfundibuliform, with

the superficies arenaceous, furnished with pores on both surfaces; pores disposed in a quincunx order, with the centre elevated into a solid axis.

A fossil genus; two species of which, according to Lamarck, have been found in France.

OCELLATED, Lat. *ocellatus*, from *ocellus*, a small eye. See OCULAR.

Having or being spotted with small eyes; or studded with spots resembling eyes.

The white-butterfly lays its voracious offspring on cabbage-leaves; a very beautiful reddish *ocellated* one, its no less voracious black offspring of an horrid aspect, on the leaves of nettles.

Derham. Physico-Theology, book viii. ch. vi. note 6.

OCHINA, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* somewhat filiform, long, the basal joint robust; the second smaller, subglobose; the two following slender, obconic; the fifth to the tenth subequal, semitriangular, produced within, and forming a serrated edge; the terminal joint elongate-ovate, acute; *palpi* four, short; maxillary with the apical joint obtuse; head small, nutant; *thorax* transverse, narrowed anteriorly, and somewhat produced in front; *elytra* convex, the lateral margin not sinuated; body oblong, ovate, moderately convex; *femora* slightly incrassated; *tibiæ* simple, pilose; *tarsi* five-jointed.

Type of the genus, *Cr. ptinoides*, Marsham, *Ent. Brit.* vol. i. p. 228. Six species, of which the typical one is found in England, and frequents trees clothed with ivy.

OCHNA, in *Botany*, a genus of the class *Polyandria*, order *Monogynia*, natural order *Dilleniaceæ*. Generic character: calyx four-leaved, corolla petals five; berry one-seeded, fixed to the large round receptacle.

Two species, trees, natives of Africa.

O'CHRE, } Fr. *ocre*; It. *ocra*; Lat. *ochra*; Gr.
O'CHREOUS, } *ὤχρα*, so called from its *pallid* colour,
O'CHREY. } from *ὤχρὸς*, pale.

As touching *ochre* or sil it is exceeding hard to be reduced into powder: and this also serveth in physike; for it hath a mild kind of mordacitie: astringent it is besides and incarnative: in which respect, sovereign to heale ulcers: but before that it will do any good, it ought to be burnt and calcined upon an earthen pan.

Holland. Plinie, vol. ii. ch. xiii.

In the interstices of the flakes is a grey, chalky, or *ochreous* matter.

Woodward. On Fossils.

This is conveyed about by the water; as we find in earthy *ochrey*, and other loose matter.

Id. Ib.

OCHROCARPUS, in *Botany*, a genus of the class *Dodecandria*, order *Monogynia*, natural order *Guttiferæ*. Generic character: calyx two-leaved; stamens numerous, arranged in a triple order, connected at the base; stigma sessile, flat, four to six lobed; berry olive-shaped, four to six celled; seeds arillate.

One species, *O. Madagascariensis*, a tree, native of Madagascar.

OCHROMA, in *Botany*, a genus of the class *Monadelphia*, order *Pentandria*. Generic character: calyx double, the exterior three-leaved; corolla petals five; capsule five-celled, many seeded, seeds enveloped with a woolly substance.

One species, *O. lagopus*, a tree, with large leaves, native of Islands in the West Indies.

OCHRUS, in *Botany*, a genus of the class *Diadelphia*, order *Decandria*, natural order *Leguminosæ*. Generic character: the two superior segments of the calyx conniving; standard with two teeth, style flattened, villose on the upper side, sutures of the pod with membranaceous wings.

OCELLARIA.

OCHRUS.

OCHRUS. One species, *O. pallida*, native of the South of Europe.

OCTAVE. **OCHTERA**, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* short, with the basal joint very short, the second and third of equal lengths, the latter rounded at the apex, and furnished with a bearded seta; *palpi* with the apex dilated, compressed, obovate; head trigonal; eyes prominent, very remote; wings incumbent; legs discrepant, anterior raptorial, with the femora large, much thickened, and denticulated beneath, their *tibiæ* capable of being applied to their inferior edge, curved within, and terminated with a stout spine.

Type of the genus, *O. mantis*, Latreille, *Gen. Crust. et Insect.* vol. i. pl. xv. fig. 15. One species only, an inhabitant of Europe and of England; in the latter Country rare.

OCHTHEBIUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Palpi* four; maxillary shorter than the antennæ, the terminal joint small, gracile, subulated, the preceding thickened, with the apex tumid; *antennæ* short, clavate, the basal joint elongate, slightly bent, the second short, subglobose, followed by an arcuated, slender, internally acute process; the club elongate, six-jointed, the apical joints rather stoutest, the terminal one the largest and ovate; head large; eyes slightly prominent; *thorax* short, with the sides more or less dilated, the posterior angles sometimes hyaline; body elliptic; *tibiæ* a little spinose; *tarsi* filiform, not ciliated.

Type of the genus, *Elophorus marinus*, Paykull; *O. punctatus*, Stephens, *Brit. Entomology*, pl. xiv. fig. 2. Twelve species, found in stagnant waters, all of them indigenous.

OCTAGON, } Gr. ὀκτώ, eight, and γωνία, a corner, an angle. See **DIAGONAL**.

A figure consisting of eight sides, and containing eight angles.

The floor's not ill pav'd and the margin o' th' spring
Is enclos'd with a certain octagonal ring.

Cotton. *A Voyage to Ireland*, can. 3.

A small portico leads into an octagonal edifice, in the centre of which there is a large basin about three feet deep lined and paved with marble.

Eustace. *Italy*, vol. ii. ch. iii. p. 114.

OCTARILLUM, in *Botany*, a genus of the class *Tetrandria*, order *Monogynia*. *Generic character*: no calyx; corolla salver-shaped, tube four-angled, border four-parted, superior; berry oblong, watery, one-seeded; seed oblong, eight-angled.

One species, *O. fruticosum*, native of the woods of Cochinchina. Louriero.

OCTAVE, Fr. *octave*; It. *ottava*, *ottavo*; Sp. *octava*, *octavo*; Lat. *octavus*; from *octo*, Gr. ὀκτώ, eight. Applied to

The eighth day, or eight days after a holiday or festival. In *Music*,

An eighth is that note which is eight distant from another, as from an unison an eighth; from a fifth a twelfth, &c. And as in the Quotation from Dryden.

If the quene and hir sone entryd not the land by the octauis of y^e Epyphany of our Lord nexte folowyng in peasyble wyse, that they shuld be takyn for enemyes to the kyng and his realme of England.

Fabyan. *Edward II.* Anno 1325. fol. 428.

Herevpon therefore he caused a parlement to be summoned at Westminster, there to be holden in the octaves of the Epiphanie.

Holinshed, vol. ii. p. 359. Henry III. Anno 1225.

Last solemn sabbath saw the church attend,
The Paraclete in fiery pomp descend;
But when his wondrous octave roll'd again,
He brought a royal infant in his traine.

Dryden. *Britannia Rediviva*.

From Chaucer I was led to think on Boccace, who was not only his contemporary, but also pursu'd the same studies; wrote novels in prose, and many works in verse, particularly is said to have invented the octave rhyme or stanza of eight lines.

Id. *Works*, vol. iii. *Preface to Fables*, sig. *A.

It was an octavo pocket-book, and appeared to be an exact copy of Rubens's album which he used in his travels; the drawings and even the hand-writing and different inks being exactly imitated.

Walpole. *Anecdotes of Painting*, vol. ii. ch. iii. p. 148.

OCTHODIUM, in *Botany*, a genus of the class *Tetradynamia*, order *Siliculosa*, natural order *Cruciferae*. *Generic character*: calyx spreading, petals obovate, attenuated at the base; seed-vessel coriaceous, two-celled, nearly globular; seeds solitary in each cell, compressed, oval.

One species, *O. Ægypticum*, native of Egypt. Decandolle.

OCTOBER, Fr. *Octobre*; It. *Ottobre*; Sp. *Octubre*; Lat. *October*. Vossius thinks *ber* a mere syllabic production of the voice: others that it is from *imber*, because the rains are frequent in the months whose names end with this syllable.

In shorter course draweth the dayes of December, than in the moneth of June; the springes of May faden and solowen in *October*.

Chaucer. *The Testament of Loue*, p. 490.

His propre monthe is, as men tellen
Octobre, whiche bringeth the kalende
Of Winter that cometh next sewende.

Gower. *Conf. Am.* book vii. p. 212.

Green rye in September, when timely thou past,
October for wheat sowing calleth as fast.

Tusser. *Points of Husbandry*. *October*.

In the year of Romulus, commencing in March, OCTOBER was strictly, as its name implies, the eighth Month. Domitian, who was born in this Month, gave it his own name, but on the death of the Tyrant it recovered its former appellation. (Suetonius, *in vit.* 15. Macrobius, *Sat.* i. 12.) So also Antoninus Pius called it *Faustinus*, in honour of his Empress Faustina, (Julius Capitolinus, 10.) and the flatterers of the insane Commodus assigned to it one of their Patron's epithets *Invictus*. (Ælius Lampridius, 11.)

OCTOGAMY, Gr. ὀκτώ, eight, and γαμεῖν, to marry. A word appropriate to the Wife of Bath.

But of no noumbre mention made he,
Of bigamie or of octogamie.

Chaucer. *The Wif of Bathes Prologue*, v. 5619.

OCTOMERIA, in *Botany*, a genus of the class *Gynandria*, order *Monandria*, natural order *Orchideæ*. *Generic character*: corolla, petals five, erect, spreading, lip articulated with an unguiform process, joined to the front of the petals; masses of pollen eight

One species, *O. graminifolia*, native of the West Indies.

OCTONARY, Fr. *octonaire*; It. *ottonario*; Lat. *octonarius*.

Pertaining to, consisting of eight.

Which number [eight] being the first cube, is a fit hieroglyphick of the stability of that covenant made with the Jews in circumcision; and the Pythagoreans call the octonary ἀσφάλεια, which signifies that security which is by covenant.

More. *Appendix to the Defence of the Philosophic Cabbala*, ch. ii. fol. 107.

OCTAVE.

OCTO-
NARY.

OCTON-
OCULAR.OCTONOCULAR, having eight eyes, (*oculos*, see OCULAR.)OCU-
LINA.

So that as most animals are *binocular*, spiders for the most part *octonocular*, and some (as Mr. Willoughby thought, *senocular*, so fleas, &c.) are *multocular*, having as many eyes as there are perforations in their corneæ.

Derham. *Physico-Theology*, book viii. ch. iii. p. 372. note.

OCTOPUS, in *Zoology*, a genus of *Cephalopodous Mollusca*.

Generic character. Body fleshy, obtuse beneath, and contained in a sac, which has no wing-like appendages, nor internal dorsal bone, or a very minute one only; head distinct, furnished with a terminal mouth, armed with two horny mandibles, and surrounded with eight simple, elongated arms, furnished with sessile suckers.

Type of the genus, *Sepia octopus*, Sowerby, *Brit. Misc.* vol. i. pl. xliii; *O. vulgaris*, Fleming, *Brit. Animals*, vol. i. p. 253. Several species, three of which are found on the British coasts.

OCTOSYLLABLE, Fr. *octosyllable*. Consisting of eight syllables.

60. Though I call this the *octosyllable* metre from what I apprehended to have been its original form, it often consists of nine and sometimes of ten syllables; but the *eighth* is always the last accented syllable.

Tyrwhitt. *Essay on the Language and Versification of Chaucer*, sec. 8.

OCTOTEUCH, Gr. *ὀκτώ*, and *τέυχος*, a book. Applied to

The eight first books of the Old Testament.

Not unlike unto that [style] of Theodoret in his questions upon the *octoteuch*.

Hammer. *View of Antiq.* (1677,) p. 37.

O'CULAR, } Fr. *oculaire*; It. *oculare*; Sp. *ocu-*
O'ULARLY, } *lar*; Lat. *ocularis*, from *oculus*, an
O'CULIST. } eye; the origin of which is left uncertain by the Latin Etymologists. Tooke assigns it to the Goth. *augo*, A. S. *eage*, an eye, from *aug-an*, *ostendere*, to show.

Of or pertaining to the eye, evident or manifest to the eye or sight; evident.

Il name a signe, shall force beleefe from you:

I bath'd him lately; and beheld the scar

That still remains a marke too *ocular*

To leaue your heart yet blinded.

Chapman. *Homer. Odyssey*, book xxiii. fol. 349.

But Andrew Thevat in his *Cosmography* doth *ocularly* overthrow it; for he affirmeth, he saw an ass with his saddle cast therein [the Lake Asphaltites] and drowned.

Sir Thomas Brown. *Vulgar Errours*, book vii. ch. xv. p. 420

Sir. The subject we talk of is the eye of England; and if there be a speck or two in the eye, we endeavour to take them off; but he were a strange *oculist* who would pull out the eye.

Bacon. *Works*, vol. i. p. 565. *Apophthegms*.

For as Thomas was an *ocular* witness of Christ's death and burial, so were the other disciples of his resurrection; having actually seen him after he was risen.

South. *Sermons*, vol. v. p. 171.

It may not therefore be unuseful to relate many circumstances, which were observable upon a late cure done upon a young gentleman who was born blind, and on the 29th of June last [1709] receiv'd his sight at the age of twenty years, by the operation of an *oculist*.

Tatler, No. 55.

The heathens who had not *ocular* demonstration, but could not contest facts so well established, made their attack upon his miracles, by instancing others who had done things altogether as wonderful, viz. Pythagoras, Abaris, Apollonius, and others.

Observer, No. 11.

OCULINA, in *Zoology*, a genus of *Polypi*.

Generic character. Polypiferous mass stony, generally fixed, branching; the branches smooth, thick, and

VOL. XXV

very short; some of the starlike mouths terminal, the others lateral and superficial, spread over the surface.

Type of the genus, *Madrepora virginea*, Linnæus; *O. virginea*, Lamarck; Ellis, *Zoophytes*, pl. xxxvi. Inhabits the Indian Ocean.

OCYDROMIA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* porrect, approximating at the base, triarticulate, the third joint lenticulate, with a seta at the apex, the two basal ones nearly coalesced; *proboscis* short, exserted, horizontal; *thorax* gibbous; wings two, parallel, incumbent; halteres naked; *abdomen* slender, with seven segments; legs all simple.

Type of the genus, *O. ruficollis*, Meigen, *Ins.* vol. ii. pl. xxi. fig. 24. Six species, all of which inhabit Britain.

OCYMUM, in *Botany*, a genus of the class *Didynamia*, order *Gymnospermia*, natural order *Labiatae*. *Generic character*: superior lip of the calyx orbicular, inferior four-cleft; corolla resupinate, one-lip four-cleft, the other entire, (flowers in a raceme.)

More than thirty species, mostly natives of the East Indies and China.

OCYPODA, in *Zoology*, a genus of *Brachyurous Crustacea*.

Generic character. *Antennæ* four, short, the intermediate ones concealed under the shell, which is almost square, slightly flattened, with the hood narrow; eyes lateral, placed on peduncles below their summit; legs ten, the anterior pair didactyle, none terminated by a fin.

Type of the genus, *O. ceratophthalmus*, Fabricius; Pallas, *Spic. Zool.* pl. v. fig. 9. The animals of this genus inhabit the tropical seas; they burrow in the sand, conceal themselves during the day, and run with great agility.

OCYPTERUS, from the Greek *ὤκτις*, *swift*, and *πτερόν*, *a wing*, Cuv., Tem.; *Swallow Shrike*. In *Zoology*, a genus of animals belonging to the family *Dentirostres*, order *Passeres*, class *Aves*.

Generic character. Beak conical, rounded, without any ridge, depressed at the base, slightly arched and compressed at the tip, on each side of which it is notched; nostrils lateral, distant from the base, small, and slightly hidden by the short hairs at the root of the beak; wings reaching beyond the tail, the first quill-feather very short, second and third of equal length, and very long; legs and toes short, inner toe distinct, outer connected at the base.

The birds composing this genus, which has been formed by Cuvier, seem to connect the Shrikes and Swallows, resembling the former in courage and the strength and form of the beak, and the latter in the great length of their wings and rapidity of their flight. Their plumage for the most part is varied black and white, and they are found in the East Indian Isles and Australia, where they feed on insects, which they pursue with great earnestness and rapidity.

O. Leucogaster, Valenc.; *Lanius Leucorhynchus*, Gmel.; *le Langragen*, Buff.; *White-bellied Swallow Shrike*. Rather smaller than the Great Shrike, has the head and neck slate-coloured, as also the upper surface of the wings and tail, which beneath are light whitish-grey; back and great wing-coverts smoky-brown; chest, belly, upper and under tail-coverts white; tail slightly forked; beak bluish; legs black. Native of the Manillas and Timor.

O. Cinereus, Valenc.; *le Langragen gris*, Cuv.; *Grey Swallow Shrike*. Rather larger than the preceding; head grey, with a black spot between the eye and root

OCU-
LINA.OCYPT-
RUS.

OCYPTE- of the upper mandible; back and belly grey, tinged
RUS. with very light brown, and becoming deeper towards the
tail, the coverts of which, both upper and under, are
OCYPUS. black, and the latter edged with white; wings slate-
colour above, greyish-white beneath; and in this species
are remarkable for their shortness, not reaching to the
tip of the tail, which is rounded, of a deep black colour,
especially above, and tipped with white, except the two
middle feathers, which are entirely black; beak blue
with a black point; legs brown and very strong. From
Timor.

O. Albo-vittatus, Valenc.; *le Langragen à Lignes
Blanches*, Cuv.; *White-striped Swallow Shrike*. Size
of the first species; head, chest, and belly brown, which
is deeper on the back and upper wing-coverts; tail-
coverts entirely black; wings slaty-blue above and grey
beneath; the outer webs of the second, third, and fourth
primaries white, so that when the wing is shut a longi-
tudinal streak, three lines in breadth, is produced; tail
black and forked, each quill, except the middle two,
tipped with white, which increases in size on each of
them, from without inwards, the outer quill having
least white, and thus a white arc is produced instead of
a band; beak deep blue; legs black. From Timor.

O. Fuscatus, Valenc.; *le Langragen enfumé*, Cuv.;
Dusky Swallow Shrike. About the size of the Chaf-
finch; the head, back, and upper parts smoky-brown,
deeper on the face; wings and tail slaty-blue, their
coverts, upper and under, black; tips of the second,
third, and fourth tail-quills tipped with white, forming
a white streak across the end of the tail; beak blue,
legs black. Probably from the Moluccas.

O. Rufiventris, Valenc.; *le Langragen à ventre roux*,
Cuv.; *Rufous-bellied Swallow Shrike*. Size of the first
species; head cinereous; back light smoky-brown, tinged
with greyish; belly rufous; wings slaty, but not ex-
tending beyond the tail, which is slightly rounded, and
of the same colour as the wings, but tipped with greyish-
white; upper tail-coverts terminated in a white arc
about three lines wide, under white traversed with broken
ashy lines; beak blue; legs black. From Bengal.

O. Viridis, Valenc.; *Lanius Viridis*, Lin.; *le Tcha-
chert*, Buff.; *Green Swallow Shrike*. Head, wings, and
upper part of body dark green; under parts white; tail
black. From Madagascar.

See Linnæi *Systema Naturæ* a Gmelin; Cuvier,
Règne Animal; Valenciennes, *Sur le Genre des Lan-
gragens*, in *Mém. du Mus. d'Hist. Nat.* vol. vi.

OCYPTERYX, in *Zoology*, a genus of *Dipterous*
insects.

Generic character. *Antennæ* triarticulate, the second
and third joints elongate, the latter rather the longest,
furnished at the base with a distinctly biarticulate, simple
seta; *palpi* nearly filiform, a little thickened exteriorly;
wings divaricating; legs all similar, simple.

Type of the genus, *Musca brassicaria*, Fabricius;
Meigen, *Zweif. Ins.* vol. iv. pl. xxxix. fig. 29. Several
species are found in Europe, but two only have hitherto
been detected in Britain.

OCYPUS, in *Zoology*, a genus of *Coleopterous* in-
sects.

Generic character. *Palpi* four; maxillary quadri-
articulate, filiform, with the terminal joint truncate at the
apex; labial with the terminal joint securiform; man-
dibles slender, curved, edentulate; *antennæ* filiform, or
somewhat setaceous; the basal joint rather long, stout,
and clavate, the remainder nearly obconic, slightly com-

pressed, with the terminal one subovate, obliquely trun-
cate; head sessile; eyes lateral, somewhat reniform;
body elongate, linear, flat beneath; *elytra* somewhat
narrower than the thorax; legs moderate; *tarsi* simple.

Type of the genus *Staphylinus similis*, Olivier, *Ent.*
vol. iii. pl. v. fig. 42. Ten species, of which six are
natives of Britain.

OCYS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Palpi* six, external maxillary
and labial with the terminal joint very minute, rather
elongate, subulated; *labrum* subquadrate, entire; man-
dibles short, acute, rather obtuse; *mentum* emarginate
anteriorly, the emargination with an acute, central lobe;
antennæ filiform, with the two basal joints naked, the
rest pubescent, the fourth longest; head small, ovate;
thorax transverse, the sides regularly rounded, as wide
posteriorly as anteriorly, the hinder angles prominent,
acute; *elytra* rather broad, ovate; body somewhat
convex; anterior *tibiæ* with a notch on the inner mar-
gin; anterior *tarsi* of the males with the basal joint di-
lated.

Type of the genus, *O. melanocephalus*, Stephens,
Brit. Ent. (Mand.) vol. ii. pl. x. fig. 2. Four species,
found in damp and marshy situations; three of them
indigenous.

ODA, in the Turkish Language corresponds with our
word "Regiment." It is spelt O'dah, or O'tah, and
commonly, but erroneously, pronounced Ortah, the latter
being now used to signify the Regiment itself, the former
its dormitory or barrack; for O'dah properly signifies
"a chamber," and thence the chamber in which a Regi-
ment is lodged, and, figuratively, the Regiment lodged in
it; but as each O'dah contains only 400 men, M. de
Hammer (*Osman. Reichs Staatsverfassung*, vol. ii. p.
196.) thinks "Company" more exactly equivalent to it
than "Regiment." The second in command over each
O'dah is called the O'dah-bâshî, (head of the Regiment,) or
Lieutenant-Colonel. This title, which seems to have
originated with the corps of Janissaries, was subse-
quently used in other corps; thus the Colonels of the
Jebahîs, or Armourers, and of the Kalfatchis, or Calkers,
were also styled O'dah-bâshî. As a Civil officer, the O'dah-
bâshî, or Head Chamberlain, holds a very distinguished
rank, being the first of the four great officers of the
household immediately about the Sultân's person. He
is, in fact, the Imperial valet-de-chambre, is generally
chosen from the White Eunuchs, or the I'ch-oghlâns,
(Court Pages,) and has almost as much power and in-
fluence as the Kapu-âghâ-sî, the Chief of the White
Eunuchs, who may be styled "First Lord of the Bed-
chamber," to whom he is inferior in rank.

Von Hammer, *Des Osmanischen Reichs Staatsverfas-
sung*, Wien, 1815, 2 vols.

ODACANTHA, in *Zoology*, a genus of *Coleopterous*
insects.

Generic character. *Palpi* six, short, filiform, the last
joint of the external maxillary and labial ovate, slightly
truncate; mandibles dentate at the base; *antennæ* fili-
form, with the first joint shorter than the head, the second
somewhat abbreviated, the remainder nearly of equal
length; head ovate, produced behind; *thorax* subcylind-
ric, narrower than the head; *elytra* shorter than the
abdomen, subtruncate; body depressed; legs slender,
anterior *tibiæ* with a notch on their inner edge; *tarsi*
with entire anterior joints, not dilated.

Type of the genus, *O. melanura*, Paykull; *Car. an-
gustatus*, Sowerby, *Brit. Misc.* vol. i. pl. xxxvi. Three

OCYPUS.
--
ODACAN-
THA.

ODACAN species, of which one is a native of the marshy districts of Cambridgeshire and Huntingdonshire.

ODD.

ODD, *adj.* Swed. *udde*, *impar*, *cui par deest*,
O'DDITY, } Ihre. Skinner says from the D. *oed*,
O'DDLY, } *ood*; Ger. *oed*, *ode*, *od*, *desertus*, *vacuus*,
O'DDNESS, } *cui, sc. aliquid deest ad numerum com-*
ODDS. } *plendum*. Junius thinks *odd* cut off

(*abscissum*) from the English *added*; and Lye that we owe the word to the Sw. *udda*. Tooke asserts it to be the past participle *owed*, *ow'd*. Thus when we are counting by couples or by pairs, we say—one pair, two pairs, &c. and one *owed*, *ow'd*, to make up another pair, (and this coincides with the interpretations of Ihre and Skinner.) It has the same meaning (he adds) when we say—an *odd* man, or an *odd* action; it still relates to *pairing*; and we mean—without a fellow, *unmatched*, not such another, one *owed* to make up a couple. He might have noticed the equivalent expressions, a singular man, a singular action. In numbers it is used when there is

One wanting to make the number even, or divisible into two equal numbers. Generally,

Singular; unmatched, unequalled, not having its like; unlikely; uncommon, unusual, extraordinary.

Odds; inequality, either for or against; unevenness, disparity, disagreement, dissension.

Kyng Xerxes, cuttinge an *odly* great pomegarnate, and behold-ynge it fayre and full of kernels, sayde in the presence of his counsayle, he had leuer haue suche one frende, as Zopirus was, thanne as many Babylons, as there were kernels in the pomegarnate.

Sir Thomas Elyot. *The Governour*, book iii. ch. vi. fol. 176.

This is the third time: I hope good lucke lies in *odde* numbers; away, go, they say there is diuinity in *odde* numbers, either in natu-ity, chance, or death.

Shakspeare. *Merry Wives of Windsor*, fol. 58.

Vntie the spell: how fares my gracious sir?
There are yet missing of your companie
Some few *odde* lads, that you remember not.

Id. *The Tempest*, fol. 18.

But O, how *odly* will it sound, that I
Must aske my childe forgiuenesse?

Id. *Ib.*

So thou that hast thy loue sette unto God,
In thy remembraunce this emprint and graue,
As he in soueraine dignitie is *odde*,
So will he in loue no parting fellowes haue.

Sir Thomas More. *Workes*, p. 28. *Rules of Pious.*

Folly and madness! since 'tis *ods* we ne're
See the fresh youth of the next yeare.

Habington. *To Sir Edward P. Knight.*

Cato the elder, answered certain on a time, that marvellously commended a boyl, a venturous, and desperate man for the wars: That there was great *oddes*, to esteem manhood so much and life so little.

Sir Thomas North. *Plutarch*, fol. 238. *Pelopidas.*

But Epicurus, a little ashamed of this, as that which must needs look *odly* and ridiculously, and seeming more cautious and castigate, pretends to correct the extravagancy of this phancy.

Cudworth. *Intellectual System*, book i. ch. v. fol. 673.

But where a man neither loves, nor likes the thing he believes, it is *odds* but in a little he may be brought also to cast off the very belief itself.

South. *Sermons*, vol. iv. p. 344.

But what in *oddness* can be more sublime
Than Sloane, the foremost toyman of his time.

Young. *Love of Fame. Satire 4.*

Capaneus is so far blinded with his own admiration, that he still fancies himself the conqueror; though the *odds* appeared visibly against him: so apt is pride to magnify.

Hart. *Statius. Thebaid 6. n. 32.*

ODE, Fr. *ode*; It. and Sp. *oda*; Lat. *ode*; Gr. *ὠδή*, from *ἀείδ-ειν*, to sing.

See the Quotation from Blair.

See how from far upon the Eastern road
The star-led wisards haste with odours sweet:
O run, prevent them with thy humble *ode*,
And lay it lowly at his blessed feet.

Milton. *Ode. Christ's Nativity*, l. 24.

There is nothing more frequent among us than a sort of poems entitled *Pindaric Odes*; pretending to be written in imitation of the manner and style of Pindar, and yet I do not know that there is to this day extant, in our language, one *ode* contrived after his model.

Congreve. *A Discourse on the Pindaric Ode.*

Music and Poetry are coeval, and were, originally, always joined together. But after their separation took place, after bards had begun to make verse compositions, which were to be recited or read, not to be sung, such poems as were designed to be still joined with music or song, were, by way of distinction, called *odes*.

Blair. *Lecture 39. vol. iii. p. 136.*

ODESSA, a thriving sea-port in the South of European Russia, is seated on a small bay of the Black Sea, in the Government of Cherson. It lies on the South-West corner of the Bay of Adschai, between the mouths of the Dniester and Dnieper, and is built on a gently rising ground surrounded by fertile plains. This place was first fixed upon as a maritime station and mercantile emporium by Catherine II., after the cession of Bessarabia, at the Peace of Jassy, in 1792. The advantages of its situation were not overrated by her, and under the judicious regulations of the Emperor Alexander, who adopted her views, Odessa has from an inconsiderable fishing-town risen into a port of no mean consequence. The bottom of the bay is of fine sand or gravel; it is seldom frozen, and there is sufficient depth of water, almost to its very edge, for the safe anchorage of ships of the largest class. Its harbour, formed by two large moles, is entirely artificial, and is calculated to hold about 300 vessels. The moles are strongly fortified by regular parapets, and embrasures for cannon. On its Eastern extremity is a citadel commanding the whole port; and on the opposite side stands a Lazaretto. The harbour and town are connected by a row of barracks; and the extensive roadstead, which is sheltered from every wind but the South-East, has received additional security by the construction of a light-house on a tongue of land to the South of the bay. The town, which from its sloping position assumes an amphitheatrical appearance, is neatly and regularly built, and contains seven Churches, an Admiralty Court, a Custom-house, and a Hospital, (which last three buildings are close to the harbour,) an Exchange, and a Theatre. The streets, which are wide and straight, cross each other at right angles; but the conveniences resulting from this arrangement, and from their width, suffer a drawback from their being unpaved. Northward from the town are warehouses for salt and salted provisions; and at some distance to the West of them are reservoirs for water. The endowments for education here consist of a Lyceum, on the French plan, schools for trade and navigation, and likewise for the instruction of girls. During the season, many Polish families resort hither for the purpose of bathing, and public baths have in consequence been erected for the convenience of visitors. Sugar, and other colonial produce, form the chief imports into Odessa; and its great article of export is corn from the Ukraine and the adjoining Countries; to this may be added timber, tallow, hides, and flax in inconsiderable

ODESSA. quantities. The annual arrival of vessels is estimated at 800, of which one half are Russian, and about one-third British. There are large breweries and distilleries established here, and several manufactures of woollen goods, silk, gunpowder, and soap. Altogether, the commerce is considerable with France, Spain, Italy, the Levant, Germany, and England. The villages in the neighbourhood of Odessa produce butter and cheese, rarities in the South of Russia; potatoes are common; and the melons are remarkably fine, the water-melons being nearly equal in flavour to those of Syria. The chief disadvantages of Odessa as a place of residence arise from scarcity of fuel and of water. Besides, at particular seasons, the climate is accounted unhealthy. According to the authority of the *Connaissance des Temps*, Odessa is situated in 46° 29' 30" North latitude, and 30° 45' 22" East longitude.

Clarke, *Travels in Russia*; Lyall, *Travels in Russia*.

O'DIOUS, Fr. *odieux*; It. *odiare*, *odioso*; Sp. *odiar*, *odioso*; Lat. *odiosus*, *odium*, (which we have adopted in common speech,) from the verb *odi*, which is traced through the Gr. verb *ὀδύσσω-ειν*, *irasci*, obsolete *ὀδύειν*, to an obsolete primitive *ὀδεῖν*, *pungere*. See *ὀδύσσω* in Lennep.

Hateful, detestable, loathsome; causing hatred or envy; invidious.

And while the Greeks, as I have you told,
Were besieged wardes to ordeine,
Mid of the feld befell a case sodeine,
Full vnhappy, lothsome, and odible.

Lidgate. *The Story of Thebes*, part iii. p. 601.

Who shal me gide, who shal me now conuoie,
Sith I fro Diomedes, and noble Troilus,
Am clene excluded, as abject, odious?

Id. *The Testament of Creseide*.

Thus from one vyce he grewe into another so that he became
odible to God and man.

Fabyan, part i. ch. viii. p. 15.

These doth Esaie in similitude compare unto wyld beasts, dragons, and other odible monsters.

Bale. *Image*, part iii. sig. A. a. 6.

Oliuer Deuyll, whom, for the odiousnesse of the name y^e kynge causyd it to be chaunged, & to be named Dāman.

Fabyan, vol. ii. p. 644. Anno 1458.

Careticus began to rule the Britaines. This man loued ciuill war, and was odible both to God and to his subiects.

Stow. *Britaynes and Saxons*, Anno 586.

With whose reproch, and odious menace,
The knight emboyling in his haughtie hart,
Knit all his forces, and gan soone unbrace
His grasping hold.

Spenser. *Faerie Queene*, book ii. can. 6.

It was an odious thing to the people of England, to haue a king brought into them vpon the shoulders of Irish and Dutch; of which their armie was in substance compounded.

Bacon. *King Henry VII.* fol. 33.

I have known him (a wicked ruler) utterly forgotten, if not odiously remembered, in the city, where he had exercised authority.

Hall. *On Hard Texts of Scripture*. *Ecclesiastes*.

The odiousness of which fact was greatly increased by a notable example which happened there in a Ligurian woman.

Savile. *Tacitus*, book ii. ch. v.

This [Roman garrison] rather weighing the greatness of the booty, than the odiousness of the vilany by which it was gotten, resolved finally to make the like purchase.

Sir Walter Raleigh. *History of the World*, book v. ch. i. sec. 3. fol. 547.

It is sufficient for their purpose that the word sounds odiously, and is believed easily.

South. *Sermons*, vol. vi. p. 102.

But his most remarkable anecdote, and probably a true one, is that Monsieur Blinville, the French ambassador, when lodged at the Bishop of Durham's, celebrated mass openly, that the *odium* might fall on the king.

Walpole. *Anecdotes of Painting*, vol. ii. ch. ii. p. 103.

ODONESTIS, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. Palpi elongate, porrected, hairy, triarticulate, the basal joint not half as long as the second, the terminal rather longer than the basal, obtuse; *maxillæ* obsolete; *antennæ* slightly curved near the base, bipectinated, especially in the males, to the apex; head small; *thorax* stout, loosely but thickly pilose; *abdomen* the same, elongated, and tufted at the apex in the males, somewhat acute and stout in the females; wings reversed when at rest; anterior rather acute at the tip, the hinder margin rounded, entire; posterior slightly denticulate; legs stout, densely pilose, especially in the males, with spurs at the apex of the tibiae. *Larva* robust, cylindric, with fascicles of hair down the sides, a distinct tuft on the neck, and another placed on a minute tubercle on the penultimate joint; when alarmed, it rolls itself into a ring; *pupa* robust, obtuse, placed in a fusiform, closely woven, luteous cocoon.

Type of the genus, *Phalæna bombyx potatoria*, Linnæus; Donovan, *Britt. Ins.* vol. v. pl. 148. Three species, one indigenous, found in thick, sedgy lanes.

ODONIA, in *Botany*, a genus of the class *Diadelphica*, order *Decandria*, natural order *Leguminosæ*. *Generic character*: calyx four-parted, segments entire, nearly equal; standard of the corolla erect, spreading, wings on the upper edge one-toothed, keel two-parted, deflexed; pod compressed, one-celled, eight-seeded.

One species, *O. tomentosa*, a climbing shrub, native of St. Domingo. Decandolle.

ODONTOCNEMA, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* short, eleven-jointed, basal joint robust, curved; second also robust and short; three following rather slender, equal in length, but longer than the second; the remainder gradually increasing in stoutness, the last being largest, ovate, subacuminate; head prominent, triangular; *thorax* short, transverse, the lateral margins rounded, the base obliquely bisinuated; *elytra* broad, striated; legs stout, short; anterior *tibiæ* simple; intermediate and posterior with a short acute tooth in the middle of the outer margin, furnished behind with a fringe of hairs or setæ; posterior *femora* very stout; *tarsi* all short, simple.

Type of the genus, *Haltica aridella*, Ent. Hefte, fasc. ii. pl. iii. fig. 2. Eight species, six of which are indigenous.

ODONTOMYIA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* porrect, approximating at the base, triarticulate, the two basal joints very short, subequal, the third long, flat; *proboscis* with the apex only exerted; *ocelli* three; wings two, incumbent, parallel; *scutellum* bidentate; *abdomen* with five segments; legs simple.

Type of the genus, *Musca Hydroleon*, Linnæus; Panzer, *Faun.* vol. viii. fig. 21. A numerous genus, of which nine species are found in Britain.

ODONTONYX, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. Palpi six, rather elongated, the

OD

ODON-
TONYX.

ODON-
TONYX.
ODOUR.

terminal joint fusiform, acuminate at the tip, scarcely truncate; *labrum* quadrate, transverse, entire; mandibles acute, bent, denticulate at the base; *mentum* emarginate, anteriorly, with an acute, triangular notch in the centre; *antennæ* filiform, the third, fourth, and terminal joints nearly equal; head elongate; *thorax* nearly orbicular, deeply emarginate in front, the posterior angles rounded; body slightly convex; *elytra* with the apex a little obliquely truncated; wings two or none; claws slightly denticulated; anterior *tarsi* of the males with three dilated joints.

Type of the genus, *Ca. rotundatus*, Paykull; *O. rotundatus*, Stephens, *Brit. Entomology*, (Mand.) vol. i. p. 96. pl. vi. fig. 2. Two species, both of which inhabit Britain.

ODONTOPERA, in Zoology, a genus of *Lepidopterous* insects.

Generic character. *Palpi* two, distinct, porrected obliquely upwards, densely pilose at the base, the apex squamous and exposed, triarticulate, the basal joint a little bent and robust, the second rather longer, attenuated to the apex, the terminal minute, placed obliquely; *maxillæ* elongate; *antennæ* long, of the males each joint producing a short, clavate twig on each side, the twigs gradually shortening to the apex; of the females, slightly serrated within; head rounded; *thorax* stout, velvety; *abdomen* rather stout, with a tuft at the apex, more robust and obtuse, with the apex ciliated, in the females; wings slightly deflexed; the hinder margin of the anterior deeply and irregularly, and of the posterior slightly and regularly, dentate; all with a central ocellar spot; *larva* with ten legs, elongate, cylindric, with a few scarcely elevated tubercles; head slightly emarginate above; *pupa* changes in a delicate cocoon in moss or under leaves.

Type of the genus, *Phalæna geometra bidentata*, Linnæus; Harris, *Aurelian*, pl. x. fig. 2. One species is indigenous to the woods and copses of England.

ODOSTOMIA, in Zoology, a genus of *Gasteropodous Mollusca*.

Generic character. Shell conical, aperture ovate; *peristoma* incomplete retrally, and furnished with a tooth on the pillar.

Type of the genus, *Turbo unidentata*, Montagu, *Test. Brit.* 324. pl. xxi. fig. 2. Several species, frequenting chiefly the Southern coasts of Britain.

O'DOUR, { Fr. *odeur*; It. *odore*; Sp. *olor*;
O'DORAMENT, { Lat. *odor*. Vossius thinks the Lat.
O'DORATE, { *oleo*, to smell, was originally written
ODORIFEROUS. { *odeo*; and Scheidius has no doubt
that *odor* was so used, *ab acrimonia odoris, nares quasi*
pungentis, and thus refers it to the same source as the
Lat. *odi*. (See ODIOS, *supra*, and Lennep.)

Odour being thus equivalent to our vulgar usage of the word *stink*.

Smell, scent—*Odoriferous*; bearing or bringing a smell or scent; usually a pleasing smell.

Walke ghe in loue as Crist lonyde us, and ghaf hymself for us
an offryng and a sacrifice to God into the *odour* of sweetnesse.

Wiclif. *Effesies*, ch. v.

— And eke her breath I trow
Sumounteth all *odours* that euer I found
In sweetnesse.

Chaucer. *The Court of Loue*, p. 373.

Marye Magdalen and Mary Jacoby, and Salome, brought *odouren*,
y^t they might come and anoynt him.

Bible, Anno 1551. Marke, ch. xvi.

What should I speke of the *oderiferous* skarlettes, the fyne veluet,
&c. Hall. Henry VII. *The seventeenth Yere*.

And the swete smoke of the *odorous* incence, whych came of the
wholsome and feruent desyres of theym that had fayth, ascended
vp before God out of the aūgels hande.

Bale. *Image*, part i. sig. O. v.

Then gan they sprinkle all the posts with wine,
And made great feast to solemnize the day:
They all perfumde with frankincence divine,
And precious *odours* fetcht from far away.

Spenser. *Faerie Queene*, book ii. can. 1.

Odoraments to smell to, rose water, violet flowers, bawme, rose
cakes, vinegar, &c. doe much recreate the braines and spirits.

Burton. *Anatomy of Melancholy*, fol. 389.

The cause is, for that where there is heat and strength enough
in the plant, to make the leaves *odorate*, there the smell of flowers is
rather evanide and weaker, than that of the leaves; as is in rose-
mary flowers, lavender-flowers, and sweet-briar roses.

Bacon. *Natural History*, Cent iv. sec. 389.

Near to that sweet and *odoriferous* clime,
Where the all-cheering Emperor of time
Makes spring the cassia, nard, and fragrant balms,
And every hill and collin crowns with palms.

Drummond. *The Shadow of the Judgment*.

An amber scent of *odorous* perfume
Her harbinger, a damsel train behind.

Milton. *Samson Agonistes*, l. 721.

So we th' Arabian coast do know
At distance, when the spices blow;
By the rich *odour* taught to steer,
Though neither day nor stars appear.

Waller. *To a fair Lady playing with a Snake*.

Flowers
Innumerable, by the soft South-West
Open'd, and gather'd by religious hands,
Rebound their sweets from th' *odoriferous* pavement.

Prior. *The Second Hymn of Callimachus. To Apollo*.

On ev'ry side spreads wide the beauteous scene,
Assemblage fair of plains, and hills, and woods,
And plants of *od'rous* scent.

Jago. *Hedge Hill*, book iv.

ODYNERUS, in Zoology, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* twelve-jointed, acute at the apex; maxillary *palpi* six-jointed, the two or three basal joints extending beyond the *maxillæ*, the latter with the terminal lobe short, lanceolate; *labium* trilobed, with glandular points; wings four, anterior longitudinally folded during repose, with three complete submarginal areolets; *abdomen* ovoid-conic, the second segment broader than the first.

Type of the genus, *Verpa parietinus*, Linnæus; Curtis, vol. iii. pl. 137. A numerous genus, the species of which inhabit sandy and gravelly districts, and their females form deep cylindrical holes, or form cells of mud in walls, into which they deposit their eggs, after placing some disabled *larvæ* therein. About twenty species inhabit Britain.

OECONOMY. See ECONOMY.

ŒCOPHORA, in Zoology, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* subulate, stout at the base; *palpi* two, very long, the second joint scaly, the terminal as long or longer, conic, naked; body small; wings elongate, narrow, subconvolute.

Type of the genus, *Tinea sulphurella*, Fabricius; *Ti. bracteella*, Hübner. Three species, two indigenous; they fly towards the evening and at night.

ŒCUMENICAL, } Gr. *οἰκουμηνικός*, *habitalis*,
ŒCUMENICALLY. } from *οἶκ-εἶν*, to dwell, to inhabit.

ODOUR.
—
ŒCUMENICAL.

ŒCUMENICAL.

Comprising the whole *habitable* world; general, universal.

ŒDE-MERA.

That anie one bishop above the rest had the name of *œcumenicall*, or universall, or head, to the derogation of other bishops, or with such glorie as is now annexed to the same: that is not to be found. *Fox. Martyrs*, fol. 8. *The Differences between the Church of Rome, &c.*

So that by the expresse resolution of all these severall councils, whereof one is *œcumenicall*: the Lord's day ought to be kept onely from evening to evening, and so to begin and end at evening.

Prynne. Histrio-Mastix, part i. act. vii. sc. 3.

1. So early as about the close of the sixth century, Gregory the first, or the great, as he is usually called, the most reverend, and in some respects not undeservedly so, of all the Roman Pontiffs, in a famous dispute with the Bishop of Constantinople, who had taken to himself the title of *œcumenical*, or universal Bishop, objects to him, the arrogance and presumption of this claim, and treats him, on that account, as the forerunner, at least, of Antichrist.

Hurd. Works, vol. v. *Sermon 7.*

Human passions, human interests, human fallibility, not those of particular doctors alone, but those of the Church, *œcumenically* assembled, from the Nicæan Council down to that of Trent, have had their share in composing the present intricate, inconsistent, and voluminous system.

Bolingbroke. Authority in Matters of Religion, es. 4. sec. 13.

ŒDALEA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* approximating at the base, porrect, triarticulate, the two basal joints nearly united, the third elongate, compressed, without a seta at the apex; *proboscis* horizontal, exerted, flat; *thorax* very gibbous; wings two, parallel, incumbent; halteres naked; legs unequal; hinder *femora* clavate.

Type of the genus, *Œ. hybotina*, Meigen, *Zweif*, vol. ii. pl. xxi. fig. 27. Two European species, both found in Britain.

ŒDE'MA, } Fr. *œdeme*; Gr. *οἰδημα*, a swell-
ŒDEMA'TICK, } ing, from *οἰδεῖν*, to swell. *Cotgrave*
ŒDE'MATOUS. } explains it, "a painless, waterish, and
flegmatick swelling; which pressed down with the finger, retains the impression thereof."

I shall now proceed to speak of that tumour which hath its rise from the pituita, or phlegm, and is known by the name of *œdema*.

Wiseman. Surgery, book i. ch. xviii. p. 135.

But the pain encreased, and the leg swell'd from the hip to the very toes exceedingly, and seemed *œdematous*. *Id. Ib.*

ŒDEMERA, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* setaceous, nearly as long as the body, pubescent; basal joint stout, subclavate, second minute, ovate, seated obliquely on the apex of the first, the remainder long and slender, gradually decreasing in length to the apex, the terminal one acute; *palpi* four, long, the terminal joint ovate-truncate, the maxillary longest; *labrum* transverse-ovate; mandibles subtrigonal, bifid at the apex; *mentum* subquadrate; head nutant, produced in part; eyes prominent; *thorax* subquadrate; narrowed towards the base, the disc unequal; *elytra* elongate, subulate, divaricating; wings exposed; body sublinear; legs all slender and simple in the females; the posterior in the males pilose, with the *femora* very much thickened and curved, and the *tibiæ* also incrassated, compressed, bent, angulated above at the base, and terminating in a point within at the apex; *tarsi* heteromerous, with the penultimate joint bilobed.

Type of the genus, *Necydalis cærulea*, Linnæus; Donovan, *Britt. Ins.* vol. xvi. pl. 558. Two British and about ten foreign species; they frequent flowers during the Summer.

ŒDERA, in *Botany*, a genus of the class *Syngenesia*, order *Segregata*. *Generic character*: calyx many-flowered; florets tubular, hermaphrodite, and some of the female flowers strap-shaped; receptacle chaffy, down chaffy.

Three species, natives of the South of Africa.

ŒDICNEMUS, from the Greek *οἰδεω*, *I swell*, and *κνήμη*, a knee; Tem. Cuv. *Thick-knee*. In *Zoology*, a genus of animals belonging to the family *Pressirostres*, order *Grallæ*, class *Aves*.

Generic character. Beak longer than the head, straight, strong, slightly depressed at the base, and compressed towards the tip; ridge of upper mandible elevated, lower mandible angular; nostrils in the middle of the beak, longitudinal, and perforated through and through; wings of moderate length, the first quill-feather rather shorter than the second, which is longest of all; tail graduated; legs long and slender; three toes in front, connected to the second joint by membrane which is continued along the edges of the toes.

This genus forms the link connecting the Bustards with the Plovers, among one or other of which kinds it was included by Ornithologists, till separated by Temminck. The young birds are remarkable for the thickness of their knee, (whence their name has been derived,) which, however, partially disappears as their age increases. They are found in uncultivated districts, feed on insects, snails, worms, small reptiles, shrews, field-mice, &c. They deposit their eggs in little cavities, which they hollow out with their feet in the dry mud. They moult but once a year, there is no sexual difference in their plumage, and the young do not attain their full feather for some years. There are several species, but Europe furnishes only one.

Œ. Crepitans, Tem.; *le Grand Pluvier, ou Courlis de terre*, Buff.; *Thick-kneed Bustard*, Lath.; *Common Thick-knee*. All the upper parts ferruginous-ash, with a longitudinal streak on the middle of each feather; spot between the eye and beak, throat, belly, and thighs pure white; neck and chest tinged with ferruginous and sprinkled with longitudinal brown streaks; on the wings a longitudinal white band, the first quill has a large white spot in the middle, the second has a smaller one on the inner web; under tail-coverts ferruginous, caudal quills, excepting the middle, tipped with black; base of the beak light yellowish, other part black; ocular circlet and legs yellow. Is very common in the South of Europe, rare in Holland, not unfrequent in England, and a bird of passage in Germany; lays two eggs of a yellowish-brown colour tinged with green and marked with olive and black spots.

Œ. Maculatus, Cuv.; *l'Œdicnème Tachard*, Tem.; *Spotted Thick-knee*. Is about the same size as the last species, and differs from it but little in plumage; the space behind the eyes, the cheeks, throat, and doubling of the wing white; the head, neck, chest, and back streaked longitudinally with black on a light tawny ground; the belly and thighs greyish and slightly marked with black streaks; alar quills black, streaked in the centre with white; rump ferruginous; caudal quills striped alternately with black and lead colour; tarsi yellowish. From the Cape of Good Hope.

Œ. Longipes, Geoffr.; *l'Œdicnème Echasse*, Tem.; *Long-legged Thick-knee*. Is the largest species of the genus, measuring nineteen or twenty inches in length; it has the beak black; forehead, eyebrows, throat, chest, and belly white, streaked longitudinally with black;

ŒDERA.
ŒDICNEMUS.

EDICNE-
MUS.
—
CENAS.

top of the head and neck light ashy-grey marked with small brownish streaks; great alar quills black, the tail graduated, its lateral quills black and white, the middle light grey, marked with irregular, transverse, dusky-grey bands. Native of New Holland.

Æ. Magnirostris, Geoff.; *l'Ædicnème à gros bec*, Tem.; *Large-beaked Thick-knee*. About seventeen inches long; the beak black, but larger and longer than in the preceding species, and slightly curved towards the point; above each eye are two broad bands, one deep brown, the other white; aural region and commissure of the beak black; plumage of upper parts ashy-brown; cheeks, throat, belly, and hind parts white; front of the neck and chest ashy streaked longitudinally with pale brown; top of the wing deep brown marked with a very broad white band; primary quills black, greater wing-coverts whitish-grey, lesser coverts edged with white; caudal quills grey and spotted beneath. From New Holland.

See Cuvier, *Règne Animal*; Temminck, *Planches Coloriées*, and *Manuel d'Ornithologie*.

ÆDMANNIA, in *Botany*, a genus of the class *Diadelphia*, order *Decandria*, natural order *Leguminosæ*. Generic character: calyx two-lipped, superior lip two-cleft, inferior lip setaceous.

One species, *O. lancea*, native of the South of Africa.

OELAND, an Island of importance, belonging to Sweden, and situated in the Baltic Sea, is 25 leagues in length, and little more than two in breadth. Population 22,000. It lies opposite to Calmar, and while its Eastern coast affords a safe roadstead, that on the Western side is perilous in the extreme. The chief formation of the Island consists of schistous, silicious, and calcareous rocks; blocks of rock crystal, porphyry, and granite being occasionally met with. Black marble, or touch-stone, and the Oeland sandstein, or freestone, are also products of this Island. In the Northern and Southern parts are alum mines, which together with the quarries afford partial employment to the inhabitants, the greater portion of whom, however, are engaged in agriculture and fishing. The valleys in the Southern districts are abundantly watered by rivulets from the rocky hills, fitting them for tillage, and affording excellent pasture for sheep and kine. The horses, called *Kleppers*, or *Klappers*, although small, are strong and active; and wild boars, hares, and several species of deer are found here. The trees which grow on the level grounds are beech, hazel, oak, and walnut. Latitude 56° 45' North, longitude 16° 20' East.

CENANTHE, in *Botany*, a genus of the class *Pentandria*, order *Digynia*, natural order *Umbelliferae*. Generic character: florets irregular, those of the disk sessile and barren; fruit ovate, oblong, crowned with the calyx.

About twenty species, mostly natives of Europe. *O. fistulosa*, *pimpinelloides*, *peucedanifolia*, and *crocata*, are natives of England. All the species are poisonous, especially the *O. crocata*.

CENAS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* slightly attenuated at the extremity, inserted between the eyes at the base of the clypeus, eleven-jointed, the articulations short, somewhat obconic, the terminal one rather elongate; *palpi* with the apical joint cylindric; body oblong, rounded, with the head and thorax rather narrower than the elytra; eyes entire; *thorax* small; *elytra* elongate, linear, flat on the back; posterior *tibiæ* with the apex obliquely

truncate, and furnished with a stout spur; *tarsi* heteromalous.

Type of the genus, *Meloë afer*, Linnæus; Latreille, *Gen. et Crust.* pl. x. fig. 10. All the species appear to be natives of Africa and the South of Europe.

CENONE, in *Zoology*, a genus of *Annelides*.

Generic character. Head concealed under the first segment of the body, which is large, and rounded before; jaws nine, four on the right side and five on the left, the lower ones strongly dentated; eyes indistinct; no projecting *antennæ*.

Type of the genus, *Æ. lucida*, Savigny; Lamarck, vol. v. p. 326. A native of the shores of the Red Sea.

CENOTHERA, in *Botany*, a genus of the class *Ocandria*, order *Monogynia*, natural order *Onagraceæ*. Generic character: calyx tubular, four-cleft, segments deflected, deciduous; corolla, petals four, inserted into the calyx; stigma four-cleft; capsule four-celled, four-valved, inferior, seeds fixed in the centre of the receptacle.

A genus of more than thirty species, mostly natives of America. They are generally hardy, free-flowering, herbaceous plants, and are frequently cultivated; they expand their flowers in the evening, and are called the Evening Primrose.

OESEL, an Island in the Baltic Sea, at the mouth of the Gulf of Riga, belonging to Russia, extends 11½ Swedish miles, or 118 versts, in length, and varies in breadth from 9½ miles, or 99 versts, to 2½ versts. It is called in the Esthonian Tongue *Kourrésaar*, that is, the *Isle of Cranes*; and by the inhabitants *Sarema*, or *The Island*. The climate is healthy and temperate; but the soil is poor, consisting chiefly of sand, loam, and clay. With good management and cultivation, however, it will produce wheat, barley, oats, and peas. The quarries here are extensive and profitable, affording blocks of stone of large size, and easily worked. Marble is also found, veined generally with blue, red, and yellow; but of too soft a nature, and in too small quantities, to be an object of importance. The inhabitants are a temperate race, little addicted to ardent liquors, and displaying great predilection for music and dancing. Of dances they have two kinds; the one called *Soyour*, or *Kærgelants*, that is to say, the *Great Dance*; the other styled *Pissonketants*, or the *Little Dance*. Most of their houses have glass-windows, and many are furnished with chimneys. The richer class, besides, indulge themselves with candles; whilst those of more limited means are contented with iron lamps, in which they burn seal-oil. The poor use torches made of fir. Unskilled in the use of letters, the untutored natives of this Island compute their Calendar by means of marks, cut on wooden tallies; and like the Hebrews, they read these primitive pages from left to right. Latitude 57° 42' North, longitude 22° 13' 30" East. Population, including the small adjacent Islands, Moen and Runoe, 35,000. The small town of *Arensberg* on this Island, is the chief place of a Circle in the Government of Riga, comprising these three Islands.

OESTRUS, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* very short, inserted in a bilocular cavity; *proboscis* obsolete; *palpi* rudimentary; *eyes* remote, of the males closer than those of the females; *thorax* with the surface irregular; wings two, incumbent, the two exterior areolets complete, the hinder ones terminal; *abdomen* with its extremity

CENAS.

OES-
TRUS.

OES-
TRUS.

OF.

inflexed, of the female much elongated and attenuated.

Type of the genus, *Oe. ovis*, Linnæus; Clark, *Essay on Bots*, pl. ii. fig. 16—20. Several species, three of which only are indigenous.

The *larvæ* reside within the skin of herbivorous mammalia, or in the frontal sinus of sheep; when about to undergo their metamorphose, they emerge from their cell, and fall on the ground, a little beneath the surface of which they change to *pupæ*.

OF, Goth. *af*; A. S. *of*; D. *af*. Skinner derives from the Lat. *ab*, Gr. *ἀπό*. Junius from *ἀπό*, *ἀφ'*. Tooke says, "I imagine that *of* (in the Goth. and A. S. *af*) is a fragment of the Goth. and A. S. *afara*, *posteritas*, *afora proles*; that it is a noun substantive, and means always consequence, offspring, successor, follower, &c." He further observes, (p. 393. note,) "The Dutch are supposed to use *van* in two meanings; because it supplies indifferently the places both of our *of* and *from*. Notwithstanding which, *van* has always one and the same single meaning, viz. *beginning*. And its use both for *of* and *from* is to be explained by its different *apposition*. When it supplies the place of *from*, *van* is put in apposition to the same term to which *from* is put in apposition. But when it supplies the place of *of*, it is not put in apposition to the same term to which *of* is put in apposition, but to its *correlative*. And between two *correlative* terms, it is totally indifferent to the meaning which of the two correlations is expressed."

Walled *of* stone, and ditched all without.

Id. Ib. v. 1889.

Of them, that writen us to fore
The bokes dwelle: and we therfore
Ben taught *of* that was writen tho,
For thy good is, that we also

In our time amonge vs here
Do write *of* newe some mattere
Ensamped *of* the olde wise.

Gower. Conf. Am. Prologvs, fol. 1.

Help then, O holy virgin, chiefe *of* nyne,
Thy weaker novice to perform thy will;
Lay forth out *of* thine everlasting scryne
The antique rolls, which there lay hidden still,
Of faerie knights.

Spenser. Faerie Queene, book i. can. 1.

Restless he pass'd the remnant *of* the night,
Till the fresh air proclaim'd the morning nigh:
All burning ships, the martyrs *of* the fight,
With paler fires beheld the Eastern sky.

Dryden. Annus Mirabilis.

Yet oft before his infant eyes would run
Such forms as glitter in the Muse's ray
With orient hues, unborrow'd *of* the sun:
Yet shall he mount, and keep his distant way
Beyond the limits *of* a vulgar fate,
Beneath the good how far—but far above the great.

Gray. The Progress of Poesy.

OFF, also written with a single *f*. D. *af*; Ger.
ab; Sw. *af*. *Of* unknown origin. In usage it is
opposed to *on*, or *upon*; and is further applied to ex-
press

A motion or removal; separation or departure, dis-
union, distance.

To go off; as a gun; where the charge is expelled
or driven from the barrel, &c.

To get off, to come *off* well; met. to get or remove
to a distance, sc. from danger, misfortune, &c.; to escape.

To be well off; to be removed or at a distance, sc.
from danger or misfortune; to be in a prosperous state
or condition.

Off hand; as by some *dexterity* or adroitness, dexter-
ously, promptly, on the spur of the moment; without
premeditation.

He was short shuldered brode, a thikke gnarre.
Ther n'as no dore, that he n'olde heve *of* barre.

Chaucer. Prologue to the Canterbury Tales, v. 552.

And for to werchen as I shal you say
To morowe, whan ye riden on the way,
Now by my fader's soule that is ded,
But ye be mery, smiteth *of* my hed.

Id. The Knightes Tale, v. 784.

This fierce Arcite hath *of* his helme y don.

Id. Ib. v. 2678.

"Now, sires," quod this Osewold the Reve,
"I pray you alle, that ye not you greve,
Though I answeere, and somdel set his howve,
For leful is with force force *off* to showve."

Id. The Reves Tale, v. 3910.

Which [ring] one *of* the lordes tooke *of* and put it on his owne
finger. whē the ring was *of*, he commaunded to burye her, regarding
her no longer.

Tyndall. Workes, fol. 350. The Practice of Popishe Prelates.

What sayes Lord Stanley, will he bring his power?

MES. My lord, he doth deny to come.

KING. *Off* with his sonne George's head.

Shakspeare. Richard III. fol. 203.

'BOTES. Lay her a hold, a hold, set her two courses *off* to sea
again, lay her *off*.

Id. The Tempest, fol. 1.

For my part the see cannot drowne mee, I swam ere I could
recouer the shore, fue and thirtie leagues *off* and on.

Id. Ib. fol. 11.

EGL. Feare not: the forrest is not three leagues *off*,
If we recouer that, we are sure enough.

Id. Two Gentlemen of Verona, fol. 36.

His wounded men he first sends *off* to shore,
Never till now unwilling to obey.

Dryden. Annus Mirabilis.

OF.
—
OFF.

OFF.
—
OFFEND.

This lucky hour the wise Batavian takes,
And warns his tatter'd fleet to follow home;
Proud to have so got off with equal stakes,
Where 'twas a triumph not to be o'ercome.

Dryden. Annus Mirabilis.

This short cut to Parnassus not only saves him a great deal of roundabout riding, but supplies him with many an apt couplet for off-hand quotations, in which he is very expert.

Observer, No. 109.

OFFAL, Skinner, that which falls off the table. Tooke the past participle of *feall-an*; *afeall-an*, to fall. Applied generally to

Any refuse; any thing cast or thrown away, as unfit for food; any thing worthless.

The miser threw himselfe, as an offal,
Streight at his foot in base humilitee,
And cleped him his leige, to hold of him in fee.

Spenser. Faerie Queene, book ii. can. 3.

If we come into a barn floore, and see some few graines scattered amongst an heap of chaffe, we do not call it a corne-heap, the quantity of the offall devours the mention of those insensible graines.

Hall. Works, vol. ii. fol. 340. Sermon Preacht to the Lords.

The lion having sucked the blood of his prey, threw the offal carcase to the jackall in waiting.

Burke. Works, vol. viii. p. 38. Letter to a Noble Lord.

The hideous monster rising heavily,
Came stalking forward with a sullen pace,
And left her mangled offals on the place.

Addison. Ovid. Metamorphoses, book ii.

OFFE'ND, v.	} Fr. <i>offender</i> , <i>offenser</i> ; It. <i>offendere</i> ; Sp. <i>ofender</i> ; Lat. <i>offendere</i> ; to strike against, (ob, and <i>fendere</i> , i. e. <i>arcere</i> , <i>repellere</i> .) See DEFEND, and the Quotation from Barrow.	
OFFE'NDER,		
OFFE'NDERESS,		
OFFE'NCE,		
OFFE'NCEFUL,		
OFFE'NCELESS		
OFFE'NSIVE,		To strike against; to assault
OFFE'NSIVELY,		or assail; to hurt; to affront, to
OFFE'NSIVENESS.	insult; to hurt or wound, sc. the	

feelings, to displease; to injure, to do wrong or injustice.

Therefore I seie, wher thei *offendiden* so that thei schulden falle doun? God forbede.

Wiclif. Romaines, ch. xi.

And this thing I preie that ghour charitie be plenteuous more & more in kunyng and in al witt, that ghe preue the better thingis, that ghe be clene and withoute offense in the dai of Crist.

Id. Philipensis, ch. i.

And thei spurnyden aghens the stoon of *offensioun*, as it is writun, lo I putte a stoon of *offensioun* in Sion, and a stoon of slaundre, and ech that schal bileue in it schal not be confoundid.

Id. Romaines, ch. ix.

I am yonge and unkonning, as thou wost,
And, as I trow, with love *offended* most,
That ever was ony lives creature.

Chaucer. The Knightes Tale, v. 2396.

Who lived ever in swiche delite o day,
That him ne meved other conscience,
Or ire, or talent, or som kin affray,
Envie, or pride, or passion, or offence?

Id. The Man of Lawes Tale, v. 5558.

My berd, my here that hangeth long adoun,
That never yet felt non *offensioun*
Of rasour ne of shere, I wol thee yeve,
And ben thy trewe servant while I live.

Id. The Knightes Tale, v. 2418.

Ye ben lady in my inward thought
Of alle mine herte withouten *offencion*.

Id. The Court of Loue.

And yet iustice natheles
Was kepte, and in nothings *offended*.

Gower. Conf. Am. book vii. p. 231.

VOL. XXV.

If thou might gete pacience
Whiche is the leche of all offence,
As tellen vs the olde wise.

Gower. Conf. Am. book iii. p. 77.

The Troians eke *offended* seek to wreke
Their hainous wrath wyth shedyng of my bloud.

Surrey. Virgil. Aeneis, book ii.

For we vse to saye, that when prynces and rulers do punyshe open offenders, they loke vpon suche thynges men do committe.

Bible, Anno 1551. Genesis, ch. xi. note.

Some conceits (being passed in cloudes and figurative speeches) might percase both be *offensiue* to your grauties and perilous to my credit.

Gascoigne. To the Reuerend Deuines.

Where I see
Much in the poem shine, I will not be
Offended with few spots, which negligence
Hath shed, or humane frailtie not kept thence.

Ben Jonson. Horace. Of the Art of Poetri

It may be thought, that God stirred vp the Saxons to be a scourge to them, and to work his just vengeance vpon them for their wickednesses and abhominable offenses dailie comitted against his diuine maiestie.

Holinshed. The History of England, vol. i. book v. ch. xvii. p. 586.

DUK. So then, it seems, your most offence-ful act
Was mutually committed.

Shakspeare. Measure for Measure, fol. 68.

Laz. That commit men nightly, offenceless, for the gain of a groat a prisoner.

Beaumont and Fletcher. Love's Cure, act ii. sc. 1.

AMINT. Then I draw;
As justly as our magistrates their swords,
To cut offenders off.

Id. The Maid's Tragedy, act iii.

Virginitie murders itself, and should be buried in highwayes out of all sanctified limit, as a desperate *offendresse* against nature.

Shakspeare. All's Well that Ends Well, fol. 231.

A power both for number and goodnesse of men and horses sufficient (if another had bene generall) to make warre *offensiue*, not onely to stand vpon their defence.

Savile. Tacitus, book iii. ch. xi. fol. 123.

Not more Maacha's goodly sonne
In stomaking did threate,
Then did this newes his father now
*Offensiue*ly disquiete.

Warner. Albion's England, book x. ch. lix.

The fourth objection is against our argument for Divine Providence drawn from the consideration of that happy mitigation of the trouble and *offensiveness* of some animals by others that bear an enmity to them, and feed vpon them as their prey, as the cat for example does on the mouse.

More. Appendix to the Antidote against Atheism, ch. xxi. sec. 7. fol. 178.

And R. Cartesius was sensible of the *offensiveness* of this opinion.

Cudworth. Intellectual System, book i. ch. v. fol. 863.

The proud he tam'd, the penitent he chear'd:
Nor to rebuke the rich offender fear'd.

Dryden. Character of a good Parson.

To offend originally signifies to impinge, that is to stumble, or hit dangerously vpon somewhat lying cross our way, so as thereby to be cast down, or at least to be disordered in our posture, and stopt in our progress: whence it is well transferr'd to denote our being through any incident temptation, brought into sin, whereby a man is thrown down, or bowed from his upright state, and interrupted from prosecuting a steady course of piety and virtue.

Barrow. Works, vol. i. fol. 181. Sermon 13.

The top is level; an offensive seat
Of war; and from the war a safe retreat.

Id. Virgil. Aeneid, book xi.

The serum did not by the smell appear putrified, and yet had let fall a considerable quantity of whitish sediment: but within three or four days after this, the liquor was found to stink *offensively*.

Boyle. Works, vol. iv. p. 613. The Natural History of Human Blood.

To my weeping friends,
And every loving relative restore
A soft-ey'd maid, a mild, offenceless prey!

Shenstone. Moral Pieces.

4 K

OFFER.

O'FFER, v.

O'FFER, n.

O'FFERABLE,

O'FFERER,

O'FFERING,

O'FFERTORY,

O'FFERTURE.

Fr. *offrir*; It. *offerire*; Sp. *ofrecer*; Lat. *offerre*, to bear or bring before, (*ob*, and *ferre*, Gr. *φέρ-ειν*, to bear or bring.)

To bear or bring before or in presence; to present; to propose; to hold forth, to exhibit; to show; to show signs of; to bring before, *sc.* the altar as a sacrifice, to sacrifice; also, to make proposal to give; to bid.

This word appears to have been introduced into the A. S. with the version of the Bible. See Lye. The show-bread is—*offring hlafas, offering loaves*; in Wiclif “looves of proposition.”

And *offrede* to þis mamet, and honourede hym ynowe.

R. Gloucester, p. 14.

þat bodi he honourde y nou þo he com þere,

And al þe stude vor hys loue, and dude vayr *offrynge*.

Id. p. 324.

þe byssop of Lyncolne hys masse song þo,

And at tyme as he wolde to *offrynge* go,

And hys taper, þat he *offrede*, in þe byssope's hond do,

Bodýng as yt were, þe taper berst atuo.

Id. p. 456.

Now has R. entre, & Acres taken es,

þe Sarazins com fulle fre, & *offred* him grete riches.

R. Brunne, p. 179.

To þe fertre [shrine] of Saynt Agate Richard made *offeryng*.

Id. p. 154.

But tho thingis that hethen men *offren*, thei *offren* to deuelis and not to God.

Wiclif. 1 Corinthians, ch. x.

Naye, but I saye, that these thingis which the gentyls *offer*, they *offre* to deuyls, and not to God.

Bible, Anno 1551.

They schulen give an *offrynge* after that is seid in the lawe of the Lord: a peyre of turturis or tweie culver briddis.

Wiclif. Luke, ch. ii.

& to *offer* (as is sayde in the lawe of the Lorde) a payre of turtle doves or two younge pigions.

Bible, Anno 1551.

Min holy pardon may you all warice, [heal,]

So that ye *offre* nobles or starlinges,

Or elles silver broches, spones, ringes.

Chaucer. The Pardoner's Tale, v. 12842.

In al the parish wif ne was there non,

That to the *offring* before hire shulde gon,

And if ther did, certain so wroth was she,

That she was out of alle charitee.

Id. Prologue to Canterbury Tales, v. 452.

But coude he rede a lesson or a storie,

But alder best he sang an *offertorie*.

Id. The Knightes Tale, v. 712.

And euer my seruice I profere

And namely whan she woll gone *offre*.

Gower. Conf. Am. book v. p. 179.

I towarde *offryng* hir lede.

Id. Ib.

This patriarke to his linage

Forbad, that thei to none ymage

Encline shulde in no wise:

But her *offrende* and sacrifice,

With all the hole hertes loue,

Unto the mighty God aboue,

They shulden yeue, and to no mo.

Id. Ib. book v. p. 135.

I dred the Grekes yea when they *offer* gyftes.

Surrey. Virgil. Æneis, book ii.

Desired thinges are not ay prest,

Nor thinges denide left al unsought:

Nor new thinges to be loued best,

Nor all *offers* to be set at nought.

Vncertaine Auctors. The meane Estate is best.

Read the third booke of Kings the 8. chapter, when God delighted onely in the fayth of the *offerer*, whiche beleued in God onely for all mercy.

Tyndall. Workes, fol. 451. A Treatise upon the Sacraments, &c.

And when the *offertory* was begon she discended doune and *offred* beyng crowned.

Hall. Henry VIII. The twenty-fifth Yere.

Thy *offers* base I greatly loth

And eke thy words uncourteous and unkempt.

I tread in dust thee and thy money both.

Spenser. Faerie Queene, book iii. can. 10.

A pious courtier may easily give to Cesar what is Cesar's, and to God what is God's; and that by an analogical instruction from this rule of Christ, allowing all that hath Cesar's image onely on it, *offerable* to Cesar.

Mountague. Devoute Essaies, Treat. 10. sec. 7.

Commend me to her, and to piece her portion

Tender her this.

1 K. Nay, let's be *offerers* all.

Beaumont and Fletcher. The Two Noble Kinsmen, act iv. sc. 4.

From which example arose perhaps the custom, to hang up the armour of worthy men in churches, as *offerings* consecrated to him who is the Lord of battel.

Baker. Of the First Danish King in England, fol. 16.

The crown itself with all those advantages were therefore given him, that the people's good should be first consider'd; not bargain'd for, and bought by inches with the bribe of more *offertures* and advantages to his crown.

Milton. Works, vol. i. fol. 400. An Answer to Eikon Basilike.

Every unhallowed, unfitting prayer is a strange fire; a fire that will be sure to destroy the *offering* though mercy should spare the *offer*.

South. Sermons, vol. ii. p. 100.

The rule of justice, which wants with most anxiety to be inculcated in the making of bargains, is, that the seller is bound in conscience to disclose the faults of what he *offers* to sale.

Paley. Moral Philosophy, book i. ch. vii.

As soon as the Sermon or Homily is ended, the Priest is directed “to return to the Lord's Table and begin the *Offertory*, saying, one or more of the sentences following as he thinketh most convenient in his discretion, *i. e.* according to the length or shortness of the time that the people are *offering*,” as it was worded in King Edward's first Common Prayer and from thence in the Scotch one. These are in the place of the Antiphona or Anthem which we find in the old Liturgies after the Gospel, and which from their being sung while the people made their oblations at the altar were called *Offertory*.

Wheatley. On the Common Prayer, ch. vi. sec. 10.

O'FFICE, v.

O'FFICE, n.

O'FFICER,

O'FFICERED,

OFFICIAL, adj.

OFFICIAL, n.

OFFICIALLY,

OFFICIALTY,

OFFICIATE, v.

OFFICIAL,

OFFICIOUS,

OFFICIOUSLY,

OFFICIOUSNESS.

Fr. *office*; It. *ufficio*; Sp. *oficio*; Lat. *officium*, from *officere*, which Vossius says was the same with *efficere*; and hence *officium*, *quod quisque efficere debet*, what every one ought to do or perform.

That which ought to be done or performed; act or deed due, duty; any thing which we are obliged, bound, engaged, or employed to do; peculiar or appropriate busines, or employment; service or usefulness.

Also, the place where; the station or situation in which *official* acts are done.

Officious; busy to act, or to perform services, active in the performance of services or benefits.

King Henri wondede mucho, to abbe men in *offis*,

Mid him, that of conseil were god and wis.

R. Gloucester, p. 468.

Forto reise þe treuage, þat on þe lond was sette,

Pader & Thurston to þat *office* were fette.

R. Brunne, p. 55.

And to þe arches in haste. he hyede anon after,

And turnede cyvyle into symonye. and suth he tok þe *official*.

Piers Ploughman. Vision, p. 399.

For the mynsterie of this *office* not onli fillith tho thingis that failen to hooly men, but also multiplieth manye thankyngis to God bi the preuyng of this mynsterie.

Wiclif. 2 Corinthians, ch. ix.

OFFER.

FFICE.

OFFICE. For the *office* of this ministracion, not only supplieth the nede of the saintes : but also is aboundaunte here in, that for laudable ministringe, thanks might be geuen to God of manye.
Bible, Anno 1551.

God tokeneth and assyneth the tymes ablynge hem to hir propre *offyces*.
Chaucer. Boecius, book i. p. 413.

And hereupon he to his *officeres*
Commandeth for the feste to purvey.
Id. The Clerkes Tale, v. 8066.

There shall no judge imperiall,
Ne bishop, ne *officiall*,
Done judgment on me.
Id. The Romant of the Rose, p. 219.

But moste of all his hert is set
In court, vpon these great *offices*
Of dignitees and benefices.
Gower. Conf. Am. book ii. p. 63.

My harte was high, I could not seeme to serue,
In regiment where no good rules remayne,
Where *officers* and such as well deserue,
Shall be subdude by euery page and swayne.
Gascoigne. The Fruites of Warre.

The priest sued him before y^e bishoppes *officiall* for dyffamacyon.
Sir Thomas More. Workes, fol. 127. A Dialogue concerning Heresies, &c.

MENE. You shall perceine, that a jacke gardant cannot *office* me from my son Coriolanus.
Shakspeare. Coriolanus, fol. 26.

LEO. So stands this squire
Offic'd to me.
Id. Winter's Tale, fol. 279.

MENE. You guard like men, 'tis well. But by your leaue,
I am an *officer* of state, and come
To speak with Coriolanus.
Id. Coriolanus, fol. 26.

MENE. You haue stood your limitation : and the tribunes
Endue you with the people's voyce, remaines,
That in th^e *officiall* markes inuested, you
Anon doe meet the senate.
Id. Ib. fol. 13.

And all her number'd starrs, that seem to rowle
Spaces incomprehensible (for such
Their distance argues and their swift return
Diurnal) meerly to *officiate* light
Round this opacous Earth, this punctual spot.
Milton. Paradise Lost, book viii. l. 22.

With granted leave *officious* I return,
But much more wonder that the Son of God
In this wild solitude so long should bide
Of all things destitute.
Id. Paradise Regained, book ii.

And Sir Robert Clifford in especiall wonne to be assured to the king, and industrious and *officious* for his service.
Bacon. King Henry VII. fol. 125.

And this was the rare morsel so *officiously* snatch'd up, and so ill-favour'dly imitated by our inquisiturient bishops, and the attendant minorities—their chaplaines.
Milton. Works, vol. i. fol. 145. Of Unlicensed Printing.

INT. Thanks to the gods, and our *officiousness*, the plot's discover'd.
Beaumont and Fletcher. The Woman Hater, act iii. sc. 3.

What could we expect from an army *officered* by Irish papists and outlaws.
Addison. Freeholder.

For all thy victories in war,
You, valiant Cutts, th^e *officious* Muses crown,
For you triumphant wreaths prepare
Immortal as your fame, and fair as your renown.
Yalden. On the Conquest of Namur, 1695.

While flattering crowds *officiously* appear
To give themselves, not you, an happy year;
And by the greatness of their presents prove
How much they hope, but not how well they love.
Dryden. To the Lord Chancellor Hyde, (1662.)

Many of the miracles of Abbé Paris were proved immediately by witnesses before the *officiality*, or bishop's court, at Paris, under the eye of Cardinal Noailles.
Hume. Essays, vol. ii. p. 463. note [L.] p. 125.

A little neat church is annexed to it, with apartments for the *officiating* clergy, and the persons attached to the service of the cemetery.
Eustace. Italy, vol. ii. p. 351.

I had always, in my *officinal* state, been kept in awe by lace and embroidery; and imagined that, to fright away these unwelcome familiarities, nothing was necessary, but that I should, by splendour of dress, proclaim my reunion with a higher rank.
Johnson. The Rambler, No. 123.

Some bitterness is *officiously* squeezed into every man's cup of his soul's health, till, at length, the whole intention of nature and providence is destroyed.
Sterne. Sermon 37. On Penances.

The miserable Rachel now too late discovered the fatal consequences of interfering between husband and wife, and heartily reproached herself for her *officiousness* in aggravating his jealousy.
Observer, No. 111.

OFFING, a word common on the coast and among naval men, and applied to a position at a distance *off* the shore or coast; within sight of it.

OFFSCO'URING, } That which is *scoured off*;
O'FFSCUM. } cast *off*, thrown *off*.
Off-scum, that which is *skimmed off*.

Our prayer hath
No pow'r to pass: and thou hast made us fall,
As refuse, and *off-scouring* to them all.
Donne. The Lamentations of Jeremy, ch. iii.

In fine, the apostles and ministers of Christ were look'd upon as the very *offals* and *off-scouring* of the world, and were trampled upon accordingly.
South. Sermons, vol. v. p. 424.

OFF-SET, a *set*, or part that may be *set* or planted, coming *off* the main root.

They let them remain for many years, in which time they produce such a number of *off-sets*, that many times one single cluster has contain'd above a hundred roots.
Miller. Gardener's Dictionary, in v. Lilio-Narcissus.

OFFSPRING, A. S. *ofspring*, *proles*, *propago*, *progenies*, *posteritas*, (*of*, and *spring-an*, to spring.) Any thing that springs or arises from.

Production, propagation, posterity, child, or children.

Kyng he was of West sex, and ys *ofspring* also.
R. Gloucester, p. 164.

Truly I think, ne vain is my belefe,
Of goddish race some *ofspring* shold he be.
Surrey. Virgil. Aeneis, book iv.

Sir Guyon chaunst eke on another looke,
That hight Antiquitee of Fairy land :
In which whenas he greedily did looke,
Th' *ofspring* of elves and faryes there he fond
As it delivered was from hond to hond.
Spenser. Faerie Queene, book ii. can. 9.

Certainly the prime antiquity of *off-spring* is always given to the Scythians.

Raleigh. History of the World, book i. ch. v. sec. 7. fol. 69.

From whence it follows, that these were notions not descending from us, but born with us; not our *off-spring*, but our brethren.
South. Sermons, vol. i. p. 54.

OFFUSCATE. See **OBFUSCATE**.

OFT, *adj.* } Goth. *ufta*; A. S. *oft*; Ger.
OFT, *adv.* } *oft*; Sw. *ofta*. Skinner thinks it
O'FTEN, *adj.* } alludes to the Gr. *ἀψ, iterum*,

and I broughte him to thi disciplis and thei myghten not heele him.
Wiclif. Matthew, ch. xvii.

And *ofte times* he falleth into the fyre, and *ofte* into the water,
And I broghte hym to thy discyples, and they coude not heale hym.
Bible, Anno 1551.

In woundis aboue maner. in deethis *oftetymes*.
Wiclif. 2 Corinthians, ch. xi.

In pryson more plenteously: in death *oft*.
Bible, Anno 1551.

Men shulden wedden after hir estate,
For youthe and elde is *often* at debate.
Chaucer. The Milleres Tale, v. 16231.

But doun on knees went euery manere wight,
And thanked him with all hir hertes might,
And namely these Thebanes *often sith*.
Id. The Knightes Tale, v. 1879

Upon Grisilde, this poure creature,
Full *often sith* this markis sette his eye,
As he on hunting rode paraventure.
Id. The Clerkes Tale, v. 8109.

For slain is man, right as another beast,
And dwelleth eke in prison, and arrest,
And hath siknesse, and gret adversite,
And *oftentimes* gilteles, parde.
Id. The Knightes Tale, v. 1314.

But yet full *ofte*, and that is routh
Thei spreden, that be most vntrue.
Gower. Conf. Am. book i. p. 26.

So harde me was that ilke throw
That *ofte sithes* ouerthrowe,
To grounde I was without breathe:
And euer I wisshed after death.
Id. Ib. book i. p. 17.

And ouer that, I dare say, that ther are but few, but that they had
wel leuer abide the paine to be thrise acquitted by proclamacion, and
peradventure *ofte*, then ones beare a fagot for heresy.
Sir Thomas More. Workes, fol. 984. *The Debellation of Salem and Byzance*.

They that are swifte in taking, be *ofte times* slowe in remembring.
Id. Ib. fol. 3. *The Life of John Picus*.

Discourse
Is *oftest* yours, the latter [intuition] most is ours,
Differing but in degree, of kind the same.
Milton. Paradise Lost, book v. l. 489.

Events which are *oft-times* as much against the intention, and
above the remedie of the agent as besides the nature of the act.
Hall. Works, vol. i. fol. 452. *Sermon before the King at Theobald's*, 1622.

My brother wisht thee here, and thou art here; he will be too
kind, and weary thee with *often* welcomes.
Baumont and Fletcher. The Maid's Tragedy, act i. sc. 1.

Degrees of well doing there could be none, except perhaps in the
seldomnesse and *oftenness* of doing well.

Hooker. Ecclesiasticall Politie, book i. sec. 8. fol. 21.

Whole houses, of their whole desires possest,
Are *often* ruin'd, at their own request.

Dryden. Juvenal. Satire 10. l. 8.

OGCODES, in Zoology, a genus of Dipterous insects.

Generic character. *Antennæ* very minute, biarticulate, inserted in the superior margin of the mouth; head almost wholly occupied by the eyes; *ocelli* three; *proboscis* concealed; *thorax* convex; *abdomen* robust, gibbous; legs simple; *onychii* three.

Type of the genus, *Musca gibbosa*, Linnæus; *Henops leucomelas*, Meigen. *Klap.* vol. i. pl. viii. fig. 30. Three species of this singular genus only are known, two of which inhabit England.

OGDOASTICK, Gr. ὀγδοῦς, eight, and στίχος, a verse. See DISTICH.

Consisting of eight verses.

His request to Diana, in an *hexastick*, and her answer in an *ogdoastick*, hexameters and pentameters, discovered to him in a dream, with his sacrifice and ritual ceremonies, are in the British story.

Selden. Illustrations of Drayton's Poly-olbion, song 1.

OGGANITION, Lat. ob or og-gannire, to yelp as a dog at any one.

Nor will I abstaine notwithstanding your *oggannition*, to follow the steps and practice of antiquity, in using the words sacrifice and priesthood also.

Mountague. Appeale to Cæsar, ch. xxix. p. 288.

O'GLE, v. } The D. ooghen, is *oculos intendere*,
O'GLE, n. } *acie oculorum assequi*, to strain or stretch
O'GLER, } the eye, to follow with the eye: (oogh :)
O'GLING. } and oogheler, consequentially, adulator.

Kilian. And hence, perhaps, our word.

To cast glances of the eye.

Snuffs her dim eyes to give one parting blow,
Have at the heart of every *ogling* beau!

Halifax. On the Countess Dowager of —.

Who would not scorn what houswife's cares produce,
Or who would learn one earthly thing of use?
To patch, nay *ogle*, may become a saint;
Nor could it sure be such a sin to paint.

Pope. The Rape of the Lock, can. 5.

His women then forgot all former wiles,
The watchful *ogle* and delusive smiles.

Gay. The Fan, book ii.

Being thus qualified, I intend, by the advice of my friends, to set up for an *ogling-master*. I teach the church *ogle* in the morning, and the playhouse *ogle* by candle-light.

Spectator, No. 46.

I am diverted from that subject by letters which I have received from several ladies, complaining of a certain sect of professed eunimies to the repose of the fair sex, called *oglers*.

Tatler, No. 145.

Those muscles, in English, wherewith a man *ogles*,
When on a fair lady he fixes his goggles,
We found 'em much worn.

Byrom. The Dissection of a Beau's Head.

It was not enough, that the speech from the throne in the opening of the session in 1795, threw out *oglings* and glances of tenderness.
Burke. Works, vol. viii. p. 106. *Letters on a Regicide Peace*, let. 1.

OFT.
OHIO.

O H I O.

Extent and
boundaries.

OHIO, at the present time, in extent of industry, in the growing amount of manufactures, in the regular increase of population, and in general spirit, intelligence, and improvement, ranks as one of the foremost of the United

States of America. Lying between 38° 30' and 41° 19' North latitude, and between 3° 31' and 7° 41' West longitude, it extends in length 210 miles, in breadth 200, and contains 40,000 square miles, or 25,000,000 acres.

OHIO. It is bounded on the North by the territory of Michigan and Lake Erie; East by Pennsylvania; South-East by Virginia; South by the Ohio, which divides it from Virginia and Kentucky; and West by Indiana.

History.

After the settlement of Kentucky and Tennessee, a vast range of territory, extending for 1200 miles along the North of the Ohio, remained still in the undisturbed possession of its savage natives. The rivers which watered the Northern parts of the Ohio were known to the French in 1634; but no establishment was made till 1735, when a small colony fixed itself at Vincennes, on the Eastern bank of the Wabash. The advantages of its soil and climate were soon made known in Europe, and, in 1750, the British Government granted 600,000 acres of land, bordering the Ohio, to a Company, which soon experienced opposition from the French traders. After a series of annoyances and reprisals on both sides, a war took place, in the course of which, the important fort Duquesne, at the junction of the Alleghany with the Monongahela river, was ceded to the English, by whom it was called Fort Pitt, and afterwards Pittsburgh. When the Peace of 1763 had confirmed Britain in possession of these regions, its Government, by a capricious regulation, prohibited the formation of settlements upon any waters, except those which flowed into the Atlantic. It was not till the year 1788, that the Ohio Company, from New England, formed a settlement, on a considerable scale, at Marietta, on the mouth of the Muskingum. They were still harassed, however, by the hostility of the Indians, till, in 1795, a pacification was effected at a Congress held at Greenville; and the United States began on a great scale the system of purchase from the Indian Tribes, which has since been carried on. Having thus obtained the peaceable disposal of a vast extent of rich territory, a better mode of distribution was adopted, which at once secured the titles of the proprietors, and enriched the treasury. The land was partitioned into townships, six miles square, subdivided into sections of 640 acres, and these into quarter sections of 160. After this arrangement, that wonderful influx of emigration set in, which has raised the population, in the space of 42 years, from 3000 to 1,000,000.

Face of the Country.

Though its Southern line is situated not far from the Alleghany Mountains, this State may be considered a great body of table-land, sloping in one direction towards the Ohio, and in the other towards Lake Erie. Perhaps the most fertile part of the soil lies between the two Miamies, on the upper courses of which, Muskingum and Scioto, are rich and extensive *Prairies*, divided as elsewhere into *Wet* and *Dry*, the latter only being at present susceptible of cultivation. The forests are heavily timbered, but in the richest soils, the trees are rather remarkable for straightness, than for size. A considerable portion of the Eastern and South-Eastern Country is hilly; in some places rising into fine, cultivable swells, and in others too broken and precipitous for agricultural purposes. But nine-tenths of the surface are capable of high cultivation, and are already, or are rapidly becoming, a thickly settled Country of small freeholds. The whole region seems to have invited a hardy and numerous body of settlers, to select themselves farms of nearly equal size, and to dot and intersperse them over its surface. There are vast tracts of Country in this State that are actually alluvial, and in fact, the greater part of the land has an alluvial aspect, as though it had at no distant date emerged from waters.

Indian corn is here, as elsewhere in the West, the staple grain; and on rich soils, 110 bushels have been produced from an acre, though 50 may be considered an average crop. The soil is in general well adapted for wheat; and rye, barley, oats, spelt, buckwheat, and other grain are raised in great abundance and perfection; as are likewise melons, pumpkins, the pulses, and the usual garden and culinary vegetables. Indeed, from its being more stiff and clayey, this State has the best garden soil of any in the Western Country. Fruit trees of every description flourish here; and of such excellent quality are the grapes said to be, that the German emigrants have already established two or three vineyards, as it is affirmed, with great success. Recently tobacco has been added to the articles cultivated; and yellow tobacco, which bears a price so much higher than any other kind, has been found to prosper remarkably. Besides trees, shrubs, and vines, this State produces a number of indigenous plants useful in Medicine. Among others, Virginia snake-root, Indian turnip, ginseng, (which is dug in considerable quantities as an article of commerce,) colombo, valerian, lobelia, blood-root, or *Sanguinaria Canadensis*, &c.

The general price of uncultivated lands, without any particular local advantages, is two dollars per acre. The alluvial or bottom lands, and dry fertile meadows, bring the highest price. The next quality are elevated grounds producing hickory, walnut, ash, elm, maple-tree, papaw, and hackberry. The third in value are those covered with beech; and the cheapest are those which produce only white and black oak. Good, improved land near Cincinnati will fetch from 50 to 100 dollars an acre; but farms in a half-improved state are frequently offered at from 4 to 12 dollars.

The climate along the immediate valley of the Ohio is more equable and temperate, than in the middle and table-lands of the State; and the difference is greater than can be attributed merely to the difference of latitude. The central parts are in the same latitude with Philadelphia, where the mean temperature was found to be 53°, and in the same year that of Ohio was 55°. As we recede from the Ohio, the temperature diminishes in a greater ratio than that of the latitude. The prevalent and warm winds are those that blow from the gulf and up the valley of Mississippi. The cold breezes come charged with the frosts of Canada and the lakes. It is a great inconvenience in this climate, that during the Winter, the transitions alternately from warm to cold, and the reverse, are frequent and violent. Thaws and frosts are the result; and the soil being deep and clayey, the travelling is very muddy and uncomfortable. The Winter seldom commences in severity till Christmas; and the weather begins to open early in February. In the Ohio valley, the heat of the Summer is uniformly oppressive; but it neither commences early, nor continues late. The Autumns are almost always temperate, dry, and healthy.

The noble and beautiful river which gives its name to the State, the *Ohio*, is formed by the junction of the Alleghany and Monongahela at Pittsburgh; and from its commencement, rivers of romantic and beautiful character fall into it at almost equal distances, as lateral canals; the principal of which are the Great Miami, Wabash, Cumberland, and Tennessee. Its mean width at Cincinnati is about 600 yards, and below the Cumberland 1000. Between Pittsburgh and its junction with

OHIO.

the Mississippi, it makes three and a half degrees of Southing in latitude; and its length is 1120 miles. Its average descent in a mile is not far from six inches, and the average range between high and low water about fifty feet, its lowest stage being in September, and its highest in March. The steamers have abridged the passage from Cincinnati to New Orleans from 100 to 30 days. The Ohio and its tributaries cannot have less than 5000 miles of navigable waters; and taking all the circumstances of the river into consideration, few in the World can vie with it either in utility or beauty.

Great
Miami.

The *Great Miami* is the next largest and most interesting river, and joins the *Ohio*, after the latter has run 551 miles, on its Northern bank.

The *Maumee* is an important stream, yielding a valuable fishery, and is remarkable for the luxuriant verdure of its banks.

Canals.

A line of canal to connect the Ohio with Lake Erie is in rapid progress. This work was commenced in July 1825; and its length, including feeders, will be about 320 miles. Commencing at the beautiful village of Cleaveland, it keeps the valley of Cuyahoga to Portage, which gives its name to the summit level between Cuyahoga and the Tuscarawas; here it passes over to the latter stream, and descends with it, by the villages of Kendall, Dover, and Coshocton, to the mouth of Wakatomaka creek, where it leaves Zanesville, a few miles to the South, and passing the high lands into Licking river, ascends that stream to the summit level; from this point it enters the Scioto valley by Walnut creek, and passing Circleville, Chillicothe, and Piketon, joins the Ohio near Portsmouth. A navigable feeder of ten miles in length, connects Columbus with the main canal.

The Miami.

The *Miami Canal*, commencing at Dayton, near the mouth of the Mad River, connects Cincinnati with the heart of the populous region bordering on the two Miamies. Its length is about 67 miles. The practicability of extending this canal to the Rapids of Maumee, has been ascertained by experienced engineers, and the line has been actually marked.

Minerals
and mineral
springs.

In the Eastern divisions of the State, mineral coal in the greatest abundance and of the best quality is found; and in the same regions the most considerable quantities of iron ore are met with. Limestone, marble, and freestone abound in strata near the surface, are easily quarried, and admirably adapted to building. Salt springs are common, the largest manufactories of this article being in Muskingum, Morgan, Jackson, and Gallia Counties; and half a million bushels are yearly produced in the State. There are several mineral springs, of which the most frequented are the Yellow Springs, near the Falls of Little Miami. Those, the waters of which are drunk medicinally, are more or less impregnated with muriate of soda.

Commerce
and manu-
factures.

The external trade of the State passes through the channel of the Ohio river, and by the Mississippi to New Orleans, excepting a small portion of the Northern parts which finds a market at Lake Erie. The exports consist of horses, cattle, swine, flour, pork, bacon, whiskey, peach-brandy, beer, porter, pot and pearl-ashes, hemp and spun yarn, boards of walnut, cherry, and blue ash, and furs from the waters of the Great Miami, Wabash, and Maumee.

The chief imports are goods from the East Indies, Europe, and New England; and manufactures of the middle States, which are transported 300 miles across

the mountains from Philadelphia and Baltimore. From Louisiana are imported sugar and molasses, cotton, rice, and salted hides. From the Missouri territory lead, peltry, and skins; from Tennessee and Kentucky, cotton, tobacco, saltpetre, and marble; from Pennsylvania and Virginia, iron in the bar, rolled or cast form, nails, mill-stone, glassware. Ohio has taken the lead of all the Western States in manufactures, of which the principal items are given in the following Table.

OHIO.

	546,274

The Legislative authority is vested in a Senate and Government. House of Representatives; both of which, collectively, are styled the General Assembly of Ohio. The Representatives are chosen annually, the Senators biennially; and the Senate must not exceed one-half, nor fall short of one-third of the number in the House of Representatives. Their present number is thirty-three Senators and sixty-nine Representatives. To be eligible for the former the candidate must be thirty years of age, and a resident in the Country of at least two years' standing. For the latter, residence of one year, and age above twenty-five, constitute eligibility. The executive authority is vested in a Governor, chosen biennially by the people, who must be thirty years of age, and have resided in the State at least four years. The qualifications of a freeman are the age of twenty-one, residence, and payment of taxes.

In 1790 the population was estimated at 3000; in 1800, at 45,365; in 1810, at 230,760; in 1820, it was 581,434: and at the present date it is conjectured, with much probability, to exceed 1,000,000. The population, in regard to its distribution, is exhibited in the following Table, taken from the last census.

Washington	10,326	10,425
Wayne	11,933	11,933
Wood	732	733
	576,572	581,434

By this census it appears, that there were 130,460 men, above eighteen years of age, capable of bearing arms. At the same time 110,991 persons were engaged in agriculture; 18,956 in manufactures; 1459 in commerce or merchandise; and there were at that time

3495 foreigners in the State, not naturalized: 4723 of the whole number were Free Blacks.

One section in every thirty-six of the public lands, is reserved for the establishment and support of common schools; and particular donations of three townships have been made to the Miami and Ohio Universities, the former situated at Oxford, the latter at Athens. In 1826 the former contained 112 students. There are three Colleges besides these, and common schools are founded in every township.

The Presbyterians and the Methodists are the prevalent denominations. German Lutherans exist in considerable numbers, and the custom of itinerant preaching, as a supply, is very prevalent. The Shakers and Jumpers have also establishments in this State.

Columbus is the political metropolis of the State, and is very nearly the geographical centre of it. It is situated on the Eastern bank of the Scioto River, in Franklin County; and although it was a compact forest in 1812, it now contains about 2000 inhabitants. Among other public edifices erected here may be distinguished the Federal Court House, the State House, and the range of building devoted to the public offices, which is 100 by 25 feet. These buildings are all in the Public Square, an area of ten acres, reserved for the use of the public in the centre of the town. It is in North latitude 39° 57', and 6° West longitude.

Cincinnati, however, is the most important town in the State, being the emporium of the Western Country, and far larger than any other town in the Mississippi Valley, with the exception of New Orleans. It is built partly on a bottom (as it is termed) and partly on a hill; the upper part of the city being about 60 feet above the lower. Seven of the streets are 66 feet wide, and 396 feet apart; and cross streets, of the same width and distance, intersect them at right angles. The public buildings consist of a Court-house, Jail, three Market-houses, the largest of which is 300 feet long, the United States Bank, the Cincinnati College, and Churches, Hospitals, and Museums. Each day of the week is a market-day; and lines of market-waggons are seen in the streets, extending half a mile in length. There are between 30 and 40 considerable manufacturing establishments in this city, and 10 printing-offices, from which issued, in 1826, nearly 200,000 books and pamphlets, besides newspapers, of which there are 12. The whole value of the manufactures here, in the several departments of industry, is estimated at 1,850,000 dollars. At present its commerce is as extensive as the courses of steam and keel-boats; and of the former 60 have been already built here, burthen 11,225 tons. The imports of the city exceed the exports, because no inconsiderable amount of the imports is brought here for re-exportation. Of course, the amount of imports, compared with the exports, cannot be taken to show the balance of trade. The imports, in 1826, were 2,528,590 dollars; the exports 1,063,560 dollars. Cincinnati is in 39° 6' 30" North latitude, and 7° 24' 25" West longitude.

Steubenville, the seat of justice for Jefferson County, is seated on the Western bank of the Ohio. It is in the centre of a rich and populous country, has had a very rapid growth, and contains three Churches, a handsome market-house, a woollen factory, a steam paper-mill, a flour-mill, and a cotton factory. It has two Banks, twenty-seven mercantile stores, sixteen inns; and possesses a population of about 3000. North latitude, 40° 25', West longitude 3° 40'.

Steubenville.

OHIO. *Chillicothe* is the County Town of Ross County, beautifully situated on an alluvial plain, on the West bank of the Scioto River, 45 miles in a right line from its entrance into Ohio. It is laid out with great regularity, the principal streets crossing each other at right angles, and running parallel with the course of the Scioto. The inhabitants amount to nearly 3000, and it contains a Bank, thirty mercantile stores, four cotton-spinning factories, and a number of flour-mills. North latitude 39° 20', West longitude 83° 53'.

Marietta. *Marietta* lies a little above the mouth of Muskingum River, and is the seat of justice for Washington County. It contains two Churches, the public County buildings, two printing-offices, and about 100 houses; the whole township numbers above 2000 residents. The neighbouring soil is exceedingly fertile; but the inundations of the river prove a great drawback on the prosperity

of this town. North latitude 39° 25', West longitude 83° 28'.

OHIO. *Athens*, the County Town of Athens County, is the seat of the Ohio University. The funds, the Library, and the Philosophical apparatus are very respectable; and it promises to be an institution of great utility to the State. North latitude 39° 23', West longitude 83° 5'.

The remaining principal towns are *Lancaster*, *New Lisbon*, *Gallipolis*, *Circleville*, *Urbana*, and *Sandusky*. The last, sometimes called *Portland*, has been only recently laid out, but from its vicinity to the proposed line of the Great Ohio Canal, it is rapidly rising into importance.

Flint, *History of the Western States*; Kilbourn, *Ohio Gazetteer*; Murray, *Discoveries and Travels in North America*; Carey and Lea, *Geography and History of America*; Worcester, *Gazetteer*.

OICEOPTOMA, in Zoology, a genus of *Coleopterous* insects.

Generic character. *Antennæ* eleven-jointed, nearly as long as the thorax, rather slender at the base, and terminating abruptly in a quadri-articulate club, the basal joint of which is small, and the terminal large, obconic; *palpi* four, unequal; head small, inflected; eyes moderate; *thorax* nearly semicircular, transverse, emarginate anteriorly; *elytra* entire (of the females sometimes notched at the apex,) carinated, with a deep marginal canal; body oval, depressed; legs rather short, slender; the anterior *tarsi* of the males slightly dilated; *tarsi* pentamerous.

Type of the genus, *Silpha thoracica*, Linnæus; Donovan, *Britt. Ins.* vol. ii. pl. iii. fig. 1. Six species, all of them frequenting carrion, dung, &c.; four of them natives of Britain.

OIL, v.	} Goth. <i>aleus</i> ; A. S. <i>ele</i> ; D. <i>olie</i> ; Ger. <i>oel</i> ; Sw. <i>olja</i> ; Fr. <i>huile</i> ; It. <i>oglio</i> ; Sp. <i>olio</i> ; Lat. <i>oleum</i> ; Gr. <i>ἐλαιον</i> , all which, I here says, may perhaps have their origin from the M. G. <i>ala</i> ; A. S. <i>ælan</i> , <i>accendere</i> , to kindle.
OIL, n.	
OILY,	
OILINESS,	
OILING, n.	
OIL-COLOUR,	
OIL-PAINTING.	

But the fyve foolis tooken her lampis, and tooken not *oile* with hem.

Wiclif. *Matthew*, ch. xxv.

The folyshe toke their lampes, but toke none *oyle* with them.

Bible, Anno 1551.

The wake-plaies ne kepe I not to say:
Who wrestled best naked, with *oile* enoint,
Ne who that bare him best in no disjoint.

Chaucer. *The Knightes Tale*, v. 2963.

What should thou need to enuy ought at that,
When thou smellest like a ciuet cat?
When as thine *oyled* locks smooth platted fall,
Shining like varnish'd pictures on a wall.

Hall. *Satire* 4. book iv.

The instances we have wherein crude and watry substance turneth into fat and *oily*, are of four kindes.

Bacon. *Natural History*, Cent. iv. sec. 355.

No wonder if error, *oiled* with obsequiousness, (which generally gains friends, though it deserves none worth having,) has often the advantage of truth, and thereby slides more easily and intimately into the fool's bosom, than the uncourtliness of truth will suffer it to do.

South. *Sermons*, vol. iv. p. 387.

Where [in Courts] flatt'ry's guile in *oily* words profuse,
In action tardy, o'er th' ingenuous tongue,
The arm of valour, and the faithful heart,
Will ever triumph.

Glover. *Leonidas*, book x.

The next precept is very remarkable, as implying the use of *oil-colours*, long before that method is supposed to have been discovered.

Walpole. *Anecdotes of Painting*, vol. i. ch. i. p. 10.

Mr. Raspe, in his curious treatise published in 1781, has proved that *oil-painting* was known long before its pretended discovery by Van Eyck.

Id. *Ib.* note*.

OINT, v. } See ANOINT. Fr. *oindre*; It. *ugnere*;
OINTMENT. } Sp. *ungir*; Lat. *ungere*: (unum agere,
quia in unguento uniantur diversa.)

To rub, to smear with oil, or any oily, greasy substance.

Wiclif. *Mark*, ch. xiv.

And there were some that were not content in them selues, and sayde: what neded this wast of *oyntment*.

Bible, Anno 1551.

Ne *ointment* that wolde clense or bite,
That hym might helpen of his wheelkes white,
Ne of the knobbes sitting on his chekes.

Chaucer. *The Knightes Tale*, v. 633.

Suche *oignement*,
That there was fire ne venym none,
That shulde fastenen hym vpon
Whan that he were *anoynt* withall.

Gower. *Conf. Am.* book v. p. 150.

That Paris now with his vnmanly sorte,
With mitred hats, with *oynted* bush and beard,
His rape enjoyeth.

Surrey. *Virgil. Æneis*, book iv.

The diuillish hag, by chaunges of my cheare
Perceiv'd my thought; and drown'd in sleepe night,
With wicked herbes and *oyntments* did besmeare
My body.

Spenser. *Faerie Queene*, book i. can. 2.

Nor Ismarus was wanting to the war,
Directing *ointed* arrows from afar;
And death with poyson arm'd.

Dryden. *Virgil. Æneid*, book x. v. 208.

The spirit of humiliation should be like Aaron's precious *ointment*, running down from the head to the skirts and hem of his garment.

South. *Sermons*, vol. ix. p. 353.

OISE.

OISE, a Department in the North of France, includes portions of the old Provinces of the Isle of France and Picardy, and is bounded by the Departments of the Somme, of the Aisne, and of the vicinity of the Seine. It has a gently undulating surface of 2400 square miles, inhabited by a population of 390,000 persons. The River Oise rises near the Belgic frontier, and, flowing in a South-Western direction, becomes navigable at Chaunay. After passing Pontoise, it falls into the Seine at Conflans St. Honorine. By means of a canal it communicates with the Somme; and it gives their names to the two Departments of Oise, and the Seine and Oise. The other principal rivers are the Aisne, the Epte, the Therain, and the Brèche. The soil is generally fertile, and produces corn, vegetables, fruit, a little wine of inferior quality, hemp, and flax. Considerable quantities of corn are sent to Paris; and butter and cheese form important articles of produce. The pastures surpass those in the interior of France, although they are inferior to the grazing lands of England and Normandy. Vast numbers of cattle and sheep are reared on them, forming a valuable branch of export. Cider in no inconsiderable quantity is prepared here; and bees are reared in some districts with great success. The chief manufactures are linen, lace, leather, and carpets; and the principal trade consists in those articles, in corn, and in cattle. The climate is temperate and healthy, except in the marshy districts of the North-Eastern and the South-Western parts. This Department is divided into the four *arrondissemens* of Beauvais, (the chief town,) Clermont, Compiègne, and Senlis.

The town of BEAUVAIS has been separately noticed.

Clermont.

The Castle of Clermont Oise, standing on the summit of the hill, at the base of which lies the town of Clermont, has been conjectured to have been built by the Romans. It, however, presents no resemblance to a Roman edifice. Philip the Fair was born in this town, but it has acquired more celebrity from having been the birthplace of the astronomer Cassini. In the XIIIth Century it was the Capital of a County, which St. Louis gave to his son Robert, the founder of the House of Bourbon. The scenery in the neighbourhood of Clermont is distinguished by its beauty; and the small manufactories which abound in its vicinity, furnish ample means of subsistence to its laborious inhabitants. Population 2406. 38 miles North of Paris. North latitude $49^{\circ} 22' 48''$, East longitude $2^{\circ} 25' 5''$.

Compiègne.

Compiègne, named by the Romans *Compendium*, (because it was a depot for military stores,) did not grow into importance before the reign of Charles the Bald. Its principal building is the Royal Castle rebuilt by Louis XV., completed by Louis XVI., and much ornamented by Napoleon. It was formerly surrounded by walls, and stood a siege against the English in 1430, when Joan of Arc was taken prisoner. A Treaty of alliance between France and Holland was concluded here in 1624, by Cardinal Richelieu. Population 7362. 48 miles North-East of Paris. North latitude $49^{\circ} 24' 59''$, East longitude $2^{\circ} 54'$.

Senlis.

Senlis, once a Roman station, called *Augustomagus*, is situated on the side of a hill, the base of which is watered by the Nonette. The streets are in general narrow and crooked; but the Cathedral is remarkable for the lightness of its Gothic architecture, and the height of its steeple. The cotton manufactories here give employment to upwards of 250 workmen; while

VOL. XXV.

the print-fields furnish occupation to more than 200, and the making of flour from potatoes to 150. In its vicinity are the extensive forests of Hallate-Ermonville, (once the residence of Rousseau, and the spot at which he died,) Pontarmé, and Chantilly. The last-mentioned place is inseparably connected with the name of the great Condé, whose magnificent Castle there was destroyed during the Revolution. The small Castle and the principal Stables, which latter are the finest buildings of the kind in France, remain entire. Population 5049. 30 miles North of Paris. North latitude $49^{\circ} 26'$, East longitude $2^{\circ} 27' 25''$.

The industry of the inhabitants in the country around Creil. Creil is well worthy of observation; since in a space not greater than four leagues long by two in breadth, there are 179 manufactories and 8000 workmen. The annual proceeds of their labour may be computed as equivalent to 16,000,000 of francs. This town is seated on the left bank of the Oise, and above 900 persons are employed in its Porcelain works. Population 1200. 30 miles North of Paris. North latitude $49^{\circ} 17' 38''$, East longitude $2^{\circ} 28' 26''$.

Noyon, called by the Romans *Noviomagus*, was the Noyon. seat of a Diocese in the time of Charlemagne, who was crowned here, and who finished the Cathedral begun by Pepin le Bref. It is the birthplace of Calvin, and of Sarrazin, a celebrated statuary of the XVIth Century. Population 6000. 70 miles North by East of Paris, and 25 miles North-West of Soissons.

Itinéraire complet du Royaume de France, 1828; *Statistique Générale et Politique de la France et de ses Colonies*, Paris, 1803; Malte-Brun, *Geography*.

OLAX, in *Botany*, a genus of the class *Triandria*, order *Monogynia*. Generic character: calyx entire; corolla funnel-shaped; three-cleft; nectary four-leaved.

One species, *O. Zeylanica*, a tree, native of Ceylon.

OLD, } See ELD. A. S. *eald*; D. *oud*; Ger. O'LDEN, } *alt*, from A. S. *yld-an*, or *ild-an*, to re- O'LDNESS. } main, to stay, to continue, to last, to endure, to delay, to defer. Tooke, vol. ii. p. 199.

Old or *eld*; remained, staid, continued, lasted, endured, delayed, deferred; *sc.* long, a long time, to great age; ancient.

Mr. Steevens says, that *old* (he knows not why) was anciently a common augmentative in familiar language; perhaps merely because many things that have stood the trial of time are, and are esteemed the better, stronger; as old ale, old hay, &c.

In *Lingua*, 1607, quoted by Steevens,

There's *old* moving among them.

In Dekker's Comedy, called *If this be not a good Play the Devil is in it*, 1612,

We shall have *old* breaking of necks.

And in *Le Bone Florence*, quoted by Boswell,

Gode-*olde* fyghtyng was there.

The word so used is not uncommon in Shakspeare. See the Note to *Henry IV.* Second Part, act ii. sc. 4.

"My leue doghter," he seide þo, "for þou hast in loue y do, Myn *olde* lyf by fore þis, and bifore þi soule al so."

R. Gloucester, p. 30.

In Saynt Bede bokes writen er stories *olde*.

R. Brunne, p. 1.

Ye an herd that it was seide to *olde* men: thou shalt not sle, and he that sleeth, schal be gilty to doom

Bible, Anno 1551.

He seith to hem, therefore every wise man of lawe in the kyngdom of hevenes is lyk to a housbond-man that bryngith forth of his tresour newe thingis and *olde*.

Wiclif. Matthew, ch. xiii.

Then sayd he vnto them: therefore euerye scribe whiche is taught vnto the kingdom of heauen is lyke an housholder, whiche bringeth forth out of hys treasure thynges both new and *olde*.

Bible, Anno 1551.

So that we seruen in neweness of spyrit and in *oldnesse* of lettre.

Wiclif. Romayns, ch. vii.

We shoulde serue in a newe conuersation of y^e spyryte, and not in the *old* conuersacion of the letter.

Bible, Anno 1551.

But cast away prophane and *olde* wiuies fables, and exercise thyself vnto godliness.

Geneva Bible, Anno 1561. 1 Timotheus, ch. iv. v. 7.

Swich *olde* lewed wordes used he.

Chaucer. The Marchantes Tale, v. 10023.

Jason, whiche sigh his fadir *olde*,
Upon Medea made hym bolde
Of art magike, whiche she couth.
And praieth hir that his father's youth
She wolde make ayenewarde newe.

Gower. Conf. Am. book v. p. 153.

As for the kings of Sussex, although they were of the same people, yet were they not of the same streine, as our *old* monuments doo expresse.

Holinshed. The Description of England, vol. i. ch. xiv. p. 407.

So must thou live, till like ripe fruit thou drop
Into thy mother's lap, or be with ease
Gather'd, not harshly pluckt, for death mature:
This is *old* age.

Milton. Paradise Lost, book xi. l. 538.

If these they scape, perhaps, in poverty,
With sickness and disease thou bow'st them down,
Painful diseases and deform'd,
In crude *old* age.

Id. Samson Agonistes, l. 700.

MACB. Blood hath bene shed ere now, i' th' *olden* time
Ere humane statute purg'd the gentle weale:
I, and since too, murders haue bene perform'd
Too terrible for the eare.

Shakspeare. Macbeth, fol. 142.

May their false lights undo 'em, and discover presses, holes, staines, and *oldness* in their stuffs, and make them shop-rid.

Baumont and Fletcher. Philaster, act v. sc. 1.

Mistaken blessing which *old* age they call,
'Tis a long, nasty, darksome hospital,
A ropy chain of rheums; a visage rough,
Deform'd, unfeatur'd, and a skin of buff.

Dryden. Juvenal. Satire 10.

OLDENLANDIA, in *Botany*, a genus of the class *Tetrandria*, order *Monogynia*, natural order *Saxifragæ*. Generic character: corolla, petals four, calyx four-parted, superior; capsule two-celled, inferior, many seeded; receptacle free.

Twelve species, natives of the East and West Indies and the South Sea Islands.

OLEA, in *Botany*, a genus of the class *Diandria*, order *Monogynia*, natural order *Jasminæ*. Generic character: calyx small, four-toothed; tube of the corolla short, border four-cleft, segments ovate; lobes of the stigma emarginate; drupe two-seeded, one of them abortive.

Ten species, natives of both hemispheres. *O. Euro-pea*, of which there are six varieties, native of the South of Europe and part of Asia, produces the valuable olive or salad oil and the olive berries eaten at table; it is

from these berries that the oil is expressed. *O. fragrans* native of China, is a favourite green-house plant.

OLEA'GINOUS, } Fr. *oleagineux, oléux*; It. *oliginoso, olioso*; Sp. *oleaginoso, oleoso*; Lat. *oleaginus, oleosus*, from *oleum*. See OIL, *supra*.

O'LEOSE, }
O'LEOUS. }

Oily, bearing oil.

The sap, when it first enters the root, and is not subdued by the action of the plant, retains much of its own nature and has not much of the vegetable, being earthy, watery, poor, and scarce *oleaginous*.

Arbuthnot. On Aliments, &c. ch. iii. prop. 3. p. 43.

Which was one inducement to make me, in speaking of the *oleaginousness* of urinous spirits, to employ the word *most* rather than the word *all*.

Boyle. Works, vol. i. p. 611. Producibleness of Spirits, part ii. sec. 2.

Besides all this, it's not unlikely, that the rain-water may be endued with some vegetating or prolifick virtue, deriv'd from some saline or *oleose* particles it contains.

Ray. Of the Creation, part i. p. 95.

In falcons is a small quantity of gall, the *oleous* parts of the chyle being spent most on the fat.

Floyer. On the Humours.

OLERA'CEOUS, } Lat. *oleraceus, olitoreus*; from
O'LITORY, *adj.* } *olera*, a pot-herb, from *olla*, a
O'LITORY, *n.* } pot. Of unknown etymology.

Olitory; a place for growing vegetables for the pot; a kitchen garden.

It [mustard] is the smallest of seeds of plants apt to grow unto a lignous substance, and from an herby and *oleraceous* vegetable to become a kind of tree.

Sir Thomas Brown. Miscell. p. 28.

Work to be done in the orchard and *olitory* garden.

Evelyn. Kalendarium Hortense. January.

Trust not to the accidental mildness of the weather, so as to neglect timely cover to your tender *olitories*.

Id. Ib. November.

OLFA'CTORY, } Lat. *olfac-ere*, for *odefacere*,
O'LID, } (from *odor*, and *facere*,) which
O'LIDOUS. } the Ancients used, says Festus;
to smell, or cause a smell. See ODOUR.

Smelling or having the sense of smell.

Olid: Lat. *olidus*; smelling, or causing the sense of smell; smelling offensively; stinking.

Its offensive odour proceeds partly from its [the beaver] food, that being especially fish; whereof this humour may be a garous excretion and *olidous* separation.

Sir Thomas Brown. Vulgar Errours, book iii. ch. iv. p. 146.

There is a Machiavilian plot,
Tho' every rare *olfact* it not.

Butler. Hudibras, part i. can. 1. v. 742.

The fixt salt would have been not unlike that of men's urine; of which *olid* and despicable liquor I chose to make an instance, because chemists are not wont to take care for extracting the fixt salt of it.

Boyle. Works, vol. i. p. 688. Producibleness of Chemical Principles.

Smelling is another sense, that seems to be wrought on by bodies at a distance: though that which immediately affects the organ, and produces in us the sensation of any smell, are effluvia, or invisible particles, that, coming from bodies at a distance, immediately affect the *olfactory* nerves.

Locke. Works, vol. iv. p. 596. Elements of Natural Philosophy.

O'LIGARCHY, } Fr. *oligarchie*; It. *oligarchia*,
OLIGA'RCHAL, } Sp. *oligarquia*; Gr. *ὀλιγαρχία*;
OLIGA'RCHICAL. } (from *ὀλίγος*, a few, and *ἀρχή*, a government or principality.)

The government, dominion, or domination of a few.

A good politician will handle with dexterity the laconick seignory, and manage well enough Lycurgus his *oligarchy*, applying and fitting his companions in government, who have equal authority unto himself, gently drawing and reducing them by little and little unto the bent of his bow.

Holland. Plutarch, fol. 772. Of three Sorts of Government.

OLIVAS-
TER.

And thus, the aristocracy being now changed into an *oligarchy*, the passions of the multitude were once more inflamed; and the same destruction followed that had before fallen upon the kings, when they had degenerated into tyrants.

Hampton. *Polybius*, vol. iii. book vi. ch. i. p. 15.

The whole defence
Our *oligarchal* tyrants have to boast,
Are poor barbarians, scarce three hundred strong.
Glover. *The Athenaid*, book xiii.

It appeared to him [Phrynichus] (which was really the case) that "Alcibiades cared as little for an *oligarchical* as a democratical government."

Smith. *Thucydides*, vol. ii. book viii. p. 321.

OLINIA, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Sapotæ*. Generic character: calyx five-toothed; corolla, petals five, scaly; stigma slightly two-cleft, five-angled; seed-vessel a drupe, seated in the bottom of the calyx.

One species, *O. cymosa*, native of the Cape of Good Hope.

OLIVA, in *Zoology*, a genus of *Gasteropodous Mollusca*.

Generic character. Shell subcylindrical, convolute, smooth, and glossy, with the base of the aperture notched, the outer whorl very large, almost concealing the other; spire short, with the sutures deep; aperture longitudinal, pillar obliquely plaited.

Type of the genus, *O. porphyria*, Lamarck; D'Argenville, *Conch.* pl. xiii. fig. k. Many species, the recent ones found on the shores of the tropical seas; they are of lively and brilliant colours.

OLIVA'STER, } Fr. *olivastre*, olive; It. *oliva*,
O'LIVE, } *olivastro*; Sp. *oliva*; Lat. *oliva*;
O'LIVED. } Gr. *ἐλαία*. See OIL.

The *olivaster* is the wild olive tree; and *olivaster* is used by Bacon, as the Fr. *olivatre*, It. *olivastro*, for olive-coloured, or having the colour of the olive.

Branchys hii bore
Of *olyue*, as in sygne þat hii of pes were.
R. Gloucester, p. 193.

What if ony of the braunchis ben brokun whanne thou were a wielde *olyue* tree are graffid among hem, and art maad felowe of the roote and of the fatnesse of the *olyue* tree?

Wiclif. *Romaynes*, ch. xi.

Thoughe some of the braunches be broken of, and thou beynge a wyld *olyue* tree, art grafte in amonge them, and made partaker of the rote and fatness of the *olyue* tree.

Bible, Anno 1551.

And they brent all the cornes of that lond
And all hir *oliveres*, and vines eke.
Chaucer. *The Monkes Tale*, v. 14042.

And toke than of *olue*
A drye braunche hem with to stere
The whiche anone gan floure and bere,
And waxe all fresshe and grene ageyne.
Gower. *Conf. Am.* book v. p. 154.

But the countries of the Abyssenes, and Barbary, and Peru, where they are tawney, and *olivaster*, and pale, are generally more sandy and dry.

Bacon. *Natural History*, Cent. iv. sec. 399.

His right hand did the peacefull olive wield.
Spenser. *The Vision of Bellay*.

The gourd,
And thirsty cucumber, when they perceive
Th' approaching olive with resentment fly
Her fatty fibres.
Philips. *Cider*, book i.

Green as of old each *oliv'd* portal smiles
And still the graces build my Grecian piles:
My Gothic spires in ancient glory rise,
And dare with wonted pride to reach unto the skies.
Warton. *The Triumph of Isis*.

O'LLA, } The Spanish *olla podrida* consisted of
O'LIO, or } various meats and vegetables, boiled, or
O'GLIO. } rather stewed together, and duly seasoned
with salt and spice. See Delpino. *Olla*, a pot or the meats, &c. boiled in it, and *podrida*, rotten; *podreecer*, from the Lat. *putrescere*. *Olla*, or *olio*, is applied to
A mixture or medley; a hotchpotch.

Not to tax him for want of elegance as a courtier in writing *oglio* for *olla*, the Spanish word, it might well be affirm'd that there was.
Milton. *Works*, vol. i. fol. 411. *An Answer to Eikon Basilike*, xv.

If we consider his person he [Nero] was such a mass of filth and impiety, such an *oglio* of all ill qualities, that he stands the wonder and the disgrace of mankind.

South. *Sermons*, vol. v. p. 204.

And would you really have my muse
Employ herself in writing news,
Or toss up a poetic *olio*
Merely to bring in Marshal Broglio.

Lloyd. *A Familiar Epistle to ******

OLMEDIA, in *Botany*, a genus of the class *Dioecia*, order *Tetrandria*, natural order *Urticæ*. Generic character: male flower, common calyx composed of imbricated scales; flowers numerous; corolla two to four parted; filaments flat, elastic: female flower, calyx conniving; corolla ovate, four-toothed; seed-vessel a one-seeded drupe.

Two species, natives of Peru.

OLY'MPIAD, }
OLY'MPIAN, } See the Quotation from Usher.
OLY'MPIC. }

From the summer of this year 3228, begins the first *olympiade* of the Greek chronologers, wherein Choraebus of Elis won the race, [sc. at the *Olympian Games*, supposed to have been originally instituted in honour of *Olympian Jupiter*.]

Usher. *Annals. Anno Mundi* 3228.

The fair first-fruits of War, th' *Olympic Games*
Alcides offered up to Jove.

Cowley. *Second Olympic Ode of Pindar*.

O son of Rhea, God supreme!
Whose kingly hands th' *Olympian* sceptre wield!

West. *Id.*

OLYRA, in *Botany*, a genus of the class *Monoecia*, order *Triandria*. Generic character: male flower, calyx, glume one-flowered, aristate; corolla none: female flower, calyx, glume one-flowered, spreading, ovate, aristate; corolla, glume two-valved, awnless; style two-cleft; seeds cartilaginous.

Three species, grasses, natives of Jamaica and China.

O'M* is "a mystical word," says Sir William Jones, (*As. Res.* i. 242.) "which never escapes the lips of a pious Hindú who meditates on it in silence." It is supposed to be formed by a combination of the three letters A, U, and M, which express the Hindú Triad Vishnu, Siva, and Brahmà, or the Preservative, Destructive, and Creative Powers of the one Supreme Being, Brahmà, or the Great One in the neuter gender, "whose Essence they believe to be infinitely removed from the comprehension of any Mind but his own." This mystic word is held in great veneration, not only by the Bráhmans and their followers, but also by the Budd'hists, at least by those in Tibet and the multitudes scattered over the Wilds of Siberia, who acknowledge the spiritual guidance of the Lámás. Of the Sanskrit sentence *O'm maní padmé Húm*, the prayer most frequently uttered by the Mongols and Tibetians, this mystic word is the first member; and the whole

* As this word might be pronounced *O'ng*, for it is terminated by the nasal point *anuswára*, it opens a wide field for etymological conjectures.

OM.
—
OMA-
LIUM.

may be rendered, "O God, thou jewel in the Lotus! thy will be done!" The second member of this mystic sentence seems to refer to the Hindú representations of Brahmā seated on the flower of a *Nymphæa Lotus*; but whatever may have been the origin of this symbol, the Mongols have appropriated it to themselves. "King Dehdú Saīn Nomihu Khán," says the *Legendary History of that People*, (Schmidt, *Forschungen*, p. 207.) "who had attained the beatitude of the Empire of Suk'hávati, wishing to offer a sacrifice of flowers to Budd'ha, despatched some of his servants to the Sea of Nymphæas (padma) to gather some of those flowers. On reaching it, they saw there a vast stem bearing a colossal bud, whence streams of light of different colours issued. When the King, informed of this, approached with his offerings, the bud suddenly opened, and lo! in the midst of it was seated, cross-legged in the form of a Khubilkhan, (i. e. an avatára, or incarnation,) the Apostle of the Empire of Snow. His two front hands were joined before his heart in the action of prayer: of his hands behind, the right held a crystal rosary; the left a white Nymphæa. (Padma.) The eternal and infinitely brilliant Budd'ha, when this Khubilkhan was presented to him, placing his hand upon the head of the latter, declared that to him should the conversion and civilization of the Empire of Snow be due: that when its inhabitants saw him and heard the sound of the six syllables, (*óm ma ni pad mé húm*,) they should obtain the beatitude of a new birth as Beings of a superior nature." "These six syllables are the summary of all doctrine," continues the supreme Budd'ha, "and by the force of them the Khutakhtu Niduber Uzekchi, otherwise called Jyan Raī zyigh, and in Sanskrit, Avalókiteswara, the principal divinity and especial protector of Tibet, succeeded in performing wonders in heaven and earth, and bringing the inhabitants of the Empire of Snow (Tibet) into the path of conversion and deliverance."

Asiatic Researches, 8vo. edit.; Fr. Paulinus a S. Bartholomæo, *Sidharubam seu Grammatica Samserdamica*, Romæ, 1790, 4to. p. 51; Klaproth, in *Nouveau Journal Asiatique*, vol. vii. p. 185.

OMALISUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* nearly contiguous at the base, the articulations cylindric-conic, the second and third being least; maxillary *palpi* with the terminal joint cylindric-ovate, with the apex conic; the labial very short; *maxillæ* with a single process; head exserted; *thorax* subquadrate, a little narrowed in front, the posterior angles produced, acute; body rigid; *tarsi* pentamerous.

Type of the genus, *O. suturalis*, Olivier, *Entom.* t. ii. pl. i. fig. 1. Inhabits Europe.

OMALIUM, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* thickened exteriorly, with the apical joints rounded, subperfoliated; *palpi* maxillary filiform, not subuluted, the terminal joint shorter than the preceding united; mandibles bent, horny, with the apex entire; *thorax* transverse-quadrate, margined, with the anterior angles rounded; *elytra* subtricated; legs simple; *tarsi* pentamerous.

Type of the genus, *Staphylinus rivularis*, Paykull. Olivier, *Entom.* vol. iii. pl. iii. fig. 27. A very extensive genus, of which at least thirty species are found in Britain.

OMALOPLIA, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* ten-jointed; the basal joint somewhat robust, subclavate, slightly pilose; second subglobose; third and fourth a little elongate, slender; three following transverse, cup-shaped, slightly produced within; the remainder forming a short, triphyllous capitulum, *palpi* four; maxillary with the terminal joint subtruncate; labial obtuse; head suborbiculate; *clypeus* rounded, entire; *thorax* rounded on the sides, sublobate posteriorly; body pilose, short, convex; *elytra* rounded at the apex, as long as the abdomen; legs rather short; *tarsi* pentamerous, very slender, elongate; claws small, alike, bifid.

Type of the genus, *Melolontha ruricola*, Fabricius; Donovan, *Britt. Ins.* vol. xi. pl. 378. Several species, one only an inhabitant of Britain, frequenting woody and umbrageous situations in chalky districts.

OMAN, one of the great divisions of the Arabian Peninsula, is the mountainous tract at its North-Eastern extremity, bounded on the North and East by the Persian Gulf and Indian Ocean, on the South and West by extensive Deserts which separate it from Mahrah and Yemámah. "Though small in extent," says Idrísí,* (*Cl. ii. part vi.*) "it is well-peopled, and has abundance of date-trees and juicy fruits, such as plantains, pomegranates, figs, grapes, and the like." It is formed almost exclusively by a range of well-watered mountains, and therefore possesses, like Yemen, but in a less degree, that moderate temperature and constant supply of moisture which are requisite for the production of abundant crops, and conduce so largely to the health and comfort of the inhabitants. "The shores of this Country," says the *Jihán numá*, (p. 496.) "are flat and sandy; but at a distance from the sea there are hills and mountains." Rásu-l hadd, (Cape Boundary,) in 22° 33' 12" North and 59° 43' 12" East, is its Southern limit; and a few days' journey to the North-East of it is Súr, a long day's journey to the South of Kalahát, another maritime town famous in Idrísí's time for its pearl-fishery. The first of those places has a small harbour, called by the Persians Bander Súr, (Port of Súr,) in 22° 35' 48" North and 59° 19' 48" East, and was the place of rendezvous for the expedition sent from Bombay against the Bení Bú Alí Arabs in March 1821. The surrounding country is said to be most miserable, but the climate is delightful. (*Asiatic Journal*, xii. 365.) Kalahát, says the *Jihán numá*, is a small market-town (kasbah) to the South-West of Maskat, and the promontory near it is called Rás-el-hadd and Rás-el-jumjumah.† Kuriyat, (the village,) probably the Kariyat Damár of Idrísí, is a small town on the coast, separated by Rás Bú Dáúd, (Cape Father David,) in 23° 21' North and 58° 54' East from the Bay of Maskat,‡ the present Capital of Omán. Sohár, 200 miles to the North-West of Kalahát, and 120 miles from Maskat,§

* In a passage omitted by the Epitomizer.

† That is "the Cape of the well in the saltmarsh." Rás-el-mah-jameh, or mohajjameh, in Idrísí, (*Geogr. Nub.* p. 53.) is probably an error of transcription.

‡ The name of this town probably signifies "the Place;" but if spelt as by Niebuhr, (p. 296.) the *Jihán numá*, and Otter, (ii. 70.) it means "a place of silence." The former, however, is found in the older writers, and in modern public documents. This uncertainty in spelling shows how difficult it must be for strangers to distinguish by their ear, the Arab letters which resemble each other.

§ Idrísí, (*loc. cit.*) The Epitome has 450 instead of 120, which is found in both the MSS. at Oxford. Niebuhr places Sahár 80 miles North-West of Maskat, and 160 North-West of Kalahát.

Boundaries.

Zoar,
Calayah.

OMAN. is the most ancient Capital of 'Omán, and was long, says Idrísí, the wealthiest and most celebrated, being visited every year by numberless merchant ships; and being also the great mart for the produce of Yemen and its own territory, which abounds in excellent fruits especially dates. It was anciently, he adds, much frequented by ships from Sín, (China,) but its commerce was destroyed by an agent of the King of Yemen, who fortified Keish, an island 12 miles square in the middle of the Sea of Fárs opposite to Maskat, and built a fleet there with which he conquered the city of Ránij, (in the Maldivé Islands,) and ruined the commerce of 'Omán.

To the North-West of Sohár there are several smaller ports, such as Shinás, or Chinás, (latterly the frontier town of the Jawáthim,) Hoseífín, and Kelbeh; beyond which is the District of Seír, or Julfáreh, occupying a broad point of land, (now called Rás-el-jebel, *i. e.* Mountain-head,) which stretches into the sea, and is terminated by Rás Musendom, in 26° 24' North and 56° 35' East, the Southern promontory at the entrance of the Persian Gulf.

Khore
facawn
Seer.

The principal towns of this District are Khór Fakán and Seír, the latter of which, on the Eastern side of a river entering the gulf a little to the West of the small peninsula of Shárijeh,* has a good port. This tract is a narrow, mountainous ridge, terminated (as appears from the actual survey of the Persian Gulf, published by Captain Horsburgh in 1830) by a series of singularly diminutive and rocky peninsulas, at the extremity of which are some rocks, called by the Arabs Bábá Selám, or Selám wa Benát-há, (*i. e.* "Salutation and her Daughters,") from the salám (salutation) which they respectfully make on entering the gulf. (Niebuhr, p. 329. Della Valle, iv. 359.) This neck of land, the inhabitants of which had revolted from the Imám in Niebuhr's time, seventy years ago, is occupied by the Jewáthim Arabs, who joined the Wahhábís, and for some years filled the Indian Seas with the dread of their piracies. Their head-quarters were at the extremity of a small peninsula called Rás el Khaímah, (Cape Tent,) in 25° 47' North and 56° 4' East, covering a deep creek, which afforded ample room for their fleets. Ráms, Zayá, Shám, Ramdhah, Kasabah and several other forts further North, were also occupied by these Jawáthimis,† whose predatory disposition was stimulated by the Wahhábí doctrines, so that they soon became as formidable by land to their Musulmán neighbour and natural Chief, the Imám of Maskat, as by sea to the traders and pilgrims traversing the Persian Gulf and Indian Ocean; nor did their piracies permanently cease, notwithstanding their town was taken and their fleets destroyed by a British force in November 1809. They soon recommenced their depredations, and it was found necessary in 1819 to despatch a force capable of dismantling all their strong holds.

Sharjee, or
Sharja.

The Western boundary of 'Omán is near Shárijeh, in 25° 22' North and 55° 31' East, on a small peninsula

* Called Shárej by Niebuhr: the guttural *kh* or *ch* sometimes has almost the sound of *sh* in the mouths of the Germans themselves, and the Arabs continually substitute *j* for the Persian *g*; so that Shárej and Kháreg, or Khárek, are identical.

† Or, according to the Persian pronunciation prevalent in India, Jávásimí. The names here spelled Rams and Zayá should perhaps be written Rambes or Rambeth; and Dayá, Dayah or Dhayá; but unless some known system of orthography be followed, it is impossible to ascertain how Arabian or Persian proper names ought to be expressed in the Roman character.

bearing the same name, supposed by Niebuhr* to be an island. It was then subject to the Sheikh of Seír,† and was famous for the produce of its pearl-fishery. (*Beschr.* 329.) This place is about ten degrees of longitude East of El Yemámah, the Western boundary of 'Omán, according to the Asiatic Geographers, (*Jihán numá*, p. 495.) but that part of Arabia has always been occupied by turbulent Chieftains of very unstable allegiance; so that the boundaries of the States to which they are at times subject, are continually varying. The most powerful ruler of 'Omán is now commonly styled the Imám of Maskat, from the town bearing that name, which has a good harbour, much frequented by European vessels. It was conquered and fortified by the Portuguese in the Autumn of 1507, (De Barros, ii. 2. 1. tom. iii. p. 93.) but was abandoned by them about 1643: Maskat is situated in 23° 37' 6" North and 58° 30' 18" East, at the bottom of a deep inlet, which receives a rivulet running along the edge of a small valley, and is enclosed by craggy and rugged mountains. Its harbour, which is almost circular, is formed by one, or, if Niebuhr be right, two islets, rather less than a mile in circumference, and nearly opposite to the town. The surrounding shores are steep and precipitous, and the entrance to the port, not more than a quarter of a mile in width, is protected by two hills, one of which is at the extremity of a peninsula, in part occupied by the town. Except the houses of the Imám and his family, there are few buildings of stone, and the most remarkable are two Portuguese Churches,‡ one still called El Igreizah, (from the Portuguese Igreja,) now used as a Court of Justice, and the other turned into the Imám's Palace. Mr. Buckingham could not discover the Mosques, because they have neither domes nor minarets; he adds, (p. 518.) that there are no Baths nor Coffee-houses; but he was probably mistaken, as Niebuhr (*Reise*, ii. 86.) saw two, but they are small, dark, and have no minarets. The Castles, which were built by the Portuguese, are called Míraní and Jeláli; and from their commanding position, together with the batteries on the neighbouring heights, afford an effectual protection to the town. It forms, according to Niebuhr, (*Reise*, ii. *Tab.* xv.) and the plan given by Signor Maurizi, the segment of a circle; and besides the city-wall, properly so called, is enclosed by a circumvallation, 20 miles in extent, beginning at the suburb of Matrah, and ending at Sedab, or Seddaf. (Maur. p. 26.) Its population, according to Mr. Buckingham, (*Travels in Assyria*, p. 507.) is about 13,000,§ of whom about one-seventh are either Indians or Persians, the rest of pure Arabian blood, and except the Hindús, all are Mohammedans. When that traveller was at Maskat, he was told that the Imám's dominions extended along the coast no further than Khór-fakán, in 25° 20' North and 56° 25' East, one

OMAN.

Chore
fakawn

* The ambiguity of the Arabian word *jezirah* is a sufficient excuse for such mistakes with respect to places which the traveller has not seen. Niebuhr's position of it, in 25° 3' North and 54° 20' East, is surprisingly near the truth, when the data which he could obtain are considered.

† Niebuhr (p. 308.) supposes Sêr to be the Sero Omán of the Nubian Geographer; but in the MSS. of Idrísí, it is *nehr* 'Omán, "the river of 'Omán, and should perhaps be Shehr 'Omán," the City of 'Omán, its ancient Capital, called Seír 'Omán in the *Jihán numá*, (p. 496.) confounded with Sohár, and probably the Aymaun to the North-East of Sharja in the Survey.

‡ Each dedicated to the Virgin. (Della Valle, iv. 350.)

§ Signor Maurizi (p. 23.) thinks that, in 1802, the inhabitants of Maskat amounted to nearly 60,000; but this is probably a very exaggerated estimate.

OMAN. way, and Rás-el-hadd, in 22° 3' 12" North and 59° 43' 12" East, the other; and from three to six days' journey (60 to 120 miles) from the shore inland. On a bay a few miles to the North-West of the city is Matrah, (Niebuhr, 297. Maurizi, 25.) a large village and sort of suburb to Maskat, said to yield a revenue of 50,000 Austrian dollars. (*As. Jour.* xix. 782.) Burkah, at the mouth of a small river between Maskat and Sohár, yields a revenue of 5000 dollars. To the South-East, just beyond Cape Bú Dáúd, in 23° 24' North and 58° 54' East, is Kuriyat, at the mouth of the river Masorah, a perennial stream. Tiwí yields 4000 dollars, and Kalahát, or Kalayát, is rated at 3000. Maseirah, near Rás-el-hadd, according to the same authority, pays 5000 dollars.

In the interior, one of the chief places is Rusták, (*i. e.* the Village,) about 70 miles West by North of Maskat, the country residence of the Imám, and the seat of a Wálí Kebír, who may be compared, says Niebuhr, (296.) to a Páshá in Turkey. Burkah, Suweik, and Síb, or Zíb, belong to his district. Rusták is rated at 7000 Austrian dollars in the account quoted above. Nizzuwah,* rated at 4000 dollars, and lying about five days' journey South-West of the Capital, is the residence of another Viceroy. It is separated from the coast by Ismá'il, the Wádí Ibn Raweihah, and Burket-el-mál; is very fertile, and contains the Jebel Akhdar, (Green Mountain,) the most extensive and loftiest chain of hills in 'Omán. Nizzuwah, (Tarua, in *Geogr. Nubiens.* p. 54.) according to Idrisi, (p. 61.) is the name of a district watered by the Nahr-el-Felj,† "a fine stream of water," flowing into the sea near Julfár. Menah, (Mang, in *Geogr. Nub.* 54.) says the same Geographer, is about half a day's journey from the valley of the Felj, at the foot of Mount Shorm, or Sharm. It is a small town, well provided with springs and palm groves. Zikkí, (Zecchle, Maur. p. 26. Zachari, *As. Jour.* xix. 782.) rated at 5000 dollars, and Ismá'il, (Samoy, *As. Jour. ibid.*) rated at 4000 dollars, are the chief towns of Districts to the West of Maskat. Near Bú shehr, (Buscier, Maurizi, 26.) about 20 miles South South-East of the Capital, there are some warm medicinal springs much frequented; and in the neighbouring mountains, there are copper mines at Goaber, and lead mines at Langsof. The Imám, at one period, was virtually Sovereign of several places on the coast of Persia. In the beginning of the present century, the coasts of Makrán, the ports of Bender 'Abbás, or Gomrún, the shores of the Persian Gulf almost as far as Bender Ríg and the adjacent Islands of Hormuz, Lárek, and Keshm, acknowledged the sovereignty of the Imám, at least as holding them in farm from the King of Persia. The former is still master of a part of Zinjibár; Kílwah (Quíloa) and the Country of the Sawáhilis, (*i. e.* Coasters,) on the Eastern coast of Africa. (Maur. 29.) The revenue raised from these territories has been variously estimated, and is, doubtless, always varying in its amount. It is, as in all genuine Musulmán Governments, derived principally from the legal tithe, or tenth paid to the Sovereign, from tribute paid by subject States, and the Customs levied on imported goods: and can hardly exceed 500,000 Austrian dollars (£100,000)

* Probably *Nigzuda*, by an error of the Press, in *As. Jour.* xix. 782.

† Felk, or Felc. (*History of Seyd Said*, p. 25, 26.) Signor Maurizi evidently means to express the soft Italian *e*, as in *Checc*, for *Kech*, (spelt *Kutch* by our Anglo-Indians,) of which his editor seems unaware. The final *j* is commonly so pronounced by the Arabs. Faig is the spelling of Gabriel Sionita. (*Geogr. Nub.* p. 54.)

annually. The population of the Imám's dominions has been estimated at upwards of 900,000 souls; but this is probably far beyond the truth, for though the mountainous tracts of Arabia are more fertile and healthy than the plains, still they must contain a great deal of waste land; the form of Government, moreover, and hereditary feuds, sanctioned by the Religion of the Arabs, are very unfavourable to their increase. The regular force of the Imám amounts to about 3000 men, (Maur. 30.) of whom 2000 are Bellúches from Bellúchistán, or Jedegáls from Sind, the rest Arabs and Negro slaves; but as all his Chiefs hold their territories by military tenure, and are bound to furnish their quota in time of war, he can, on an emergency, raise 20,000 infantry and 1000 cavalry. His naval force consists of two 50-gun ships, two frigates, two brigs, and four gun-boats; the larger vessels being employed as merchantmen in time of peace: for, like Mohammed 'Alí, Páshá of Egypt, the Imám of Maskat is the greatest trader in his dominions.

'Omán is believed by the Asiatics to have been named from 'Omán, a grandson of Abraham, (*Jihan numá*, p. 495.) and was one of the first parts of Arabia which embraced the Faith of Mohammed; but it was also one of the first which received the heretical tenets of the Ibádís, (or Beyázís,) whose founder lived under the Bení Ummayyah, (Omniades,) A. H. 674. (A. D. 1275.) The Family now reigning cannot boast of any antiquity, or of having been long seated on the throne, for Niebuhr, (p. 298.) who reached Maskat in January 1765, (*Reise*, ii. 82.) was informed that Ahmed Ibn Sa'id, the founder of the present Dynasty, was only Wálí, or Governor of Sohár, when Takí Khán, the Commander-in-chief of Nádir Sháh's army, got possession of Maskat in 1742. Ahmed, having made his peace with the Persian General by a complete and timely submission, obtained the command of Burkah in addition to his former Government, and, taking advantage of Takí Khán's rebellion against his master, succeeded by a stratagem in getting possession of Maskat, and driving the Persians out of 'Omán. He was soon afterwards, by the aid of the Khádíu-l Kudát, or First Minister of Justice, proclaimed Imám,* with the style and title of Ahmed ibn Sa'id, ibn Ahmed, ibn Mohammed, el Bú-Sa'idí, el 'Arabí, el 'Omání, (De Sacy, *Chrestom.* iii. 119.) *i. e.* Ahmed, son of Sa'id, of the Family of Abú Sa'id, of Arab race, and of the Tribe of Azd established in 'Omán. This took place in 1748 or 1749; and as he governed with much mildness and equity, he was greatly beloved by his subjects. (Niebuhr, p. 304.) His son and successor, Sa'id ibn Ahmed, died in 1790 or 1791; and was succeeded by Seyyid Sultán, one of his younger sons, who by the aid of the Bedwins, with whom he had passed his youth, dispossessed his elder brother, leaving him, however, the title of Imám, and the possession of Rusták, the Royal residence. Seyyid Sultán, taking advantage of the troubles which desolated Persia after the death of Kerím Khán, made himself master of the Island of Hormuz and Bender 'Abbási, or Gomrún, and formed alliances with many foreign Princes. He was killed in an engagement with the Jewáthimí pirates on his return from Basrah, in 1804 or 1805; and was succeeded by his son Seyyid

History.

* Imám signifies one who takes the lead and guides others; if in Prayer he is a Religious minister; hence the Imáms attached to the Mosques: but Law and Government are almost inseparable in the opinion of a true Musulmán, and thence their spiritual became their temporal leaders, and in Arabia itself, as on the coast of Africa, Imám is a title of temporal sovereignty.

OMAN. Sa'id, notwithstanding the endeavours of Ibn So'ud, Chief of the Wahhábís, to supplant him in favour of his uncle Beder, who had embraced the tenets of that proselyting Sect. Of these transactions a somewhat different account is given by Signor Maurizi, and by an anonymous writer in the *Asiatic Annual Register*; (xix. 781.) but as the facts here stated were taken from the Reports made to the French Government (De Sacy, *Chrest.* iii. 351.) by its agents on or near the spot, it is probable that they are not far from the truth: it must, however, be acknowledged that these different statements cannot be very easily reconciled. Seyyid Sa'id is still living, and deserves much praise for the excellent police maintained throughout his dominions, for his liberal treatment of strangers, and for his fidelity to his political and commercial engagements.

OMASEUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* cylindric, the third joint longest; *palpi* six; external maxillary with the second joint longer than the terminal, the last oval and truncate; internal as long as the maxillæ; labial with the two last joints elongate, the terminal slightly attenuated, truncate; *labrum* transverse, slightly emarginate or entire; mandibles bent, acute, denticulated at the base, sometimes striated above; *mentum* large, with a bifid lobe in its anterior notch; head subovate; *thorax* with the lateral margins more or less incrassated, the hinder angles sometimes acute, sometimes rounded; *elytra* entire, rather depressed; wings two or rudimentary; anterior *tibiæ* notched within; *tarsi* pentamerous; anterior in the males with three dilated joints.

Type of the genus, *Carabus aterrimus*, Fabricius; Curtis, vol. i. pl. xv. A numerous genus of beetles, the species frequenting damp and marshy situations; about sixteen inhabit Britain.

OMBRE, Fr. *hombre*; It. *ombre*; Sp. *ombre*, or *hombre*; man.

A game at cards so called.

Her joy in gilded chariots, when alive,
And love of *ombre*, after death survive.

Pope. *Rape of the Lock*, can. 1. v. 56.

OMBRE, as we are informed by the learned writer of an Italian Tract, *Del Giuoco dell' Ombre*, Roma, 1693, was introduced into Italy from Spain about the middle of the XVIth Century; and derives its name from the endeavour of each of the players to prove himself a *man (ombre)* by beating his competitors. Of this game, immortalized by Pope, but otherwise forgotten or merged in Quadrille, it may be sufficient if we say enough to explain the chief processes described in the *Rape of the Lock*.

There are several species of Ombre. The most com-

mon, and that played by Belinda, is called *Renegado*, in which the eights, nines, and tens being discarded, thirteen cards are kept in stock, and nine are dealt to each of the three players.

Belinda now, whom thirst of fame invites,
Burns to encounter two advent'rous Knights,
At Ombre singly to decide their doom;
And swells her breast with conquests yet to come.
Strait the three bands prepare in arms to join,
Each band the number of the sacred Nine.

The first player has the right of naming trumps.

The skilful Nymph reviews her force with care,
"Let Spades be trumps," she said, and trumps they were.

The Ace of Spades, *Spadillo*, is always the best trump; if the suit named for trumps be black, the deuce,—if red, the seven is called *Manillo*, and is the second best trump; the Ace of Clubs, *Basto*, is third; these are called *Matadores*, killers; the remaining cards rank in their usual order, excepting that the Ace is the lowest. Belinda holding *Matadores* and the King of Trumps, carried off the first four Tricks.

Now move to war her sable *Matadores*,
In show like leaders of the swarthy Moors.
Spadillo first, unconquerable Lord,
Led off two captive trumps, and swept the board.
As many more *Manillo* forced to yield,
And march'd a victor from the verdant field,
Him *Basto* follow'd; but his fate more hard,
Gain'd but one trump and one plebeian card.
With his broad sabre next, a Chief in years,
The hoary Majesty of Spades appears,
Puts forth, one manly leg to sight reveal'd,
The rest his many-coloured robe conceal'd.
The rebel knave who dares his Prince engage,
Proves the just victim of his Royal rage.
Ev'n mighty Pam that Kings and Queens o'erthrew
And mow'd down armies in the fights of Lu,
Sad chance of war! now destitute of aid,
Falls undistinguished by the victor Spade.

Belinda has exhausted all the trumps of one of her opponents, who, renouncing, throws away the Knave of Clubs; from her other antagonist she has carried off the Knave of Trumps by her King; but when she plays the King of Clubs he trumps it with his remaining Queen.

Now to the Baron fate inclines the field,
His warlike Amazon her host invades,
The imperial Consort of the Crown of Spades.
The Clubs black tyrant first her victim dy'd.

The Baron then plays the King, Queen, and Knave of Diamonds, and consequently wins four Tricks, as many as those gained by Belinda. Only one Trick remains; the gaining of which is called *Codille*, and the loser is said to be *beasted*. Belinda's Queen of Hearts has fallen to the Knave of Diamonds, but in the last and crowning Trick, her King wins the Ace and she secures the game.

The Knave of Diamonds tries his wily arts,
And wins, a shameful chance! the Queen of Hearts.
At this, the blood the Virgin's cheek forsook,
A livid paleness spread o'er all her look;
She sees, and trembles at th' approaching ill,
Just in the jaws of ruin and *Codille*.
And now, as oft in some distemper'd State,
On one nice Trick depends the general fate.
An Ace of Hearts steps forth: the King unseen
Lurk'd in her hand, and mourn'd his captive Queen:
He springs to vengeance with an eager pace,
And falls like thunder on the prostrate Ace.
The Nymph exulting fills with shouts the sky;
The walls, the woods, the long canals reply.

The Poet has given a far clearer description of Ombre, so far as he goes, than the professed teacher of it has presented in *The Complete Gamester*. The account

OMBRE. there offered is obscure and indistinct, and saving from the last precept, the reader will derive but little instruction. "To conclude," says the grave author, in his peroration, "lay your tricks angle-wise, that you may with more ease compute them."

OMEN.

The invention of Ombre by the Spaniards, and the equivocal meaning of the word, furnished Henri Quatre with a repartee possessing a good deal of point. The Ambassador from the Court of Madrid one day told the King with an air of menace, that his master was prepared to sustain some disputed point at the head of 100,000 men. Henri calmly answered, *Vous vous trompez, en Espagne ce ne sont pas des hommes ce sont des Ombres.* (*Journal d'Henri III.* tom. iv. p. 562.)

OMEGA, Gr. *o μέγα, o magnum*; the last letter of the Greek alphabet. See the Quotation.

I am alpha and *oo* the bigynnyng and the ende seith the Lord God that is and that was, and that is to comynge almygti.

Wiclif. Apocalips, ch. i.

I am alpha and *omega*, the beginnunge and the ending, sayth the Lorde Almighty, which is, & which was, and which is to come.

Bible, Anno 1551.

OMELET, Fr. *omelette*, or *aumelette*. *Aumelette d'œufs*, a pancake made of eggs. Cotgrave. Menage and Duchat write very elaborately upon this word, and produce a variety of etymologies; the former, among others, that of Le Vayer, *œus mesles, q. d. a medley or mixture of eggs.* Cotgrave also writes *œuf-molette*.

Clary, (*Horminum*) when tender not to be rejected, and in *omlets* made up with cream, fried in sweet butter, and are eaten with sugar, juice of orange or lemon.

Evelyn. Miscellaneous Writings, p. 739. Acetaria.

O'MEN, } Lat. *omen, ominosus*. *Omen quod*
O'MENED, } *ex ore primum elatum est, osmen*
O'MINATE, } *dictum.* Varro, lib. v. *Omen velut*
OMINA'TION, } *oremen, quod fit ore.* Festus. It is
O'MINOUS, } applied to
O'MINOUSLY, } A token or sign (of good or ill;)
O'MINOUSNESS. } a boding or foreboding, a prognostic.

And see the Miscellaneous notice in **AUGURY.**

But how the clamor flew

Vp to her turret: then she shooke; her worke fel from her hand,
 And vp she started, clad her maides; she nedes must understand
 That *ominous* outcry.

Chapman. Homer. Iliad, book xxii. fol. 307.

The *ominous* raven often he doth hear,
 Whose croaking him of following horror tells,
 Begetting strange imaginary fear,
 With heavy echoes, like to passing bells.

Drayton. The Barons' Wars, book v.

To take no pleasure, God knows, to *ominate* ill to my dear nation,
 and dearer mother the Church of England.

Seasonable Sermon, (1644,) p. 23.

The falling of salt is an authentick presagement of ill luck, nor can every temper contemn it; from whence notwithstanding nothing can be naturally feared: nor was the same a general prognostick of future evil among the Ancients, but a particular *omination* concerning the breach of friendship.

Sir Thomas Brown. Vulgar Errors, book v. ch. xxi. p. 321.

The Chief subjoins:—"Oft have these eyes beheld
 Dire *omens*, and my skill the cause reveal'd;
 Yet never felt I this excess of fear,
 Or did the stars more *ominous* appear."

Lewis. Statius, book iii. v. 738, 740.

And, when the day set for his audience came, there happened to be such an extraordinary thunder, and such deluges of rain as disgraced the show, and heightened the opinion of the *ominousness* of this embassy.

Burnet. Own Times. King James II. Anno 1687.

Nor much unlike
 Is he whose visage, in the lazy mist
 That mantles every feature, hides a brood
 Of politic conceits; of whispers, nods,
 And hints deep *omen'd* with unwieldy schemes,
 And dark portents of state.

Akenside. Pleasures of Imagination, book iii.

In black oblivion's kennel, shall be trod
 Their execrable names, who high in power,
 And deep in guilt, most *ominously* shine.

Young. The Statesman's Creed.

OMIT, v. } Fr. *omettre*; It. *omettere*; Sp. *omi-*
OMI'TTANCE, } *tir*; Lat. *omittere*, (*ob*, and *mittere*,)
OMI'SSION, } to pass by, put or lay aside.
OMI'SSIVE. } To put or lay aside, to leave off, to leave out, let alone, to forbear, to neglect.

They had vsed no rygour to hym against the law, nor *omitted* no charitable meane vnto him that came to theire mindes.

Sir Thomas More. Workes, fol. 887. The Apology.

This judgment generall all to trial brings
 Both for committed and *omitted* things.

Stirling. Doomes-day. The seventh Houre.

I maruell why I answer'd not againe,
 But that's all one: *omittance* is no quittance.

Shakspeare. As You Like It, fol. 200.

The *omissions* in comparison, are no where many. One or two copies *omit* the 30th verse of Matt. 5. Yet without detracting any thing from the precept therein contain'd; which is fully expressed by the foregoing similitude.

Grew. Cosmo Sacra, book v. ch. i. fol. 290.

The first is an untowardnesse of *omission*, the second of *commission*. The *omissive* untowardnesse shall lead the way
Hall. Works, vol. ii. fol. 339. Sermon Preacht to the Lords of High Court of Parliament.

Our Saviour likewise tells us that men shall not only be proceeded against for sins of *commission*, but for the bare *omission* and neglect of their duty, especially in the works of mercy and charity; for not feeding the hungry and the like, as we see, Matt. xxv. and that for the *omission* of these, he shall pass that terrible sentence, Depart ye cursed, &c. *Tillotson. Works, vol. ii. fol. 362. Sermon 58.*

OMNICORPOREAL, Lat. *omnis*, all or every, and *corporalis*, from *corpus*, body. See **CORPORATE**. See the Quotation.

He is both incorporeal and *omnicorporeal*, for there is nothing of any body, which he is not.

Cudworth. Intellectual System, book i. ch. iv. fol. 347.

OMNIFARIOUS, Lat. *omnifarium, omni*, and *fari*, *quod omnibus modis fari possis, et generaliter omnibus modis.* Martinus.

Of all modes or manners, sorts, or kinds.

And he supposed this [an ordering and disposing mind that was the cause of all things] to be that which brought the confused chaos of *omnifarious* atoms into that orderly compages of the world that now is.

Cudworth. Intellectual System, book i. ch. i. fol. 26.

But if thou 'rt indefatigably bent
 To toil, and *omnifarious* drinks would'st brew;
 Besides the orchard, every hedge and bush
 Affords assistance.

J. Philips. Cider, book ii.

OMNIFIC, who makes or creates (*facit*) all things (*omnia*.)

Silence, ye troubl'd waves, and thou Deep, peace,
 Said then th' *omnific* Word, your discord end.

Milton. Paradise Lost, book vii. l. 217.

O bland creatress of the gods above,
 And men beneath, from whose *omnific* love
 The woods are clad with verdure, rivers flow,
 And animals with life's warm current glow.

Lewis. Statius, book viii.

He took the hint, he storm'd the tow'r,
 And dropp'd in yon *omnific* show'r.

Brookes. Fables. The Temple of Hymen.

OMEN.

OMNIFIC.

OMNI-
FORM.OMNIFORM, Fr. *omniforme*; Lat. *omnis*, all or every, and *forma*, shape or figure.OMNIPO-
TENT.Having, being, or consisting of, every *form* or shape.

Which Tye catches and lets goe, for the direction and transmission of things to their proper places in the several parts of the world for the good of the whole, according to that essential law which is the form and being of this spirit of Nature, the last ideal or *omniform* efflux from God.

More. *Philosophical Writings. Preface general*, fol. 16.

She may have each thing view'd

By her own centrall self-vitality

Which is her self-essensial *omniformity*.

Id. *On the Soul*, part iii. can. 2. stan. 34.

The living fire, the living *omniform* seminary of the world, and other expressions of the like nature occurring in the ancient and Platonic philosophy, how can they be understood exclusive of light or elemental fire.

Berkeley. *Siris*, sec. 281.

OMNIPERCIPIENT,

OMNIPERCIPIENCE,

OMNIPERCIPENCY.

Lat. *omnis*, and *perci-*
piens, present participle of
percipere, to take tho-
roughly, *sc.* by the senses, by the mind. See PERCEIVE.
Perceiving all things, every thing.

An *omnipercipient* omnipresence, which does hear and see what-
ever is said or transacted in the world,—is a certain excellency in
God.

More. *Antidote against Idolatry*, ch. ii.

This omnipresence, or *omnipercipience* terrestrial, is one main
ground of that religious worship due to God, which we call invoca-
tion.

Id. *Ib.*

All the modes or ways the communication of this *omnipercipency*
to saints or angels are either very incredible, if not impossible, or
extremely ridiculous as to any excuse for their invocation.

Id. *Ib.*

OMNI/POTENT, *adj.*OMNI/POTENT, *n.*

OMNI/POTENTLY,

OMNI/POTENCE,

OMNI/POTENCY.

Able, powerful to do all things, almighty.

As helpe me veray God *omnipotent*

Tho I right now shuld make my testament.

Chaucer. *The Wif of Bathes Prologue*, v. 6004.

I would not let to denye an hole heape of those reasons in matters
of the sacramētes, which hage all vpon Goddes wyll and pleasure and
hys *omnipotent* power.

Sir Thomas More. *Workes*, fol. 386. *The First Part of the Confu-
tation of Tyndall*.

How fond is that man in his fantasie,

Who thinks that Joue, the maker of vs al,

And he that tempers all in heauen on high,

The sunne, the mone, the starres celestially,

So that no leafe without his leaue can fall,

Hath not in him *omnipotence* also

To guide and governe all things here below?

Gascoigne. *Miscellaneous Pieces*.

HARPS. Why, this is nothing els but to exclude the *omnipotence*
of God, and all kinde of miracle in the sacrament.

BRAD. I do not exclude his *omnipotence*, but you do it rather.

Fox. *Martyrs*, fol. 1466. *The second daies talk between Master
Bradford and Dr. Harpsfield. Anno 1555*.

The presence of whyche humanite, when it is denied, then is there
no text to proue the presence of Christes diuinitie specially, that is
to say otherwise then it is by his *omnipotence* presente euery where.

Stephen, Bishop of Wynchester. *Of the Presence of Christes Body
in the Sacrament*.

He is also *omnipotent*, as he is immense, for having, as he is im-
mense, the power of infinite being; he must needs likewise have the
power of all finite being: which is, to be *omnipotent*.

Grew. *Cosmo Sacra*, book i. ch. i. fol. 3.

VOL. XXV.

The spirits beneath, whom I seduc'd,
With other promises and other vaunts,
Than to submit, boasting I could subdue
Th' *Omnipotent*.

Milton. *Paradise Lost*, book iv. l. 85.

May not the Lord (*omnipotently* great)

A quality (when as he list) impart,

To all the guests of Pluto's ugly seat:

That (freez'd in fire) they burne yet not decay,

Do pine, not dye, as monsters every way?

Stirling. *Doomes-day. The Eleventh Houre*.

But God uses not to proceed according to the rule of an absolute
omnipotency, but according to the oeconomie of his most holy, most
wise, most just decrees.

Hall. *Works*, vol. ii. fol. 307. *Sermon preacht at Westminster, 5th
April, 1628*.

The particulars not included in the true notion even of *omnipotence*
itself, I have shown, are, whatever things are contradictory abso-
lutely in their own nature; whatever things are naturally evil and
imply weakness or imperfection in the Being itself to whom the
power of doing them is ascribed; and whatever things are morally
evil and imply injustice or unrighteousness towards others.

Clarke. *Works*, vol. i. fol. 59. *Sermon 9*.

OMNIPRE/SENT,

OMNIPRE/SENTIAL,

OMNIPRE/SENCE,

OMNIPRE/SENCY.

Lat. *omnis*, and *præsens*,
being before, (*præ*, before,
and *ens*, being.)
Being every where before
us; *present* every where or in every place.

For he also went

Invisible, yet staid, (such privilege

Hath *Omnipresence*) and the work ordain'd,

Author and end of all things.

Milton. *Paradise Lost*, book vii. l. 590.

For we'el suppose in this spirit the center of life to be indivisible,
and yet to diffuse it self by a kind of circumscrib'd *omnipresence*, as
the point of light is discernible in every point of the luminous sphere.

More. *Appendix to the Antidote against Atheism*, ch. iii. fol. 150.

Men cannot persuade themselves that *omnipotence*, *omniscience*,
and *omnipresence*, should ever be wrapt in swaddling clothes, and
abased to the homely usages of a stable and a manger.

South. *Sermons*, vol. iii. p. 302.

But his *omnipresent* filling all things being an inseparable prop-
erty of his divine nature, always agreed to him, and was not then
at length to be conferred on him.

Id. *Ib.* vol. vii. p. 22.

From the consideration of God's being *omnipresent*, it follows that
his power (as well as knowledge) is unlimited; to be every where
relied on by good men, and to be feared by bad.

Clarke. *Works*, vol. i. p. 52. *Sermon 8*.

Can each be *omnipresent*, to perceive

What endless links the blended fabric weave,

On every various consequence reflect,

Prepare each cause to yield the just effect.

Brookes. *Universal Beauty*, book ii. v. 301.

This attribute of *omnipresence*, as 'tis constantly ascribed to God
in scripture, so is it in reason likewise so plain and obvious, that the
generality of moral writers even among the heathens themselves,
have not been wanting to assert it clearly and without hesitation.

Clarke. *Works*, vol. i. fol. 46. *Sermon 8*.

OMNI/SCIENT,

OMNI/SCIENCE,

OMNI/SCIENCY,

OMNI/SCIOUS,

OMNISPE/CTIVE.

Lat. *omnis* and *sciens*, present
participle of *scire*, to know.
Knowing all things; having
boundless or infinite knowledge.
Omnispective: able to see (*spe-
cere*) all things, every thing.

For what can scape the eye

Of God all-seeing, or deceive his heart

Omniscient.

Milton. *Paradise Lost*, book x. l. 7.

The same being, moreover, which is immense; cannot but be
omniscient.

Grew. *Cosmo Sacra*, book i. ch. i. fol. 3.

TENT.OMNI-
SCIENT.

OMNI-
SCIENT.

9. To shew his *omniscience*, he is said, John ii. 24. to know all men. An attribute given in scripture to God only.
Grew. Cosmo Sacra, book v. ch. iv. fol. 321.

ON.

And so again at the last day, when our offences shall be drawn into account, the subtilty of that inquisitor shall not present unto God a bundle of calumnies or confutable accusations; but will discreetly offer up his *omniscience*, a true and undeniable list of our transgressions.

Sir Thomas Brown. Vulgar Errours, book i. ch. ii. p. 7.

I dare not pronounce him *omniscious*, that being an attribute individually proper to the Godhead, and incommunicable to any created substance.
Hakewill. On Providence.

Can atoms be *omniscient*, to discern
(What human wisdom strives, but strives in vain to learn)
What mode mysterious paints the purpling rose,
What melts the current when Mæander flows.

Brookes. Universal Beauty, book ii. v. 273.

Thee great *omniscient*, *omnispective* Power!
Thee first and last—thee only I adore!

Boyse. Poems, part iii. *The only Wish*.

OMPHALEA, in *Botany*, a genus of the class *Monocia*, order *Monadelphia*, natural order *Euphorbiaceæ*. Generic character: male flower, calyx four-parted; nectary a fleshy ring; filaments columnar; anthers two or three: female flower as the male; style very short; stigma three-cleft; capsule three-celled, with a nut in each cell.

Two species, natives of Jamaica.

ON, Goth. *ana*; A. S. *on*; D. *aan*; Ger. *an*. *On*, as well as *off*, (*q. v.*) is of unknown etymology. When equivalent to *upon*, it is opposed to *off*. See UPON.

It is used elliptically: keep *on*; *sc.* keep moving on the way; a little further *on*; *sc.* the way or course.

On-ward: see BACK-WARD, FORWARD;—keeping *on*, *sc.* the way; proceeding, advancing.

Onwardness; advance, progress.

On, in A. S. is in English *in*; and this corrupted into *an* before a vowel, and *a* before a consonant, has given many adverbs to our Language. *On* day, *aday*, *on* night, *anight*, *on* long, *along*, (*q. v.*) &c. &c.

And brynge *on* lond god y now.

— On him baptiz'd

Heaven open'd, and in likeness of a dove
The Spirit descended, while the Father's voice
From heav'n pronounc'd him his beloved Son.

Milton. Paradise Regained, book i. l. 29.

Then toldst her doubting how these things could be
To her a virgin, that *on* her should come
The Holy Ghost, and the power of the Highest
O're-shadow her.

Id. Ib. l. 140.

— Therefore while I

Descend through darkness, *on* your rode with ease
To my officiate powers, them to acquaint
With these successes, and with them rejoyce,
You two this way, among these numerous orbs
All yours, right down to Paradise descend.

Id. Paradise Lost, book x. l. 394.

SAM. A little *onward* lend thy guying hand

To these dark steps, a little further *on*;
For yonder bank hath choice of sun or shade.

Id. Samson Agonistes, l. 2.

When an elephant was gone a pretty way upon one of these, the posts upholding the frame were cut asunder, and thereby causing him to sink down into the next bridge, whence he was convey'd in like manner to the third, and *onward* still to the very bottom.

Sir Walter Raleigh. History of the World, book v. ch. vi. sec. 7.

He [Abraham] had now a right to it, (*jus ad rem*), but would stay God's leisure for the possession of it, four hundred years: *onwards* he takes his livery and seisen and will purchase with money that which the great ower of heaven gave him freely.

Hall. Works, vol. iii. fol. 95. *Sermon preached at Exeter. Gen.* xxiii. 19, 20.

But gather'd by th' *on*-marching enemy,
Returned were like clouds of steel.

Daniel. History of Civil Wars, book viii.

Though to pull back th' *on*-running state of things,
(Gath'ring corruption as it gathers days,) *Unto* the form of their first orderings
Is the best means that dissolution stays.

Id. Musophilus.

This careful husband had been long away,
Whom his chaste wife and little children mourn
Who *on* their fingers learn'd to tell the day
On which their father promis'd to return.

Dryden. Annus Mirabilis.

Next Anger rush'd, his eyes *on* fire,
In lightnings own'd his secret stings,
In one rude clash he struck the lyre,
And swept with hurried hand the strings.

Collins. The Passions. Ode for Music.

ONCIDIUM, in *Botany*, a genus of the class *Gynandria*, order *Diandria*, natural order *Orchideæ*. Generic character: calyx four and five leaved, spreading; lip flat, the base broad, tuberculated; anthers covered, deciduous.

ON.
—
ONCI-
DIUM

ONCL-
DIUM.
—
ONDA-
TRA.

Five species of parasitic, orchideous plants, natives of the West India Islands and South America.

ONCINUS, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*. Generic character: calyx tubular, short, five-toothed; corolla funnel-shaped, inferior, fleshy, border five-parted; berry globular.

One species, *O. Cochinchinensis*, native of woods in Cochinchina.

ONCOMERA, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* setaceous, much shorter than the body, slightly pubescent, the basal joint elongate, slightly attenuated at its origin; the second short, ovate-subcylindric; the remainder rather more slender, elongate, gradually decreasing in length to the apex; the terminal one abruptly strangled in the middle, giving the appearance of a twelfth joint; *palpi* four, unequal, the maxillary much longer than the labial, the terminal joint elongate, obliquely truncate; *labrum* transverse-quadrate; mandibles bifid at the apex; *mentum* transverse; head rather narrowed behind, and produced in front; *thorax* elongate, unequal, the lateral margins deflexed, the base slightly narrowed; *elytra* elongate, sublinear, slightly gaping at the apex; *abdomen* acute at the tip; legs elongate, slender, and simple; posterior *femora* in the males considerably incrassated and slightly bent; *tibiæ* also thickened, angulated at the base, a little curved and abruptly truncate at the apex; *tarsi* heteromorous, with the penultimate joint bilobed.

Type of the genus, *Necydalis podagraria*, Linnæus; *N. simplex*, Donovan, *Britt. Ins.* vol. x. pl. 358. fig. 2.

One indigenous, and three or four foreign species.

ONDATRA, from the Huron name of the animal, *Ondathra*, Lacep.; *Musquash*, Hearne, Richardson. In *Zoology*, a genus of animals belonging to the family *Claviculata*, order *Rodentia*, class *Mammalia*.

Generic character. Incisive teeth large, the upper flatly rounded in front, but not grooved, their cutting edge obliquely truncated; the lower chisel-shaped, and nearly pointed at the tip, longer than the upper; molar four on a side in either jaw, their crowns flat and marked transversely in zig-zag with enamel; nose short, thick, and obtuse; eyes small, lateral, much hidden in fur; ears short, hairy, and scarcely distinguishable; body thick, flattish, covered with a long pile and close down; tail compressed laterally, and of nearly equal length with the body; thighs hidden in the body; feet five-toed; of *fore feet*, the second toe longest, third nearly equaling it, first shortest; claws short, conical, slightly curved and much compressed, thumb has a distinct phalanx with same form and length of claw as other toes; *hind feet* very large, toes distinct, inner and outer opposite each other, and of similar length, middle three nearly of equal length, but longer than others, middle two united by web half the length of the first phalanx, and between third and fourth a short web; claws large, thin, slightly arched, and conical.

At present there is but one species of this genus known; by Cuvier and Illiger it is named *Fiber*, but by Gmelin it was included among the Beavers, *Castor*, till separated by Lacepede, who assigned to it the name by which it is here designated.

O. Zibethicus, Lacep.; *Castor Zibeth*, Gmel.; *l'Ondatra*, Buff.; *Muskbeaver*, Pen.; *Musquash*, Hearne. Length of head and body fourteen inches, of tail eight and a half: the fur, resembling that of the Beaver but shorter, is of a dark umbre-brown on the upper part of

the head, between the shoulders and on the back; on the sides, front of the belly, middle of the chest, sides of the neck and cheeks of a yellowish-brown deepest on the sides, but fading into light wood-brown on the belly and cheeks; chin, throat, sides of the chest, and hind part of the belly ashy-grey. The down on the upper parts, when blown aside, exhibits a leaden or blackish-grey colour from the roots upwards, the tips only being brown; on the under surface the down has a light blue-grey colour and the tips brown-grey. The fore extremities are very short, only the wrist and fingers being seen below the body; they are covered on the outside with short, smooth, shining, greyish-brown hair to the root of the nails; on the inner side some long hairs curve over the wrist, but the palms and insides of the toes are naked; hind legs not longer than those in front, but the feet much longer and turned inwards; on the outside they are covered like the fore feet, but the margin of the soles and toes are edged with long, shining, pale, greyish-white hairs curving inwards, the soles naked from the heels to the claws; tail compressed, convex on the sides with the acute edges vertical, is covered with a coat of thin, sleek, short hairs, admitting numerous small, roundish scales at a distance from each other to be seen through them; its general colour dusky-brown, darker on the upper edge, but of a dingy white on the lower. The Musquash, particularly the male, in the Spring time, has a strong musky smell; it is however eaten by the Indians, and prized by them when fat; it somewhat resembles flabby pork. According to Richardson, this animal is not found lower than latitude 30°, and he has found them as high as 69°, near the mouth of the Mackenzie River. They prefer small grassy lakes, swamps, or the grassy borders of flowing streams where the bottom is muddy: they feed chiefly on vegetable substances; in the Northern districts principally on the roots and tender shoots of the bulrush and reedwall, and on the leaves of several carices and aquatic grasses; and in the Summer they frequent the rivers for the purpose, it is said, of feeding on fresh-water mussels. In Autumn, before the frost sets in, the Musquash builds its conical mud-house, with a base sufficient to raise it above the surface of the water. The spot chosen is generally among the long grass, which assists in forming the walls, from the mud being deposited among it, but the animal does not appear to make any composition or mortar by tempering these together. Within there is a bed of dry grass, and the entrance is beneath the water. When ice is formed over the surface of the swamp, the Musquash makes breathing holes through it and protects them with mud, but in severe weather this precaution fails and many of the animals are destroyed. In the Summer it burrows in the banks of the lakes forming canals many yards in length, at the end of which the nest is placed in a chamber, in which the young are deposited. They produce three litters in the course of the Summer, each consisting of from three to seven young. The districts in which they are most abundant are very liable to inundations which destroy great numbers of them, and in severe Winters, being unable to obtain their usual food, they prey on each other; but their great fecundity repairs this loss in a very few years. The Musquash is watchful, but not very shy, and will come near a boat, but dives on the flash of a gun. It may be frequently seen on the shores of little muddy islands in a rounded form and scarcely distinguishable from a lump of earth, till when alarmed it plunges into the water, and on diving makes a smart

ONDA-
TRA.

ONDA-
TRA.
ONE.

blow with its tail. The fur of this animal is used in the manufacture of hats, and between four and five hundred thousand skins are annually imported into England from North America. The principal season for taking the Musquash is in Autumn before the snow falls, and in Spring after the snow has disappeared, but before the ice fails; but in Winter the depth of snow prevents the house or breathing holes from being seen. The Indians destroy them by spearing them through the walls of their houses, which they approach with great caution as the animals are easily alarmed and take to the water; and so well is the hunter acquainted with the position in which the animals lie that he will often spear four or five at once; and so soon as it appears from the motion of the spear that an animal is struck, the house is broken up and it is taken out. In order if possible to secure those animals which have escaped, all the breathing holes are stopped up, save one, at which the hunter stations himself to spear the Musquashes as they come up for air.

Three varieties of the Musquash have been observed, one entirely black which is very rare, another pied with blackish-brown patches on a white ground, and a third white or albino, which is not very rare.

We saw their stern distorted looks from far,
And *one-eyed* glance, that vainly threaten'd war.
Dryden. Virgil. Æneid, book iv.

This total *oneness* of its threefold bliss
Life, light, and joy, of Nature's vast abyss
No tongue so well can utter, but the mind,
That seeks for somewhat to object, may find.
Byrom. On Trinity Sunday.

Severely humbled to her *one-horse* chair
And the low pastimes of a country Fair.
Jenyns. The Modern Fine Lady, (1750.)

ONEROUS, Fr. *onereux*; Lat. *onerousus*, from *onus*, a load or burthen; which Lennep derives from *ὄνω, tollo, et per metonymiam, sublatum gero. Ονῶ, or ὄνῃμι, is usually rendered prosum, utilitatem fero, or affero.*

Burthensome, heavy, weighty.

And for he nil be importune
Unto no wight, ne *onerous*,
Nor of goodnesse covetous:
Therefore he spareth, it may well been,
His poore estate for to susteen.

Chaucer. The Romant of the Rose, p. 212.

I was afraid for the weake hearers of the scripture through the *onerous* and importable transgression of their pastor, should shew themselves disobedient.

Fox. Martyrs, fol. 124. Letter of Hulderike to Pope Nicholas I.

ONLESS, so *unless* was anciently written, of which a large collection of examples may be seen in Tooke, vol. i. p. 162, *et seq.* He considers it to be *onles* the imperative of the A. S. verb *onlesan*, to dismiss; and to mean *dimitte, sive dismisso*; dismiss this, or this being dismissed. Skinner also refers it (rather) to this A. S. verb; but without fixing upon the particular part. See LESS, and UNLESS.

His aduersaries thought that he shulde neuer haue had such a crosse laide on him *oneless* then he had also outwardly and openly liued in wickednesse. *Bible, Anno 1551. Job, ch. ix. note.*

They thynke that *onlesse* one man's life be payde for the lyfe of another, the wrath of Gods immortall cannot be appeased.
Arthur Goldyng. Cæsar. Commentaries, book vi. fol. 157.

ONEIROCRITICKS.

ONEIROCRI'TICK, *n.* } Fr. *onirocrite, oniro-*
ONEIROCRI'TICKS, } *critique*; Latin of the
ONEIROCRI'TICAL. } Lower Ages *onirocrites*;
Gr. *ὄνειρο-κριτικός; ὄνειρος, a dream, and κριτικός, one*
who can discern, understand, interpret.

"An interpreter of dreams," as Addison explains.

Beside Hippocrates hath spoke so little and the *oneirocriticall* masters have left such frigid interpretations from plants, that there is little encouragement to dream of paradise itself.

Sir Thomas Brown. Cyrus Garden, p. 73.

After having surveyed very attentively all kinds of ranks and professions, I do not find in any quarter of the town an *oneiro-critick*, or in plain English, an interpreter of dreams.

Spectator, No. 505.

A pretense as groundless and silly, as the dreaming *oneiro-criticks* of Artemidorus and Astrampsychus, or the modern chiro-mancy and divinations of gypsies.

Bentley. Sermon 4, p. 124.

Aristotle, in his short Tract *de Divinatione per Somnia*, a little book on ONEIROCRITICKS which, as Anthonie Marten says after Peter Martyr, is "both learnedlie and clarklie written," argues, "that this kind of Divination by Dreames is not utterlie to be rejected, bicause commonlie verie much is attributed thereunto; and those things which be received in a maner of all men, are never altogether false. Moreover there be manie Dreames wherof there may be yeilded a verie fit and convenient reason, which (as experience teacheth) deceive not men, but fall out true; therefore it were not well to despise all manner of Divination by Dreames. Yet we must take heed that we be well advised in admitting of them; seing it is a verie hard matter to shew the causes of them; for that Nature on this behalfe worketh most obscurelie."

Aristotle continues to express his conviction that Dreams are not sent by God. "If they were sent by

Him He would give them to such as are good and wise men, but we see by experience that it is otherwise; for the foolish and simple doo manie times prevaile in this facultie. Moreover the brute beastes have their Dreames; but who will say that God giveth them the power of Divination? . . . seeing also that God is not envious He would not so obscurelie warne them whom He would have to be instructed in the things to com, but He would shew these things cleerelie and plainlie; but Dreames are so darke and obscure that for the interpretation of them men must repaire to Prophets and Soothsaiers."

We have given Aristotle's words as we find them in Marten's version of Peter Martyr's *Common Places*, (part i. ch. v. p. 32.) because the language of the translator is not less racy than the arguments of the original Writer. In the more than 2000 years which have elapsed between the death of the Stagyrte and our own times little if any thing has been delivered more satisfactory than that which he has written above, on the dark subject of Dreaming. Peter Martyr, indeed, combats and condemns the reasoning of the Philosopher; apparently with some fear lest it should be adduced in opposition to the Divine Dreams recorded in Holy Scripture. Such miraculous Dreams, however, tend rather to corroborate than to overthrow the argument of Aristotle. They are manifestly exceptions to his general rule; and by admitting that ordinary Dreams are *not* prompted by the Deity, we are more likely to advert with becoming reverence to such as are extraordinary, and do in truth proceed from a supernatural origin. In that most obscure portion of the Divine economy it pleased God in several instances to prompt the Wicked no less than the Good; and the Christian well knows that in the propagation of Revealed Truth the Almighty has often chosen those instruments which, to the eye of the World, appear the most weak, impotent, and unworthy. If it be a matter of surprise, let it also at the same time be a matter of thankfulness, that it "hath seemed good in the sight" of "the Lord of Heaven and Earth" to "hide these things from the wise and prudent and reveal them unto babes."

The profession of an Oneirocritick was but ill paid in Athens. Plutarch tells us that Lysimachus, a grandson of Aristides, was reduced to poverty so miserable, that he gained a wretched livelihood by interpreting Dreams out of some kind of Table in a stand near a Temple of Bacchus, *ἐαυτὸν ἐκ πίνακίου τινὸς ὀνειροκριτικοῦ παρὰ τὸ Ἰακχεῖον λεγόμενον καθεζόμενος ἔβασκε*. So precarious and inadequate was the subsistence thus obtained, that ultimately himself, his mother, and his aunt, received three oboli apiece daily from the public Treasury in order to support life. (*In vit. Arist. ad fin.*) "Dreams," as Cicero has made his brother Quintus argue in the Ist Book of his eloquent Tract *de Divinatione*, "if of a severer cast, are not neglected by the Roman Statesman. In the memory of all of us an Edict of the Senate ordained the rebuilding of the Temple of Juno Sospita from the Dream of Cæcilia Metella." (i. 2.) "How it is," continues Quintus, "I know not, that the purgative virtues of scammony, and the efficacy of *aristolochia*, (birthwort or snake-root,) against the bite of serpents, should have been discovered in Dreams, but it is plain they were so." (10.)

Of Medical Dreams there are many on record. Plutarch tells us that Pericles, in consequence of a Dream, cured the bruises of a workman who had fallen from a great height while employed in building the Citadel at

Athens. (*In vit.*) Galen reduced an inflammation in his own diaphragm by bleeding himself in the most prominent vein between the thumb and forefinger; (*de Sanitat. tuendâ*, i. 8.) an operation which it may be thought scarcely needed the machinery of a Dream for its suggestion. The same great Physician learned the use of certain aperients and refrigerants in like manner; and one of his Patients obtained his own remedy by Dreaming of a gargle of lettuce-juice. (*Ibid.* xiv. 8. *Præcept.* vii. 9.) In later times Sir Christopher Wren is said to have cured himself of a strangury by refusing his surgeon's recommendation of phlebotomy, and Dreaming that a woman in an outlandish dress gathered dates from a palm-tree and presented them to him. On awaking he sent for dates and was relieved.

To return to Cicero; we need not detail the well-known Dreams which Quintus afterwards recites: (20—29.) those which foreboded the greatness of Dionysius or the cruelty of Phalaris; the thirty years of rule portended to Cyrus by his three ineffectual grasps at the Sun, which on each occasion slipped from his hands; the warning of Juno Lacinia which induced Hannibal to convert into a cheek-plate the small portion of gold which he had abstracted from her statue; or that magnificent *Vastitas Italiae*, the all-devouring Dragon which Jove exhibited to the same great leader in the Council of the Gods, when he forbade him to look back upon the ruin which followed his steps. The Dreams of Xenophon and that of Socrates appear to have convinced Quintus that there was method in these images of sleep. *Mentiri Xenophontem an delirare dicemus?* and some relations by Aristotle, notwithstanding the general incredulity of that great writer respecting Dreams, tend to corroborate his impression. *Singulari vir ingenio Aristoteles et pænè divino, ipsene errat an alios vult errare?* Sophocles, Caius Gracchus, Simonides, Quintus himself, and his brother Marcus Tullius, are then introduced as having Dreamed veritably; and the revelation by a Dream of a murder committed at Megara, (which in various forms and under different names has become part of the capital stock of almost every later Book on Dreaming,) is powerfully related. Whatever falsity exists in Dreams, according to Plato's doctrine, (*de Rep.* ix.) which Quintus zealously espouses, springs, we are told, wholly from the predominance of the two brute portions of the Soul. If temperate habits of body and purity of mental cultivation afford its right ascendancy to the remaining third, our Dreams on the other hand will be tranquil and true; and hence, it may be, arose the Pythagorean veto on beans as an article of diet. Thus the Stoic Poseidonius teaches that men are warned divinely in their Dreams in three different ways: one by which the Mind, from its own likeness to the Deity, looks forward into futurity; a second by means of the countless Immortal Spirits with which the air abounds, all of whom are stamped with certain impresses of Truth; (*in quibus tamquam insignitæ notæ veritatis apparent*;) and a third in which the Gods themselves commune with Mortals.

When Cicero in the IId Book undertakes in his own person to refute these positions of his Brother, he first accuses him of having pleaded his cause unphilosophically by adducing examples instead of arguments; and having thus adroitly evaded the stubborn evidence of facts, he overwhelms him by acuteness of reasoning. With respect to the discipline of temperance which Plato and Pythagoras inculcated as a necessary preparative for veracious Dreaming, he asks, contemptuously, what was the belief

of the latter when he forbade Beans? *quasi verò eo cibo mens non venter inflatur!* He who shoots at a mark all day long, sometimes probably will hit it: is it a matter of surprise, then, that those who Dream all night long should sometimes Dream truly? Doublets must occasionally turn up if we are always casting the dice, but it would be scarcely wise to attribute them to other agency than that of chance. To the affirmation that the Gods warn us in our Dreams, it may be sufficient to show how much trouble they would in that case expend to little purpose. For how few of us remember, understand, or obey our Dreams! how many deride their observation as an anile superstition! Why, again, should not the Gods warn us in our waking moments rather than in those of slumber, when the former mode would possess greater distinctness and certainty? Why should they choose a circuitous method requiring interpretation, when they have it in their power to act directly and immediately? But *some* Dreams, you tell me, not *all* are true. How, then, are we to distinguish between them? If the Gods minister those which are true, whence proceed those which are false? Or which is more likely of the two, that the pure essence of the Immortals should stoop everywhere over the truckle-beds of snoring men, in order to exhibit mystic and ambiguous symbols, which the Dreamers, when they awake in terror, may carry on the next morning for the exposition of some idle conjecturer; or that the Mind should represent to itself in sleep images of those things which it has perceived while waking? Away with all these riddles and rebusses! Is it for my advantage that you give me advice which is unintelligible? What would you say to a Physician who should prescribe to his Patient a

Grass-crawling, earth-born, bloodless house-bearer,

when he meant him to swallow a decoction of snails? Yet such for the most part is the process in Dreaming. Take the Dream which Chrysippus relates. A man Dreamed that he saw an egg hanging from the tester of his bed, and the Oneirocritick pronounced that there was a treasure under the couch. The Dreamer dug accordingly, and found some gold set round with silver; part of which latter he presented to the Sage. "Was there no gold?" asked the wise man; "if not, what meant the yolk of your egg?" As if forsooth no one ever Dreamed of an egg without discovering a treasure! and as if there were any necessity first for the obscure intimation, secondly for the open interpretation; for both the visionary type and the substantial antitype! Dark and misty Dreams therefore are unsuitable to the majesty of Heaven; and those which are more plain are but reflections of our waking thoughts. As for the Dream-diviners, only look to their contradictions. A candidate for the Olympic stadium Dreamed that he was whirled along in a four-horse chariot. "You will win," said the first interpreter, "success is implied by the strength and swiftness of the horses." "You will lose," said the second, "do you not see there were four who ran before you?" An eagle appeared to another racer in his Dream. "Victory! victory!" cried one whom he consulted, "it is the most rapid of all Birds." "I cannot congratulate you," said another, "for your Bird drove all the others before it."

Such is an outline of the arguments upon which Cicero rejects Divination by Dreams, condemning it as a superstition which may rob Sleep itself of its powers of

soothing, and convert it into a bitter fountain of terror and alarm.

Pliny says but little on Dreams. Amphietyon, as he tells us, was the first person who addicted himself to their interpretation. (vii. 56.) According to Tatian, however, (*contra Græcos*, p. 160.) and Clemens Alexandrinus (*Strom.* i. p. 306) the Telmessians in Caria claim the ambiguous honour of this invention. Infants, for the most part, Dream from their very birth, (a position respecting which Aristotle contradicts himself;) yet some men never Dream at all. "And if such chance, contrarie to this custome, for to Dreame ones, it hath been counted for a signe of Death, as we have seene and proved by many examples and experiments. And here in this place there offereth it self a great question, and very disputable pro and contra, grounded upon many experiments of both sides: namely, Whether the soule of man while the bodie is at rest, foreseeeth things to come? and how it should so doe? or whether this be a thing of meere chance and altogether conjecturall, as many others be? And surely if we goe by histories we may find as many of the one side as the other. Howbeit all men in manner agree in this, that Dreames either upon drinking wine and full stomache, or els after the first sleep, are vaine and of no effect. As for sleepe, it is nothing else but a retreat and withdrawing of the soule into the mids of itself. Evident it is, that Horses, Dogs, Kine, Oxen, Sheepe, and Goats doe Dreame. Whereupon it is credibly also thought, that all creatures that bring forth their young quicke and living, doe the same. As for those that lay egges, it is not so certain that they Dreame: but resolved it is that they doe sleepe." (x. 175.)

If anise seed "be hanged about the bed upon a travers or curtain, or otherwise sticked to the pillow or bolster, so as folke may have the sent thereof in their nostrils whiles they lye asleepe, it riddeth them of troublous Dreames and fantastical visions." (xx. 17.) On the contrary, Pycnocomon "causeth troublesome and unquiet Dreames if one drinke a dram thereof in wine." (xxvi. 8.) "We be given most to Dreams at Spring and Fall, also when we lie with our face upward, but never groveling." (xxviii. 4.) The first of these assertions is drawn from Aristotle, and has furnished Plutarch with a subject for inquiry in one of his *Symposiac Questions*. (ix. 10.) Certain parts of a Chamæleon have wondrous properties in regard to Dreams. "As for the left shoulder I am ashamed to relate unto what monstrous Spirits Democritus doth consecrate it, and namely how by the virtue thereof, a man may cause what Dreams and fantastical illusions hee listeth, yea and make those whom he will himselfe to imagine the same apparitions. As also how the right foot of the said beast driveth away all such straunge visions." (xxviii. 8.)

We ought not to omit a superstition which from many passages of the Tragedians appears to have prevailed among the Greeks, that the Gods, Ἀποτρόποι, might be conciliated by sacrifices to avert the evil effects of Dreams; or that a similar good result might be obtained by relating the Dream in the face of the rising Sun; the influence of the Lord of Day being directly opposed to that of Night. Thus Clytemnæstra, having seen the Shade of Agamemnon in her sleep, was overheard narrating her terrors at Daybreak;

ταῖς αὐτὰς τοῦ παρόντος, ἤνυχ' Ἠλίου
δαίμνισι τοῖνας ἐκλυον ἐξηγουμένην.

So also Iphigenia repeats the Dream which she interprets as prognosticating the death of her brother,—a Dream, one of the Images of which, “the single remaining column,” has suggested to Edwards, the Author of the *Canons of Criticism*, the finest and most touching Sonnet in our own, or perhaps in any other Language. Iphigenia, under the recollection of the seeming Earthquake which overthrew the Royal Palace at Argos, so that amid its ruins—

λίξω πρὸς αἰθέρ', εἰ τι δὴ τόδ' ἐστ' ἄκος. 43.

Artemido-
rus.Division
andDefinition
of Dreams.Dreams re-
lating to
the parts of
the Body.

To Artemidorus, an Ephesian, who flourished in the reign of Antoninus Pius, we are indebted for the reduction of the Art of interpreting Dreams to a regular Science. His life was devoted to collecting authentic reports of Dreams by travelling, correspondence, and the purchase of MSS. ; and the product of his labours is a Work in V Books under the title of *Oneirocritica*, which has been learnedly edited by Rigaux, and translated into English, although not without considerable mutilation, by Bernard Alsop, in 1644. It is to that version we shall principally have recourse. The Sage commences by distinguishing between *ἐνυπνίον* and *ὄνειρος*, *insomnium* and *somnium*. With the former we have nothing to do ; it quits us together with sleep, and no consequences can be deduced from it. The latter alone is worth the Philosopher's attention, and appertains to Truth. After distributing Dreams into *speculative*, (*θεωρηματικοί*), which are actual scenic representations, and *allegorical*, which symbolize future events, we obtain the following precise definition of a Dream, announced with not a little confidence, as the original words will evince : *πρῶτον μὲν εἰρήσεται μοι τίς ὅρος καθολικὸς ὄνειρου, οὐδὲν ἀντιθέσεως δεόμενος, εἰ μὴ πρὸς φιλονεικούντας λέγοιτο*. A Dream is a motion or fiction of the Soul in a diverse form (*πολυσχημῶν*) signifying either good or evil to come. In the outset, therefore, the question of the Prophetical nature of Dreams is begged.

As a general rule in distributing the members of our own Body when seen in Dreams, we must bear in mind that the head signifies the father ; the right hand the mother, the son, and the brother ; the left hand the wife, the friend, the daughter, and the sister. Of the Dreams affecting these various members it may be thought that a few are no more than *ægri insomnia*, which do not often occur to the sane and healthy. Thus to Dream you have hog's bristles instead of hair is great and violent danger, such as the hog is commonly subject to. To Dream of Emmets going in at the ears foretells death to most persons, for they are daughters of the Earth, and go again to the Earth : but to Sophisters, Philosophers, and Schoolmasters, it is good, for Emmets represent children which will give them audience. So also to Dream you have ass's ears is good only to Philosophers, to others it is servitude and misery. Blindness is cross to Navigators and such as contemplate the Stars and are Wisards ; but to Poets this Dream is good, for they have need of great sleep when they would write verse. To a cony-catcher (*ἀνδρὶ πανούργῳ*) and a fair woman to have more than their natural number of eyes is not good, for *he* shall have more eyes than he wishes to watch his fraudulent tricks, and *she* will be surrounded by incautious suitors and detected in her intrigues. The

person bent upon foreign travel who Dreams that he has a wry neck, and that his head is turned so that it looks backward, should on every account forbear his intended journey, or if it be already commenced he should hasten home. The internal parts of the Body have many remarkable significations : the Liver betokens the Sun, Food, and a Fog ; the Gall, Melancholy, Money, and Women ; the Spleen, Pleasures, Laughter, and Wassail ; “the Belly and Guts, Children, for they cry oft for meat, likewise they signify usurers ;” the Loins, Brothers and Cousins.

Most exercises of work or handicraft which a man has especially learned are good : but “to dye leathers is ill to all and revealeth secrets ; and to see medicines is worst of all.” “To play with a top is pain and travail, whereof notwithstanding shall come good.” To play upon a Bagpipe is good to all ; upon the Harp indicates Gout to some “because of cords and nerves.” All herbs and roots which have a strong smell when eaten reveal secrets and signify anger with her attendants ; laxative herbs are good for those in debt ; herbs and roots which have a head and are good nourishment signify profit ; as a carrot strength to them which are at law for inheritance, for we pluck them out of the ground with their heads, branches, strings, and veins. Radishes or Turnips being curled, signify vain hopes, for they make a great show, and have but little substance. Pompions are good to get friendships and affinity, for other affairs not so good. In opposition to the Arabian Oneirocriticks, Artemidorus notices that to eat roasted meat, especially pork, signifies profit. To eat venison, little birds, or a green goose is good ; to eat fresh fish is good, “so they be not little ones, because they are nothing but little bones, and signify enmity towards their familiar friends.” “I know by experience,” continues the Sage with marked solemnity, “that to Dream to eat the flesh of any stranger is good.” In his estimate of that Dream in which we eat cakes with cheese, (a Dream which is not remarked as an uncommon one,) Bernard Alsop has made an amusing interpolation. Artemidorus contents himself with saying, *πλακοῦντες οἱ τετυρῶμενοι δόλον καὶ ἐνεδραν σημαίνουσι*, which the excellent translator renders, perhaps owing to some national pique, Cakes with Cheese “signifye deceit and treason—by Welshmen.”

To see a Sheep is good, especially to “Sophisters, Pedaunts, and Schoolmasters.” To ride on a Ram, particularly over a plain Country, is good for those who wish to be rich ; *φιλολόγοις καὶ τοῖς ἐπὶ τὸ πλουτεῖν ὀρμωμένοις* : which words Alsop, who takes not a few liberties with his original, has rendered “Orators, Attorneys, Proctors, and all those who desire to heap up gold and silver by their labour.” Asses are good for friendship and company ; and signify wives, companions, and friends, being not proud above their estate, or fierce, but gentle and very obedient. Oxen in labour are good ; in a herd they are “trouble, divulgation and peril.” “To see a gentle, familiar Lion, and fawning, signifies good and profit ;” and as a general rule, since wild beasts represent our enemies, it is good to overcome them. A Wolf signifies the year ; an Ape a malefactor ; a wild Boar, rain, tempest, and a rude and angry wife. To be addressed or to be presented with a gift by a Dragon, is an excellent prognostic. “The Aspe and the Adder signifie many and rich wives. I have knowne by experience that these two beasts coming towards us wreathed and wound together have been arguments of good, especially if they bite us.” To catch fish is profitable,

ONEIRO-
CRI-
TICKS.Exercises
and sports.

Vegetables.

Roasted
meat.Other escu-
lents.

Animals.

ONEIRO-CRITICKS. excepting to those who follow sedentary professions and to Schoolmasters; the former cannot at the same time fish and follow their business; the latter shall have foolish scholars, because fish are mute. "Frogs are abusers and praters. But to see them in a Dream is good for those which live upon the Commons. (τοῖς ἐξ ὄχλου ποριζόμενοις.) I knew a man who dreamt that he beate with his fystes, and the knuckles or joynts of his fingers upon Frogges, and it fell out that his master gave him might and authority over all the affayres of his house."

Dignities.

A Bay tree is good for "Physicians, Poets, and Divines." (ἱατροῖς καὶ μάντεσι.) To be made a King is very good for a "Philosopher, Poet, or Soothsayer;" (φιλοσοφῶ καὶ μάντει;) to be a Town Clerk (γραμματεῦν) is to do another man's work with pain void of profit;" "to be made a Bishop (τὸ ἱρᾶσθαι καὶ ἱερωσύνην παρὰ δήμον λαβεῖν) is good for all, only except those who would be secret." To eat books is good to Schoolmasters, and to all who make profit by books. "Partridges signify men and women, but most often women without conscience, ungrateful, hard." Artemidorus adds, that Partridges are the only Birds devoid of Religion: μόνοι τῶν ὀρνίθων θεῶν σέβας οὐκ ἔχουσι. It is good to whip and scourge every one over whom we have authority, except a Wife; it is always good to be whipped with rods or with the hand, and signifyeth profit; but with leather, reeds, or cudgels is not good. To Dream to be dead is good for Fathers, Poets, Orators, and Philosophers; the first shall have children who will live; the others shall compose Works worthy of remembrance. "Moreover, I have experience that it is good for those which are in heaviness and fear, for those which have suit for inheritance, and which would buy lands." To weep and grieve is joy and mirth, provided there be some cause for the Dreaming sorrow.

Dying.

Marriage.

It is good to see many rats playing and sporting. To see a Cook in the House is good for those which would marry, for marriages are not made without Cooks. We do not, however, receive any very favourable impression from their Works of the nuptial happiness either of Artemidorus or of his Translator. Among other passages of similar tendency, the former writes, ἄλυσις γυναικα σημαίνει, διὰ τὸ ὄνομα καὶ τὸ καθεκτικόν: which the latter, connecting with it and condensing the remainder of the chapter, renders, "A chaine is a Wife, detaining, ill successe of affayres, and hinderance."

Cautions relative to interpretation.

On concluding his III^d Book, Artemidorus appears to have felt some slight misgiving relative to the value of his Art; and in order to remove any impression which may have been stamped upon his readers by the discovery of certain contradictions in his precepts, he offers a short apology for their existence. Nothing, he assures us, can be more difficult than to adjust the temperament and mixture (τὴν κράσιν καὶ τὴν μίξιν) of things seen in our Dreams, since occasionally they wear the semblance of contradiction. But contradiction cannot coexist with Truth. It is important, therefore, that we should observe the order of precedence in our Dreams, and judge accordingly of good and evil. One other matter is to be remembered, from which the Oneirocritick derives considerable advantage, namely, that the fulfilment of Dreams is indeterminate in point of time.

Astram-
psychus

The Vth Book consists entirely of Examples, among which there is scarcely one which would repay the trouble of transcription. Rigaux has annexed to his Edition of Artemidorus, the *Oneirocritica* of Astrampsychus, a

VOL. XXV.

Greek author of uncertain date, comprised in 100 Iambics, and a similar Work by Nicephorus, Patriarch of Constantinople, extending to 146. The precepts of the latter, in order to increase the difficulty of composition, are arranged in divisions marshalled in the order of the Alphabet, so that each line of each separate division commences with the same letter. These Poetical pieces are followed by the *Oneirocritica* of Achmet, a Physician, who from internal evidence appears to have been a Christian. They are written in Greek, and detail at very considerable length the Oriental interpretation of Dreams. The concise and abrupt style in which they are written forbids abridgement; and they form rather a series of heads than a connected Treatise. We trust, however, to compensate the inability which we feel to present our readers with a specimen from this Work, by abstracting the particulars of another from the pen of a native Arab, which we shall presently have occasion to notice.

ONEIRO-CRITICKS. and Nicephorus.

Achmet.

Macrobius.

Macrobius, in his *Commentary* upon the *Somnium Scipionis* of Cicero, has distributed Dreams into five principal classes: 1. *ὄνειρος*, *somnium*, or the legitimate Dream; 2. *ὄραμα*, *visio*, a waking ecstasy; 3. *χρηματισμός*, *oraculum*, a divine Dream procured by sleeping on some particular consecrated spot, a common mode of Divination frequently mentioned by profane writers, and alluded to by Isaiah, when he speaks of those who ἐν τοῖς μνήμασι καὶ ἐν τοῖς σπηλαίοις κοιμῶνται διὰ ἐνύπνια: (lxv. 4.) 4. *ἐνύπνιον*, *insomnium*, a Dream which may be traced to Physical causes, as redundant health, excited imagination, repletion, hunger, thirst, indigestion, fatigue, or any passion roused immediately before falling asleep; 5. *φάντασμα*, the floating images which arise being sleeping and waking. The last two species he considers unworthy of regard. Virgil has stigmatized *insomnia* as *falsa*; and their name, as Macrobius tells us, has been given them because *unā cum somno avolant, et pariter evanescent. Hinc et insomnio nomen est non quia per somnium videtur, sed quia in ipso somnio tantummodò esse creditur dum videtur, post somnium nullam sui utilitatem vel significationem relinquit.* To the *φάντασμα* he assigns the *ἐφιάλης*, or Nightmare; and neither from it, nor from the *insomnium*, does he think any knowledge of futurity can be derived. Of the other three kinds belonging to Divination, the first two are easily interpreted. In the Oracular Dream, some grave personage, a Parent, a Priest, or even a God, openly declares matters which will or will not happen, which should be done or avoided; in the Vision a distinct scenical representation is afforded to the eye; but in the *ὄνειρος*, the Dream proper, every thing is figurative and symbolical, and needs unravelling. The *Somnium* is subdivided into 1. *proprium*, when the Dreamer himself is active or passive; 2. *alienum*, when some one else appears to be so; 3. *commune*, when himself and another jointly are so; 4. *publicum*, when the transaction affects the public welfare; 5. *generale*, when the Sun, Moon, and Stars, or the whole Universe, form the subject. The Dream of Scipio presents specimens of all the subdivisions in one. (i. 3.) This quinquarticular distribution of Dreams may be found almost verbatim in a Tract by St. Augustin, *de Salutaribus Documentis, Opera*, iii. 363.

The interpretation of Dreams, indeed, frequently occupies the notice of the Fathers of the Church. In the Tract of Tertullian *de Animâ*,—one of the most ingenious and not one of the least obscure Works which has proceeded

Tertullian, de Animâ.

ONEIRO-
CRI-
TICKS.

from the pen of that remarkable Writer—occurs a long and important passage concerning the nature of Dreams. It is by no means easy at any time to transmute the Latinity of the Carthaginian Father into another Language, and the subject which he treats in this instance not a little increases our ordinary difficulty; but his reasoning, so far as we comprehend it, appears in brief to be as follows. After recounting various Philosophical opinions concerning the nature of Sleep, and inclining to the notion of the Stoics who define it a relaxation of the power of the senses, it remains, he says, to state a Christian opinion concerning Dreams—*ut de accentibus somni*—as he untranslatably styles them. When the Body sleeps, it takes its own peculiar refreshment, but that refreshment not being adapted to the Soul, which does not rest, she, during the inactivity of the bodily members, employs her own. So a gladiator without arms, or a charioteer without his chariot, may each respectively exhibit the movements and gestures belonging to his Art; and every process of those exercises may appear to be represented, although not a single act be performed in reality. He then nicely distinguishes between the hallucinations of insanity and of Dreaming. The latter result not from unsoundness of mental health, but agreeably to the course of Nature; the Intellect is under a shadow, but it is by no means extinguished.

He next proceeds to reject the doctrine of Epicurus, in which Dreams are considered altogether idle and fortuitous; for who is there, he asks, so altogether disencumbered from the attributes of our human state, as not at some time or other to acknowledge that a Dream has been verified? Then running through many of the well-known common-places on Dreaming, he expresses his belief that future honours and dignities, medical remedies, thefts, and treasure, have at times been revealed by Dreams. Many Dreams, he thinks, may be attributed to the agency of Demons, some of which are true and agreeable, although they are mostly vain, inefficient, and turbulent, full of mocking and impurity; for it is but natural that images should resemble the substances which they shadow out. Dreams also proceed from God as one portion of Prophecy. Some arise from that intensity with which the Mind directs itself to particular objects; although Dreaming is by no means a voluntary operation. There is another class springing from neither divine nor demoniacal influence, not reflecting mental images, out of the pale of reasoning, of interpretation, and even of narration itself, and which must be referred to *Ecstasis*—a state which he has before described in words which we dare not quit, as *excessus sensus et amentie instar*; the condition into which God threw Adam during the formation of Eve. c. 45—47.

Lactantius. In a short passage of his Tract *De Opificio Dei*, Lactantius expresses his conviction of Divine agency in Dreams. The undoubted testimony of History, he says, frequently presents us with remarkable verifications of Dreams, and part of the economy of Prophecy depends upon them. Virgil's evidence may be admitted that they are neither always true nor always false. False Dreams are connected solely with Sleep. Those which are true are sent by God, in order that we may learn impending good or evil by their revelation. (18.)

Cyprian. Cyprian affirms that he was instructed by a Dream to mix wine with water in the Eucharist. (Ep. 63.) St. Basil discreetly recommends those upon whom Dreams make undue impression to rest content with Scripture, and not

to allow the phantasms of Sleep to counterbalance the doctrines of Salvation. (Ep. 120.) At a much later date, St. Bernard of Clairvaux wrote a very neat and satisfactory Sermon *de Somniis*. The Devils, he says, often disturb men at night by Dreams; and not unfrequently attacking them with more open force, whip them bodily. Both Fasting and Repletion will occasion Dreams, nay the Mind of itself alone will furnish them; but many arise from Diabolical illusions. We must not, therefore, too easily give credit to Dreams, notwithstanding some are true, lest Satan, transforming himself into an Angel of Light, should deceive the unwary. Moreover, the verification itself is now and then contrived by the fraud of Devils, in order to increase their power of misleading the over confident. Finally, says the good Father, in his peroration, *in omni vita tua contemne auguria et somnia et pone spem tuam perfectè in Dei providentiâ, et in hac vitâ et in futurâ venient tibi prospera. De modo bene vivendi. Serm. 88.*

The Schoolmen approached the subject of Dreams after a widely different fashion, and there are some nice points examined by Thomas Aquinas, in the investigation of which we cannot venture to follow his steps. Tom. iii. *Quæst. lxxx. Art. 7.* On the general nature of Oneirocriticks, he inquires in another place, *utrum divinatio quæ fit per somnia sit illicita?* In favour of its lawfulness, he argues that it is not unlawful to apply to God for instruction, and that God sometimes gives instruction by Dreams; that holy men, as Joseph and Daniel, have been skilled in this Art; that it is irrational to deny any thing which is affirmed by general experience, but general experience affirms that Dreams give indications of future events, and therefore that since they belong to Divination, it is lawful to interpret them. The last syllogism appears in all points a manifest *petitio principii*. On the other hand, he advances the prohibition in *Deuteronomy*, xviii. 10., and his conclusion appears to be that if Dreams are suggested by Angels, they may be investigated, if by Devils, it is as well to leave them alone. Nothing seems wanting for the application of this excellent advice, unless it be a criterion by which the origin may be discovered. (Tom. ii. *Quæst. xc. Art. 6.*)

We come next to the Orientalists, by whom the Art of Oneirocriticks has been largely cultivated. Pierre Vattier, a Physician, and Regius Professor of Arabic in Paris, published, in 1664, *L'Onirocritique Mussulman*, a translation from the Work of Gabdorrhachaman, the Son of Nasar, whom he supposes to have flourished in the II^d Century of the Hegira. This Tract, like that of Artemidorus, effectually confirms Cicero's remark, *nihil tam præposterè, tam inconditè, tam monstruosè cogitari potest, quod non possimus somniare*; nevertheless, we can scarcely persuade ourselves that the heaviest indigestion which gluttony ever brought down as its own punishment, could produce some such Dreams as the son of Nasar professes to expound.

Dreams, we are told in the outset, form one of the forty-six parts of Prophecy; and that man who undertakes their interpretation should understand the Book of God, and remember the words of his Apostle, whose name be perpetually blessed. He should also comprehend Arabic Proverbs, and the Etymologies of Words; the distinction of men, of their habits and of their conditions; he should be skilled in the principles of Interpretation; and possess a clean Spirit, chaste morals, and the Word of Truth. Various examples are then given of the necessity for each of the above attainments. Expla-

CRI-
TICKS.

nations are often to be drawn, in the first place, from the Koran; as for instance, if an Egg be seen in a Dream, who can doubt that the Dream concerns Women, when he remembers the text, "Women are like an Egg hidden in a nest?" Secondly, we must often decide from the Words of the Apostle; e. g. Mohammed, having once called a Shrewmouse a little adulteress, it follows, that all Dreams concerning Shrewmice relate to faithless wives. Thirdly, Proverbs and words in Dreams realize themselves to the very letter, or its contrary. Fourthly, Dreams vary in an essential manner, according to the distinction in men's moral habits; thus, if a man of probity dream that he has his hands tied, no more is meant than to signify his aversion from ill; but if he be a wicked man to whom such a Dream occurs, it betokens the multitude of his crimes, and his final damnation. So, too, there is a variation according to the difference of time: to be mounted on an Elephant by night portends some occurrence of great show but little profit; whereas a ride on the same animal by day is a sure forerunner of the repudiation of a Wife. In their estimate of the most veritable Dreams, the Arabs agree with the Greeks and Romans, and place them, like the *ὑπάρ* of Homer, just before dawn:

Ὀὐκ ὄναρ, ἀλλ' ὑπάρ ἰσθλον, ὃ τοι τυτλίσμινον ἵσταται.

To these they add such as occur during a noontide nap. Moreover Dreams are always most likely to prove true which happen during the season of ripe fruit.

General
Principles.

The first duty of a Musulman Oneirocritick may be thought sufficiently obvious. It is that he have a right understanding of all that is told him by the person who makes report of the Dream; for if the whole Dream be confused, and cannot be reduced to principles, it must be considered of that kind which are called inexplicable. A resolution, to which he must strictly adhere, involves in it something of a pious fraud; if any Dream be reported to him of which the true interpretation tends to the commission of ill, he must put a good face on the matter, and give an answer, less true, indeed, but more profitable. He must carefully remember, that trees, beasts of prey, and birds, denote men generally; but in each of these he must have regard to the species; thus a palm-tree marks an Arab, but a walnut-tree a native of Gagemia; the former a useful man, endowed with many good qualities; the latter a cheat and a quarrelsome person, for the following plain reasons, that nuts make a noise when they are shaken, and that no one can get at their kernels without having first cracked the outer shell. A Bird denotes a great traveller; but a Peacock, a Vulture, or an Eagle, implies a King of Gagemia, with his rich attire, his inexhaustible treasures, and his superb retinue. The wise man who dreams of a Crow, or a Magpie, will beware lest he encounter some impious and irreligious hypocrite.

Trees.

Birds.

A Priest.

An Orator.

The Planets.

We cannot pretend to enter upon all the various Dreams to which Gabdorrhachaman has appended resolutions, and the Reader probably will think that, as it is, we extend our specimens too widely. Hapless is the Priest who, in his Dream, makes a call to Prayer without obtaining a congregation, he will inevitably prove a thief; yet more hapless the Candidate for Oratorical distinction who dreams that he has made a speech, unless he be fully qualified for his task; he will assuredly be crucified. Of the Planets, Saturn represents the Chief Justice; Mars the Commander-in-Chief; Jupiter the Lord Treasurer, or Lord Chamberlain, or, occasionally, some other distinguished personage; Venus, the Queen; and Mercury,

the Home Secretary. Whoever dreams that he devours the stars, will live free of expense at some great man's table. To roast meat is a sign that the Dreamer is abusive, and a backbiter; to eat roasted meat is a sure forerunner of little profit and much care; to boil a kettle with meat in it, is a proof that gain will be derived from some householder, who is represented by the kettle; but, alas for him whose kettle is without meat! he will affront a householder and suffer for his pains.

Especial note should be taken of the sort of house which presents itself in our Dream; one plastered and unknown to us is the tomb; one unknown but not plastered is a wife. If any man dream that he is unroofing his own house he will become poor; if that of another, he will become rich at that other's expense. Fruits differ widely in their prognostics. Apples betoken professional advantage in proportion to the quantity eaten. Oranges in great numbers foretell riches, and one or two signify virtuous children; neither is their yellow colour, although generally ill-omened, to be feared as unpropitious; but pears, apricots, saffron, quinces, and melons, notify distress and sickness. White and red grapes are eminently fortunate, they are, indeed, the juice of the good things of this World. Not so the black kind, especially when out of season; disease will follow them. Sometimes, from the number of stones which they contain, may be estimated the number of bastinadoes which he who eats them will receive; sometimes the number of pimples which will blush upon his skin. In a word, no good can arise from any black grape, because when Noah, to whom God grant Peace, cursed his son in his wrath, the grapes which he held in his hand turned to a dark colour.

To dream that we have our heads beneath our shoulders without their being severed at the neck, is a sign of dismissal by a superior, and of consequent poverty; change of hair from black to white betokens approaching honours; increase of the length of beard, notifies care, discontent, and misfortune, proportioned to the elongation. To be shaved is ill-omened; to be anointed, provided the oil be fragrant, the contrary. The sprouting of whiskers to one who usually shaves them is a sign of debt. As we eat our own brains, or those of another man, we shall live respectively at his or our own cost. He who dreams that his tongue has grown to an immoderate length, will vanquish his opponent in argument, if he be engaged in any controversy; if otherwise, he will utter much folly and ribaldry; but under all circumstances, and on every occasion, few Dreams can be more fortunate than that in which a man sees the tongue of his wife amputated at the root.

Each tooth points to a different relation: the two in front denote children, brothers, and sisters, the next two uncles, aunts, and cousins, and so on to the more remote. The reader of Herodotus (vi. 107.) will remember the evil augury which Hippias drew from the loss of his last tooth on the sands of Marathon; but the Khalif Almansor took a sure mode of obtaining a happy prognostic, when he dreamed that his complete set fell out from his jaws. The first interpreter whom he consulted informed him that all his relations would die. The Commander of the Faithful was angry, and dismissed the melancholy Seer with abundance of hard words. "God has given you an evil mouth, and put into it evil words. Quit my presence, and take the curse of God in your company!" The second Oneirocritick who was summoned did not require further warning; he was

one, we are told, experienced in addressing the Great; and he modified the unpleasant answer, so as to assure the Khalif that he should outlive all his connections. Almansor smiled graciously at the announcement, and ordered the agreeable Prophet 10,000 drachms of gold.

Horses.

The son of Sirin was informed one morning by a man already affianced, that he had dreamed his betrothed was changed into a little Ethiopian Dwarf. "Hasten to complete your nuptials," was the advice which he received; "the blackness of the Bride signifies great riches, the smallness of her stature brevity of days." The Lover obeyed, and in a few days buried his newly married wife, and inherited her great wealth.

Asses.

The colour of Horses is important; black, white, and bay are fortunate; chestnut is better than any other colour, but the happiest of all is the steed with four white feet and a star in his forehead. A black mare signifies a rich wife; a dappled grey one of extraordinary beauty; a greenish-bay (?) a devotee; a dark bay a skilful musician; a bright chestnut, one wealthy and pious. Asses are yet more lucky than Horses, and the rules in regard to their colours are alike. The more signs of blows and bruises which an Ass exhibits, the better is it for the Dreamer. To buy an Ass, and to pay for it in ready money, prognosticates success. To kill an Ass in order to eat its flesh, foretells treasure trove; but to drink an Ass's milk is a sign of heavy sickness.

Resurrec-
tion-men.

Resurrection-men should be careful to whom they relate their Dreams. "What answer," said a stranger to the son of Sirin, "shall I convey to a man who has dreamed that he broke some eggs, and took out the white, leaving the yolks in the shells?" "Tell him to come and consult me in person," replied the Oneirocritick. It was in vain that the same message was often repeated; the son of Sirin refused all answer, till the messenger avowed that himself was the Dreamer, and confirmed the statement by an oath. "Seize that man and bear him before the Cadi, for he disinters and robs the dead!" was the declaration which immediately overwhelmed him with terror and astonishment.

Antidote to
evil Dreams.

On awaking after a bad Dream it is prudent to spit on the left side, and to ask God's protection from Satan. This precept is thought to be derived from the Prophet, (to whom God grant Peace and Mercy,) and it is a sufficient antidote against the most evil Dreams. Another precept traced to the Prophet, with which we shall conclude our notice of Gabdorrhachaman, is that "a Dream belongs to the first interpreter." Mohammed, it seems, on two separate occasions, explained a Dream which a woman related to him in the absence of her husband—namely, that the main beam of their house was broken—as a sign that her husband would return in safety, and that she would bear a son. On a third application with a similar Dream, the Prophet was not at home; and Gaira replied in his stead, that the woman's husband would die, and that she would produce a daughter. On Mohammed's return, the Dreamer complained of the evil change in interpretation, and was silenced by the above dictum. The event was according to the prediction; and Gabdorrhachaman easily discovers a reason for the anomaly. There was some difference, he says, either in the times or else in the woman.

Cardan.

Of modern Oneirocriticks, Cardan, who has written Four Books *Somniorum Synesiorum omnis generis insomnia explicantes*, in the course of which he is largely indebted to Artemidorus, was an arrant Dreamer in his own person; and the last Chapter of his IVth Book

contains more than fifty examples derived from himself. Many of them are specimens of egregious trifling, some probably are not confined very strictly within the bounds of Truth. Thus when he was in doubt whether the Faculty of Medicine would associate him, he dreamed towards dawn, *dum illucesceret*, (a season, it will be remembered, of no ordinary importance to the Dreamer,) that he saw Alexander the Great and Hephæstion engaged in a Lion hunt. Hephæstion bore a club, and Alexander, who was unarmed, endeavoured to tear asunder the jaws of the Royal Beast, whom he had seized with his hands. At first the hero appeared likely to succeed, till the Lion griped his hands fast, and but for the aid of Hephæstion's club, he must have perished. No brains but such as those possessed by Cardan would have been able to connect this adventure with his own existing circumstances: *Significavit Alexander de causâ agi quæ jam diu periisse videbatur. Ephemionem existimo Lucam fuisse Cruceium, medicum, amicum Sfundrati . . . Profuit hoc somnium non mediocriter ad consequendam victoriam causæ quam profligatam existimaveram.* (253.)

On the night of the 10th of November, 1539, Cardan dreamed that he saw his stomach full of food taken out of his body and replaced. He was discontented at the operation, and remarked that his stomach would never digest so well as it had done heretofore. On the day following, all the *anagnostæ* of his left hand were cut, not however so that any of them fell out. This qualification had been signified by the replacing of his stomach, just as its extraction and consequent deterioration of digestive virtue had typified the loss of power in his hand. *Et ventriculus significabat familiarem; continetur enim intra corpus ut familiaris qui in domo alitur; et est exanguis quia mihi sanguine conjunctus non erat.* (255.)

The payment of some money by a debtor who had long and obstinately resisted, and who at length was compelled to refund by the interference of the Criminal Judge, was presignified by a Dream, in which Cardan imagined that he was eating the egg of an Ostrich at that Magistrate's table. No one can fail to discover the analogy between the fact and its symbol. *Orum enim illius avis concoctu contumacissimum, ipse vero avis magna, potens ac nobilis qualitatem debitoris declarabat.* (259.)

Cardan's literary efforts were frequently (perhaps we might justly say always) the result of Dreaming. On the night of the 1st of January, 1543, he dreamed that, in company with some friends, he inspected a beautiful marble Tomb, covered with ancient inscriptions. This Dream was plainly verified by his undertaking and finishing in that year a *Tract de Sapientiâ*; for both Books and Tombs are *monuments*; the presence of friends implied *publication*; and the time, New year's night, pointed to the completion of the Work within the current year. The Tomb, however, was an ill omen as to the circulation of the book, because few have leisure to look at a Tomb, however exquisite may be its workmanship. (262.) During a Dream in the year 1557, he was delighted by a most ravishing and celestial harmony, and immediately on awaking he perceived that he had discovered the resolution of a doubt, upon the investigation of which he had been occupied nearly twenty years, namely, why some persons die and others recover from Fever? At the moment, he called for writing materials, and began to compose that most choice volume, (*librum illum pulcherrimum*), his *Ars parva medendi*, which he

finished after four years' toil, and more than twenty transcriptions. The labour, however, according to his own estimate, was well expended, and its product was symbolized by the Dream. Of the Book he states, *in quo tota prorsus medicina continetur*; of its prognostic, *Sic ex harmoniâ divina sapientia portendebatur*. (276.)

Literary Dreams have occurred to other writers also. When the pious, orthodox, and excellent Metropolitan, Bradwardine, was engaged in writing down Pelagius, (as he tells us in his Preface to this Tract *de Causâ Dei*, which, although now unread, obtained from contemporary admiration the title of *Doctor profundus* for its author,) he dreamed one night that he was struggling in the air with his antagonist, who at first prevailed against him, and cast him headlong from a fearful height. The combat was long and doubtful, but the Archbishop in the end was triumphant, and broke the Heretic's neck: insomuch that he awoke greatly refreshed and consoled, and proceeded with renewed spirit in his Work of controversy.

But a few years after the decease of Cardan, towards the close of the XVth Century, Oneirocriticks were professed by a Neapolitan Gentleman, Giuniaio Maio, who deserves greater credit for his exertions in restoring the pure usage of Latinity than for all his skill in Dreams. Among his Disciples of note are counted Sannazaro and Alexander ab Alexandro, the Author of the *Geniales Dies*, the latter of whom has left some account of his preceptor. He describes him as a man well tinctured with letters, and studious in investigating and noting down the peculiar powers of Language. His discipline in tuition was most precise; and what is more to our purpose, he was considered so veracious an Oneirocritick, that his responses were esteemed to be almost divine admonitions. Every morning during the period of Alexander's attendance on his Lectures, there flocked to him a throng of Dreamers of mark and reputation; and he expounded and explained to them, not obscurely and perfunctorily as most others, but distinctly and openly, all the enigmas presented in Sleep, and their prognostications, whether of good or evil, so that you would suppose them announced by an inspired Prophet. Many through his admonitions escaped death or calamity. (i. 11.)

Sannazaro also has celebrated his preceptor in the VIIth Elegy of his IId Book. The lines are so polished and harmonious, that we must indulge ourselves by the transcription of a short passage.

ONION, Fr. *oignon*; Lat. *unio*, a *bulbi* unitate *nomen habens*, taking its name from the oneness of the bulb. Martinius.

As for *onions*, I cannot find that there be any of them grow wild. Those which are sown in gardens, I am sure, will with their smell only cause the eyes to shed tears, and by that means clarify the sight: but if they be annointed with the juice, they will mundifie the better.

Holland. *Plinie*, vol. ii. ch. v.

ONISCUS, in *Zoology*, a genus of *Myriapoda*.

Generic character. *Antennæ* four, the inner ones very short, the outer eight-jointed, inserted beneath a prominence on the anterior margin of the head, the latter distinct from the thorax, which last is similar to the abdomen; body terminated with jointed appendages; legs fourteen.

*At tibi venturos, Mai, prædicere casus
Fas est, et miles consuluisse deos.
Nec tantum aut aræ fumos, aut nuntia sentis
Fulgura, sed Stygiis somnia missa locis.
Somnia quæ miseram perturbant sæpe quietem,
Dum mens incertis pendet imaginibus
O quoties per te vanum posuisse timorem
Me memini, et lætos continuasse dies.
O quoties, trepidus cum non spernenda putarem,
In nostrum cavi damna futura caput.
Sæpe meæ tibi cum narrassem visa puellæ,
Dixisti, certos haud procul esse metus.
Sæpe illam madidos lustrare in flumine crines
Jussisti, et misto solvere farra sale,
Quod si olim terris talem te fata dedissent,
Sprevisset Thuscos Martia Roma viros.*

Maio has called down upon himself a heavy condemnation from the pen of Del Rio, (*Disq. Mag. lib. iv. c. 3. q. 6. p. 278.*) but he lived to good purpose if it were only that he has suggested the acute remarks on Dreaming which Bayle has appended to his name. That writer treats the Art of Oneirocriticks as the most frivolous and ridiculous of all pursuits; at the same time admitting that Dreams themselves involve inquiries of interest. *Je crois que l'on peut dire des Songes la même chose à-peu-près que des Sortilèges: ils contiennent infiniment moins de mystères que le Peuple ne le croit, et un peu plus que ne le croient les Esprits forts.* He then points to the innumerable similar waking phantasies which fade away from the Mind unnoticed, but which if they occurred during Sleep would be treasured up as almost prophetic.

There is one species of Dreams which an old writer has noticed with greater respect perhaps than they deserve, and we may conclude with his words, even if we do not altogether assent to them. "Their rash opinion is much to be checked, which contemne Dreames as meere delusorie, alledging by waie of disproofe an old erroneous verse,

Somnia ne cures nam fallunt plurima plures,

speaking indefinitely of Dreames without distinction, whereas in truth, great value is in them in respect of their kind and nature. For though some sort of Dreames (as those that be physically) are not greatlie to be relied upon; yet those of the *metaphysicall kind*, having a *special influence from above Nature's reach*, are not lightlie to be overslipped." (*Holinshed, Chronicles, England, ii. 74. Ed. 1807.*)

Type of the genus, *O. asellus*, Linnæus; Degeer, *Mem. vol. vii. p. 547. pl. xxxv. fig. 3.* Common in damp walls and decayed trees, beneath stones, &c. in temperate and Northern Europe.

OMIAS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* twelve-jointed, geniculated, rather long, generally slender, the scape elongated, slender at the base, with the apex clavate, the basal joint of the funiculus rather long, obconic, the remainder short, nodose; club oblong-ovate, four-articulate; head produced anteriorly into a deflexed, short, stout, somewhat round rostrum, with a nearly triangular impression above towards the apex; forehead more or less wide: eyes small, rounded, prominent;

Warning to
Metaphysicians.

OMIAS. *thorax* small, narrow, with the sides rounded; *elytra* generally ample, short, ovate, very convex above; legs moderate, rather stout; *tarsi* tetramerous, with the penultimate joint bilobed, the terminal subclavate, slender, furnished with two claws.

ONO
MANCY.

Type of the genus, *Curculio rotundatus*, Fabricius. Ten species, mostly natives of Southern Europe.

OMOPHRON, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* filiform, with the basal joint robust; *palpi* six, filiform, with the terminal joint nearly conic; mandibles horny, ciliated, and entire; head oval, deeply inserted into the *thorax*, which is very short, transverse, emarginate in front and lobate behind, the base nearly as broad as that of the *elytra*; the latter hard, entire, as long as the abdomen; legs slender, elongate; anterior *tibiæ* with a notch in front; *tarsi* pentamerous.

Type of the genus, *Scolytus limbatus*, Fabricius; Latreille, *Gen. Crust. et Ins.* vol. i. p. 222. pl. vii. fig. 7. Of this remarkable genus there are four or five species; they frequent damp, sandy places, but none of them have yet been detected in Britain, although one is not uncommon in Germany and France.

ONITICELLUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* nine-jointed, short, the basal joint short, clavate, the two following somewhat cup-shaped, the three next transverse, the remainder forming a trilamellate club; *palpi* four; maxillary short, with the terminal joint subovate; labial slightly pilose, with the apical joint minute, subulate; head small, suborbicular; *thorax* large, somewhat orbiculate, slightly produced in the middle behind, emarginate in front; *elytra* small; body depressed; legs rather long; *femora* simple; *tibiæ* anterior much dilated, and strongly dentate externally, intermediate and posterior short, especially the former, and slightly denticulated on the outer margin; *tarsi* pentamerous; anterior short, slender; four posterior longer and stouter.

Type of the genus, *Scarabæus verticicornis*, Fabricius. One species only, a native of Europe, and, according to Fabricius, of England; but the latter is very questionable.

ONITIS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* nine-jointed, terminated by a lamellated, subtunicated club; *palpi* four, labial with the second joint larger than the first; head and *thorax* frequently horned, the latter ample, suborbiculate, truncate-emarginate in front, and obliquely truncate towards the hinder angles; the posterior margin frequently with a double impression; *scutellum* wanting; body ovate; legs short, robust; *femora* subovate, compressed; *tibiæ* quadridentate externally, the four posterior angulated, with short, compressed, pentamerous *tarsi*, two anterior in the males usually without *tarsi*.

Type of the genus, *O. Sphinx*, Fabricius; Drury, vol. i. pl. xxxv. fig. 8. An extensive genus, widely distributed over the Old World South of the fiftieth degree of North latitude.

O'NOMANCY, } Fr. *onomantie*; Gr. *ὄνομα*, a
ONOMA'NTICAL. } name, and *μαντεία*, *μαντεύεσθαι*, to foretell, to predict.

Prediction, or divination by names.

Such like curious observations bred the superstitious kinde of divination called *onomantia*, condemned by the last generall coun-

sell, by which the Pythagoreans iudged the even number of vowels in names to signifie imperfections in the left sides of men, and the odde number in the right.

Camden. Remaines, p. 51. Names.

By this Theodatus, king of the Gothes, when he was curious to know the success of the warres against the Romans, an *Onomantieall* or name-wisard Jew willed him to shut vp a number of swine in little hogsties.

Id. Ib.

ONOMANCY, it has been properly said, more correctly signifies Divination by a Donkey, *ὄνος*, than by a name, *ὄνομα*; and the latter Science ought to be termed Onomamancy, or Onomatomancy. The notion that an analogy existed between men's names and their fortunes is supposed to have originated with the Pythagoreans, it furnished some reveries to Plato, and has been the source of much small wit in Ausonius. In a Dedication to Probus, a Pretorian Præfect, he asks in a complimentary strain, whether

ille venturi sciens
Mundi supremus arbiter,
Qualem creavit moribus,
Jussit vocari nomine?

Epist. xv.

And to a tippling old woman called Meroe he is far less flattering. As the Epigram embraces more than one Onomantic play upon names we shall cite it entire.

Qui primus, Meroe, nomen tibi condidit, ille
Thesidæ nomen condidit Hippolyto.
Nam divinare est nomen componere quod sit
Fortunæ, morum, vel necis indicium.
Protesilæ, tibi nomen sic fata dederunt:
Victima quod Trojæ prima futurus eras.
Idmona quod, Vatem, Medicum quod Iapida dicunt,
Discendas artes nomina præveniunt.
Et tu sic Meroe, non quod sis atra colore,
Ut quæ Niliacæ nascitur in Meroe:
Infusum sed quod vinum non diluis undis,
Potare immixtum sueta merumque merum.

Epig. xx.

It is scarcely necessary to remark, that the name of Hippolytus, who was torn in pieces by his horses, is traced to *ἵππος* and *λύομαι*; that of Protesilaus to *πρωτος* ἐπὶ τῷ λαῷ. Idmon, *ἰδμων*, is from *εἶδω*, and Iapis, from *ἰάσθαι*. The Scholiast on Homer, *Iliad* B., derives Peneleus in like manner, ἀπὸ τοῦ πένεσθαι περὶ τὸν λεῶν; we have seen Priam referred to *πρίαιμαι*, because he was bought and redeemed from Slave-stealers in his youth; and Agamemnon's long tarrying before the Walls of Troy attributed to the conformation of his name, which compelled him *ἀγαν μίμνειν*.

Another Epigram by Ausonius, punning in like manner upon names, may be cited as equally deficient in point and in prosody.

De Chresto et Acyndino fratribus.
Χρῆστος, Ακύνδινος, εἰσὶν ἀδελφοί· οἴκτρα δὲ τέκνα,
Moribus ambo malis nomina falsa gerunt.
Οὐδ' οὗτος Χρῆστος, οὐδ' οὗτος Ακύνδινός ἐστιν.
Una potest ambos littera corrigere.
Αἴκιν Χρῆστος ἔλγῃ καὶ Ακύνδινος ἄλφ' ἀπολίσσῃ,
Κύνδινος hic fiet, frater "Αχρῆστος erit.

Epig. xl.

This gentle joke appears to have been a favourite with Ausonius, for the Epigram following is a quatrain on the same subject.

Two leading rules in the Science of Onomancy were first, that an even number of vowels in a man's name signifies something amiss in his left side; an uneven number a similar affection on the right; so that, between the two, perfect sanity was little to be expected. Secondly, of two competitors, that one would prove successful the numeral letters in whose name when summed

ONO-
MANCY.

ONO-
MANCY.
—
ONSET.

up exceeded the amount of those in the name of his rival; and this was one of the reasons which enabled Achilles to triumph over Hector.

The Gothic King Theodotus is said, on the authority of Cælius Rhodiginus, (*Lectiones Antiquæ*, xiii. 35.) to have practised a peculiar species of Onomancy on the recommendation of a Jew, and the story is alluded to in our extract above from Camden. The Diviner advised the Prince when on the eve of a war with Rome to shut up thirty Hogs in three different styes, having previously given some of them Roman and others Gothic names. On an appointed day, when the styes were opened, all the Romans were found alive, but with half their bristles fallen off, all the Goths, on the other hand, were dead; and from this prognostic the Onomantist foreboded that the Gothic army would be utterly destroyed by the Romans, who at the same time would lose half their own force.

ONONIS, in *Botany*, a genus of the class *Diadelphia*, order *Decandria*, natural order *Leguminosæ*. Generic character: calyx five-parted, segments linear; corolla pea-flowered, standard striated; filaments connected; pod turgid, sessile.

An extensive genus of shrubs containing nearly one hundred species, mostly natives of the Northern hemisphere.

ONOPORDUM, in *Botany*, a genus of the class *Syngenesia*, order *Æqualis*. Generic character: calyx imbricated with sharp pointed scales; receptacle with cells like a honey-comb; down pilose, caducous; seeds transversely striated.

Nine species, natives of Europe; *O. acanthium* is a native of England.

ONOSERIS, in *Botany*, a genus of the class *Syngenesia*, order *Æqualis*. Generic character: calyx imbricated; corolla radiated, the rays three-toothed; receptacle nearly naked; down pilose.

One species, *O. purpurata*, native of New Granada.

ONOSMA, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Boraginæ*. Generic character: corolla bell-shaped, border tubular, ventricose, five-toothed; style enclosed, seeds four.

Twelve species, natives of Europe and the East.

ONOSMODIUM, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Boraginæ*. Generic character: calyx deeply five-parted; corolla oblong, somewhat bell-shaped, throat naked, border ventricose, five-cleft; segments conniving, acute; anthers sessile, enclosed; style exserted.

Two species, natives of North America.

ONSET, *i. e.* a set on, assault, attack; also, Something added or set on; Brocket; who says, "a dwelling-house and out-buildings" are so called:—perhaps the out-buildings to a dwelling-house.

In comes the king, his brother's life to save,
And to this brave duke a fresh onset gave.

Drayton. *The Battle of Agincourt*.

LAM. Good man of war,
Hands off, if you take me it must be by siege
Not by an onset.

Beaumont and Fletcher. *The Honest Man's Fortune*, act iii. sc. 2.

There is surely no greater wisdom, than well to time the beginnings and onsets of things.

Bacon. *Essaie* 21. p. 125.

— As when in Indian forests, wild,
Barbaric armies suddenly retire
After some furious onset.

Grainger. *The Sugar Cane*, book ii. v. 338.

ONSLAUGHT. See ANSLAUGHT.

ONTHOPHAGUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* nine-jointed, the basal joint long, cylindric, the second globose, the four following short, gradually becoming transverse, the remainder forming an abrupt, pubescent, triarticulate club; *palpi* four; maxillary with the terminal joint attenuated at each end and truncate; labial very hairy, two-jointed, the apical joint reniform, obliquely truncate; head cornute or tuberculated; *clypeus* large, entire, irregularly semicircular; *thorax* broad, as long, or longer than the elytra, emarginate and retuse before, rounded behind; body depressed; legs moderate; anterior tibiae large, strongly dentate externally; posterior bidentate at the apex; *tarsi* pentamerous, slender, anterior rather smallest.

Type of the genus, *Scarabæus Nuchicornis*, Linnæus. Panzer, *Fauna Germ. Init.* pl. iv. fig. 1. A very extensive genus, principally natives of warm and temperate regions; about ten species are indigenous; they live in and subsist upon dung, especially that of horned cattle.

ONTHOPHILUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* abruptly clavate, geniculated, the basal joint long, robust, subclavate; second subglobose, third elongate, slender; five following very short, somewhat moniliform, or subglobose; the remainder forming an ovate-globose club; *palpi* slender; head small, deeply inserted in the thorax, the latter subtrigonal, sulcate; *elytra* abbreviated, also sulcate; body subquadrate, robust; *sternum* simple; legs long; tibiae long, slender, compressed; *tarsi* pentamerous, with the four basal joints subequal.

Type of the genus, *Hister striatus*, Forster. *Hi. sulcatus*, Olivier, *Ent.* vol. i. pl. i. fig. 6. Three species, two of which are natives of England, and are found in dung.

ONTOLOGY, Gr. *ὄντα*, accusative plural of *ὄν*, being, and *λόγος*, discourse. See the Quotation from Watts.

Ontology is a discourse of *being* in general, and the various and most universal modes or affections, as well as the several kinds or divisions of it. The word *being* here includes not only whatsoever actually is, but whatsoever can be.

Watts. *Works*, vol. v. p. 635. *Of Ontology*, ch. i.

When these two sciences had thus been set in opposition to one another, the comparison between them naturally gave birth to a third, to what was called *ontology*, or the science which treated of the qualities and attributes which were common to both the subjects of the other two sciences.

Smith. *Wealth of Nations*, vol. iii. book v. ch. i. p. 167.

ONYX, Fr. *onyche*; It. *onice*; Sp. *onyche*; Lat. *onyx*; Gr. *ὄνυξ*, *unguis*; a corneo unguis candore. "Sudines saith, that the precious stone *onyx* hath a white in it resembling the naile of a man's finger." Pliny, book xxxvii. ch. vi.

But the true *onyx* indeed hath verie many veins, and those of sundrie colours; garnished also it is with circles as white as milke: and albeit the colours of the veins be inexplicable as a man casteth his eye upon them severally, yet meeting as it were all in one, they make a good consort and yeeld a lustre most pleasing to the sight.

Holland. *Plinie*, book xxxvii. ch. vi.

The fancy of Sudines mentioned above is repeated by Isidore in his *Origines*, (xvi. 8.) and has been very pleasingly employed by the Poets, who say that the

ON-
SLAUGHT
—
ONYX.

ONYX. *Parcæ* formed the *Onyx* from one of *Venus's* nails which *Cupid* had pared with his arrow. "It hath likewise (quoth hee,) continues *Pliny* from *Sudines*, "the colour of a *Chrysolith*, otherwise called a *Topase*, of a *Cornaline* also and a *Jasper*. *Zenathemis* affirmeth that the *Indian Onyx* is of divers and sundrie colours; to wit, of a fierie red, a blacke, a horne grey; having also otherwhiles certaine white strakes or veines, in fashion of eyes compassing it about; and in some of them you shall see white strakes or veins likewise to goe crosse and byas between them. *Sotacus* maketh mention, moreover, of an *Arabian Onyx*, but it differeth from others (saith hee) in this respect that the *Indian Onyx* hath certaine sparkes in it, and the same environed and compassed about with white circles, either single or manyfold, farre otherwise than the *Indian Sardonyx*; for in the former, the white seemed to bee pointed prickles, but in these they bee compleat circles. As for the *Arabian Onyches* there bee found of them blacke with white circles. *Satyrus* reporteth furthermore, that the *Indian Onyx* is fleshie; that in one part it resembleth a *Rubie*, otherwise called a *Carbuncle*, in another a *Chrysolith*, and an *Amethyst*; yet he maketh no account of such."

The *Onyx* was a favourite gem with the Ancients for the workmanship of *CAMAIEUX*. The gem must be distinguished from the *Onychites* or *Alabastrites*, not unfrequently also termed *Onyx*; a species of marble furnished by the quarries of *Caramania*, and much employed by the Romans in the fabric of essence-boxes. So highly were those trinkets esteemed that *Horace*, when inviting *Virgil* to his exquisite Spring festival, playfully offers to barter a whole cask of wine for even a small *Onyx*.

Nardi parvus Onyx eliciet cadum.

Herodotus (iii. 20.) speaks of *μύρον ἀλάβαστρον* among the presents sent by *Cambyes* to the King of *Ethiopia*, and *Cicero*, also, (*Academ.* ii.) mentions an *Alabaster plenus unguenti*. It was a box of this kind, an *ἀλάβαστρον* or *Onyx*, which *Mary*, the sister of *Lazarus* and of *Martha*, broke, and poured its contents of precious ointment upon the head of our Saviour, while he sate at table in the house of *Simon the Leper* at *Bethany*. (*Matt.* xxvi. 6, 7.) By breaking we must understand not that she broke the box, but the seal which closed it and kept the perfume from evaporating.

We read of other uses to which the *Onychites* were applied; as drinking cups, legs of tables and couches, tessellated pavement and columns. It is probable that there were many varieties, differing materially from each other in value; for *Pliny*, who on the authority of *Cornelius Nepos*, speaks of columns of this marble 32 feet in height, and of *amphoræ* as large as *Chian* casks, notices as wonderful, *pro miraculo insigni*, four moderate-sized columns, which *Cornelius Balbus* erected in his Theatre; and adds that he himself had seen 30 rather larger in a Banqueting chamber constructed by *Callistus*, a rich and powerful Freedman attached to *Claudius*. (xxxvi. sec. 12.) Among the superb spoils of *Mithridates*, which *Pompey* conveyed to Rome, were 2000 drinking cups of *Onychites* set in gold. *Appian* is precise in his statement, and we see no reason for the doubt which has sometimes demurred respecting it; *δισχίλια μὲν ἐκπώματα λίθου τῆς ὀνυχίτιδος λεγομένης εὐρέθη χρυσοκόλλητα.* (*Bell. Mith.* 115.)

Athenæus (xi. 13.) cites *Poseidonius* for some huge

ὀνυχίνοι σκάφοι, called by him *Panathenaica*. The reader who wishes to learn more regarding *Onyx* and *Onychites*, if he is regardless of the exhaustion of patience, may turn to *Saumaize* in his remarks upon the *Polyhistoria* of *Solinus*, vol. i. p. 394.

OODES, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* filiform, with the three basal joints naked; *palpi* six, elongate, slender, external maxillary with the two last joints of equal length, the terminal cylindric-truncate, the preceding clavate; labial the same; *labrum* transverse, obsoletely notched; *mandibles* acute, not denticulated; *mentum* transverse, moderately emarginated in front, the emargination with a simple lobe; head ovate; *thorax* as broad as the *elytra*, convex; body broad, rather convex; wings two; *tarsi* pentamerous, anterior of males with three dilated joints.

Type of the genus, *Carabus helopoides*, *Fabricius*; *S Sturm, Deutschlands Fauna*, vol. vi. pl. cxlviii. One species is a native of damp places in Europe and in Britain; about six are found out of Europe.

OOZE, v. } The ancient Britons (says *Lye*, from
OOZE, n. } *Baxter*) by *asc*, *esc*, *isc*, *osc*, and *usc*,
Oo'zy. } (changed into *ax*, *ex*, *ox*, or *ouse*, and
ux.) meant *water*, generally; and the Ger. *asche*, *aqua*, *præcipuè fluens*, is by *Wachter* called *Vox Cellica*. But *Lye* also tells us that the *Ouse*, indiscriminately written *Ise*, *Ose*, *Use*, is in A. S. not only called *Usa*, but *Wusa*; which seems to lead directly to the A. S. *wes-an*, to wet, *wæs-can*, to wash, and *wæs*, *water*. *Tanner's ouse* is the bark wetted or washed, steeped or soaked in water. *Ooze*, then, is

(Earth) wetted or washed; (*lutum*;) mud or mire; also water or other moisture slowly, sluggishly, or gently issuing forth, rising, or springing. And to *ooze*,

To issue forth, rise, spring, flow, slowly, sluggishly, or gently.

I scapt the deth, I graunt, and brake the bands,
And lurked in a marrice all the nyght
Among the ooze, while they did set their sailes
If it so be that they indede so dyd.

Surrey. Virgil. Æneis, book ii.

Where these riuers mette, the waues rose like surges of the sea
being full of muddle, & ooze.

Brende. Quintus Curtius, book ix. fol. 263.

Hurls up the slimy ooze and makes the scaly brood
Leap madding to the land affrighted from the flood.

Drayton. Poly-olbion, song 7.

Strange death! for when the thirsty fire had drunk
Their vital blood, and the dry nerves had shrunk;
When the contracted limbs were cramp'd, even then
A waterish humour swell'd and ooz'd again.

Dryden. Virgil. Georgics, book iii.

And fam'd *Astypalæa's* fens
Breed shoals of fish in oozy dens.

King. Art of Love, part vi.

He the deadly wound
Ere long discover'd; for it still ooz'd crimson,
Like a rose springing midst a bed of lillies!

Brookes. Conrade. A Fragment.

OPA, in *Botany*, a genus of the class *Icosandria*, order *Monogynia*. *Generic character*: calyx superior, tubular, bell-shaped, five-cleft; corolla, petals five, concave, conniving, inserted into the mouth of the tube of the calyx; berry truncated, one-seeded.

Two species, trees, natives of *Cochinchina*.

OPAL.

OPAL, Fr. *opale*; It. and Sp. *opalo*; Lat. *opalus*.
Of unknown etymology.

The stones called *opales* differ little or nothing otherwhiles from beryls; and yet the same sometime are nothing at all like them: neither is there a gem that they will give place unto, unlesse it be the emeraud: India land is the onely mother of them.

Holland. *Plinie*, book xxxvii. ch. vi.

"Lapidaries, therefore," continues Pliny of OPALS, "and those who have written books of pretious stones, have given unto them the name and glorie of the greatest price, but especially for the difficultie in finding them out and chusing of them, which is inenarrable; for in the Opall you shall see the burning fire of the Carbuncle, or Rubie, the glorious purple of the Amethyst, the greene sea of the Emeraud, and all glittering together, mixed after an incredible manner. Some Opals carie such a resplendent lustre with them that they are able to match the bravest and richest colours of painters; others represent the flaming fire of brimstone, yea, and the bright blaze of burning oile. The Opall is ordinarily as bigg as a filberd nut. And heere commeth to my mind, an historie among us as touching the Opall, worthie of remembrance: for there is at this day to be seene one of these Opals, for the which gem Marcus Antoninus proscribed and outlawed Nonius, a Senator of Rome, the sonne of that Struma Nonius, at whome the stomacke of Catullus the Poet did rise so much, seeing him (as he did) sit in a stately chaire of yvorie called Curulis; and grandfather to that Servilius Nonianus whome I myselfe have seene Consull. Now the said Senatour when he was driven to flie upon this proscription, tooke no more with him of all the Gods which hee had, but onely a ring wherein this Opall was set, which (as is well knowne) had been valewed sometime at twentie thousand sesterces. But as the cruell and inordinate appetite of Antonie (who for a jewell onely outlawed and banished a Roman Senatour) was wondrousfull on the one side, so the peevishnesse and contumacie of Nonius was as straunge on the other side, who was so farre in love with that gem which cost him his proscription, and rather thanne to part with it suffered himselfe to bee turned out of house and home: and yet the verie wild beasts are better advised than so, who are content to bite off those parts of their bodie and leave them behind them for the hunters, for which they see themselves in daunger of death. In the Opall, there be observed also divers blemishes and imperfections as well as in other stones; namely, if the colour resemble the colour of the floure of that hearbe which is called *Heliotropium*, *id est*, Turnesole: also if it look like Chrystall or haile: likewise if there be a spot comming betweene in manner of a graine or kernell of salt: if it be rough in handling, and if there be certaine small prickes or spots represented to the eyes: neither is there any pretious stone that the Indians can counterfeit so well by means of glasse, as this; insomuch as hardly a man shall discern the natural Opall from the false, when they have done withall: but the onely triall is by the Sunne, for if a man hold an Opall betwixt his thumb and finger against the beams of the Sunne, if it be a counterfeit, hee shall find those divers colours which shewed therein, to run into one and the same transparent colour, and so to rest in the bodie of the stone; whereas the brightness of the true Opall eftsoones doth chaunge, and sendeth forth the lustre too and fro more and lesse, yea, and the glittering of the light shineth also upon the fingers. This gem, for the rare and incomparable

VOL. XXV.

beautie and grace that is in it, most writers have called Pæderos.

"There is, also, another kind of Opall apart by itselfe, according to the opinion of some, who say that it is called by the Indians Sangenon. It is said that there be Opals in Ægypt and in Arabia, like as in the Kingdome also of Pontus, but such of all other beare the lowest price. In Galatia also, and in the Isles Thrasos and Cyprus: for albeit they have the lovely beautie of the Opalus, yet their lustre is nothing so lively and lightsome, and seldome shall you meet with any of them that is not rugged: their chief colours stand much upon brasse and purple: the fresh verdure of the greene Emeraud is away, which the true Opall does participat. This is generally held, that they are more commendable which be shadowed as it were with the colour of wine, than delaid with the clearnesse of water."

The name Pæderos which Pliny says has been applied to the Opal, must be understood to signify beautiful as the complexion of youth; it is so explained in two lines by the pseudo-Orpheus:

φημι δὲ τοι τρεπτεῖν καὶ Ὀπάλλιον οὐρανίωνα
ἀγλαόν, ἱμεροῦ τρένα χροῖα παίδος ἔχοντα.

De Lapid. 270.

OPA'QUE, *adj.* } Fr. *opaque*; It. and Sp. *opaco*;
OPA'QUE, *n.* } Lat. *opacus*, which Scaliger and
OPA'QUENESS, } Vossius derive from *ope*, *hoc est*,
OPA'CATE, } *terrâ*; (*Ops*, *Mater Deum*;) *nam*
OPA'CITY, } *umbræ et frigoris captandi causâ*
OPA'COUS, } *in subterraneos se specus abdebant*.
OPA'COUSNESS. } It is, hence, by usage,
Shady, dark, gloomy, obscure, cloudy.

For sight no obstacle found here, nor shade
But all sun-shine as when his beams at noon
Culminate from th' Æquator, as they now
Shoot upward still direct, whence no way round
Shadow from body *opaque* can fall.

Milton. *Paradise Lost*, book iii. l. 619.

All plants break through into open day
Rend the thick curtain of cold cloying night,
The earth's *opakenes* enemy to light,
And crown themselves in signe of victorie
With shining leaves, and goodly blossomes bright.

More. *On the Soul*, part ii. book i. can. 2. st. 31.

The same corpuscles upon the unstopping of the glass did *opacate* that part of the air they moved in.

Boyle.

Abandoning that gloomy and base *opacity* of conceit, wherewith our earthly minds are commonly wont to be overclouded.

Hall. *Sermon* 32. 1 John, ch. i. v. 5.

Every sudden and plentiful eruption of water out of the hidden caverns of the earth, hath its altars erected to it; and some pools have been made sacred for their immense profundity and *opacity*.

Cudworth. *Intellectual System*, book i. ch. iv. fol. 510.

Meanwhile upon the firm *opacous* globe
Of this round world, whose first convex divides
The luminous inferior orbs enclos'd
From chaos and th' inroad of darkness old,
Satan alighted walks.

Milton. *Paradise Lost*, book iii. l. 418.

As if at this day in the sunshine there should be produced an *opacous* body, together with it the shadow would be produced.

Hale. *Origination of Mankind*, ch. vi. sec. 1. fol. 120.

Mysteries, which (without these coverings) even the *opacousness* of the place were not obscure enough to conceal.

Evelyn, book iv. sec. 8.

The *opacousness* of the sclerotis hinders the pictures that outward objects (unless they be lucid ones) make within the eye to be clearly discerned.

Boyle. *Usefulness of Natural Philosophy*, vol. ii. p. 52.

Through this *opaque* of nature and of soul
This double night, transmit one pitying ray,
To lighten, and to cheer.

OPAL.

OPAQUE.

OPA-
TRUM.
—
OPE.

OPATRUM, in Zoology, a genus of *Coleopterous* insects.

Generic character. *Antennæ* short, robust, clavate, eleven-jointed, basal joint curved, second minute, third elongate, subcylindric, a little thickened at the apex, the fourth to the seventh somewhat obconic, three following transverse, increasing in size; the eleventh suborbiculate; *palpi* short, stout, unequal, the terminal joint of the maxillaries large, obtrigonal; of the labial ovate-obtuse; head transverse-ovate, narrower than the thorax, the latter transverse-subquadrate, deeply emarginate in front, with the lateral margins rounded, and sinuated behind, with the posterior angles acute, and closely applied to the base of the elytra, which last have the sides deflexed; *abdomen* elongate, quadrate; wings moderate; legs stout; *tibiæ* with very short spurs; anterior trigonate; *tarsi* heteromerous, short.

Type of the genus, *O. sabulosum*, Linnæus; Samouille, pl. ii. fig. 8. The insects of this genus, of which there are nearly thirty species, (two only indigenous,) are generally found in sandy districts, and are chiefly inhabitants of the Old World.

OPE, or	} A. S. <i>openian</i> ; D. <i>openen</i> ; Ger. <i>offnen</i> ; Sw. <i>opna</i> . The A. S. <i>yppan</i> . <i>aperire</i> , <i>pandere</i> , (whence <i>ge-yppan</i> , to gape,) seems to be the common origin. See GAPE; also CHAP, CHAPS.
O'PEN, v.	
OPE, or	
O'PEN, adj.	
O'PENER, n.	
O'PENING, n.	
O'PENNESS, n.	To sever or separate, <i>sc.</i> that which
O'PENLY.	is close; to give entrance or passage;

to uncloze, to disclose; to uncover, to discover; to manifest, to explain; to expose, to begin or commence the exposition. *Open*, the adjective, is thus,

Plain, evident, unclosed, uncovered, unprotected; and met.

Undisguised, sincere, unreserved, frank.

Open weather; clear from clouds, not overcast, not condensed or constricted.

Open-headed, (in Chaucer;) for nought but that he saw her with her head *uncovered*, &c.

For þe comon folk it wan wod *open* & forest.

R. Brunne, p. 110.

To *openen* and undo þe hȳ gates of hevene.

Piers Plouhman. Vision, p. 124.

For if a trumpe ghyue an uncerteyn soun, who schal make himsilf redi to bateil? so but ghe ghyue an *opun* word bi tunge, how schal that that is seid be knowun.

Wiclif. 1 Corinthians, ch. xiv.

And aftir that hise britheren were gon vp than he gade up to the feeste day, not *openly*, but as in priuete.

Id. John, ch. vii.

But as soone as hys brethren were gon vp, thē went he also vp to y^e feast: not *openly* but as it were priuely.

Bible, Anno 1551.

He that *openeth* to me, shal have foryevenesse of his sinnes, and I wol enter into him by my grace.

Chaucer. The Persones Tale, p. 151.

He on a day in *open* audience

Ful boistously hath said hire this sentence.

Id. The Clerkes Tale, v. 8666.

To the erl of Pavie, which that hadde tho

Wedded his suster, prayed he specially

To bringen home agein his children two

In honourable estat al *openly*.

Id. Ib. v. 8643.

How he, Sulpitius Gallus, left his wif,

And hire forsoke for terme of all his lif

Not but for *open-headed* he hire say,

Loking out at his dore upon a day.

Id. The Wif of Bathes Prologue, v. 6228.

Whan Progne of Philomene herde,
She wolde knowe how that it ferde,
And *openeth* that the man hath brought,
And wot therby, what hath he wrought,
And what mischiefe there is befall.

Gower. Conf. Am. book v. p. 167.

The thyng so *open* is at the eie,
That euery man it maie beholde.

Id. Prologue, p. 1.

— And therefore I

Will write and shewe all *openly*,

Howe loue and I togedre mette.

Id. Conf. Am. book i. p. 17.

The windowes of my Muse, then straight I *ope*,

And first I shewe, the travail of such time:

As I in youth, imploy'd in looving rime.

Gascoigne. A Remembraunce, &c.

We read that women haue iudged all Israell and haue bene great prophetisses and haue done mighty dedes, yea, and if stories be true, wemen haue preached sence the *openyng* of ye New Testamēt.

Tyndall. Workes, fol. 252. An Answer vnto Sir Thomas More's Dialogues.

— For at this match,

With swifter spleene then powder can enforce

The mouth of passage shall we fling wide *ope*,

And giue you entrance.

Shakspeare. King John, fol. 7.

ANT. Go fetch me something, Ile break *ope* the gate.

Id. Comedy of Errors, fol. 90.

Yet still he fills the faithful souldier's ears

With stories of his weakness, of his life,

That he dare not venture to appear in *open*,

And shew his warlike face among the souldiers.

Beaumont and Fletcher. The Prophetess, act i. sc. 1.

True *opener* of mine eyes, prime angel blest,

Much better seems this vision, and more hope

Of peaceful dayes portends, then those two past.

Milton. Paradise Lost, book xi. l. 598.

There is nothing to be discommended in this riuer, [Severn,] but the *openness* thereof in manie places to the weather, whereby sundry perils oft ouertake such as fish or saile in small vessels.

Holinshed, vol. i. p. 117. The Description of Britain, book i. ch. xiii.

My constancy I to the planets give;

My truth to them who at the Court do liue;

Mine ingenuity and *openness*

To Jesuits.

Donne. The Will.

Certainly the ablest men that ever were, have had all an *opennesse* and franknesse of dealing.

Bacon. Essay 6. p. 26.

— Thou art his friend,

(The confidence he has in thee confirms it,)

And therefore I'll be *open* breasted to thee.

Beaumont and Fletcher. The Custom of the Country, act v. sc. 1.

Nor doth 't affect this fond gentility,

Whereon the fool world *open-mouthed* gazes,

Thinking itself of great ability.

Drayton. Pastorals. The Fifth Eclogue.

Not so, when, diadem'd with rays divine,

Touch'd with the flame that breaks from Virtue's shrine,

Her Priestess Muse forbids the good to die,

And *opes* the Temple of Eternity.

Pope. Epilogue to the Satires. Dialogue 2.

With *openings* fast the gaping earth gave way,

And in her inmost womb receiv'd the day.

Rowe. Lucan, book i.

It [Religion] places him under a perpetual awe of that justice that sees in secret, and rewards *openly*.

South. Sermons, vol. viii. p. 31.

This shews how the mind of man is naturally to be prevailed upon; and that in the proposal of so great a thing to it as a new Religion, the natural *openness* and meeting fervours of men's first acceptance, are by all means to be secured and possessed.

Id. Ib. vol. vii. p. 34.

OPE.

OPE-
RATE.

When I
Oped his young eye to bear the blaze of greatness;
Shew'd him, where empire tower'd, and bad him strike
The noble quarry.

Gray. *Agrippina*, act i. sc. 1.

Large was the cave, but scarce at noon of day,
The winding mouth receiv'd a feeble ray;
Yet from an opening to the right appear'd
A beam of sunshine that the dwelling cheer'd.

Hoole. *Orlando Furioso*, book xiii. v. 595

By their frequent change of company, they [soldiers] acquire good breeding and an openness of behaviour.

Hume. *Of National Characters*, vol. i. p. 196.

OPERA. For the application of this word, borrowed from the Italian, see the Quotations from Dryden and Burney.

An *opera* is a poetical tale or fiction, represented by vocal and instrumental musick, adorned with scenes, machines, and dancing.

Dryden. *Preface to Albion and Albanus*.

An *opera* may be allowed to be extravagantly lavish in its decorations, as its only design is to gratify the senses, and keep up an indolent attention in the audience.

Spectator, No. 5.

And this [end of XVIth Century] seems the true era whence the *opera*, or drama, wholly set to musick, and in which the dialogue was neither sung in measure, nor declaimed without musick, but recited in simple musical tones, which amounted not to singing, and yet was different from speech, should be dated.

Burney. *History of Musick*, vol. iv.

O'PERATE, v. } Fr. *operer*; It. *operare*; Sp. *operar*; Lat. *operare*; "ab ἔπω, qua notat operor, venit Latinum opus." Vossius. And see Len-
OPERA'TION, } nep, in v. ὄπλον.

Operose; laborious; toilsome, troublesome.

Here may ye see wel, how that genterie
Is not annexed to possession,
Seth folk ne don hir operation
Always, as doth the fire, lo, in his kind.

Chaucer. *The Wif of Bathes Tale*, v. 6730.

And of this constellacion
The very operacion
Auailleth, if a man therein
The purpose of his worke begin.

Gower. *Conf. Am.* book vii. p. 211.

By virtue of both these acts of common Divine providence all things are enabled to act and *operate* according to the laws of their being, without the necessity of any new individual concurrent act of special providence producing, directing, or determining their several operations.

Hale. *Origination of Mankind*, ch. i. fol. 41.

And therefore also they judge of humane actions by the event; for being incapable of *operable* circumstances, or rightly to judge the prudence of affairs, they onely gaze upon the visible success, and thereafter condemn or cry up the whole progression.

Sir Thomas Brown. *Vulgar Errours*, book i. ch. iii. p. 9.

Earth yeeld me rootes,
Who seekes for better of thee, sawce his pallate
With thy most operant poyson.

Shakspeare. *Timon of Athens*, fol. 90.

KING. Faith I must leaue thee loue, and shortly too:
My operant powers their functions leaue to do.

Id. *Hamlet*, fol. 268.

Lov'd for we did, and like the elements
That knew not what nor why, yet do effect
Rare issues by their operance.

Beaumont and Fletcher. *The Two Noble Kinsmen*, act i. sc. 3.

In architecture, as in all other *operative* arts, the end must direct the operation.

Reliquia Wottonianæ, p. 6.

His word out of himself proceeding, being most perfect and generative and *operative*, falling upon fruitful nature, made it also fruitful and producing.

Raleigh. *History of the World*, book ii. ch. ii. sec. 6. fol. 180.

How the plastick nature is in general to be conceiv'd, Aristotle instructs us in these words. If the naupegeical art, that is the art of the shipwright, were in the timber itself, *operatively* and effectually, it would there act just as nature doth.

Cudworth. *Intellectual System*, book i. ch. iii. fol. 155.

Doubtless upon such and the like occurrences many chymical and other accidental discoveries have been made, besides and beyond and without the intention of the operator.

Hale. *Origination of Mankind*, ch. iv. sec. 2. fol. 154.

Nevertheless we acknowledge, that God and nature do things every where in the most frugal and compendious way and with the least *operoseness*.

Cudworth. *Intellectual System*, book i. ch. iv. fol. 672.

So as there is a kind of *operosity* in sin in regard whereof sinners are styled the workers of iniquity. (Luke xiii. 27.)

Hall. *Works*, vol. iii. fol. 727. *Select Thoughts*, 45.

Lives through all life, extends through all extent;
Spreads undivided, *operates* unspent.

Pope. *Essay on Man*. Epist. 1. v. 274.

The *operative* strength of a thing may continue the same, when the quality that should direct the operation is changed: as a man may have as strong an arm, and as sharp a sword to fight with in a bad cause as in a good.

South. *Sermons*, vol. vi. p. 6.

Love is of too substantial a nature to be made up of mere negatives, and withall too *operative* to terminate in bare desires.

Id. *Ib.* vol. iii. p. 13.

This is the philosophy of the popish operators in all their religious performances.

Id. *Ib.* vol. x. p. 21.

Where as Aristotle's nature is no fortuitous principle, but such as doth nothing in vain, but all for ends, and in every thing pursues the best; and therefore can be no other than a subordinate instrument of the divine wisdom, and the manuary *opificer* or executioner of it.

Cudworth. *Intellectual System*, book i. ch. i. fol. 54.

Consider the infinite distance betwixt the poor mortal artist, and the Almighty *opificer*; the few wheels and motions of a watch, and the innumerable springs and organs in the bodies of brutes.

Bentley. *Sermon* 2. p. 76.

Nature and grace must *operate* uniformly; even as gravitation operates uniformly upon matter; instinct upon brutes; and those secret powers upon men by which the blood circulates, the pulse beats, the breath comes and goes, and other functions are continually performed in us without our knowledge and endeavour.

Jortin. *Dissertation* 1. p. 6.

He [Streater] died in 1680, at the age of 56, not long after being cut for the stone, though Charles II. had so much kindness for him as to send for a surgeon from Paris to perform the operation.

Walpole. *Anecdotes of Painting*, vol. iii. ch. i. p. 18.

All these *operose* proceedings were adopted by one of the most decided tyrants in the rolls of history.

Burke. *Works*, vol. v. p. 216. *Reflections*, &c.

OPERCULARIA, in *Botany*, a genus of the class *Tetrandria*, order *Monogynia*. Generic character: common calyx one-leaved, bell-shaped, unequally toothed; no proper calyx, florets four or five cleft, equal; receptacle closing with a lid, within which the seeds are contained.

Three species, natives of New Holland and New Zealand.

OPE-TIDE, probably—time of festivity, or open-house: opposed to a time of fast.

So lavish *ope-tyde* causeth fasting Lents,
And starving famine comes at large expense.

Hall. *Satire* 1. book ii.

He [God] grudges not our moderate and seasonable jollities, there is an *ope-tide* by his allowance, as well as a Lent.

Id. *Sermon before the King in Lent*, 1641.

OPE-
RATE.
—
OPE-
TIDE.

OPETIO-
RYN-
CHUS.
—
OPHI-
DIUM.

OPETIORYNCHUS, from the Greek *ὀπίτιον*, an awl, and *ὀύχος*, a beak, Tem. In *Zoology*, a genus of animals belonging to the family *Tenuirostres*, order *Passeres*, class *Avcs*.

Generic character. Beak much longer than the head, slender, very delicate, and awl-shaped, straight or slightly curved, flattened at base, and compressed at tip; tongue short, cartilaginous; nostrils lateral, a little in front of the base, ovoid, and partially closed by naked membrane; wings short, the first three quill-feathers graduated, third and fourth the longest; tail short, and slightly graduated, the feathers completely webbed; legs long, tarsi twice as long as the middle toe, which is connected to the outer at its base; lateral toes of equal length.

This genus has been separated by Temminck from the Bee-Eater, *Merops*, and placed between the Creepers, *Certhia*, and his *Anabates*: he founds it on the *Merops Rufus*, and says that there are several other species, all from South America, but he only mentions this one.

See Temminck, *Manuel d'Ornithologie*.

OPHELUS, in *Botany*, a genus of the class *Monadelphica*, order *Polyandria*. *Generic character*: calyx bell-shaped, five-cleft, inferior; corolla, petals five, ovate, thick, filaments about five hundred, connected at the base into a tube; berry twelve-celled, many seeded, exterior woody.

One species, *O. sitularius*, a large tree, native of the shores of the Eastern parts of Africa: the seed-vessel is more than a foot long, and is used by the natives as a drinking vessel. Loureiro.

OPHICEPHALUS, from the Greek *ὄφις*, a snake, and *κεφαλή*, a head, Bloch. In *Zoology*, a genus of animals belonging to the family *Discoboli*, order *Malacopterygii Subbrachii*, class *Pisces*.

Generic character. Head and body completely covered with large polygonal scales; head depressed, obtuse, and short in front, the vertex covered with irregular scales resembling those of a snake; mouth wide; teeth rasp-like, and in a single row, with a few large and hooked ones scattered on the sides; gill-flaps smooth; dorsal fin single and very long, proceeding along almost the whole of the back; ventral below the pectoral fins.

The disposition of the scales on the head of this genus resembling that of snakes, has given rise to its name. It contains but two species:—

O. Punctatus, Bloch; *Karruway*, Lacep. This fish measures from seven to eleven inches; its jaws are of equal length; teeth small and pointed; lateral lines straight, caudal fin rounded; general colour dingy-white, studded with numerous black spots; the fins also tipped with black. From the rivers of the Indian Isles.

O. Striatus, Bloch; *Wrahl*, Lacep. This species sometimes attains the length of four feet; it has the back of a blackish-green; belly yellowish-white, with narrow, transverse, yellow and brown bands; it hides itself in the mud, but is considered a delicacy, and is found on the Coromandel coast.

See Bloch, *Ichthyologia* a Schneider; Lacepede, *Histoire des Poissons*.

OPHIDIUM, from the Greek *ὀφίδιον*, the name of a fish used by Pliny; Linnæus, *Donzelle*. In *Zoology*, a genus of animals belonging to the family *Anguilliformes*, order *Malacopterygii Apodes*, class *Pisces*.

Generic character. Head covered with large scales; branchial membrane and opercule very wide; body and tail long, compressed, sword-shaped, and irregularly

studded with scales; dorsal, caudal, and anal fins connected; in some species the lower jaw bearded.

This genus very much resembles the *Muraena* and *Ammodytes*, but the junction of the dorsal, caudal, and anal fins distinguishes it from the latter, as does the branchial apparatus from the former.

O. Barbatum, Gmelin; *la Donzelle barbué*, Daubenton; *Bearded Donzelle*. From eight to ten inches in length; the lower jaw furnished with four barbs, but the upper is most prominent; body and tail silvery, tinged with flesh colour, assuming a bluish hue on the back, and varied with very numerous small spots; lateral line brown; pectoral fins brown speckled with grey, dorsal, anal, and caudal white edged with black. It is caught in the Mediterranean, and its flesh considered delicate.

O. Blacodes, Schneid. Often attains six feet in length; head depressed, the upper jaw longer than the lower; body rounded and tail compressed; general colour pale red or dotted with red spots on the back, silvery-red on the belly. Found about New Zealand; is very voracious, but torpid and lazy, resting on the rocky bottom of the sea.

O. Imberbe, Gmel.; *la Donzelle Imberbe*, Daub.; *Beardless Donzelle*. Has no beard; its dorsal fin so small as to appear little more than a fold of skin; caudal fin slightly rounded; general colour yellow. Is found in the Mediterranean, on the Southern coast of France especially, but also in all the European Seas.

O. Viride, Gmel.; *la Donzelle Unernah*, Bonnaterre; *Green Donzelle*. Head broad; eyes large; one or more longitudinal flutings on the upper part of the muzzle, and the upper jaw rather shorter than the lower; no beards to the latter; mouth very wide; caudal fin pointed; general colour bright green; all the fins and the under part of the belly white. It often grows to the size of a cod-fish, and is found almost entirely in the Northern Seas.

See Lacepede, *Histoire des Poissons*; Bloch, *Ichthyologia* a Schneider.

OPHION, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* many-jointed, slender, with the apex somewhat curved; head transverse, short; eyes reniform; *thorax* somewhat gibbous; wings ample, without a minute triangular areolet; *abdomen* petiolated, compressed, with the back carinated; the aculeus scarcely exerted; legs long, slender, with the claws pectinated beneath.

Type of the genus, *O. ichneumon luteus*, Linnæus; Albin, *English Insects*, pl. xi. fig. g, h. About ten species, several of which are found in England.

OPHIOPHAGOUS, Gr. *ὄφις*, a serpent, and *φάγειν*, to eat.

Eating or feeding upon serpents.

Nor are all snakes of such poisoning qualities as common opinion presumeth; as is confirmable from the ordinary green snake with us, from several histories of domestick snakes, from *ophiophagous* nations, and such as feed upon serpents.

Sir Thomas Brown. *Vulgar Errors*, book vi. ch. xxviii. p. 226.

OPHIORHIZA, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Gentianæ*. *Generic character*: corolla funnel-shaped, five-cleft; germen two-cleft; stigmas two; capsule mitre-formed, two-lobed, two-celled, many seeded.

Four species, natives of North America, the East Indies, and Otaheite.

OPHI-
DIUM.
—
OPHIORHIZA.

OPHIOXYLON. **OPHIOXYLON**, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Apocineæ*. Generic character: corolla a slender tube, thickened in the middle, border five-parted; stigma capitate; berry two-celled; two-seeded. The flowers are sometimes without a pistillum.

Two species, natives of the Islands of Ceylon and Bourbon.

Position.
Name.

OPHIR, (אֹפִיר,) one of the sons of Joktan, son of Eber, a great-grandson of Shem, settled with his brothers in Arabia, (*Gen.* x. 29, 30. *1 Chron.* i. 23.) and occupied one of the South-Western States, which, like the neighbouring territories of Hazremaut and Sabá, (Sheba,) was named after its founder. From this Country, or from some other region bearing the same name, the Hebrews obtained the purest gold in the greatest abundance; hence such was proverbially called the "gold of Ophir." (*Job*, xxii. 24. xviii. 16. *Psal.* xlv. 9. *Isa.* xiii. 12.) Although that metal is not now found in Arabia, (Niebuhr, 141.) it is clear from the concurrent testimony of the Ancients that it was formerly procured thence; and the mountainous region occupied by the descendants of Joktan, was the tract most likely to contain beds of minerals. Michaelis, therefore, supposes (*Spicilegium Geogr. Ext. Heb.* ii. 184.) that the Ophir from which "the navy in Ezion-geber, on the shore of the Red Sea," "fetched gold, and brought it to King Solomon," (*1 Kings*, ix. 26. 28. *2 Chron.* viii. 17, 18.) was the Country mentioned in the Xth chapter of *Genesis*. Niebuhr, (p. 292.) indeed, says he could not hear of any place in Arabia bearing a name which resembled Ophir; but he was convinced that such a name would be found by any one who could travel from Adan to Dafar, as he travelled through the territory of the Imám of San'á; and he is of opinion that Ophir was the harbour named Cana by the Greeks, and the principal port in the dominions of the Queen of Sheba; (Arrian, *Periplus*, p. 18.) but Ophir was rather the name of a territory than of a town; and as the Arabs must at an early period have maintained commercial intercourse with the neighbouring coast of Africa, it is not improbable that Ophir might be only the emporium at which the Hebrews and Tyrians obtained the gold of Africa from the Arabs with whom, by a similarity of language, they could most easily communicate. As it seems possible to derive the word Ophir from a root signifying *dust*, it has been supposed to be applicable to any Country producing *gold-dust*; and almost every region in which that precious metal is found, has in turns been pressed into the service of the sacred Geographers. Josephus (*Antiq. Jud.* i. 6.) places the children of Joktan on the River Cophen to the North-East of Persia, between that Country and India, because the latter was believed to have been occupied by Havilah. Among the Moderns, Bartholdus Nihusius fixed, with more show of probability, on Melindah; Cornelius a Lapide (on *Jerem.* x.) quotes others who supposed Ophir to be Angola, on account of the slaves imported by Solomon. The Portuguese Geographers, with Volterranus, Stuckius, and Ludovicus Venetus, imagined it to be Sofálah. Kimchi, and those who follow him, confounding it with Tharshish, and influenced perhaps by the authority of St. Jerom, held Carthage to be the place. Genebrard and Vatablus were satisfied that it was St. Domingo, because, according to Peter Martyr, Columbus used to say that he had found out the Ophir of Solomon. Arias Montanus, Marinus of Brescia, and John

Cana.

Opinions,
ancient and
modern.

Goropius Becanus gave the preference to Peru; while Malvenda and Garcias thought it was both Peru and Mexico. Others again, taking an Eastern course, carried the Jewish fleets to New Guinea and the islands of Solomon. Urphe, an island in the Red Sea; Ormuz in the Persian Gulf; Aphar, Saphar, Saphora or Saphirina, a town on the Arabian Gulf, have all been pointed out by other writers. Bochart was persuaded that the Ophir from which David got three thousand talents of gold (*1 Chron.* xxix. 4.) was the Cassanitis of Ptolemy and Stephanus, on the coast of Arabia, while that visited by the fleets of Solomon was Taprobamé, now called Ceylon. Pegu is the region selected by Maffei, (*Hist. Ind.* lib. i.) because the Franciscan Bomfer affirmed that the Peguans trace their pedigree to Jewish convicts sent thither by Solomon to work the gold mines of Ophir. Others travelled further South, and stopped at the Peninsula of Malacca, which abounds in precious ores, apes, and peacocks. John Tzetzes maintained Sumatra to be Ophir for the same reason. Lipenius, taking a more comprehensive view, and relying on the authority of Josephus, (*Ant. Jud.* viii. 6.) Theodoret, and Procopius, who call Ophir the Golden Land, *i. e.* the Golden Chersonese, says that the children of Joktan peopled all the Countries bounded by the Eastern Seas, and that Ophir included not merely Sumatra, or Malacca, but every coast and island from Ceylon to the Indian Archipelago. On observing that out of the twelve passages in the Old Testament containing the name of Ophir, only seven afford any clue to its position, and that these are reduced to three when the parallel passages and texts in which Ophir is not a local name have been withdrawn, it is manifest on how slender a basis all these sweeping conjectures are founded; and the opinion of Michaelis, who places Ophir in that tract of Country which was peopled by the family of Joktan, and was most accessible to the Jews by the route of the Red Sea, will appear not only most accordant with the scanty hints furnished by the sacred writers, but likewise most consistent with the imperfect state of navigation at that early period. Uphaz (אֹפִיז, *Jer.* x. 9. *Dan.* x. 5. *1 Kings*, x. 18.) is probably a Chaldee substitute for Ophir. (Michael. *Supplem.* No. 47. p. 46.)

Michaelis, *Spicilegium Geographiæ Exteræ Hebræorum; Supplementa ad Lexica Hebræa*; Niebuhr, *Beschreibung von Arabien*; Arrianus, *Periplus Maris Erythræi*; Josephi *Opera*, Ed. Havercamp; Bochart, *Geographia Sacra*; Maffei *Historia Indica*; Lipenii *Fasciculus Dissertationem*; Huetii *Commentatio de Navigatione Salomonis*.

OPHIRA, in *Botany*, a genus of the class *Octandria*, order *Monogynia*, natural order *Onagræ*. Generic character: involucre two-valved, three-flowered; corolla, petals four, superior; berry one-celled.

One species, *O. stricta*, native of Africa.

OPHISAURUS, from the Greek ὄφις, a snake, and σαῦρος, a lizard, Daudin. In *Zoology*, a genus of animals belonging to the family *Anguida*, order *Ophidia*, class *Reptilia*.

Generic character. Eyes furnished with lids; tympanum very distinct externally, tongue extensile, broad, and forked in a crescent-like form at its tip; teeth small and pointed in both jaws, and also in the palate; body thickish, cylindrical, oblong, having a longitudinal fold on each side of the belly; tail longer than the body, cylindrical, and terminating in a delicate point; scales on the head smooth and few in number; on the

OPHIR.
—
OPHI-
SAURUS.

OPHI-
SAURUS.OPHI-
USA.

body square, and arranged in longitudinal rows; vent simple.

This, as well as the genus *Anguis*, forms the link connecting the two orders *Ophidia* and *Sauria*; like the latter order they possess eyelids which the Snakes have not, and indeed seem to be little different from the genus *Seps* except in being deprived of feet. They are found only in the New World, and are remarkable for the extreme fragility of their tail; they prefer the retired and swampy parts of extensive woods, and feed on insects, worms, and other small animals. Daudin thinks there is probably more than one species, especially about the Colony of Surinam, but one only has hitherto been described.

O. Ventralis, Daud.; *Anguis Ventr.* Linn.; *Cæcilia Maculata*, Catesby; *Glass Snake* of the Carolinas. About two feet three inches in length; of a cylindrical form, rather large in front and gradually diminishing to the tip of the tail; on the back and tail fourteen longitudinal rows of scales nearly square, on the belly twelve rows, smooth, and of a more or less hexagonal form, producing from one hundred and twenty to one hundred and twenty-seven transverse rows, similar to rings; scales under the tail similar, and forming two hundred and fifty rings; about the upper jaw twenty-five scales, and one of them large and rostral, around the lower twenty-three; the semicircular vent covered in front with seven scales. Colour brown or bluish-black above, the sides of the head and neck varied and pointed with black; and all the scales on the upper part of the body and tail marked with two points of light green or yellowish. These animals are innocuous; the extreme fragility of their tail, and their colour resembling glass, has given rise to the name they bear in the United States.

See Daudin, *Histoire Naturelle des Reptiles*; Catesby, *Natural History of Carolina*.

OPHISPERMUM, in *Botany*, a genus of the class *Decandria*, order *Digynia*. Generic character: calyx bell-shaped, six-parted, inferior; corolla none; nectary ten-lobed, ovate, tomentose; filaments short, rising from between the lobes of the nectary, capsule two-celled, one-seeded, seeds winged.

One species, *O. Sinense*, a large tree, native of China. Loureiro.

OPHIURA, in *Zoology*, a genus of *Radiata*.

Generic character. Mouth simple, five-sided, placed beneath; body much depressed, rounded, with five distinct, entire, squamous rays with very spinous ridges, the latter with suckers; spines movable.

Type of the genus, *Asterias nigra*, Müller, *Zool. Dan.* pl. xciii. fig. 1—4. Ten species, most of which are found on the sandy shores of Great Britain.

OPHIURUS, in *Botany*, a genus of the class *Triandria*, order *Digynia*, natural order *Gramineæ*. Generic character: flowers situated in the excavations of the stem; glume two-flowered, two-valved, exterior valve cartilaginous, interior concave, membranaceous; calyx membranaceous, awnless.

One species, *O. corymbosa*, native of New South Wales.

OPHIUSA, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* rather long, simple, very faintly pectinated in the males; *palpi* stout, approximating, slightly recurved, the terminal joint not much exposed, obtuse; the two basal joints covered

with long compact scales anteriorly; the first one-third the length of the second, reniform; the second a little curved at its base, and slightly clavate; the terminal short, rather slender, subulated; *maxillæ* moderate; head rather broad, with a small crest between the antennæ; eyes naked; *thorax* not very robust, smooth; wings entire, forming a triangle during repose; anterior broad, subtriangular, with obscure stigmata, acute at the apex; posterior rounded, with a slight emargination on the hinder margin; *cilia* of all elongated; *abdomen* slender, hairy, with a rather large tuft at the apex in the males; legs moderate; posterior *tibiæ* rather stout, with long spurs; *larva* with twelve legs, naked, slender, somewhat geometric in motion; *pupa* folliculated.

Type of the genus, *Phalæna noctua lusoria*, Linnæus; Donovan, *Britt. Ins.* vol. x. pl. cliv. fig. 2. Eight species, four of which are reported to be found in Britain.

OPHONUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* filiform, with the two basal joints naked; *palpi* six; external maxillary with the terminal joint ovate-truncate, longer and stouter than the preceding, which is clavate; internal with the basal joint slender, the terminal more robust, ovate, acuminate; labial with the two last joints of equal length, the last stoutest, fusiform-truncate, the preceding slender, not clavate; *labrum* slightly notched; mandibles short, rather obtuse, the base dilated internally; *mentum* short, deeply emarginate in front, the centre slightly produced; head subtrigonal; *thorax* subquadrate, or suborbicular; *elytra* rather sinuated at the apex, with the second stria abbreviated; wings two, ample; *tarsi* pentamerous, anterior and intermediate of the males with four dilated joints.

Type of the genus, *Carabus obscurus*, Fabricius; Sturm, *Deutschlands Fauna*, vol. iv. pl. xcii. fig. A. About thirty species, fifteen of which are natives of Britain, the most remarkable indigenous one being *O. Germanus*. Stephens, *Illustrations, (Mandibulata,)* vol. i. pl. ix. fig. 1.

OPHRYS, in *Botany*, a genus of the class *Gynandria*, order *Diandria*, natural order *Orchideæ*. Generic character: calyx five-leaved, the three exterior ovate lanceolate, the two interior (petals?) small, linear, the lip arising from the base of the style without a spur, large, lobed, pendulous.

A genus of elegant ochideous plants, mostly natives of Europe. Eleven species are natives of England, growing on a chalky soil. *O. apifera*, the Bee Ophrys, is found plentifully on the chalk hills of Kent and Surrey in the month of July. *O. aranifera*, the Spider Ophrys, and *O. Muscifera*, the Fly Ophrys, are interesting plants, but are more scarce than the Bee Ophrys.

OPILUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* eleven-jointed, pilose, clavate; the second joint short, the six following elongate; the remainder forming the club, of which the basal joint is elongate-obtrigonal, the other shorter; the terminal one being obliquely acuminate; *palpi* with the terminal joint large, securiform; head as broad as the *thorax*, which is conic-cylindric, with the base slightly attenuated; body elongate; legs moderate; *tarsi* indistinctly five-jointed, the basal joint minute, and concealed above by the apex of the *tibiæ*.

Type of the genus, *Attelabus mollis*, Linnæus; Sa-

OPHI-
USA.
—
OPILUS.

OPILUS. moule, pl. xii. fig. 1. Of this pretty, but not numerous genus, two species have been detected in England, one, however, is very rare; they are found beneath the bark of trees.

OPINE.

O'PIATE, n. } Fr. *opiate, opion*; It. *oppiare, op-*
O'PIATE, adj. } *pio*; Sp. *opiato, opio*; Lat. *opium,*
O'PIUM. } *opion*; Gr. *ὀπιον*, from *ὀπός*, *succus,*
juice.

See the Quotation from Pliny.

For he had yeven drinke his gayler so
Of a clarre, made of certain wine,
With narcotikes and *opie* of Thebes fine,
That all the night though that men wold him shake,
The gailer slept, he mighte not awake.

Chaucer. *The Knightes Tale*, v. 1474.

It appeareth also in the gangrene, or mortification of flesh, either by *opiates*, or intense colds.

Bacon. *Natural History*, Cent. iv. sec. 333.

The juice of poppie commonly runneth out in great abundance, and gathereth into a thicknesse: which afterward is stamped, and reduced into little trosches, and dried in the shade. Which juice thus drawne and thus prepared, hath power not onely to provoke sleepe, but if it be taken in any great quantitie, to make men die in their sleepe: and this our physicians call *opion*.

Holland. *Plinie*, vol. ii. book xx.

All their shape
Spangl'd with eyes more numerous then those
Of Argus, and more wakeful then to drouze,
Charm'd with Arcadian pipe, the pastoral reed
Of Hermes, or his *opiate* rod.

Milton. *Paradise Lost*, book xi. l. 133.

And for the particular ingredients of those magical oyntments, it is like they are *opiate*, and soporiferous.

Bacon. *Natural History*, Cent. x. sec. 903.

What a strange bewitchery is there in flattery? How, like a spiritual *opium*, does it intoxicate and abuse the understanding, even sometimes of men wise and judicious?

South. *Sermons*, vol. viii. p. 192.

A pillow, which, like *opiates* ill-prepared,
Intoxicates, but not composes; fills
The visionary mind with gay chimeras,
All the wild trash of sleep without the rest.

Young. *The Complaint*. Night 8.

But not the shade with kindly *opiate* bless'd,
That lull'd the remnant of the world to rest,
Nor toil persuasive of profound repose,
Through Godfrey's camp could give an eye to close.

Brookes. *Jerusalem Delivered*, book ii.

OPINE, v.
OPINABLE,
OPINIATE, v.
OPINATIVE,
OPINATIVELY,
OPINIATIVE,
OPINIATIVENESS,
OPINATOR,
OPINATOR,
OPINER,
OPINING, n.
OPINIASTRE,
OPINIA'TRE,
OPINIASTROUS,
OPINIA'TROUS,
OPINIA'TRY,
OPINIA'TRETY,
OPINION, n.
OPINION, v.
OPINIONATE,
OPINIONATED
OPINIONATELY,
OPINIONATIVE,
OPINIONIST.

Fr. *opiner, opiniastre, opini-*
astrete, opinion; It. *opinare,*
opinione; Sp. *opinar, opinion*;
Lat. *opinari, opinio*. Of unknown
Etymology. Vossius says from
opus, ut reor a re; cogito ab
ago sive coagito. Sanè hæc om-
nia mentis opus significant; all
signify the work or operation of
the mind. Or, he adds, from
πινύειν, that is, *φρονεῖν, sapere,*
whence *πινύσις, sapientia; in-*
telligentia. In common usage,
to *opine* is

To think; to think or deem
probable, or likely to be or to
happen.

Opinion, the *n.* See the Quo-
tations from Locke and Belsham.
And it is further sometimes used
as equivalent to sentence, cen-
sure, (generally,) doom, or judg-
ment.

Opinionate, holding, maintain-

ing, holding fast or adhering to *opinion* or conceit; **OPINE.**
firm, obstinate, or pertinacious in *opinion* or conceit;
conceited, head-strong, self-willed. And

Opinatre, or *opiniastre*, *adj.* from the French, is used
to the same effect.

And whanne ye here batelis and *opynyouns* of batels drede ye not
for it bihoveth these thinges to be don but not yit anoon is the ende.
Wiclif. *Mark*, ch. xiii.

Clerely to answeere ye would ask long space,
The manner is doubtfull and *opinable*,
To a certaine you I woll myselfe enable.

The Remedy of Loue. Imputed to Chaucer.

This was the old *opinion* as I rede.

Chaucer. *The Wif of Bathes Tale*, v. 6444.

Some seyne, he did well enough,
And some seyne, he did amis.

Diuers *opinions* there is.

Gower. *Conf. Am.* book iii. p. 89.

Now if the iudges bee so sore and so cruell, that thei will not
allowe that polycy, yet hath thys pacifier taught him farther to saye
that he did but speake it affirmatiuely, and wil not holde it *opina-*
tively, and then ye wote well it is by this pacifier no heresy.

Sir Thomas More. *Workes*, fol. 924. *The Apology.*

Once by fortune Heluidius Priscus Prætor-elect had *opined* against
a matter which Vitellius affected.

Savile. *Tacitus*, book ii. ch. xxvii.

Opinion is a light, vaine, crude, and imperfect thing, settled in
the imagination; but never arriving at the understanding, there to
obtaine the tincture of reason.

Ben Jonson. *Discoveries*, fol. 87.

And verily how possibly he should admit and leave unto us sense
and *opinion*, and not withal allow that which is sensible and *opinable*,
a man is not able to shew.

Holland. *Plutarch*, fol. 913.

Keep thy word and promise, be constant in a good resolution.
Speak truth. Be not *opinative*; maintaine no factions.

Burton. *Anatomy of Melancholy*, fol. 355.

Weak and wilful *opiners*, but not just arbitrators.

Bishop Taylor. *Artificial Handsomeness*, p. 157.

Very few examine the marrow and inside of things, but take them
upon the credit of customary *opinings*.

Id. *Ib.* p. 131.

Men are so far in love with their own *opinastre* conceits, as they
cannot patiently endure opposition.

Raleigh. *Arts of Empire*, ch. xiv.

Next, in matters of death, the laws of England, wherof you have
intruded to be an *opiniastrous* sub-advocate, and are bound to defend
them, conceive it not enjoined in scripture, when or for what cause
they shall put to death, as in adultery, theft, and the like.

Milton. *Works*, vol. i. fol. 298. *Doctrine and Discipline of Divorce.*

The first obstacle to good counsell is pertinacy or *opiniativeness*.

Raleigh. *Arts of Empire*, ch. xiv.

But if you have no mercy upon them, yet spare yourself, lest you
bejade the good galloway—your own *opiniaster* wit—and make the
very conceit itself blush with spur-galling.

Milton. *Works*, vol. i. fol. 99. *Animadversions upon the Remon-*
strants' Defence.

Lest popular *opiniatre* (*opiniatrety*, in some editions) should arise,
we will deliver the chief *opinions*.

Sir Thomas Brown. *Vulgar Errours*, book vii. ch. ix.

That a mare will sooner drown than a horse, though commonly
opinion'd, is not I fear experienced: nor is the same observed in the
drowning of whelps and kitlins.

Id. *Ib.* book iv. ch. vi. p. 247.

Lon. He is strong *opinion'd* that the wench he lov'd

Remains close prisoner by the King's command.

Beaumont and Fletcher. *The Noble Gentleman*, act i. sc. 1.

Self-conceited people never agree well together: they are wilfull
in their brawls, and reason cannot reconcile them. Where either
are only *opinionately* wise hell is there: unlesse the other be a pa-
tient meerly.

Feltham. *Resolve* 85. fol. 150.

And 'tis the more difficult to find out verity, because it is in such
inconsiderable proportions scattered in a mass of *opinionative* uncer-
tainty; like the silver in Hiero's crown of gold.

Glanvil. *The Vanity of Dogmatizing*, p. 64.

OPINE.

Our author Hales was esteemed a man very *opinionative*, tho' otherwise very learned.

Wood. *Athenæ Oxonienses*, fol. 177.

OPISTHOCOMUS.

Every conceited *opinionist* sets up an infallible chair in his own brain.

Glanville to Albius.

As they have any thing bad in them, they proceed from us, as they contain somewhat good, they are from God; which sufficiently confuteth those heretical *opinators*, and decideth the controversie.

Barrow. *Works*, vol. ii. fol. 183. *Sermon* 12.

They did *opiniat* two principles, not distinct only, but contrary the one to the other.

Id. *Sermons*.

So that for all his exact plot down was he [Cæsar Borgia] cast, from all the greatness, and forced to end his days in a mean condition: as it is pity but all such politic *opiniators* should.

South. *Sermons*, vol. i. p. 352.

To which, smiling and shaking his head, he answered, why, what else can be thought or said of it, but that in this the *opiniator* overruled the annotator, and the man hath a mind to indulge his fancy?

Id. *Ib.* vol. iii. p. 345. note.

Be sure not to let your son be bred up in the art and formality of disputing, either practising it himself, or admiring it in others; unless, instead of an able man, you desire to have him an insignificant wrangler, *opiniater* in discourse, and priding himself in contradicting others.

Locke. *Of Education*, vol. iii. fol. 85. sec. 189.

Man not enduring to be termed a foppish simpleton, doting on speculations, and enslaved to rules, a fantastical humourist, a precise bigot, a rigid stoick, a demure sneakesby, a clownish singularist, or non-conformist to ordinary usage, a stiff *opiniatre*, &c.

Barrow. *Works*, vol. iii. fol. 378. *Sermon* 34.

The floating of other men's *opinions* in our brains, makes us not one jot the more knowing, though they happen to be true. What in them was science, is in us but *opiniatrety*; whilst we give up our assent only to reverend names, and do not, as they did, imploy our own reason to understand those truths which gave them reputation.

Locke.

Of Human Understanding, book i. ch. iv.

The one [set declamation] sets the thoughts upon wit and false colours, and not upon truth: the other [captious logical disputes] teaches fallacy, wrangling, and *opiniatry*.

Id. *Of Education*, vol. iii. fol. 43. sec. 98.

Well! of all fops, commend me to him for the greatist, he's so *opinion'd* of his own abilities, that he is ever designing somewhat, and yet he sows his stratagems so shallow, that every daw can pick 'em up: from a plotting fool, good Lord deliver me.

Dryden. *Sir Martin Mar-all*, act i.

The entertainment the mind gives this sort of propositions, [probability] is called belief, assent, or *opinion*, which is the admitting or receiving any proposition for true, upon arguments or proofs that are found to persuade us to receive it as true, without certain knowledge that it is so.

Locke. *Of Human Understanding*, book iv. ch. xxv.

Opinion is the result of obscure and indeterminate perception. That the planets revolve about the sun, is a branch of knowledge; that they are inhabited by beings similar to men is only an *opinion*.

Belsham. *Philosophy of the Mind*, ch. v. sec. 1. p. 108.

At that moment appeared Kent, painter enough to taste the charms of landscape, bold and *opinionative* enough to dare and to dictate, and born with a genius to strike out a great system from the twilight of imperfect essays.

Walpole. *Anecdotes of Painting*, vol. iv. ch. vii. p. 289.

OPISTHOCOMUS, from the Greek *ὀπισθεν*, behind, and *κόμη*, hair, Illiger; *Sasa*, Sonnini. In Zoology, a genus of animals belonging to the family *Gallidæ*, order *Gallinacæ*, class *Aves*.

Generic character. Beak strong, thick, short, convex, dilated laterally at the base, suddenly compressed at the tip, which is slightly curved; lower mandible strong, and terminating in an angle; nostrils perforating completely the middle of the beak, lateral, and covered with membrane; wings of moderate length, first quill very short, four following graduated, sixth the longest; tail long, flat, rounded, and consisting of only ten quills;

legs strong, muscular; tarsus shorter than middle toe; feet four-toed, all unconnected, but each margined with a rudimental membrane; hind toe shorter than the inner, but furnished with a longer claw than the others.

OPISTHOCOMUS.

OPPIDAN.

Temminck does not allow this genus to be placed among the gallinaceous birds, on account of its wanting the connecting membranes of the toes, and the number of caudal quills not corresponding to that order. Still, however, notwithstanding these distinctions, it is retained among them by Cuvier, as well as by Illiger, who founded the genus, which at present consists but of one species.

O. Sasa, Illig.; *Phasianus Cristatus*, Lin.; *le Hoazin*, Buff.; *Sasa*, Sonnini. Is about the size of a Peacock; on the back of the head is a crest, consisting of narrow feathers, ferruginous from their root to their middle, and black for the remainder, which reaches down to the middle of the neck; when excited, the bird is capable of elevating this crest horizontally, but no further, and at the same time it spreads its tail; the general colour of the plumage is sombre, the upper part and sides of the neck, as also the upper parts of the body, are brown marked with white and glossed with green and copper colour, whilst the alar quills are tinged with ferruginous; under parts white clouded with rust; under wing-coverts, belly, and legs ferruginous, feet and toes red with black claws. The bird has pretty much the same carriage as the Peacock. In Guiana, of which Country it is a native, it is met with either in pairs or in small flocks of six or eight, never more, in the marshy savannahs, where it feeds on the leaves and berries of the *Arum arborescens*; but it is never found either in the woods or in elevated districts. It is scarcely ever on the ground, but spends the greater part of the day perched on the branch of a tree overhanging the water. It has a very strong smell of castoreum, so that its flesh is not fit for food, and is only used as a bait for fishing.

See Illiger, *Prodromus Avium*; Cuvier, *Règne Animal*; Latham, *General History of Birds*.

OPORABIA, in Zoology, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* short, the articulations produced within in the males, and each side furnished with several fine hairs, which produce a slightly pectinated appearance, simple in the females; *palpi* minute, not visible from above, depending, triarticulate, the basal joint stout, reniform; the second very short, subquadrate; terminal minute, ovate; *maxillæ* short; head small, short; forehead broad; eyes globose; *thorax* slender; wings ample, thin, anteriorly rounded, disposed in a triangle during repose; anterior ovate-triangular, more or less marked with undulated strigæ, posterior somewhat oval; body short, slender, and obtuse, with a small tuft at the apex in the males, shorter and acute in the females; legs simple; both sexes with wings; *larva* smooth, naked, lineated; *pupa* subterranean.

Type of the genus, *Geometra dilutata*, Wiener, *Verzeichniss*; *Pl. inscriptata*, Donovan, *Britt. Ins.* vol. xv. pl. 517. One species, a native of Britain; appearing late in the Autumn.

O'PPIDAN, *adj.* } Lat. *oppidanus*, from *oppi-*
O'PPIDAN, *n.* } *dum*, which is commonly (though for various reasons) derived from *ope*. Vossius prefers; *quia, qui ruri agerent, propter pericula opes eo conferrent suas, vel quia opem inde expectarent*. It is used as equivalent to

A townsman;—at the seats of our Universities, op-

OPPIDAN. posed to gownsmen. And at Eton School, to those boys not on the Foundation, who board in the town.

OPPONE. Touching the temporal government of Rome, and *oppidan* affairs, there is a Pretor, and some choice citizens who sit in the Capitol.
Howell. Letter 38. book i. sec. 1.

The *oppidans*, in the mean time, were not wanting to trouble us; and particularly the baillives.

A. Wood. Ann. Univ. Ox. in 1528.

OPPIGNERATE, Lat. *oppignerare*, to pledge, to pawn, *ob*, and *pignerare*, from *pignus*, which seems to be from *pago*, or *pango*, *quia* pactionis lege datur. Vossius.

To plight or pledge, to pawn.

They would say of the duke of Guise, Henry, "that he was the greatest usurer in France, for that he had turned all his estate into obligations." Meaning, that he had sold and *oppignerated* all his patrimony, to give large donatives to other men.

Bacon. Works, vol. i. p. 549. Apophthegm 175.

OPPILATION, Fr. *oppiler*, *oppilation*, an obstruction; *oppilatif*; *oppilative*, obstructive. Cotgrave. It. *oppilare*, *oppilazione*; Sp. *opilar*, *opilacion*; Lat. *opilare*, to stop up, to close up, (*ob*, and *pilare*, Gr. *πιλεῖν*, *densare*, *condensare*, to thicken or condense.) See **COMPILE**.

A stopping or closing up, an obstruction.

Let them beware of all meates, that wyll stoppe the pores, & make obstructions or *oppilations*, that is to saye, with clammy matter stoppe the places where the natural humours are wrought & digested.

Sir Thomas Elyot. The Castel of Helth, book ii. p. 39.

I find among the writers, that the milke of a goat is next in estimation to that of the woman; for that it helpeth the stomach, remooueth *oppilations* and stoppings of the liuer; and looseth the bellie.

Holinshed. The Description of England, vol. i. book iii. ch. i. p. 372.

OPPO'NE , v.	} Fr. <i>opposer</i> ; It. <i>opponere</i> , <i>opporre</i> ; Sp. <i>oponer</i> ; Lat. <i>opponere</i> , to put or place against (<i>ob</i> , and <i>ponere</i> , to put or place.) To oppose is

		To put, place, or set against, or in the way of; in the front of; to resist; to stand against or in front of; to hinder, (<i>sc.</i> the progress or passage,) to contravene; to be adverse or hostile; to urge against, (<i>sc.</i> in speech,) to contradict.

Eastward ther stood a gate of marble white
Westward right swiche another in th' *opposite*.

Chaucer. The Knights Tale, v. 1896.

That now next at this *opposition*
Which in the signe shal be of the Leon.

Id. The Frankeleines Tale, v. 11369.

For thy my sonne, if thou be wise,
Nowe thou hast herde this euidence,
Thou might thyn owne conscience
Oppose, if thou hast be suche one.

Gower. Conf. Am. book v. p. 145.

Auoyde vngostlye vanities of voyces, and *opposiciōs* of science
falsely so called.

Bible, Anno 1551. 1 Timothy, ch. vi.

What can you not do,
Against lords spirituall or temporall,
That shall *oppose* you?

Ben Jonson. The Alchemist, act iii. sc. 2.

The second day, the foure *opponents* brought in their complaints.

Stow. King James. Anno 1603.

VOL. XXV.

I remember S. Augustine professes, this was it that heartned him, and made him to triumph in his former Manachisme, that he met with feeble *opponents*, and such as his nimble wit was easily able to overturn.

Hall. Works, vol. iii. fol. 584. The Peace Maker, sec. 24.

Therefore when Salomon had spoken of all the vanities of men, at last he *opposes* the memorandum as a counterpoise against them all, Remember for all these things thou shalt come to judgement.

Hakewill. Apologie, book iv. sec. 7. fol. 519.

The castle-gates opened, fearless of any further *opposal*.

Sir T. Herbert. Travels, p. 81.

If I could bear it longer, and not fall
To quarrell with your great *opposeless* willes
My snuffe, and loathed part of nature should
Burne itselfe out.

Shakspeare. Lear, fol. 303.

Those truths which are of the foundation and essence of religion, are necessarily to be known, beleaved, embraced of all men; and the obstinate *opposers* of them are worthy of our carefull avoydance and hardest censure.

Hall. Works, vol. iii. fol. 33. Christian Moderation, book ii. sec. 5.

BAP. With the honour to give the daring enemy an affront
In being the first *opposer*, it will teach
Your soldiers boldness.

Beaumont and Fletcher. The Fair Maid of the Inn, act i. sc. 1.

But say thou wert possesst of David's throne
By free consent of all, none *opposite*,
Samaritan or Jew.

Milton. Paradise Regained, book iii. l. 357.

Some of our *opposites* are so intoxicated with the divinity of monarchy, as they confidently determine that the efficient cause of royal monarchical power is onely God.

Prynne. Treachery and Disloyalty, part iii. fol. 115.

At the right side of any of the bases begin your account from that to the *oppositely* noted planet thence to his *opposite*, and so shall you find a continued course in that order.

Drayton. Polyolbion, song 11.

Before mine eyes in *opposition* sits
Grim Death my son and foe, who sets them on,
And me his parent would full soon devour
For want of other prey, but that he knows
His end with mine involv'd!

Milton. Paradise Lost, book ii. l. 803.

Grey-headed men and grave, with warriors mixt,
Assemble, and harangues are heard, but soon
In factious *opposition*.

Id. Ib. book xi. l. 604.

Here not without some *oppositive* comparison; not Moses, not Elias, but this: Moses and Elias were servants; this a son.

Bishop Hall. Contemplations, book iv.

Then up th' *opponent* hill,
By the swift motion slung, we mount aloft.

Somerville. The Chase, book iii.

The savage renders vain the wound decreed;
And springs impetuous with *opponent* speed.

Pope. Homer. Odyssey, book xix.

And that they are so will appear one day, when those exact bills of our accounts, relating all our *opposings* even of the smallest motions of the spirit, shall be preferred, and read against us.

South. Sermons, vol. xi. p. 253.

There is one darling inclination of mankind, which usually affects to be a retainer to religion, though she be neither its parent, its godmother, or its friend; I mean the spirit of *opposition*, that lived long before christianity, and can easily subsist without it.

Swift. Works, vol. iii. p. 112. An Argument against abolishing Christianity.

The leading views of the earliest and most enlightened patrons of the economical system have, in my opinion, been not more misrepresented by its *opponents*, than misapprehended by some who have adopted its conclusions.

Stewart. Philosophy of the Human Mind, ch. iv. sec. 18. p. 251.

OPPONE.
—
OPPRESS.

Yon path, that leads
Down the steep bourn and 'cross the level meads,
Soon mounts th' *opponent* hill, and soon conveys
To where the farm its pleasing group displays.
Scott. Epistle 2. To a Friend in London.

Whether a black-haired man, or a fair-haired man presided in the Court of King's Bench, I would have the law the same; the same whether he was born in *domo regnatrice*, and sucked from his infancy the milk of courts, or was nurtured in the rugged discipline of a popular *opposition*.

Burke. Works, vol. x. p. 122. Powers of Juries in Prosecutions for Libels.

OPPORTU'NE, } Fr. *opportun*; It. *opportuno*;
OPPORTU'NELY, } Sp. *oportuno*; Lat. *opportunus*.
OPPORTU'NITY. } See IMPORTUNE. (From *ob*, and
portus, a port, or harbour.) *Opportunus est locus, in quo navigantes portum in propinquo habent, quasi ob portum.* Vossius.

Convenient, at hand, for harbour, safety, rest.

Convenient, commodious; fit, suitable, timely, seasonable.

Wicliff explains *opportunity*; (*opportunitas*;) *sc.* best time.

For none so proud, that dare me deny,
Knight or knave, chanon, priest, ne nonne,
To tell a tale plainly as they conne
Whan I assigne, and see time *oportune*.

Lidgate. The Story of Thebes. Prologue, p. 571.

And fro that tyme he soughte *oportunte* or best tyme to bitraie him.
Wicliff. Matthew, ch. xxvi.

And from y^t tyme he sought *oportunte* to betraye hym.
Bible, Anno 1551.

The murkiest den,
The most *opportune* place, the strong'st suggestion,
Our worser genius can, shall neuer melt
Mine honour into lust.

Shakspeare. Tempest, fol. 14.

But this may seem to be anticipated in this place, because it will fall in afterwards more *opportune*ly to be discoursed again.

Cudworth. Intellectual System, book i. ch. iv. fol. 208.

And yet that *opportunity* which led
Him to attempt, seem'd likewise him t' excuse:
A feeble-spirited king that governed,
Who ill could guide the sceptre he did use.

Daniel. History of Civil Wars, book v.

First, a soliloquy is calmly made;
Where every reason is exactly weighed,
Which, once perform'd, most *opportune*ly comes
Some hero frighted at the noise of drums.

Buckinghamshire. Essay on Poetry.

Tho' prompt, if proper the occasion rise,
Her nimbler aid no generous Muse denies;
But if a fair and friendly call invite,
Speeds on the verse to *opportune* delight.

Byrom. Epistle to a Friend. On the Art of Poetry.

O mistress, *opportune*ly, art thou met.

West. Triumphs of the Gout.

[Vandyke] was indefatigable, and keeping a great table, often detained the persons who sat to him, to dinner, for an *opportunity* of studying their countenances, and of retouching their pictures again in the afternoon.

Walpole. Anecdotes of Painting, vol. ii. ch. iii. p. 165.

OPPRE'SS, } Fr. *opprimer, opprresser*; It.
OPPRE'SSION, } *opprimere, opprressare*; Sp. *op-*
OPPRE'SSIVE, } *primar*; Lat. *opprimere, op-*
OPPRE'SSIVELY, } *pressum, to press or squeeze*
OPPRE'SSIVENESS, } *against, (ob. and premere.) See*
OPPRE'SSOR. } COMPRESS.

To *press* or squeeze against, heavily, burthensomely; to over-burthen, overcharge or overload; to *press* beyond sufferance; to bear hardly, painfully, or severely

against or upon; to overpower by violence, to violate OPPRESS. or ravish.

Whether riche men *oppressen* not you bi power, and thei drawen you to doomes.
Wicliff. James, ch. ii.

Are not the riche they which *oppresse* you, and they whyche drawe you before iudges.
Bible, Anno 1551.

The seven maidens of Milesie also
Han slaine herself for veray drede and wo,
Rather than folk of Gaule hem shuld *opprresse*.
Chaucer. The Frankelaines Tale, v. 11723.

And with a glad intent
Chees rather for to dien, than assent
To ben *oppressed* of hire maidenhede.
Id. Ib. v. 11697.

For which *oppression* was suiche clamour
And swiche pursuite unto the king Artour,
That damned was this knight for to be ded
By course of lawe.
Id. The Wif of Bathes Tale, v. 6471.

And suche fortune there he nam,
That he a maiden hath *oppressed*,
Which in hire ordre was professed.
Gower. Conf. Am. book v. p. 130.

I haue had experience many a time and oft, both in the dys-closing of felonies, and sometime of muche other *oppression* vused by some one man or twayne in a shyre.

Sir Thomas More. Workes, fol. 907. The Apology.

Nor vppon all offycers and call them bribours, nor vppon gentle menne and call theym *oppressours*.
Id. Ib. fol. 868.

Israel is *oppressed* of the Madianites, because he returned agayne into idolatrie.

Bible, Anno 1551. Judges, ch. vi. note.

From wider gates *oppressors* sally there;
Here creeps th' afflicted through a narrow dore.
Davenant. Gondibert, book ii. can. 1.

So was the huntsman by the bear *opprest*,
Whose hide he sold, before he caught the beast!
Waller. The Battle of the Summer Islands, can. 2.

To ease the soul of one *oppressive* weight,
This quits an Empire, that embroils a State.
Pope. Moral Essays. Epistle 1. v. 105.

And by the Nobles, by the Commons curst,
Th' *oppressor* rul'd tyrannic where he durst,
Stretch'd o'er the poor and church his iron rod,
And serv'd alike his vassals and his God.
Id. Windsor Forest.

Oppression makes wise men mad, but the distemper is still the madness of the wise, which is better than the sobriety of fools.

Burke. On a Regicide Peace. Letter 1.

The Italian republic they regard as the handmaid and creature of France, with a pompous name to dupe the populace, and to palliate the odium of tyrannical measures and of *oppressive* taxation.

Eustace. Italy, vol. i. ch. ii. p. 124.

OPPRO'BRY, } Fr. *opprobre, opprobrier*;
OPPRO'BRIOUS, } It. *obbrobrio, obbrobrioso*; Sp.
OPPRO'BRIOUSLY, } *oprobrio*; Lat. *opprobrium, ob-*
OPPRO'BRIOUSNESS. } *and probrum, quasi objectum*
probrum, *obprobrare*; probrum objicere; and probrum, says Vossius, signifies anything not consentaneous to virtue; *obprobrare*, is to charge any one with acting contrary to virtue. And *opprobrium*,

The charge of acting contrary to virtue; reproach, (of so acting,) disgrace, infamy.

And leaue that *opprobrious* name cokold.

The Remedy of Loue. Imputed to Chaucer.

Whiche [Christ] for the rewarde of his vertue receiued the *opprobrious* death of the crosse.

Sir Thomas More. Workes, fol. 15. The Life of John Picus.

Thei finde the meane sometye to make some false shrewes saye, that they heard such a christen mā speake *obprobrious* woordes agaynste Mahomet.

Id. Ib. fol. 1212. The Third Booke of Coumfort against Tribulation.

OPPROBRY. A righteous mā is better that hath none images, for he shall be free fro *obprobriousnes*.

Barnes. *Workes*, fol. 344. *That it is against the Holy Scripture to honour Images, &c.*

OP-PUGN. The head of Thomas Vaske was set vp ouer Newgate, to the *opprobry* of his parents, which inhabited thereby.

Stow. *Richard II.* Anno 1388.

The wisest heart
Of Solomon he [Moloch] led by fraud to build
His temple right against the temple of God,
On that *obprobrious* hill, and made his grove
The pleasant Valley of Hinnon, Tophet thence
And black Gehenna call'd, the type of hell.

Milton. *Paradise Lost*, book i. l. 408.

BUCK. Thinke you, my Lord, this little prating Yorke
Was not incensed by his subtile mother,
To taunt and scorne you thus *obprobriously*?
Shakspeare. *Richard III.* fol. 187.

Stern Menelaüs first the silence broke,
And, inly groaning, thus *obprobrious* spoke,
"Women of Greece! oh, scandal of your race,
Whose coward souls your manly form disgrace."

Pope. *Homer. Iliad*, book vii.

He (saith S. James) that speaketh against his brother, and judgeth his brother, speaketh against the law, and judgeth the law, that is, he *obprobriously* doth imply the law to be defective, untill he doth compleat or correct it.

Barrow. *Workes*, vol. i. fol. 283. *Sermon 20.*

OPPU'GN. Fr. *oppugner*; It. *oppugnare*;
OPPU'GNANCY. Sp. *opugnar*; Lat. *oppugnare*, to
OPPUGNA'TION. fight against, (*ob*, and *pugnare*, from
OPPU'GNER. *pugnus*, χεῖρ πυκνή, *id est*, *manus densa et digitis clausis contracta*, the hand drawn together with the fingers close.) See **EX-** and **IM-PUGN.**

To fight against; to strive or contend against, to attack, to oppose, to resist.

The true catholike faythe is, and euer hath been, *oppugned* and assaulted by the deuyl and all his disciples such heretikes as Tyn-

dall is, from the begynnyng vnto thys present tyme.
Sir Thomas More. *Workes*, fol. 571. *The Second Part of the Confutation of Tyndall.*

Willing faithfully to wryte and reduce in veritie historiall, the great seige, cruel *oppugnation* and peteous taking of the noble and renowned cite of Rhodes, the key of Christendome.

Hakluyt. *Voyages, &c.* vol. ii. fol. 72. *The Loss of Rhodes.*

For if the maintenance of ceremonies be a corrosiue to such as *oppugne* them; vndoubtedly to such as maintayne them, it can be no great pleasure, when they behold how that which they reuerence, is *oppugned*.

Hooker. *Ecclesiasticall Politie*, book iv. sec. 10. fol. 146.

Take but degree away, vn-tune that string,
And harke what discord followes: each thing meetes
In meere *oppugnancie*.

Shakspeare. *Troilus and Creside*, fol. 82.

Yea tell me, by what power was it that thine oracles (wherby all the world was held up in superstition) were silenced? What power whereby the Gospel so opposite to flesh and bloud hath conquered the world, and in spight of all the violence of tyrants, and *oppugnation* of rebellious nature, hath prevailed?

Hall. *Workes*, vol. iii. fol. 637. *Satan's Fiery Darts Quenched*, dec. 1. temp. 1.

I am sorry, that any of our new excutifidians should pester your Suffolk; although glad in this, that they could not light upon a soil more fruitful of able *oppugners*.

Hall. *Letter concerning falling away from Grace.*

He exercised with great zeal his parts in propagating the Gospel against its *oppugners*, not only by communication and preaching, but by his exemplary course of life, and great piety.

Wood. *Athenæ Oxonienses*, vol. i. fol. 442.

If nothing can *oppugn* love
And virtue envious ways can prove,
What may not he confide to do,
That brings both love and virtue too?

Butler. *Hudibras*, part i. can. 3.

OPSIMATHY, Gr. *οψιμάθια, μαθεῖν*, to learn, *ὀψέ*, OPSIMATHY. late. See the Quotation.

Opsimathie, which is too late beginning to learn, was counted a great vice and very unseemly among moral and natural men.

Hales. *Remains*, p. 218.

O'PTATIVE, Fr. *opter*, to choose, *optate*, elect;
O'PTATIVELY, Cotgrave. It. *ottare, ottative*; Sp.
O'PTION, *optar, optative*; Lat. *optare*; which
O'PTIONAL, may be from the Gr. *ὀπτομαι, quod est, video, considerare*; and thus, *optare, propriè sit considerare, eligere*; to consider, to elect, to look at, to choose.

Optative, that can or may choose; choosing, selecting. *Option*,

Choice, selection; preference.

Nothing reacheth nearer God's actual infinity, than this (as I may say) *optative* infinity in the soul of man, which though she can never reach the other infinite existence, yet hath a possibility of never staying or limiting her motions towards it.

Mountague. *Devoute Essaies, Treat. 14. sec. 5.*

Blessing is an act that will bear reciprocation; God blesseth man, and man blesseth God; God blesseth man imperatively, and man blesseth God *optatively*.

Hall. *Workes*, vol. ii. fol. 296. *A Sermon of Thanksgiving.*

Might I have my *option*, O God, give mee rather a little with peace and love.

Id. *Ib.* vol. ii. part ii. fol. 152. *Occasional Meditations*, 81.

Who digs the mine or quarry, digs with glee;
No slave! His *option* and his gain are free.

Savage. *Public Spirit.*

Blest with each boon that simpler minds desire,
Till Heav'n grows weary of their nauseous pray'rs,
I made the nobler *option* to retire,

And gave the world to worldlings and their heirs.

Hart. *Thomas A' Kempis.*

The difference between the employment of language in such cases, (in our speculations concerning individuals,) and in our speculations concerning classes or genera, is; that in the former case the use of words is, in a great measure, *optional*; whereas, in the latter, it is essentially necessary.

Stewart. *Philosophy of the Human Mind*, ch. iv. sec. 2. p. 173.

OPTION. The Archbishop of a Province has a customary prerogative, when one of his Suffragan Bishops is consecrated by him, to name a Clerk or Chaplain of his own to be provided for by such Bishop: in lieu of which it is now usual for the Bishop to make over by deed to the Archbishop, his executors, administrators, and assigns, the next presentation of such dignity or Benefice in the Bishop's disposal within that See, as the Archbishop himself shall choose, and this is called the Archbishop's *Option*. If the Bishop die or be translated before the Archbishop exercises his right, the *Option* is lost, because the new Bishop is not bound by the grant of the predecessor; and the Archbishop cannot present to any Benefice which is vacant at the time of the Bishop's death, because the patronage of all such vacant Benefices belongs by prerogative of the Crown. An *Option* is considered the private patronage of the Archbishop; and if the Archbishop die, it belongs to his personal representatives, who may present whomsoever they please, unless the Archbishop has by his Will directed them to present a particular individual, in which case they are compellable to obey the Will. Blackstone, *Commentaries*, vol. i. p. 381; Burn, *Ecclesiastical Law*, vol. i. p. 226.

O'PTICK, Fr. *optique*; It. *ottico*; Sp. *optico*;
O'PTICKS, Lat. *optice*; Gr. *ὀπτική*, from *ὀπτεσθαι*,
O'PTICAL, to see.
O'PTICIAN.

OPTICK.

OPU
LENT.

The broad circumferen
Hung on his shoulders like the moon, whose orb
Through *optic* glass the Tuscan artist views.
Milton. Paradise Lost, book i. l. 293.

But the organism of every part of the brain, particularly of the chambers of the *optique* nerves, in which, if any were in the brain, the phantastick images of visible things are made, is altogether different from that of the eye.

Grew. Cosmo Sacra, book ii. ch. iii. fol. 73.

The sins we doe, people behold through *opticks*
Which shows them ten times more than common vices,
And often multiplies them.

Beaumont and Fletcher. Thierry and Theodoret, act i. sc. 1.

Other famous astronomers of the present age, teaching that the sun is now remote about two thousand and eight hundred, nay three thousand semidiameters from the earth, affirming that Copernicus and Tycho neglected to allow for refractions, which (as the *opticks* will demonstrate) do much alter the case.

Hakewill. Apologie, book ii. ch. iv. sec. 3. fol. 100.

It seems not agreeable to what anatomists and *optical* writers deliver, touching the relation of the two eyes to each other.

Boyle. Works, vol. i. p. 673. *Experimental History of Colours*.

It has been proved by *optical* writers, that in perceiving the distances of visible objects from the eye, there is a judgment of the understanding antecedent to the perception.

Stewart. Philosophy of the Human Mind, vol. i. ch. ii. p. 104.

The rapid progress which has been lately made in astronomy, anatomy, and botany, has been chiefly owing to the aid which these sciences have received from the *optician*.

Id. Ib. Introduction, part ii. sec. 1. p. 17.

Nature has wisely placed the *optic* nerve of each eye, not in the middle of the bottom of the eye, but toward the side next the nose; so that whatever part of the image falls upon the *optic* nerve of one eye, may not fall upon the *optic* nerve of the other.

Ferguson. Lecture 7. vol. i. p. 256.

The description of the eye, and of the manner in which the pencils of rays proceeding from the different points of a visible object are collected by the refractive powers of the humours, so as to form a picture on the retina, belongs properly to *opticks*.

Stewart. Outlines of Moral Philosophy, p. 25.

O'PTIMACY, } Lat. *optimus*; ab *opto*, *quoque*
O'PTIMISM, } *optimum dicitur, quod electissimum*;
O'PTIMIST. } *i. e. that which is most choice or*
worthy of choice. See *OPTION*, *ante*.

For *optimist*, see the Quotation from *Stewart*.

Optimacy; a select body; nobility; supremacy.

Sometimes an *optimacy* of a few [sins] all prime coequal in their power.

Hammond. Works, vol. iv. fol. 529. *Sermon 9*.

By some modern authors the scheme of *optimism* has been proposed in a form which leads to a justification of moral evil, even with respect to the delinquent.

Stewart. Outlines of Moral Philosophy, p. 213.

The fundamental principle of the *optimists* is, that all events are ordered for the best; and that the evils which we suffer are parts of a great system conducted by almighty power, under the direction of infinite wisdom and goodness.

Id. Ib. p. 211.

O'PULENT, } Fr. *opulent*; It. and Sp. *opulento*;
O'PULENCE, } Lat. *opulens, opulentus*, from *opes*,
O'PULENCY. } *opibus abundans*, abounding in riches.
Abounding in riches or wealth; rich, wealthy, (*sc.* to an excess.)

In after-times it [Tyre] contended with Zidon for primacy, and became far more renowned, *opulent*, and strong.

Raleigh. History of the World, book ii. ch. vii. sec. 2. fol. 189.

A satire against the softness of prosperity,
With a discoverie of the infinite flatteries
That follow youth and *opulencie*.

Shakspeare. Timon of Athens, fol. 95.

Pleas'd on her pillow their dull heads to lay,
Rude Nature's state had been our state to-day;
No cities e'er their towery fronts had rais'd,
No Arts had made us *opulent* and gay.

Thomson. Castle of Indolence.

And from the towered structure haste,
That proudly threatens to the skies;
From Rome and its tumultuous joys,
Its crowds, and smoke, and *opulence*, and noise.

Francis. Horace. Ode 29. book iii.

The wealth of the Medici made them masters of Florence; though it is probable it was not considerable, compared to the united property of that *opulent* republic.

Hume. Essay 7. vol. i. p. 43.

How few can rescue *opulence* from want!
Who lives to Nature, rarely can be poor;
Who lives to Fancy, never can be rich.

Young. The Complaint. Night 6.

OPUNTIA, in *Botany*, a genus of the class *Icosandria*, order *Monogynia*, natural order *Cactæ*. Generic character: leaves of the calyx numerous, the interior having the character of petals; no tube above the germen; stamens shorter than the petals; style cylindrical, berry ovate, umbilicated at the apex, often spiny.

Of this genus, divided from *Cactus* of *Linnæus*, there are thirty-three species known, mostly natives of South America and the West Indies; they consist of plants with jointed, flat, succulent branches without leaves, generally covered with spines; from the form of the fruit they are called Prickly Pear, or Indian Fig; several of the species are cultivated in South America, being the natural food of the insect which produces the *Cochineal*.

OR, *i. e. ere*, before. See *ERE*. In the expression *or ere*, the repetition may be made for the sake of emphasis.

And I salle telle þat tale, or I ferrer go,
How falsnes brewes bale with him, and many mo.

R. Brunne, p. 55.

But natheless, while I have time and space,
Or that I forther in this tale pace,
Me thinketh it accordant to reson
To tellen you alle the condition
Of ech of hem.

Chaucer. Prologue to the Canterbury Tales, l. 36.

And thou art false, I tell thee utterly.
For þar amour I loved hire first or thou.

Id. The Knightes Tale, v. 1157.

Nowe therefore geue ye knowledge to the vpper capytayne & to the council, that he brynge him forthe vnto vs to morow, as though we wolde knowe somthyng more perfectly of him. But we (*or euer* he come neare) are redy in the meane season to kyl him.

Bible, Anno 1551. The Actes of the Apostles, ch. xxiii.

OR, Goth. *aihlthan*; A. S. *oththe*; D. *of*; Ger. *oder, aut, vel, sive*. Of unknown etymology. It is used to express separation or division, difference or disjunction.

Oþer he smot of þe arm or þe hond, or þe heued.

R. Gloucester, p. 17.

He said befor þam alle, of S. Edmundes lond
He wild haf trenage, or brenne alle þat he fond.

R. Brunne, p. 44.

For tweyne or thre ben gaderid in my name, there am I in the myddil of hem.

Wiclif. Matthew, ch. xviii.

For where two or thre are gathered together in my name, th
am I in the middes of them.

Bible, Anno 1551.

For what profitith it to a man if he wyne al the world and suffre peyring of his soul? or what chaungyng schal a man give for his soule?

Wiclif. Matthew, ch. xvi.

What shall it profyt a man, though he should wyne all the whole worlde yf he lose his owne soule? or els what shall a man geue to redeme hys soule againe with all?

Bible, Anno 1551.

In ech of hem he fint somewhat,
That pleaseth hym, or this or that.

Gower. Conf. Am. book v. p. 142.

ORACLE

ORACLE.

O'ACLE, n. } Fr. *oracle* ; It. *oracolo* ; Sp.
O'ACLE, v. } *oraculo* ; Lat. *oraculum*, from *ora-*
ORA'CLAR, } *tum*, past participle of *orare*, to
ORA'CLARLY, } pray : *ab eadem orandi notione*,
ORA'CULOS, } (*i. e. dicendi ore*) *deorum responsa*
ORA'CULOSUSLY. } *dicuntur oracula*. Vossius. *Inest in*
his Deorum Oratio. Cic. Top.

The answer spoken or uttered by the Gods, their Priest or Priestess.

Oracular, oraculous ; having the ambiguity of an *oracle* ; ambiguous ; equivocating ; having or pretending to the authority of an *oracle* ; authoritative ; affecting or pretending to wisdom or foresight.

Why this a dreame, why that a sweaen
And not to euery man liche euen,
Why this a fantome, why that *oracles*,
I not.

Chaucer. The House of Fame, book i.

But this thy glory shall be soon retrench'd ;
No more shalt thou by *oracul* abuse
The Gentiles ; henceforth *oracles* are ceast,
And thou no more with pomp and sacrifice
Shalt be enquir'd at Delphos or elsewhere,
At least in vain, for they shall find thee mute.

Milton. Paradise Regained, book i. l. 455.

The more they her persuade, the more she doth resist
Let them say what they will, she will do what she list,
She stiles herself their chief, and swears she will command,
And whatsoe'er she saith, for *oracles* must stand.

Drayton. Poly-olbion, song 11.

O that whiles we sweate and bleede for the maintenance of these
oracular truths, wee could bee perswaded to remit of our heat in the
pursuit of opinions.

Hall. Works, vol. ii. part ii. fol. 4. Charge to the Diocese of Exeter.

But then the king
(Your husband) for Dodona was in way ;
That from th' *oraculous* oake, he might display
Joue's will.

Chapman. Homer. Odyssey, book xix. fol. 297.

As for equivocations, or *oraculous* speeches they cannot hold out
long.

Bacon. Essay 6. fol. 29.

The testimonies of antiquity and such as pass *oraculously* amongst
us, were not if we consider them alwaies so exact, as to examine
the doctrine they delivered.

Sir Thomas Brown. Vulgar Errours, book i. ch. vi. p. 22.

Let him *oraculous*, the end, the way,
The turns of all thy future fate display
Thy pilgrimage to come and remnant of thy day.

Pope. Homer. Odyssey, book x.

Till thou art heard, imaginations vain
Possess the heart, and fables false as hell ;
Yet deem'd *oracular*, lure down to death
The uninform'd and heedless souls of men.

Cowper. The Task, book v.

A timid jury will give way to an awful judge delivering *oracu-*
larly the law, and charging them on their oaths, and putting it
home to their consciences to beware of judging, where the law had
given them no competence.

Burke. Works, vol. x. p. 123. Powers of Juries in Prosecutions for Libels.

Whether the first source of ORACLES may be traced to the two Theban females pirated by the Phœnicians, and sold respectively into Libya and Threspotia, as the Father of History would persuade us : (ii. 56.) whether with Diodorus Siculus (v. 67.) we should ascribe them to so august an origin as that of Themis, τὴν Θέμιν εὐρέτριαν γεγονέναι τῶν χρησμῶν : or whether with Isaac the Maronite, [cited by Kircher, we degrade them to a Diabolic parentage among the corrupt seed of Cham : (*Ædipus Ægypt.* tom. i. synt. 3. c. 2. p. 172.) it will be most discreet to leave undecided ; and we shall, therefore, adopt the dictum of Professor Daniel Clasen, who has written two learned Books on Oracles in general, and one on the Sibyls in particular, in the course of which he assures us, *id certius est, Oraculorum initium incertum esse.* (i. 5.) This must be received as no slight admission by a Writer who maintains through more than 800 quarto pages, first with a needless interposition of supernatural agency, that the Devil was the prime-mover of all Oracles ; and secondly in opposition to much sound Historical evidence, as we shall show by and by, that their Responses ceased altogether at our Saviour's advent. Clasen's second position is affirmed by him in the words of Del Rio rather than in his own. The failure of prophetic Gas, which Plutarch has assigned as a cause for Oracular silence, is summarily dismissed ; and the cessation, says the learned Jesuit, *non tam tribuendum est vapori seu exhalationi illi deficienti quam virtuti Salvatoris nostri Jesu, qui superveniens fortior forti armato hæc deceptionis vasa extorsit.* (*Disq. Mag.* iv. 2. q. 6. p. 535.) The Physical reason advanced by the Greek Philosopher, and the Theological one adduced by the Divine of Antwerp, are perhaps of equal value.

Daniel Clasen's II^d Book, in which he descends from reasoning to description, is far more worthy of attention than his Ist, and he has collected with much diligence many particulars concerning the chief Heathen Oracles.

To begin with the Oracle of *Delphi*. When Jupiter was once desirous to ascertain the central point of the Earth, he despatched two Eagles, as Pindar majestically styles the Birds, in a lost passage, of which Strabo (ix. 419.) has preserved the sense ; two swans as Plutarch (*de defectu Oracul.*) calls them ; or two Crows as they are named by Strabo himself, in order to determine this problem in land-surveying. The messengers took flight in opposite courses, from Sunrise and Sun-set ; and they met at Delphi, which place was thenceforward dignified with the title of Γᾶς ὀμφαλον, the navel of the Earth ; an *umbilicus* being represented in white marble within its celebrated Temple. (Pausanias, x. 16.) Dante has made use of a similar modern superstition concerning Jerusalem. Varro, however, has very slyly overthrown the whole of this Legend by a quiet comment on

Clasen de
Oraculis.

Delphic
Oracle.

Delphi the
navel of the
Earth.

ORACLE. a passage in Ennius, "*O Sancte Apollo qui umbilicum Terrarum obtines!*" *Umbilicum dictum aiunt ab umbilico nostro; quod is medius sit locus Terrarum ut umbilicus in nobis, quod utrumque est falsum; quod is locus nec medius terrarum sit, neque noster umbilicus hominis medius.* (*De Lingua Latina*, vi.)

Discovery
of its Oracu-
lar virtue.

Delphi thus became a place of great distinction, but it was not yet Oracular, unless we admit the manifest allegory of Tellus and Daphne, (Pausanias, x. 5.) till the fumes which issued from a neighbouring cave were first discovered by a shepherd named Coretas. This swain's attention was forcibly attracted to a spot round which whenever his goats were browsing they gambled and bleated more than was their wont. Whether these fumes arose in consequence of an Earthquake, or whether they were generated by Demoniacal Art is not to be ascertained: but the latter hypothesis is thought by Clasen to be the more probable of the two. Coretas, on approaching the spot, was seized with ecstasy, and spoke some words which neither himself nor others could understand, and which therefore were deemed inspired. We do not learn, however, that he profited by his discovery, or obtained any sacerdotal office in consequence of it; but it seems that it was not long before the danger arising in consequence of the excitement of curiosity among the neighbours, the deadly stupefaction often produced among those who inhaled the fumes without proper caution, and the inclination which it aroused in some to plunge themselves into the depths of the cavern below, occasioned the setting apart of an unhappy girl, who was to be the vehicle of the Responses, now deemed Oracular and called Pythian, as proceeding from Apollo, the slayer of Python, to whom Delphi was consecrated. A three-legged stool with a hollow seat, for the Tripod was no more, was placed above the steamy fissure; and mounted on that throne, the Priestess could be charged with the divine *afflatus*, comparatively unharmed, and was thus rendered the vehicle of Apollo's dictation. (Diod. Sic. xvi. 26.)

Appoint-
ment of a
Priestess.

The Tripod.

Her inspir-
ation.

Phemonoe is said by Pausanias to have been the name of the first Pythoness, *πρόμαντις τοῦ θεοῦ πρώτη*, and she spake like her successors in hexameters, (x. 5.) which for the most part limped most grievously in dog-grel. Pausanias adds, that it was the common belief of antiquity that only women were objects of inspiration; a notion which is easily explained by their facility of hysterical affection. *Λέγεται ἡ Πυθία αὐτῇ γυνὴ τις εἶσα ἐπικαθῆσθαι τῷ τρίποδι τῇ Ἀπόλλωνος, διαίρεσα τὰ σκέλη· εἶθ' ἔτις πνεῦμα πονηρὸν κάτωθεν ἀναδιδόμενον καὶ διὰ τῶν γεννητικῶν αὐτῆς διαδύμενον μοριῶν πληρῶν τὴν γυναῖκα τῆς μανίας.* That which Æcumenius in the above words, commenting on *Acts* xvi., ascribes to an Evil Spirit, Justin more philosophically refers to *spirit* of another kind. *Ex quo (profundo terræ foramine) quod in Oracula patet, frigidus Spiritus vi quādam velut vento in sublime expulsus mentes vatum in recordiam vertit, impletosque Deo responsa consulentibus dare cogit.* (xxiv. 6.) The powerful effects of this cold blast are, we think, more vividly described in a rapid but most terrific picture drawn by the pen of Gregory Nyssen, when speaking of another Demoniac, than in the much longer, far more elaborate, and infinitely better known passage by Lucan, directed to the Pythoness herself. (v. 161.) The Greek Father writes as follows of a Wanton, who was seized by an Evil Spirit after accusing Thaumaturgus of incontinence. No sooner had the money which she demanded for her

perjury been paid, than πνεύματι δαιμονίῳ στρεβλωθεῖσα, καὶ βρυχηθμῷ θηρίῳδαι παρὰ τὴν ἀνθρώπινην φωνὴν ἀνοιμώξασα, πίπτει πρηνὴς κατὰ τὸ μέσον τῶν συνειλεγμένων θεάμα φρικτόντε καὶ φοβερὸν τοῖς παροῦσιν ἀθρόως γεγεννημένη, τῶν τριχῶντε διερρίμμενων, καὶ ταῖς ἰδίαις χερσὶ σπαρασσομένων, καὶ τῶν οφθαλμῶν ἀπεστραμμένων, καὶ τῇ στόματος τὸν ἀφρὸν παραπτύοντος. (*De vitâ S. Greg. Thaumaturgi; Opera*, ii. 973. Paris, 1615.) The Pythoness might have furnished the above noble portrait.

ORACLE.

As the Oracle became more celebrated, its prophetic machinery was constructed of more costly materials. The Tripod was then formed of gold, but the ὄλμος, The Cor- (Julius Pollux, x.) *cortina*, or lid, which was placed in its hollow rim, in order to afford the Pythoness a more secure seat, continued to be made of brass. (Plin. xxxiv. 3.) When she ascended she was said *γενέσθαι παρὰ τῷ θεῷ*, and *λαλεῖν ἐκ τραπέζης*. She prepared herself by drinking out of a sacred fountain, (Castalia,) adjoining the crypt, the waters of which were reserved for her only, and in which she bathed her hair; by chewing a laurel leaf, whence she was called *ἐαφνηφάγος*; (*Lycophron*;) and by circling her brows with a laurel crown. (Aristoph. in *Pluto*, 39.) The person who made inquiry from the Oracle first offered a victim, and then having written his question in a note-book, handed it to the Pythoness before she ascended the Tripod; *οἱ μαντενόμενοι ἐν πυξίδι ἐγγραφὸν τὰς πένσεις, στεφάνωτ' ἀμφιστάντες ἀβρῷ τῇ μαντιπόλῳ ἐχειροτονέειν*: (*Scholias in Aristoph. Plutium*;) and he also, as well as the Priestess, wore a laurel crown. (Livy, xxiii. 11.) In early times the Oracle spoke only in one month of the year, named *Byssus*, in which it originated; and at first only on the 7th day of that month, which was esteemed the birth-day of Apollo, and was called *Polyphthonus*. (Plut. *Quæst. Græcæ*, 9.)

Virginity was at first an indispensable requisite in the Pythoness; on account, as Diodorus tells us, of the purity of that state and its relation to Diana; moreover, because Virgins were thought better adapted than others of their sex to keep Oracular mysteries secret and inviolate. But an untoward accident having occurred to one of these consecrated damsels, the guardians of the Temple in order (as they imagined) to prevent its repetition for the future, permitted no one to fulfil the duties of the office till she had attained the mature age of fifty; they still indulged her, however, with the use of a maiden's habit. (Diod. Sic. *ut sup.*) The Response was always delivered in Greek. (Cic. *de Divin.* ii. 56.) When the reader calls to mind some of the many equivocating replies which are everywhere recorded as having been enounced from the Tripod, he may perhaps feel surprised that so late a writer as Plutarch should continue to vaunt its infallibility. No words, however, can be stronger than those which he has employed. "As Mathematicians call a straight line the shortest possible course between two points, so the answer of the Pythoness proceeds to the very truth without any diversion, circuit, fraud, or ambiguity. *It has never yet in a single instance been convicted of falsehood.*" (*De Pythiæ Or. Opera*, ii. p. 408. Francofurti, 1620.) *Τὰ ἐκ Τρίποδος* was a proverbial expression for Truth.

The Pythoness latterly not a Virgin.

Infallibility
of the
Oracle.

The origin of the name of *Jupiter Hammon*, and the locality of his Oracle, which we shall next briefly consider, are alike disputed. The Legend of its foundation by Dionysus on the recovery of his Libyan Kingdom, according to his Father's prophecy, is related by Dio-

Jupiter
Hammon.

ORACLE. dorus Siculus, (iii. 72.) and putting aside the wild story told by Herodotus, (ii. 42.) of the appearance to Hercules of Jupiter disguised by the Ram's head and fleece, the later author soberly contents himself by attributing Hammon's horns to the crest of the helmet which he had worn in battle; a key similar to that which has been applied by others to resolve the marvellous transformations of Proteus. Servius, on the IVth *Aeneid*, thinks that the horns symbolize the *involution* of the Responses. The Temple of Jupiter Hammon is described by Lucan (ix. 511.) poetically; in prose, but perhaps not more authentically, by Q. Curtius, (iv. 7.) by Strabo, (p. 30.) and by Arrian; (iii. p. 161.) and its wondrous Fount, from the days of Herodotus to our own, has been warehoused by small Poets as part of their stock in trade of sparkling illustrations. Under our notice of JUPITER, we have already spoken of this Temple and of the golden vessel in which the somewhat nondescript Idol of the God was carried abroad by his Priests, responding, if he were in good humour, to his votaries, not by speech, but by nodding. (Strabo, xvii. p. 814.) Hence, as might be expected, his infallibility derived no slight protection, for since the Priests themselves often confessed ignorance of their God's meaning, it was not easy for his votaries to tax him with mistake. The *Arietinum responsum*, therefore, although certain in itself, usually left those who applied for it in the uttermost uncertainty; and in the end it passed into a Proverb, which has been cited by Aulus Gellius, (iii. 3.) from a lost Comedy, the *Fretum*, even in his days but doubtfully attributed to Plautus:

*Nunc illud est,
Quod Arietinum responsum Magnis Ludis dicitur:
Peribo, si non fecero; si faxo vapulabo.*

Obscurity
of the
Oracle.

Visit of
Alexander
the Great.

Response to
Hannibal.

Antiquity of
Dodona.

Every thing about this Oracle partakes of obscurity; and even the visit of Alexander the Great, an event of sufficient magnitude to entitle us to look for an authentic narrative, is defaced by fable and puerility. The object of that most perilous journey is by no means clearly explained; for we can scarcely induce ourselves to believe that the Macedonian, "madman" as he might be, either seriously wished to emulate the reputed action of Perseus and of Hercules, or to satisfy any grave doubt which he might entertain as to his own immediate descent from Jove, embodied as a huge Serpent: *Malle Draconis se filium credi quam Philippi clarissimi Regis!* Among the other distinguished votaries of Jupiter Hammon were Lysander (Plut. *in vita*) and Hannibal; the latter of whom obtained a Response which brings to mind the Ecbatana of Cambyses, and the "Jerusalem" of our own Harry IV.: *Δίβυσσα κρύψει βῶλος τὸν Ἀννίβαλ δέμας.* The juggling Oracle by these words did not intimate that the ashes of the banished Carthaginian hero were to find repose in his native Country, but in Libyssa, a village of Bithynia, in which place he poisoned himself to escape delivery into the hands of Flaminius. It is but just, however, to Jupiter Hammon to state that his name as the Prophet on this occasion, is first introduced by Veccius. Plutarch when relating the story, in his *Life of Flaminius*, does not specify the particular Oracle which delivered the Response.

In passing on to *Dodona*, we altogether decline the controversy concerning its relative antiquity with Delphi, notwithstanding it has been peremptorily written that the Delphic Oracle was founded in A. M. 1638, whereas Deucalion and Pyrrha did not erect the Temple of Jupiter

at Dodona till A. M. 2492. (Clasen, 309.) The Prophetic voice at Dodona issued from a single oak, *ἐκ ὄρου* ὑψικόμοιο Διὸς, (Od. T. 297.) or as Hercules relates in the *Trachiniæ*,
ORACLE.

*Σιλλῶν ἱσιλῶν ἄλλος ἐστὶ γράψαμεν
πρὸς τῆς πατρῆας καὶ πολυγλώσσου δρυός.*

1169.

Although, unless Lucian be jocose, a Beech tree also gave tongue there: *ἡ φηγος ἐν Δωδώνῃ αὐτόφωνος ἐμαντεύετο.* (*Gallus, ad init.*) Boissard, indeed, cuts the knot by affirming that both Oaks and Beeches were vocal. (*De Divinat.* p. 89.) Bells and copper basins, suspended from the trees, clanged and tinkled at the slightest breath of wind, and perhaps with greater regularity of cadence whenever an Oracle was delivered. Whether it was a real Dove, or a Lady named Peristera, who first officiated as Priestess, it is not for us to decide, (Herodotus, ii. 55. Pausanias, x. 12.) although it may be thought that the question of Herodotus sufficiently conveys its own answer: *ἐπεὶ τέω τρόπῳ ἂν πελειὰς γὰ ἀνθρωπηῆ φωνῇ φθέγγετο;* A fountain of strange virtue near the sacred grove was named *Anapauomenon*, because it decreased at noon; its water was cold, and like other water extinguished torches if they were plunged beneath, but it possessed also the most unwaterlike power of relighting them if applied to it after extinction. Pliny, (ii. 103.) Pomponius Mela, (ii. 3.) and Solinus (7.) record the fact, and Lucretius (vi. 879.) undertakes to explain it. The Poet fails in his attempt, and St. Augustin takes a shorter mode than is satisfactory to Natural Philosophers, by referring the cause immediately to God's pleasure, who, as he implies, takes delight in thus puzzling mankind. (*De Civ. Dei*, xxi. 5—7.) Clasen thinks the general opinion mistaken which supposes Deucalion to have consulted this Oracle concerning the restoration of the Human Race after the Deluge. What need was there of such a question, asks the Professor with great simplicity, while his wife was yet alive? It was a matter *quod sanè ipse scire potuit*, without applying either to the Devil or to a Conjuror.

Trophonius, at whose Oracle we next arrive, according to Pausanias, (ix. 37.) was the most skilful architect of his day; and in conjunction with his brother Agamedes he plundered the Treasury which he had built for Hyrieus, by a trick similar to that which Herodotus (ii. 121.) has so amusingly related as practised by the two Egyptian brothers against Rhampsinitus. Concerning the origin of his Oracle there are many opinions. Some say that he was swallowed up by an earthquake in the cave which afterwards became prophetic; (Pausanias, *ut sup.*) others, that after having completed the adytum of Apollo at Delphi, (a very marvellous specimen of his workmanship, which Dr. Clarke thought might at some time be discovered on account of its singularity,) he declined asking any specific pay, but modestly requested the God to grant him whatever was the greatest benefit a man could receive; and in three days afterwards he was found dead. (Cicero, *Tusc. Quæst.* i. 47.) Cicero, however, in another place, (*De Nat. Deorum*, iii. 22.) cites Trophonius as one of the names of Mercury; and Boccaccio, catching the hint, at once finds a Greek etymology in *τρέπειν*, signifying the versatility of the God of Merchants and of Thieves. Even if Trophonius had more Oracles than one, that with which we are most concerned was at Lebadæa, in Bæotia. (Strabo, ix. 414. Pausanias, i. 34. ix. 39. Livy, xlv. 27.)

This Oracle was discovered after two years of scarcity in its neighbourhood, when the Pythoness ordered the starving

and fountain.

Story of
Trophonius.

Discovery
of his
Oracle.

ORACLE. population, who applied to her, to consult Trophonius in Lebadæa. The deputation sent for that purpose could not discover any trace of such an Oracle, till Saon, the oldest among them, obtained the desired information by following the flight of a swarm of bees. (Pausanias, ix. 40.) The Responses were given by the Genius of Trophonius to the inquirer who was compelled to descend into a Cave, of the nature of which Pausanias has left a very lively representation. The votary resided for a certain number of days in a Sanctuary (*ιερόν*) of Good Fortune, in which he underwent customary lustrations, abstained from the hot bath, but dipped in the river Hercyna; and was plentifully supplied with meat from the victims which he sacrificed. Many, indeed, were the sacred personages whom he was bound to propitiate with blood; among them were Trophonius himself and his sons, Apollo, Saturn, Jupiter Basileus, Juno Henioche, and Ceres Europa, who is affirmed to have been the Nurse of Trophonius. From an inspection of the entrails, a Soothsayer pronounced whether Trophonius was in fit humour for consultation. None of the *exta*, however favourable they might have been, were of the slightest avail, unless a ram, immolated to Agamedes at the mouth of the Cave on the very night of the descent, proved auspicious. When that propitious signal had been given, the Priests led the inquirer to the river Hercyna, where he was anointed and washed by two Lebadæan youths, thirteen years of age, named *Hermæi*. He was then carried further to the two spring-heads of the stream; and there he drank first of Lethe, in order that he might forget all past events and present his Mind to the Oracle as a *tabula rasa*; and secondly, of Mnemosyne, that he might firmly retain remembrance of every occurrence which was about to happen within the Cave. An Image, reputed to be the workmanship of Dædalus, was then exhibited to him, and so great was its sanctity, that no other eyes but those of a person about to undertake the adventure of the Cave were ever permitted to behold it. Next he was clad in a linen robe, girt with ribands, and shod with sandals peculiar to the Country. Respecting costume, Maximus Tyrius differs from Pausanias; he speaks either of entire nakedness or of a purple mantle. (*Diss.* xxvi.) The entrance to the Oracle was a very narrow aperture in a grove on the summit of a mountain, protected by a marble parapet about two cubits in height, and by brazen spikes above it. The upper part of the Cave was artificial, like an oven, (the *kelder* as the Dutchman in the *Spectator* calls it,) but no steps were cut in the rock, and the descent was made by a ladder brought to the spot on each occasion. On approaching the mouth of the adytum itself the adventurer lay flat, and holding in each hand some honeyed cakes, first inserted his feet into the aperture, then drew his knees and the remainder of his body after them, till he was caught by some hidden force, and carried downward as if by a whirlpool. The Responses were given sometimes by a vision, sometimes by words; and a forcible exit was then made through the original entrance, and in like manner feet foremost. There was only a single instance on record of any person who had descended failing to return, and that one deserved his fate; for his object was to discover treasure not to consult the Oracle. Immediately on issuing from the Cavern, the inquirer was placed on a seat called that of Mnemosyne, not far from the entrance, and there the Priests demanded a relation of every thing which he had seen and heard; he was

The descent
as described
by Pausa-
nias.

then carried once again to the Sanctuary of Good Fortune, where he remained for some time overpowered by terror and lost in forgetfulness. By degrees his former powers of intellect returned, and, in contradiction to the received opinion, he recovered the power of smiling. "I write," continues Pausanias, "not only from hearsay, but matters which I have seen occur to others, and of which I myself have made experiment when I went to consult Trophonius." (ix. 39.)

This pointed assertion effectually disproves the notion that a visitor of the Cave of Trophonius never smiled after his return. It is probable that the gloom, the mephitic vapours, and perhaps some violence from the Priests which he encountered in his descent, might seriously affect his constitution, and render him melancholy; and thus Aristophanes strongly expresses terror, by an expression in *The Clouds* which became proverbial,

ὡς δίδωκ' ἰγὼ
ἔσω καταβαίνων ὥσπερ ἐς Τροφώνιαν. 507.

One man, indeed, is noticed by Athenæus, (xiv. 1.) who did not recover his power of smiling till assisted by another Oracle. Parmeniscus of Metapontum finding himself thus wofully dispirited, went to Delphi for a remedy, and Apollo answered that he would find a cure if he resorted to his mother. The Hypochondriac interpreted this Response as relating to his own native Country; but on being disappointed in his hope there he sought relief in travelling. Touching by accident at Delos, he entered a Temple of Latona, and unexpectedly casting his eyes upon an Idol of that Goddess (Apollo's mother) most grotesquely sculptured, he burst into an involuntary flood of laughter. Of other recorded descents into the Cave of Trophonius, that of Timarchus, described by Plutarch, (*de Socratis Genio; Opera*, ii. 590.) is dismissed by the writer himself as a Fable, ὁ μὲν Τιμάρχου μῦθος ἔστω. That of Apollonius Tyanæus (Philostratus, iv. 8.) was an irruption, not a legitimate visit. The Impostor appears to have bullied the Priests, and to have done exactly according to his pleasure both above and below ground.

Dr. Clarke in his visit to Lebadæa found every thing belonging to the Hieron of Trophonius in its original state, excepting that the narrow entrance to the adytum was choked with rubbish. The Turkish Governor was afraid of a popular commotion if he gave permission for cleansing this aperture. Mr. Cripps, however, despite the fear of becoming permanently ἀγέλαστος, introduced the whole length of his body into the cavity, and by thrusting a long pole before him found it utterly stopped. The waters of Lethe and Mnemosyne at present supply the washerwomen of Lebadæa. We must not part from the Cave of Trophonius without an allusion to Addison's Dream. Few of the *Spectators* exhibit more graceful humour than that Number (599.) in which he approaches the precincts of the Oracle, and the melancholy charm which clouded the brow of others has been powerless with him. But it must be remembered that he awoke before he stepped within the entrance.

The Oracle of Delos, notwithstanding its high reputation, had few peculiarities which need detain us: its virtue was derived from the nativity of Apollo and Diana in that Island. At Dindyma, or Didyma, near Miletus, Apollo presided over the Oracle of the *Branchidæ*, so called from either one of his sons or of his favourites, Branchus of Thessaly, whom he instructed in soothsaying while alive, and canonized after death. The Responses were given by a Priestess, who bathed and

ORACLE. fasted for three days before consultation, and then sat upon a bar, waving a charming-rod in her hand, and inhaling the steam from a hot spring. (Jamblichus, xx.) Apollo Dindymæus was one of the few Gods to whom the Roman Law allowed the privilege of being a Legatee. (*Ulpiani Fragm. Tit. 23. § 5.*) At Claros, near Colophon, was the Oracle of the *Clarian Apollo*, delivered by a Priest selected for the most part out of a Milesian family, who prophesied after drinking the water of a subterraneous fountain, which while it gave insight into futurity at the same time shortened the term of life. (Pliny, ii. 103.) It had also the enviable quality of inspiring with verse those who were before illiterate, as Germanicus found by experiment upon its guardians. *Tum in specum degressus (sacerdos) haustū fontis arcani aquā ignarus plerumque literarum et carminum edit responsa versibus, compositis super rebus quas quis mente recepit.* (Tacitus, *Annal.* ii. 54.) The Response to Germanicus was inauspicious, and we learn from Strabo that it was one of the latest delivered by the Clarian Oracle. (xiv. p. 642.)

Of the Clarian Apollo.

Egyptian Oracles.

In Butus, on the Sebennytic mouth of the Nile stood an Oracle of Latona. (Herod. ii. 155.) It had the merit of predicting the death of the insane tyrant Cambyses. Herodotus speaks also of other Egyptian Oracles; one of Jupiter in Heliopolis, (ii. 8.) others of Diana, of Mars, of Minerva, and of Hercules. (ii. 83.) Apis, the sacred Bull, was supposed to be Oracular, as he received or rejected food from the hand of a votary; and he plainly announced calamity to Germanicus by disdain his offering. (Pliny, viii. 46.)

Oracle of Amphiaræus.

In the Temple of Amphiaræus at Oropus, on the frontiers of Bœotia and Attica, Oracular dreams were given to those who slept upon the skin of a ram which they had previously sacrificed. The Priests were the interpreters, after a day's abstinence. The fountain belonging to this Oracle was a second Pactolus to its Sacerdotal establishment. No rite was performed in it, nor was it used for lustrations, but its waters proved an un-failing source of substantial profit. Every patient who consulted Amphiaræus respecting any disease, and who was satisfied with the Oracle's prescription, threw a piece of gold into the consecrated spring before his departure. (Pausanias, i. 34.)

Numerous other Oracles.

The minor Oracles, of which little more is known besides the names, were numerous, and these we may be allowed to omit. The largeness of their number may be determined from a passage in Tertullian's *Tract De Animâ*, in which, after noticing four or five of the chief Oracles, he proceeds, *Cætera cum suis et originibus et ritibus, et relatoribus, et cum omni deinceps historiâ somniorum Hermippus Beritensis quinione voluminum satiatissimè descripsit.* (p. 290.) Plutarch also has spoken of Bœotia singly as being *ἐνεκα χρηστηρίων πολυφώνος.* (*De Defect. Or.* 411.) One Oracle of Bacchus in Thrace, however, is of too jovial a nature to be dismissed altogether in silence. The statue of the jolly God was inscribed with the words *Infucata veritas*, for which Clasen would not inaptly substitute *In vino veritas*; since the Priests having first listened to the question of the worshipper, filled themselves to the brim with wine, together with which they affected to imbibe the fumes of Prophecy. *Quo facto aliquid murmurabant vel loquebantur quod habebatur pro Oraculi responso.* The authority which Clasen cites for this story is Maiolus in his *Dies Caniculares*, p. 361.

Cessation of Oracles.

Lucian has treated the extinction of Oracles with great

humour as a subject of much congratulation to Apollo. **ORACLE.** "How troublesome," he says, "must have been the incessant duty of the Soothsaying God; how stunned must have been his ears with hourly inquiries. First, he was obliged to be at Delphi, then he must run post haste to Colophon, cross over to Xanthos, return to Claros, look in at Delos, and hurry on to the Branchidæ. Wherever, indeed, any one of his ghostly interpreters chose to sip holy water, nibble the laurel, and mount the tripod, thither must Apollo resort with all diligence and obsequiousness, or good b'ye to his reputation." (*Bis accusatus, ad init.*) That at our Saviour's birth "the Oracles were dumb," was long a received article of belief, a doubt concerning which would have savoured of profaneness; and the splendid use which Milton has made of that fancy in his *Ode on the Nativity* reconciles us to its existence. But, in truth, it is no more than a fancy; and one which, instead of elevating the majesty of Heaven must tend to its degradation in the eyes of the soberly pious. On this point we may learn a lesson from a Pagan: *καταμηνύς τὸν Θεὸν ἀνθρωπίναις χρείαις οὐ φείδεται τῆς σεμνότητος, οὐδὲ τηρεῖ τὸ ἄξιωμα καὶ τὸ μέγεθος αὐτὸ τῆς ἀρετῆς.* (*Plut. de Defectu Orac.* 414.) Without attributing this cessation to Divine agency, there were obvious reasons for its occurrence, which was not sudden but gradual. As men became less ignorant they were less easily deceived, and the Oracular trade being no longer profitable fell out of the market. The frauds which Eusebius notices as revealed by the confessions of Pagan Priests in the reign of Constantine, (*Præparatio Evangelica*, iv. v. vi.) must have been long suspected, if not in many instances discovered, and must, consequently, have tended greatly to render Oracles contemptible. The parallel which such instances afford to the impostures laid open by the Visitations of many of our own Religious Houses at the Reformation cannot fail to strike the most inattentive reader.

Not at the Advent of our Saviour.

Van Dale (a Dutch Writer of the last Century, whose Work was presented to the French in a lighter form by Fontenelle in his *Histoire des Oracles*) has cited innumerable authorities to disprove the common opinion, that Oracles ceased at the Birth of Christ. Among them are no less distinguished writers than Tacitus, Philostratus, Lucian, Strabo, Juvenal, Suetonius, Martial, Statius, Pliny the younger, Tertullian, Herodian, Plutarch, Dion Cassius, Capitolinus, Trebellius Pollio, Zosimus, Sozomen, and Ammianus Marcellinus, (*Diss. I. de Orac.* p. 87—117.) all of whom have incidentally mentioned Oracular Responses as existing in their own days. It would detain us far too long if we were to examine these accounts separately; and the point which is sought to be established by them scarcely requires the citation of anterior testimony if we produce the latest evidence which has been given. Theodoret writes of Julian when he was about to undertake his Parthian War, that *εἰς ἅπαντα τὰ κατὰ τὴν Ρωμαίων ἡγεμονίαν χρηστήρια τοὺς εὐνουστάτους τῶν ὑπηκόων ἐξεπέμψεν.* (iii. 9.) Julian would not have taken this trouble of sending to all the Oracles in his dominions if they had long since been silent; that they were not a few may seem implied by *ἅπαντα*; and whether the Emperor himself believed in them or not, there cannot be a doubt from his anxiety to obtain their sanction, that he knew them to possess influence over the minds of the populace. Macrobius, who flourished yet later, in the reigns of Arcadius and Honorius, speaks of the *Sortes Antianæ*, in words which distinctly prove that

ORACLE. they were consulted as Oracles in his time. The Idol of the Heliopolitan God, he says, is carried abroad by its Priests, *ferunturque divino spiritu, non suo arbitrio, sed quo Deus propellit vehentes: ut videmus apud Antium promoveri simulacra Fortunarum ad danda responsa. Saturnalia, i. 23.*

Bayle. Bayle says less on Oracles than might be expected, but that little is pungent. The Pagan notions of the Deity, he observes, were as false as Atheism itself. After a favourable Response from Jupiter, we meet countless instances of application to Apollo as the Judge *de dernier ressort*; and many Gods were consulted, just as we consult many Advocates concerning a Lawsuit, in order that we may obtain the surest opinion by comparison. *Tot capita tot sensus.*

Modern
Oracle to
Erigena.

In times much more modern, a whimsical mention of an Oracle occurs in the Biography of Johannes Scotus Erigena, a Monk of St. David's, who taught Logic, Music, and Arithmetic at Oxford in the reign of Alfred. It should be premised that doubts exist concerning the name, the native Country, and the identity of this excellent Professor; and we are indebted for our principal knowledge of him to the industry of Anthony à Wood, who has transcribed his account from the MS. *Glossæ* of Roger Bacon on Aristotle's Tract *de Secretis Mulierum*, preserved in the Library of Christ Church, Oxford. (1616, D. 3. 17.) Bacon, who calls Erigena Patricius, says that he was a most skilful and faithful interpreter of Tongues, to whom we are indebted for some true copies of certain Works of Aristotle obtained in the manner related below. Erigena had been a great traveller, and "he tells us, also, that he left no place or Temple in which the Philosophers were wont to compose and repose their secret Works, which he had not thoroughly searched when he was in Greece and other Eastern parts of the World. There was not also any learned man whom he believed to have some knowledge in Philosophical writings but he sought him out. At length, coming to the Oracle of the Sun which Æsculapides built, he found therein a solitary man most learned in Philosophy and in wit excellent, to whom applying himself as much as he could, did in the result supplicate him that he would communicate to him the secret writings of that Oracle, &c. With some consideration he promised to do it, and being as good as his word, Patricius found among them the Work which he desired, and for which he had purposely journeyed to that place, namely, Aristotle's Book called *Secretum Mulierum*; which being obtained he retired with great joy, and gave many thanks to God for it." The real ver-

sion of the story probably is, that Erigena discovered the MS. in a Temple in Greece; for even honest Anthony is startled by the Oracular portion of the narrative. "Without doubt," he remarks in a note, "our famous Friar is here mistaken, for Oracles were long before the time of Erigena ceased." (*Hist. and Ant. of Univ. of Oxford, i. 40. by Gutch.*) Aubrey, however, cannot so easily relinquish the marvel, which gains not a little by transfusion into his pages. "Johannes Scotus Erigena, when he was in Greece, did go to an Oracle to inquire for a Treatise of Aristotle, and found it by the Response of the Oracle. This he mentions in his Works lately printed at Oxford!" (*Miscellanies. Oracles.*)

In a Satirical Dialogue by Cælius Calcagninus, *Oraculorum Liber; Opera*, (640.) may be found some amusing Parodies on ancient Responses delivered by an imaginary modern Oracle. The inquirer, who receives the following reply, is first portrayed as *Gallus quidam e proceribus morbo laborans intercute, quem ex crapulâ, puto, contraxerat, obeso ventre, torosis lacertis, prominentibus labris, glabro calvicio, torque alioqui insignis et frequenti famulatio. Rogabat autem Apollinem ut consuleret quâ ratione sine morbi præjudicio posset gemmatas lagenas haurire.* The object of the Oracle in return was to mystify, and the success of the attempt can scarcely be doubted when we read the prescription which was enunciated.

Clunibus admoveas; sed clunes dropace levâ (lævi (?))
Castoreumque linas. Tum mascula pellis hycnæ
Virus in exertos inspiret nocte molares.
Terque pedes, bis terque caput sub gurgite Hydaspi
Merge, trientales demum continge dyotas.*

The Frenchman retired quite satisfied with this *concinnum pharmacum*. We wish an unhappy Poet who was among the inquiring throng had done the same. He was answered, that he must fulfil his fate and starve. Yet his tuneful application, with which we shall conclude, may seem to have merited greater favour from the God of Song.

*Cura mihi Aonides, semper mihi numen Apollo,
Nocte dieque illi barbata nostra sonant.
Sed mihi quid fructus dulcissima barbata præbent?
Quâ tandem Aonides utilitate juvant!
Pauperies me dura premit, sævique labores,
Atque arcere hyemem vix toga sarta potest.
Nonne fuit satius medicas excurrere ad artes?
Nonne fuit satius civica jura sequi?
Da, rogo, consilium, votorum inspector Apollo,
Nam te dulce sequi, sed mihi egeré grave est.*

ORAISON. See ORIZON.

O'RAL, } Lat. *os, oris*, perhaps from Gr. *ἐρ-εῖν*, to
O'RALLY. } speak.

Spoken or uttered by the mouth; by word of mouth.

And see *orally* in the Quotation from Hall: "so present as to be received in the mouth."

As for *orall* traditions, what certaintie can there be in them? what foundation of truth can be layd upon the breath of man?

Hall. *Works*, vol. ii. fol. 40. *The Old Religion*, sec. 3.

That it should be corporally, carnally, *orally* present, and torn in pieces with our teeth (as good Pope Nicholas caused Berengarius to say, and our Allen hath followed him unbidden) hath ever seemed impious to us, and (as Austen judges it) no lesse than flagitious.

Id. Ib. vol. i. fol. 625. *No Peace with Rome*, sec. 17.

Both Romanists and Pharisees own alike a written doctrine, but then they both pretend the true sense and explication thereof to have descended to them by *oral* tradition.

Tillotson. *Works*, vol. i. fol. 590. *The Rule of Faith*, part iii. sec. 9.

Mr. White, indeed, says, that the faith of the Jews was not delivered to them *orally*, but by writing; than which nothing can be more inconsistent with his hypothesis. *Id. Ib.* fol. 591.

Before the invention of the arts of writing, carving, and painting, *oral* tradition must have been the only vehicle of historical knowledge; and, with respect to this, it is well worth our notice, that the wisdom of Providence has made provision for the instruction of youth in the dispositions and circumstances of their aged parents.

Priestley. *Lectures on History*, vol. i. part ii. lect. 4. p. 99.

* We cannot attempt an emendation in this line, which no doubt is faulty.

ORAN.

ORAN, a corruption of the Arabic word Wahrán,* is the name of a considerable town on the Northern coast of Africa. It is built on a declivity five miles South-East of the Mersá-l kebír, (*i.e.* Great Port,) the Portus Magnus of the Ancients, and is about half a furlong East of the village of Gízah. (Quiza Colonia,) The Castle of Santa Cruz, its principal fort, is in $35^{\circ} 44' 27''$ North, and $39' 15''$ West,† and the town itself, situated partly on the plain, partly on a rising ground at the foot of lofty mountains overhanging it to the North and North-West, presents to the eye groups of well-built houses, rising gradually above each other, and overshadowed by fine trees, so as to form one of the most picturesque scenes in this part of Barbary. (*Voyages, &c.* p. 56.) On the ridge of the mountain behind the town, there are two castles commanding it and the Mersá-l kebír; and to the South and South-East, there are two others on the same level as the lower part of the town, but separated from it by a deep winding valley through which a small stream of excellent water flows; and near its source stands a fifth castle, "which not only," says Dr. Shaw, (p. 13.) "guards the matmórs (granaries) that are dug under the walls of it, but is at the same time an important defence to the city." He also mentions in terms of admiration, the beauty of the ravine to the South, interspersed with orange-groves and rills trickling over rocky beds, while shady bowers and a change of scene occur at every step. "By Nature as well as by Art, Wahrán," he adds, "is a place of great strength and much more tenable than Algiers; the Spaniards, therefore, owed their success against it, in 1732, to a sudden panic which seized the Beg who had the command and abandoned it without making any resistance." The early history of this town, with which Dr. Shaw seems to have been unacquainted, fully confirms his suspicion, that it is not on the site of an ancient city; for, according to Abú

Obaïd al Bekrí of Cordova, who flourished in the Xth Century, it was founded by seamen from Andalus, (Spain,) A. H. 290, (A. D. 903,) destroyed by hostile Berbers seven years afterwards, rebuilt in the following year by Abú Hamíd Dáwis, burnt and pillaged by Yálí, another Berber Chief, A. H. 343, (A. D. 954,) and again reestablished, after having lain for several years in ruins. In the XIIth Century, Idrísí (*Clim.* iii. 1. p. 30.) described it as "a city near the sea-shore, surrounded with strong walls of earth, having well-supplied markets, workmen of various trades, and much profitable commerce. It is opposite to Almeria on the coast of Andalus, (Spain,) and distant from it two days' sail. Close to it there is a small port which can afford no shelter; but two miles distant from it, is the Great Harbour, (El mersá-l kebír,) in which the largest ships are sheltered from every wind; there is no port like it in all the coast of the Land of the Berbers. The inhabitants of Wahrán are supplied with water by a stream flowing

* Wahrán may signify "the tremulous vapour seen on a very hot day," and has no relation to wa'ar, difficult of ascent, from which Dr. Shaw (p. 12.) derives it. Guaharan, Guharan, Warran, Aurán, and Oran, are the various corruptions of this name commonly occurring; Gomez (*De Reb. Gest. Ximenii*, p. 1022.) says it was also called Acra and Madaura.

† Shaw places Oran just as far to the East of the Meridian of London, in $35^{\circ} 49'$ North, approaching therefore near to the true latitude. According to Marmol (v. 28. tom. ii. fol. 194 c.) its latitude is 34° North, and its longitude $12^{\circ} 30'$ East of Ferro, ($5^{\circ} 39' 36''$ West of Greenwich,) nearly in the position of Ceuta.

by it into the sea. On this stream there are gardens and orchards, producing abundance of fruit; its inhabitants, also, collect much honey, and have abundance of butter, cream, oxen, and sheep, the latter sold at a very low price. It is much frequented by ships from Spain. Its inhabitants are very observant of their engagements, clever, and proud." "The people of one of the neighbouring villages," says El Bekrí, (*Not. et Extr.* xii. 528.) "are famous for their extraordinary height and strength. If the accounts of many eye-witnesses can be believed, a good-sized man does not reach the shoulder of one of these people. One of them could walk about while carrying six men at the same time, and another brought home upon his back a load of wood sufficient for building a house." In Leo's time (p. 511.) it contained 6000 houses, and had mosques, schools, hospitals, baths, inns, and fine and lofty walls. Most of its inhabitants were tradesmen or linen-weavers, but many were men of substance. They were remarkable for their good manners and civility to strangers, and had large dealings with the Catalans and Genoese. Though within the territories of the Sultán of Telemsán, (Tremecen,) they never entirely acknowledged his sovereignty, and while they allowed his officers to collect the port-duties for him, all civil and criminal suits in the city were settled by an Alkáid of their own choice. Their continued and daring piracies at length provoked the displeasure of Spain, and on a second attack after an unsuccessful attempt, the place was, in 1509, taken by the Cardinal Don Fray Francisco Ximenez, Archbishop of Toledo, in person, at the head of a very large force. (Marmol, ii. fol. 195. b.) It was captured partly by a stratagem, and partly by the treachery of the agents of the Sultán of Telemsán. The Algerines, after an unsuccessful attempt to retake it in 1555, at length regained it in 1703, after it had been in the possession of Spain for very nearly 200 years. In July 1732, however, a Spanish armament under the command of the Duke de Montemar retook Oran, and the Castle of Marsá-l kebír, and since that period, those places as well as Ceuta have formed a part of the Spanish dominions.

Ximenii*, Francofurt, 1603; *Notices et Extraits des MSS. de la Bibliothèque du Roi*, Paris, 12 tom. 4to.; Leo Africanus, *Descriptio Africae*, Ed. Elzev.; *Modern Universal History*.

O' RANGE, n. } Fr. orange; It. arancia;
O' RANGERY, } Sp. naranja; Low Lat. au-
O' RANGE-TAWNEY, adj. } rantium; Lat. aurata mala,
O' RANGE-TAWNEY, n. } χρυσά μῆλα, because of their golden colour.

The trivial name of the *Citrus Aurantium* of Linnaeus.

Your chekes enbolned like a mellow costard,
Colour of orange.

Another Ballade. Imputed to Chaucer.

And a while after came the notary to us aboard our ship; holding in his hand a fruit of that country, like an orange, but of colour between orange-tawny and scarlet: which cast a most excellent odour.

Bacon. *New Atlantis*, fol. 4.

[They say] that usurers should have orange-tawney bonnets, because they doe Judaize.

Id. *Essaie* 41. p. 239.

Besides the wholesome luxury which that place abounds with, I have always thought a kitchen-garden a more pleasant sight than the finest orangerie, or artificial greenhouse.

Spectator, No. 477.

ORAN.

ORANGE.

ORANGE. It rarely happens to find a plant vigorous enough to have (like an orange tree) at once beautiful shining leaves, fragrant flowers, and delicious nourishing fruit. *Spectator*, No. 155.

—
ORA-
TION.

ORA'TION, } Fr. *oration*, *orateur*; It. *orazione*, *oratore*; Sp. *oracion*, *orador*; Lat. *oratio*, *orator*, from *orare*, *quod ab ore factum*, (see Scheid. in Lennep, in v. öpw,) *proprie significat ore precari*, to pray or beseech, by word of mouth; and thus, the Fr. *oraison*; Ital. *orazione*; Sp. *oracion*; a prayer. *Oration* is usually applied to

An elaborate speech or harangue;
An *orator*, one who makes or utters such a speech; or an eloquent speaker. See the Quotation from Elyot.
Orator and *oratrix*; the male and female suitors in our Courts of Equity.
Oratory, Fr. *oratoire*; a place (closet, chapel, &c.) for prayer.

But certes (quod she) these *orators* or aduocates, doen al the contrary, for thei enforcen hem to commoue the iudges, to haue pitie of hem, that doen the greuances and the wronges.

Chaucer. Boecius, book iv. p. 440.

And for to don his rite and sacrifice,
He estward hath upon the gate above,
In worship of Venus goddess of love,
Don make an auter and an *oratorie*.

Id. The Knightes Tale, v. 1907.

— If wimmen hadden written stories,
As clerkes han. within hir *oratories*,
They wold have writ of men more wikkednesse,
Than all the merke of Adam may redresse.

Id. The Wif of Baihes Prologue, v. 6276.

Saynt Gregory Nazianzene the gret famous olde doctour, wrytyng in his second *oration* made against the gret emperour infidele, commonlye called Julianus apostata, &c.
Sir Thomas More. Works, fol. 399. *The First Part of the Con- futation of Tyndall*.

An *orator* is he, that can or may speke or reason in euery ques- tion sufficetly, elegantly, and to perswade properly, accordyng to the dygnytie of the thyng that is spoken of, the opportunitie of tyme, and pleasure of them that be herers.

Sir Thomas Elyot. The Governour, book i. ch. xiii.

And also heereby we grant to them licence to build them *ora- tories* or temples.

Fox. Martyrs, fol. 78. *The Ten First Persecutions*, &c. Anno 318.

And after the procession, the king himselfe remaining seated in the quire, the lord archbishop vpon the greece of the quire, made a long *oration*.

Bacon. King Henry VII. fol. 178.

Their *orators* thou then extoll'st as those
The top of eloquence, statists indeed,
And lovers of their Country, as may seem;
But herein to our prophets far beneath,
As men divinely taught, and better teaching
The solid rules of Civil government
In their majestic unaffected stile
Than all the *oratory* of Greece and Rome.

Milton. Paradise Regained, book iv. l. 350.

I sorrow, lastly, to haue seene
Whom now I wish to see,
Because I see loue's *oratrice*
Pleads tediously to thee.

Warner. Albion's England, book ii. ch. ix.

In France he robbed the *oratories* and temples of the Gods, stored with rich offerings and ornaments.

Hakewill. Apologie, book iv. sec. 3. fol. 356.

The acting of playes is but a preposterous spurious course, to traîne up youthes to an *oratoricall* grave comely action or elocution.
Prynne. Histrio-Mastix, part ii. act iv. sc. 1. p. 940.

Nor do they oppose things of this nature argumentatively, so much as *oratoriously*.

Bishop Taylor. Artificial Handsomeness, p. 115.

The former [Demosthenes] who had to deal with a people of much more politeness, learning, and wit, laid the greatest weight of his *oratory* upon the strength of his arguments offered to their understanding and reason: whereas Tully considered the dispositions of a sincere, more ignorant, and less mercurial nation, by dwelling almost entirely on the pathetick part.

Swift. Works, vol. iv. p. 9. *Letter to a young Clergyman*.

At the same time the *oratorial* part of these gentlemen seldom vouchsafe to mention fewer than fifteen hundred, or two thousand people, to be maintained in this hospital, without troubling their heads about the fund.

Id. Ib. vol. xvi. p. 294. *Considerations about maintaining the Poor*.

Among the Ancients it was a fundamental principle, and frequently inculcated, "*Quod omnibus disciplinis et artibus debet esse instructus orator*;" that the *orator* ought to be an accomplished scholar, and conversant in every part of learning.

Blair. Lecture 1. vol. i. p. 5. *Introduction*.

The fret work in the small *oratories* at Winchester, and the part behind the choir at Gloucester would furnish beautiful models.

Walpole. Anecdotes of Painting, vol. i. ch. v. p. 194.

Whether diffused or compressed, gay or grave, whether for his abundance or his brevity, he is equally to be admired, nor is he supereminent for poetical talents only, but for *oratorical* also.

Observer, No. 122.

ORB, n.

ORB, v.

O'RBED,

O'RBY,

O'RBICK,

ORBI'CLAR,

ORBICULA'TION,

O'RBICLE,

O'RBIT.

Fr. *orb*; It. and Sp. *orbe*;
Lat. *orbis*; a sphere or circle.
See EXORBITANT.

A sphere or circle; any round or spherical body; a wheel; a circular motion or revolution:

Orbit is used by Young as a diminutive of *orb*.

Yet it is not to be conceiv'd that those eternal effluences of sanctity and love in the glorified saints, should by this means be confin'd, and cloy'd with repetition of that which is prescrib'd, but that our happiness may *orb* itself into a thousand vagancies of glory and delight, and with a kind of eccentrical equation be, as it were, an invariable planet of joy and felicity.

Milton. Works, vol. i. fol. 41. *The Reason of Church Government*.

And her bright eyes (the *orbs* which beauty move)
As Phœbus dazzle in his glorious race.

Drummond. Sonnet.

— Let each
His adamantine coat gird well, and each
Fit well his helm, gripe fast his *orbed* shield,
Borne ev'n or high.

Milton. Paradise Lost, book vi. l. 543.

How the body of this *orbick* frame
From tender infancy so big became.

Bacon. Pan or Nature.

Such wat'ry *orbicles* young boys do blow
Out from their soapy shells, and much admire
The swimming world, which tenderly they row
With easy breath till it be waved higher.

G. Fletcher. Christ's Triumph on Earth.

And this ethereal quintessence of heav'n
Flew upward, spirited with various forms,
That roll'd *orbicular*, and turn'd to stars
Numberless, as thou seest, and how they move.

Milton. Paradise Lost, book iii. l. 718.

It might have been more significantly called *orbiculation*, seeing this circumfusion makes not only a circle, but fills a sphere.

More. Song of the Soul. Introduction General, p. 424.

— Then Paris, first with his long javeline parts,
It smote Atrides *orbic* targe: but ranne not through the brasse.
Chapman. Homer. Iliad, book iii. fol. 45.

— When now arraid
The world was with the Spring; and *orbic* heures
Had gone the round againe, through herbs and flowers.
Id. Ib. Odyssey, book x. fol. 157.

ORA-
TION.
—
ORB.

ORB.

ORC.

When the conquering orb, with one bright ray,
Broke thro' the gloom, and rethron'd the day.
Hughes. To Mr. Constantine.

This line, thus curve and thus orbicular,
Render direct, and perpendicular.
Congreve. An Impossible Thing.

Attend, and you discern it [ambition] in the fair
Conduct a finger, or reclaim a hair;
Or roll the lucid orbit of an eye;
Or, in full joy elaborate a sigh.
Young. Satire 5. On Women.

Only there is this difference, that the bodies of the great system
were projected at great distances from each other, and in such a
manner that the planets revolve in orbits almost circular, so as not
to come too near to the sun, or to be carried too far from him in
their revolutions.

*Maclaurin. Sir Isaac Newton. Philosophical Dissertations, book iv.
ch. i. p. 297.*

Yet when thy spirit, taught from earth to fly
Spreads her full plume, and gains upon the sky,
One moment pause, till these dead orbs resign
Their last faint beam, and speed my soul to thine.
Cawthorn. Lady Jane Grey to Lord Guilford Dudley.

ORBEA, in *Botany*, a genus of the class *Pentandria*,
order *Digynia*, natural order *Asclepiadeæ*. Generic char-
acter: corolla five-cleft, star-shaped, the surface corru-
gated, in the centre a large, round, raised appendage,
stamens unequally two-cleft.

A genus divided from *Slapelia*, differing from that
genus in the large central orb. There are twelve species
described, all natives of the South of Africa.

ORBICULA, in *Zoology*, a genus of *Acephalous
Mollusca*.

Generic character. Shell orbicular, inequivalve, with-
out apparent hinge; lower valve very thin, flattened,
adhering to marine bodies; upper valve subconic, with
the apex more or less elevated.

Type of the genus, *O. Norvegica*; Lamarck, *Anim. sans
Vert.* vol. vi. p. 242. Inhabiting the Northern Ocean.

ORBICULINA, in *Zoology*, a genus of *Cephalopo-
dous Mollusca*.

Generic character. Shell subdiscoid, multilocular,
with compound, contiguous turns; spire eccentric;
cells short, very numerous; septa imperforate.

A fossil genus, containing several species, none of
which are British.

ORBITY, Fr. *orbité*, orphanism; lack of parents,
also want of children; generally, any lack or want. See
ORPHAN, *infra*.

Not fully a mother, shee's in orbitie,
At once receiver and the legacie.
Donne. Poems, p. 333. The Annuntiation and Passion.

Old age and orbitie, as Cesellius professed, were those two things
that emboldened him.

Hall. Works, vol. iii. fol. 572. The Balm of Gilead, sec. 3.

ORBULITA, in *Zoology*, a genus of *Cephalopodous
Mollusca*.

Generic character. Shell subdisciform, spiral, the
sides equal, the last whorl embracing and concealing the
previously formed ones; the inner walls joined by
waved sutures; septa transverse, lobed at their circum-
ference, and perforated by a marginal tube.

Type of the genus, *O. discus*, Sowerby, *Min. Conc.*
pl. xiii. A numerous fossil genus, the species of which
are found in limestone, oolite, lias, &c. Several in
Britain.

ORC, Lat. *orca*, *belluæ marinæ* genus; quod Græcis
ὄρυξ, estque orca ex ὄρυγα. Holland (*Plin.* book ix. ch.
vi.) writes the word with the Lat. termination, *orcæ*.

Her marble-minded breast, impregnable, rejects
The ugly orks, that for their lord the ocean woo.
Drayton. Poly-olbion, song 2.

The haunt of seales and orcs, and sea mews cling.
Milton. Paradise Lost, book xi. l. 835.

O'RCHARD, } Some of our old writers (Holland,
O'RCHARDING, } North) write this word *hort-yard*, as
O'RCHARDIST. } if they would give a Latin origin to
the first syllable: the word is variously written in A. S.
ort-geard, orc-geard, orc-eard, orc-yrð. Junius and
Lye think the first to be the most ancient, and that it is
formed from *weort-yard*, i. e. *wyrt-yard*, a yard or place
prepared for worts or herbs; and in *John*, ch. xviii. vv.
1 and 26. we find Goth. *aurtigards, aurtigarda, hortus*,
in A. S. *wyrt-tun*, an inclosure for worts. (See TOWN.)
Lye would derive the Lat. *hortus*, from *ort* or *weort*.
Orchard is now applied to

A garden for fruit trees.

He ladde hym into an orchard, as yt gret ned were
To speke wyþ him priueliche, þat no man y war nere.
R. Gloucester, p. 104.

Bituene Saint Oswalde's zat, & þe North zat iwis,
Is a long wal inou, as þe abbode's orchard is.
Id. p. 555.

Neither is that orchard vnfruitful, which vnder shoue of sundrie
weedes, hath medicinale plaisters for all infirmities.

Gascoigne. To the Youth of England.

I made me orchardes & gardens of pleasure, & plated trees in
them of all maner frutes.

Bible, Anno 1551. Ecclesiastes, ch. ii.

Trench grounds for orcharding, and the kitchen-garden to lie for
a winter mellowing.

Evelyn. Kalendarium Hortense. October.

However expert the orchardist may be, much will depend on soil.
Transactions of the Adelphi Society, vol. xiii. p. 24.

Else false hopes
He cherishes, nor will his fruit expect
Th' autumnal season, but in Summer's pride,
When other orchats smile, abortive fail.

J. Philips. Cider, book i.

ORCHESIA, in *Zoology*, a genus of *Coleopterous
insects*.

Generic character. Antennæ eleven-jointed, the eight
basal joints short, obconic-cylindric, a little broadest at
the apex, the third longer than the following, the seventh
and eighth rather stouter than the preceding, the three
terminal ones abruptly large, forming an oval, acute,
club; palpi unequal; maxillary large, the second and
third joints produced within, the apical are much larger,
elongate, obtrigonal; labial filiform; mandibles short,
notched internally; head inflexed; eyes elongate; thorax
somewhat semicircular, with the posterior angles acute;
elytra rigid, elongate, narrow; back flat; legs slender;
posterior saltatorial; tibiæ simple, posterior short, with
very long spurs at the apex, serrated externally; tarsi
elongate, heteromorous, the four anterior, with the penul-
timate joint subcordate, emarginate above.

Type of the genus, *Dircea micans*, Fabricius; *Mega-
toma picea*, Herbst, *Col.* vol. iv. p. 97. pl. xxxix. fig. 5.
A pretty genus, of which the species inhabit *boleti*; two
are found in Britain, and several on the Continent.

ORCHESTES, in *Zoology*, a genus of *Coleopterous
insects*.

Generic character. Antennæ geniculated, eleven-
jointed, rather short and slender; funiculus six-jointed,
its first joint large, obconic, second and third oblong,
obconic, the remainder subequal, short, truncate at the
apex; club thick, oblong-ovate; head small, produced

ORC.

ORCHES-
TES.

ORCHES- in front into an inflexed, elongate, rather stout, and
TES. rounded, bent, free rostrum; eyes large, round, promi-
ORDAIN. nent, approximating; *thorax* small, obconic, bisinuated
 or subtruncate behind; *elytra* oblong-ovate, broader
 than the *thorax*, the apex obtusely rounded; *pygidium*
 sometimes exposed; legs stout, anterior approximating,
 posterior longest, and formed for leaping; *femora* cla-
 vate; posterior generally very much incrassated, some-
 times denticulated.

Type of the genus, *Cur. quercus*, Linnæus; *Cu. rufus*,
 Donovan, *Brit. Ins.* vol. xi. pl. 389. fig. 3. A nume-
 rous and pretty genus, of which at least eighteen species
 inhabit Britain; being found chiefly upon oaks, beeches,
 poplars, and willows; they leap nimbly.

ORCHESTIA, in Zoology, a genus of *Crustacea*.

Generic character. Head distinct; *antennæ* four,
 superior not longer than the two first joints of the under
 ones; legs dissimilar of the male, the four anterior are
 monodactyle, the second pair with a compressed band;
 of the female, the anterior pair monodactyle, the second
 didactyle; *abdomen* furnished with branchial and swim-
 ming appendages below, and vesicular bodies at the base
 of some of the legs.

Type of the genus, *O. littorea*, Leach; Desmarest,
Crustacea, 261. Four or five species, of which the
 typical one inhabits the coasts of Britain, beneath stones,
 above high-water mark.

O'RCHESTRA, } Fr. *orchestre*; It., Sp., and Lat.

O'RCHESTRE. } *orchestra*; Gr. *ὀρχήστρα*, from
ὀρχεσθαι, *saltare*, to dance.

That part of the Theatre among the Greeks in which
 the Chorus danced; among the Latins, in which the
 Senators sat. See the Quotations from Holiday and
 Twining.

The modern application of the word may be traced in
 the extract from Holiday; unless applied to Musicians

in our Theatres, in which they really occupy the seat **ORCHES-**
 next the stage, the use of the word is faulty. **TRA.**

During the stage plaies aforesaid D. Laberius, a gentleman of
 Rome, acted his owne Poem or Enterlude; for which, being rewarded
 with 500. thousand sesterces, and a ring of gold, he passed directly
 fro the stage by the *orchestra*, to take up his place among the
 Knights in the 14. foremost seats.

Holland. Suetonius, fol. 242. *Caivs Julius Cæsar*.

Orchestra (from *ὀρχήσθαι*, to dance) was properly the place where
 the players usually danced: but here figuratively, it signifies the
 seats next the stage. It was the place in the theatre where the
 Senators sate at shews, as Vitruvius tells us, lib. v. cap. 6.

Holiday. Juvenal. Sat. 3. (28.) fol. 55.

Devotion, when lukewarm, is undevout;
 But when it glows, its heat is struck to Heaven;
 To human hearts her golden harps are strung.
 High Heaven's *orchestra* chaunts amen to men.

Young. The Complaint. Night 4.

The performers in the *orchestra* of a modern theatre, are little, I
 believe, aware, that they occupy the place, and may consider them-
 selves as the lineal descendants of the ancient Chorus. *Orchestra*
 (*ὀρχήστρα*) was the name of that part of the antient theatre which
 was appropriated to the Chorus.

Twining. Aristotle, vol. i. p. 159. n. 3.

ORCHIS, in Botany, a genus of the class *Gynan-*
dria, order *Diandria*, natural order *Orchideæ*. Generic
 character: calyx ringent, the superior leaflets arched, lip
 dilated, with a long spur at the base; anthers terminal,
 connected.

An extensive genus of elegant herbaceous plants, na-
 tives of both hemispheres, containing nearly one hun-
 dred species. *O. bifolia*, *pyramidalis*, *morio*, *mascula*,
ustulata, *militaris*, *latifolia*, *masculata*, and *conopsea*,
 are natives of England. Eng. Bot.

ORD, A. S. *ord*, *acies*, *acumen*, the point of any thing:
 and in that sense used of Chaucer. Also, *initium*, the
 beginning. Somner. The latter is the meaning: the
 former a consequential application.

He sticketh hem upon his speares orde.

Chaucer. The Legend of Cleopatras.

O'RDONNANCE.

Fr. *ordonner*, *ordinaire*; It. *or-*
dinare, *ordinal*, *ordinario*, *ordi-*
nato; Sp. *ordenar*, *ordinal*, *ordi-*
nario, *ordenido*. In Fr., also, *or-*
dinatif, (which Cotgrave renders
ordinative.) Lat. *ordinare*, *ordina-*
tum, *ordinarius*; and in the Lower
 Ages *ordinalis*, *ordinale nomen*,
ordinem significans, *primus*, *se-*
cundus, &c. signifying order or
 succession; as first, second, &c.
Ordinare, from *ordo*, *ordinis*. See
ORDER.

To put, place, or set in order,
 to dispose, appoint, regulate, ar-
 range, the order or method, the
 station, rank, or degree; to deter-

mine or define, to settle or establish.

Ordinary; settled, established; regular, and hence
 usual, common, vulgar.

An *ordinary*; a settled or established officer, for
 whose Legal acceptance see *postea*; a settled sum or
 price; place where a settled sum or price is charged.

þe louerdýnges. þat þer were, ȝarked hem anon,
 And ordeýnede her ost, to fyȝte agen her son.

R. Gloucester, p. 236.

And an fourty nyȝt hy býliuede þere aboute,
 And conseýlede of batayle, & ordeýnd her route.

Id. p. 359.

So muche he truste on him, that in his warde he let do
 Henri is eldoste sone, & is eir al so,
 That he werre his wardein, & al is ordeinour
 To is wille to willi him & to the king's honour.

Id. p. 469.

"Harald," said William, "listen to my resoun,
 What right þat I haue of Englonð þe coroun
 After Edward's dede, if it so betide,
 That God haf ordeyn'd so I after him abide."

R. Brunne, p. 68.

If he were ordeýnd clerke.

Id. p. 129.

His doughter Custance was wedded to Bretayn,
 With William's ordinance, vnto þe erle Alayn.

Id. p. 83.

Who gessist thou is a trewe servaunt and a prudent, whom his
 lord ordeýnede on his meyne to gyve hem mete in tyme?

Wiclif. Matthew, ch. xxiv.

ORDAIN. And whanne the werkis weren maad perfyte at the ordynaunce (a fundacion) of the world he seide thus in a place of the seuenthe dai, and God restide in the seuenthe dai from alle hise werkis.

Wiclif. *Ebruis*, ch. iv.

And he that is at mischief, shal betake,
And not slaine, but be brought unto the stake,
That shal ben ordeined on eyther side,
Thider he shal by force, and ther abide.

Chaucer. *The Knightes Tale*, v. 2556.

That is to sain, that in the right ordaine house of so moch a father, and an ordainour of meine, that the vesselles that ben foule and vile, shuld ben honoured and heried and the precious vesselles that should ben defouled and vile.

Id. *Boccus*, book iv. p. 435.

And every thing though it be good, it is not of hymself good, but it is good by that, it is ordainable to the grete goodnesse.

Id. *The Testament of Loue*, book ii. p. 496.

I have no woman suffisant certain
The chambres for to array in ordinaunce
After my lust, and therefore wolde I fain,
That thin were all swiche manere governance.

Id. *The Clerkes Tale*, v. 8837.

Ther is a wedded man in his estat
Liveth a lif blissful and ordinat,
Vnder the yoke of mariage ybound.

Id. *The Marchantes Tale*, v. 9160.

This prayer must be trewely sayd, and in perfect feith, and that men prayen to God ordinately, discretely, and devoutly.

Id. *The Persones Tale*, p. 169.

She taketh vpon hire selfe the gilte
And is all redie to the peine,
Whiche any man hire wolde ordeine.

Gower. *Conf. Am.* book iv. p. 122.

To speke right in suche a wise
To every monthe by hym selue,
Upon the heuen of signes twelue,
He hath after his ordinall,
Assigned one in speciall.

Id. *Ib.* book vii. p. 210.

That thei thirtie mile about,
By daie and eke also by night,
In that mirrour beholde might
Her enemies, if any were,
With all her ordinance there,
Whiche thei ayene the citee cast.

Id. *Ib.* book v. p. 139.

The Frenchemen ordayned thre great batayls, in eche of them, fiftene thousand men of armes, and xx. M. men a fote.

Lord Berners. *Froissart. Cronycle*, vol. i. ch. xli. p. 57.

When all these thinges are ordered as they ought,
And see themselves, within my glass of steele,
Euen then (my priests) may you make holyday
And pray no more but ordinarie prayers.

Gascoigne. *The Steele Glas*.

And after that might the worke be allowed and approued by the ordinaries, and by their authorities so put vnto print, as all the copies should come whole vnto the bysshopp's hande.

Sir Thomas More. *Workes*, fol. 245. *A Dialogue concerning Heresies*, &c.

I saye that ordinarilye into hys faythfull folke neyther finall reprobates nor finall electes (for faythfull are at sondrye times of both the sortes :) he geueth not the beliefe or faith on that fashion.

Id. *Ib.* fol. 582. *The Second Part of the Confutation of Tyndall*.

We may be bold with Tindale's lycence, whyle we haue Luther's leaue already, to warrant that it is a token of good and ordynate loue to God, & for God to hys neighbour.

Id. *Ib.* fol. 369. *The First Part of the Confutation of Tyndall*.

I wyl ordynately treate of the two partes of a publyke weale, wherof the one shall be named due administration, the other necessary occupation.

Sir Thomas Elyot. *The Governour*, ch. ii. p. 12.

By th' all-working providence,
That fashions out of dangers, toils, debates,
Those whom it hath retained to commence
The first and great establishments of states.

Daniel. *Panegyrick to the King's Majesty*.

The nature of man is ordainable to life.

Hall. *Rem.* p. 377.

And thus he offended truth even in his first attempt; for not content with his created nature, and thinking it too low to be the highest creature of God, he offended the ordainer, not only in the attempt but in the wish and simple violation thereof.

Sir Thomas Brown. *Vulgar Errours*, book i. ch. xi. p. 51.

And yet though the knowledge of them [matters physical] is curious, and contenting in itself, yet it is not ordainable or applicable to the use and benefit of the man that knows them, or of others.

Hale. *Origination of Mankind*, ch. i. fol. 5.

It seems therefore to me that the historian, in using the cardinal number, as such, and not for the ordinal; tacks the times of servitude all along, into those of liberty.

Grew. *Cosmo Sacra*, book v. ch. iii. fol. 179.

And marching thrise in warlike ordinance,
Thrise lowted lowly to the noble mayd.

Spenser. *Facrie Queene*, book iv. can. 3.

HAM. Why euen in that was heauen ordinate.

Shakspeare. *Hamlet*, fol. 279.

For though it had been long, at length she came to hear
That Isis was to Thame in wedlock to be ty'd;
And therefore she prepar'd t' attend upon the bride;
Expecting at the feast, past ordinary grace.

Drayton. *Poly-olbion*, song 14.

Our courteous Anthony,
Being barber'd ten times o're, goes to the feast;
And for his ordinary, paies his heart,
For what his eyes eate onely.

Shakspeare. *Antony and Cleopatra*, fol. 346.

The Author of Nature hath so ordained, that the temper of the inferior bodies should ordinarily depend vpon the superior.

Hakewill. *Apologie*, ch. v. sec. 1. fol. 103.

And finding how the certain right did stand,
With full consent this man did ordinate
The heir apparent to the crown and land.

Daniel. *History of Civil Wars*, book iv.

It is a large body, I know, and full of ordinate varietie, to which I now direct my words.

Hall. *Works*, vol. ii. part ii. fol. 2. *To the Diocese of Exeter*.

Look up to that over-ruling hand of the Almighty, who ordaineth all their [thy enemies] motions to his own holy purposes.

Id. *Ib.* vol. iii. fol. 546. *The Balm of Gilead*, sec. 3.

The mutinous people have spitefully rejected the government of their Messiah, and of David his type and predecessor; but now, behold, by the holy and wise ordination of God, either and both of them are appointed for the chief stay of the people.

ORDAIN.

Nor is it well, nor can it come to good,
That through profane and infidel contempt
Of holy writ, she has presum'd t' annul
And abrogate, as roundly as she may,
The total ordinance and will of God.

Cowper. *The Task*, book i.

The most ordinary machine (clock or watch) is sufficient to tell the hours, but the most elaborate alone can point out the minutes and seconds, and distinguish the smallest difference of time.

Hume. *Essay* 1. vol. p. 6.

Nature bestowed upon Pythagoras a form and person more than ordinarily comely.

Observer, No. 8.

ORDINARY, *Ordinarius*, a term used in the Civil Law, meaning in its most extensive signification any one who hath regular and proper jurisdiction, in opposition to those who are *extraordinarily* appointed; but in our Law it has a much more confined meaning. Coke, in his *Second Institute*, p. 398, says, that "this word signifieth a Bishop, or he or they that have *ordinary* jurisdiction, and is derived *ab Ordine*;" for which he gives a quaint reason, as if the name were selected for the purpose of keeping the individual who bears it in perpetual remembrance of "the high Order and office that he is called unto." When the word is used in the present day, it is generally to denote either the individual who has the right to grant letters of administration of the effects of deceased persons, or him who has the right of Ecclesiastical Visitation. The Bishop of the Diocese is, generally speaking, the *Ordinary* in the first of these two senses; but there are many peculiar jurisdictions which interfere with his. In the second sense, the Pope was formerly, as the King is now, supreme *Ordinary*, and as such, the Visitor of the Archbishops or Metropolitans; the Metropolitan is the *Ordinary* of the Suffragan Bishops in his Province; each Bishop in his own Diocese is *Ordinary* and Visitor of all Deans and Chapters, Parsons, Vicars, and other Ecclesiastical Corporations. The Archdeacon, too, visits the Clergy in his district, and therefore is called the *Ordinary*. In some cases, the Archdeacon has a *peculiar* or exclusive jurisdiction, but generally his authority is only concurrent with that of the Bishop.

See INHIBITION; Blackstone, *Commentaries*, vol. i. p. 384. 480; Williams, *On Executors and Administrators*, vol. i. p. 10; Comyn, *Digest. Ecclesiastical Persons*.

Five inferior Orders of the Church of Rome.

The only three recognised ORDERS in the Apostolical and Primitive Church being Bishops, Priests, and Deacons, the inferior grades admitted into the Roman Catholic Polity, namely, Subdeacons, Acolyths, Exorcists, Readers, and Doorkeepers, (*Ostiarii*.) must be considered of later and of entirely Ecclesiastical institution. Their origin is obscure, and they are not mentioned before the days of Cyprian and of Tertullian; and, indeed, although the modern Romanists count precisely five, and sometimes have assigned mystical reasons for so doing, the number appears to have varied in different periods of Church History. The reputed Ignatius (*Ep. ad Antioch.* 12.) excludes Acolyths, and yet by adding Singers and *Copiatæ*, swells the list to six; the *Constitutions* which bear the name of Clemens Romanus (iii. 11.) count but four, Subdeacons, Readers, Singers, and Doorkeepers; the *Apostolical Canons*, as they are called, (69.) name only the first three; and, in a word, the number five is perhaps less selected than any other by the majority of ancient Church Writers, whether authentic or pseudonymous.

Their design.

Their use in early times was to form a Nursery for the regular Clergy, and to assist in the performance of

certain lower and ordinary offices, to which laymen, if authorized by the Bishop, were equally competent. More than one Council, indeed, wisely prohibited those who had once embarked even in this inferior ministry, from returning to secular employments; nevertheless they were esteemed *insacrali* by the ancient Canons; they did not receive any Ordination at the Altar, nor, for the most part, any imposition of hands, and they were considered as altogether distinct from the *ιερωμένοι*, the three Orders instituted by the Apostles.

By the Vth Canon of the IVth Council of Carthage, Subdeacons, on their appointment, were to receive an empty Paten and an empty Cup from the hands of the Bishop, and a Ewer and Towel from the Archdeacon; a ceremony implying their duties, namely, the preparation of the sacred utensils for the service of the Altar. But they were not allowed in any way to minister at the Altar, to step within its rails, nor even to place the holy vessels upon it. So the duties of the Acolyths were symbolized when the Archdeacon presented them with a taper in a candlestick, and an empty pitcher; they were to light the candles in the Church, and to supply wine for the Eucharist. Concerning the duty of the Exorcists, from the obscurity attaching to the history of the Energumens intrusted to their care, it is difficult to speak with certainty; and it may be thought that peculiar sanctity and especial reservation would be required in persons who were to exercise so important a gift as the adjuration of Evil Spirits. Nevertheless some of the occupations of the Exorcists, as noticed by the XCth Canon of the Vth Council of Carthage, belong rather to inferior *keepers* than to spiritual Guardians of the Demoniacs. Thus, although at times in which the Church was not assembled they were enjoined to pray over their unhappy charges, they were also to take heed that they were busied in wholesome exercises, such as sweeping the Church pavement, &c. by which idleness might be banished, and the Tempter thereby be deprived of favourable opportunities for assault. They were also to look after the daily meals of their patients. The Bishop, on their appointment, presented them with a Book containing the forms of exorcizing. The Readers, as their name implies, read the Scriptures publicly, not, however, at the *Bema* of the Altar, but at the *Pulpitum* in the body of the Church; and the Bishop's words upon placing in their hands the Bible, by which he conferred the privilege, sufficiently denote their separation from the regular Clergy, *Accipe, et esto Lector verbi Dei, habiturus si fideliter et utiliter impleveris officium, partem cum eis qui Verbum Dei ministraverunt.* (IV. *Conc. Carth.* c. viii.) To the *Ostiarii*, the Bishops delivered the Keys of the Church; and they appear to have had about as much claim to the spiritual gifts conferred by Ordination on the regular Ministry as is possessed by the Beadles or Pew-openers of a modern Proprietary Chapel.

We particularly specify the above five inferior Orders, as they are still retained by the Romanists. Besides them, at different periods of Ecclesiastical History, we read of *Psalmistæ*, or Singers, sometimes called *ὑποβόλαις*, because as *Præcentors* they prompted and suggested the musical parts of the Service to the remainder of the Congregation; of *Copiatæ*, (*κοπιᾶσθαι*, to labour,) or *Fossarii*, who looked after funerals, and seem to have united in one the functions both of a Sexton and an Undertaker; and of *Parabolani*, who undertook the dangerous work (*παράβολον ἔργον*) of attending the sick.

ORDAIN.

Subdeacons.

Acolyths.

Exorcists.

Readers.

Doorkeepers.

Other Orders.

ORDAIN. The Church of England declines admitting Orders as a Sacrament, for the reasons stated in her XXVth Article, "for that they have not like natures of the Sacraments with Baptism and the Lord's Supper, for that they have not any visible sign or ceremony *ordained of God*." This plain, broad, simple statement, is infinitely preferable to a good deal of special pleading which has sometimes been advanced on the same subject. To say that because there are three Orders, Bishops, Priests, and Deacons, therefore, if we admit one Sacrament of Orders, we ought to admit three Sacraments, is scarcely less fanciful than to say that because there are two sexes there ought to be two Baptisms, or two Lord's Suppers. Again, if the imposition of hands in Ordination at the moment at which the Bishop, as God's Minister, and by his authority, confers the gifts and graces of the Holy Ghost on a worthy recipient, be not "an outward and visible sign of that inward and spiritual grace," of what, it may be asked, is it an outward and visible sign, and why is it employed at all? Far better and more true is it to say that it is not an outward and visible sign *expressly ordained by God* through Christ, of an inward grace, by which salvation is generally attainable by all men. But such are the outward and visible signs in Baptism and the Lord's Supper.

Church of
England
Form for
Ordination.

The Forms for the Consecration of Bishops and the Ordaining of Priests and Deacons, according to the usage of the Church of England, were set forth, in a manner very little differing from that now employed, in the Liturgy promulgated in 2 Edward VI. By 3 and 4 Edward VI. c. 10. all other Forms were abolished, and afterwards by 5 and 6 Edward VI. c. 1. the existing Form was annexed to the Book of Common Prayer. It was then legally established by the XXXIX Articles, by the VIIIth Canon, and by the Act of Uniformity 13 and 14 Charles II. c. 4. The time for Ordination is restricted by the XXXIst Canon to the Sundays following the four Ember Weeks; but on urgent occasions the Bishop, at his discretion, may admit Priests and Deacons on some other Sunday or Holiday. The Place is the Bishop's own Cathedral, the Church of the Parish in which he resides, or the Chapel of his Palace. The qualifications for the person to be ordained are, that to be admitted Deacon he be twenty-three years of age, (Can. XXXIV.) unless he have a faculty, (*Preface to Form of Ordination*), which faculty or dispensation for persons of extraordinary abilities must be obtained, as it seems, from the Archbishop of Canterbury. To be admitted Priest, a candidate must be four and twenty years complete, and in this case there is no dispensation. (Can. XXXIV. 13 El. c. 12.) By the XXXIId Canon, some certain place is required at which the Priest or Deacon may exercise his function, and that *title*, as it is called, must be exhibited to the Bishop. The titles enumerated are a presentation to some Ecclesiastical preferment then void in the Diocese; an appointment to some cure of souls in the same; a fellowship, conductship, or chaplainship in some College in Cambridge or Oxford; or a

Deacon.

Priest.

Title.

certificate that he is a Master of Arts of five years' standing, living at his own charge in either of the Universities. And if any Bishop shall admit any person into the Ministry that hath none of these titles as aforesaid, then he shall keep and maintain him with all things necessary till he do prefer him to some Ecclesiastical Living. And if the said Bishop shall refuse so to do, he shall be suspended by the Archbishop, being assisted with another Bishop, from giving of Orders by the space of a year. A Testimonial of good life and conversation must be exhibited to the Bishop under the seal of some College of Oxford or Cambridge, where the Candidate before remained, or of three or four grave Ministers, who have known his life and behaviour for the space of three years next before. The signatures now required are those of three *beneficed* Clergymen, countersigned by the Bishops of their Dioceses, provided their Benefices are not situated in the Diocese of the Ordaining Bishop. If the Candidate shall have quitted College, a notice, termed a *Si quis*, calling upon *any person* who is aware of just cause or impediment to his Ordination to signify it to the Bishop, must be read during Divine Service in the Church of the Parish in which the Candidate usually resides, and a testimonial that no impediment has been alleged, signed by the officiating Minister and the Churchwardens, must be transmitted to the Bishop. A Certificate also of having attended University Divinity Lectures must be procured, and likewise a Certificate of Baptism to avouch the legal age. The previous examination by right appertains to the Archdeacon, who in the Form of Ordination presents the Candidates to the Bishop. It is usually performed by a Chaplain appointed for that purpose by the Bishop, and with respect to Priest's Orders in particular, the Candidates must be able to render to the Ordinary an account of his Faith in Latin, according to the XXXIX Articles, or have special gift or ability to be a preacher. No Bishop may admit any person into Sacred Orders who is not of his own Diocese, except he is of one of the Universities, i. e. have a title as Fellow of a College; or except he shall bring Letters Dimissory from the Bishop to whose Diocese he belongs. The Candidates must take the Oaths of Allegiance and Supremacy before the Ordinary or Commissary, must subscribe the XXXIX Articles, and three other Articles specified by the XXXVIth Canon: one respecting the exclusion of all Foreign Authorities from Spiritual or Ecclesiastical power within the King's Dominions; another respecting the legality of the Book of Common Prayer; and a third respecting the Articles of Religion. This subscription must be made before the Bishop, willingly and *ex animo*.

The necessary preliminaries for both Priests' and Deacons' Orders are stated, much to the convenience of Candidates, in a most useful little Manual compiled by Christopher Hodgson, Esq., Secretary to the Archbishop of Canterbury, *Instructions for the Use of Candidates for Holy Orders, and of the Parochial Clergy*.

partial judgment. Hickes thinks, that *ur* is an emphatic prefix, as *a* and *ge* were, and that the verb *urdelan*, (*ur*, and *dælan*), *judicare*, was once in use. *Dissertatio Epistolaris*, p. 149.

ORDEAL.

Whan so you list, by *ordal* or by othe,
By sorte, or in what wise so ye lest,
For love of God, let preue it for the best,
And if that I be gilty do me die.

Chaucer. *Troilus and Creseide*, book iii.

To make the sword arbiter of such differences, were no better than to revive the old *ordalian* triall used by our Heathen ancestors. *Hall. Works*, vol. iii. fol. 802. *Cases of Conscience*, decade 2. case 2.

A custom not much differing from these, was practis'd in this island by our Saxon ancestors upon the same account, and was therefore call'd the *fire-ordeal*, for *ordal* in Saxon signifies purgation. The manner of undergoing this test was thus; the person accus'd pass'd blindfold, with bare feet, over certain plough-shares made red hot, and plac'd at an equal distance from one another.

Potter. *On Greece*, vol. i. ch. vi. p. 255.

The *ordal* was another established method of trial among the Anglo-Saxons. It was practised either by boiling water or red-hot iron. The former was appropriated to the common people; and the latter to the nobility.

Hume. *History of England*, vol. i. p. 224. append. 1.

Hebrew
Waters of
Jealousy.

The earliest trace of any custom resembling the ORDEALS, afterwards so largely used among the Northern Tribes of Europe, may be found in the Waters of Jealousy, which the Hebrew Women suspected of adultery were compelled to drink as a test of innocence. (*Numbers*, v.) Of the employment of these *מים חשד*, the *ῥδωρ τῆ ἐλεγμῆ τοῦ ἐπικαταρῶμενον*, the bitter water which was "to make the belly of the guilty to swell and the thigh to rot," no instance is recorded in Scripture; probably because Divorce was a shorter and easier process. Grotius, in commenting on the Chapter, has cited a passage from a *Tract de Mirabilibus*, attributed to Aristotle, respecting a Fountain in Sicily, affirmed to possess a virtue by which it detects perjury. The test is exactly contrary to that which we shall presently have occasion to mention in the later Water

Fountain of
Palice.

Ordeal. The Sicilian who appealed to this decision, wrote his oath on a tablet, and threw it into the spring, if it swam he was accounted honest, if it sank he was forsworn. *ἔστι δὲ καὶ ὄρκος ὃς ἀγίος αὐτόθι δοκεῖ εἶναι, ὅσα γὰρ ὁμνύσι τις γράψας εἰς πινακίδιον, ἐμβάλλει εἰς τὸ ῥδωρ. εἰ μὲν οὖν εὐορκῇ, ἐπιπολάζει τὸ πινακίδιον· εἰ δὲ μὴ εὐορκῇ, τὸ μὲν πινακίδιον βαρὺ γενόμενον ἀφανίζεσθαι φασί, τὸν δὲ ἄνθρωπον πῖμπρασθαι.* Of this Fountain, the *κρατῆρες* of Palice, Diodorus Siculus speaks at greater length. It was a hot spring, perpetually boiling, but never overflowing, exhaling a sulphureous vapour, and roaring with a terrific noise. The Historian does not notice the method in which the oath was administered, but he states that a sudden judgment overtook the perjured, and that many of them were stricken with blindness on the spot. (xi. 89.) Silius Italicus has marked the punishment, without specifying its nature:

*Et qui præsenti domitant perjura Palici
Pectora supplicio:*

xiv. 219.

and Solinus (*Polyhist.* 4.) and Isidore (*Orig.* xiv. 6.) have transferred the retributive virtue with a slight variation to a spring in Sardinia, in which when those who swear bathe their eyes, if they have avouched the truth, they see more clearly; if they have perjured themselves they are blinded. Macrobius (*Sat.* v. 19.) has cited a long passage from Polemon, *περὶ τῶν ἐν Σικελίᾳ θαυμαζομένων ποταμῶν*, confirming the account of the springs of Palice. The river Olachas in Bithynia is affirmed by Pliny to affect the forsworn very much, as the choice vintages produced by the auger of Mephistophiles

River
Olachas.

punished the careless drunkards who spilled them on the ground in Auerbach's Cellar at Leipsic—*cujus gurgite perjuri notantur pati velut flammam urentem.* (xxxii. 2.)

Achilles Tatius, in his Erotic Romance, *The Loves of Clitophon and Leucippe*, recounts a pretty legendary tale of the origin of that virtue which rendered the Fountain of Styx an Ordeal of virgin purity. Rhodope, the loveliest maiden of her time, vowed suit and service to Diana, and it so happened that her neighbour Euthynicus, the handsomest youth in Ephesus, professed himself, in like manner, a second Hippolytus. A conspiracy between Venus and Cupid betrayed these opponents of their sway into such a cave as was fatal to Dido; and the huntress Queen, as a punishment for the violation of her law, changed Rhodope into the Fountain Styx, which bathed the inmost recesses of the retreat in which her offence was committed, and gave its water the power of detecting any flaw in maiden honour. When the reputation of any Nymph was at stake, she made profession upon oath of her immaculacy, and descended into the waters of Ordeal with this oath written upon a tablet, and fastened round her neck. If she was pure, the water remained undisturbed; but alas for the character of that frail damsel, round whom it rose till, dancing up to her neck, it moistened the false evidence of the tablet! (viii. 12.)

That an Ordeal resembling the *Ferri candentis Judicium* of later times was practised by the Greeks, is manifest from some lines in the *Antigone* of Sophocles, which, however often quoted before, we are imperatively bound to repeat here. When the sentinel placed by Creon over the corpse of the slain Polynices, in order to prevent it from receiving sepulture, announces that it has been buried, and protests his own innocence, he challenges an appeal to fire:

*Ἡμεῖς δ' ἵποιοι καὶ μύδους αἶρεν χερσὶν,
Καὶ σὺρ δῖόν τε, καὶ θεῶν ὀρκωμοτίν.*

264.

And this, probably, is the oldest allusion extant to the *Judicia Dei*. The secret, whatever it might be, by which the baneful effects of fire were averted, must have been known to those votaries of Apollo who inhabited Mount Soracte, the Hirpi, certain Etruscan Families, who, in consequence of annually walking with bare feet over burning coals, obtained immunity from taxes and military conscription, by a *Senatus-Consultum*. (Pliny vii. 2.) Of these Jugglers, Arruns was one, and he describes their feats as below:

*Summe Deum, sancti custos Sorractis Apollo,
Quem primi colimus, cui pineus ardor acervo
Pascitur, et medium freti pietate per ignem
Cultores multa premimus vestigia prunæ.*

Æneid, xi. 785.

A species of Ordeal was practised in Italy in the IXth Century, of which we find the following notice in the laborious collection of Ughello on the Ecclesiastical antiquities of that peninsula. In the year 818, a dispute arose between the Civil Authorities of Verona and the Canons of St. Zeno in that City, as to the reparation of a part of the town walls, and when the contention had been protracted for a long time without hope of settlement, both parties agreed to refer it to the decision of God and the Holy Spirit. Two young Priests of reputed purity of life having been selected as the champions on each side respectively, were instructed *ad crucem stare* in the Church of St. John during the celebration of Mass. Meyer, who has referred to this anecdote, (*Esprit des*

ORDEAL.

cles.

The Hirpi-

Standing by
the Cross at
Verona.

ORDEAL. *Inst. Judiciares*, i. 317. and whose reference is wrong, and may therefore create much trouble, on account of the scantiness of index to Ughello,) understands by *ad crucem stare*, no more than that the Priests were to stand by the Crucifix during the service, a task, it may be imagined, of no great difficulty: we rather suppose they were to stand with their arms extended as if on the Cross, a position which must cause great fatigue. Be this as it may, the representative of the City fell to the ground senseless in the middle of the Passion, while the Deputy for the Monks continued in the prescribed attitude till the completion of Mass, and, in consequence, his employers were relieved from the burden of repairing. (Ughello, *Italia Sacra*, v. 711.)

Icelandic Ordeal.

Bishop Nicholson, in his Preface to Wilkins's *Leges Anglo-Saxonice*, cites an account of a species of Ordeal practised by the Icelanders before their conversion to Christianity. His notice is borrowed from the *Crymogæa* of Arngrim Jonas, whose very words (as he is styled *elegantissimus* by the Bishop of Derry) we feel bound to report. *Cespitem oblongum cum veluti laminam quandam humo excisum et in fornicis morem surgentem, ita ut fines ambo humi affigerentur, de veritate testatur subire jussus est, super quem si nullo fulcrite non corruit fornix ille cespititius, fidem meruit; sin minus criminis falsi damnatus est.* (i. 9.)

Four Ordeals of the Middle Ages.

The four chief Ordeals of the Middle Ages to which our Saxon ancestors resorted in common with the rest of Europe, were, 1. that of Hot Iron; 2. of Boiling Water; 3. of Cold Water; 4. the Corsned. Ecclesiastics usually chose the first; they were prohibited from claiming the Judicial Combat (which we do not here include) in person, and they avoided the Water Ordeals, which for the most part were considered ignoble, and reserved for Peasants. That species of the Hot Iron Ordeal which consisted in treading blindfold and barefooted over a certain number of red-hot ploughshares laid lengthwise, at unequal distances, was no uncommon test of female chastity.

Anglo-Saxon Laws relating to Ordeals.

The Laws of Ina enjoin the weight of iron, in the Ordeal of Red-hot iron, to be three pounds in the three-fold trial, (*Lada triplex*), probably, therefore, in the simplest, (*Lada simplex*), it was not more than one. The accused was to have his option of the Water Ordeal or the Iron Ordeal. All persons, except the Priest and the Accused, were prohibited from entering the Church after the Fire by which the Ordeal was to be heated was lighted. The Water was to boil furiously in a vessel of iron, copper, lead, (?) or clay. In the *anfeald*, or simple charge, the accused was to take out a stone placed beneath the water at the depth of his wrist; in the triple charge, at that of his elbow. Two umpires on each side were to agree as to the point at which the water boiled furiously. Then an equal number of men on each side, all fasting, were to enter the Church, to be sprinkled with and to taste holy water, to kiss the Gospels, and to be signed with the Cross. After their entrance no one was permitted to mend the fire; in the Iron Ordeal the iron was to lie on the coals till the end of the last Collect, and then to be placed on staples, *super slaphas* or *staplas*; nine feet, each of the length of the foot of the accused, were measured from the staples, and such was the distance over which he was required to carry the Hot iron. While he was so doing, or plunging his arm into the Boiling water, not a word was to be uttered, except a prayer for the discovery of truth. His hand was then to be bound up and sealed, and

inspected after the lapse of three days. (Wilkins, *Leges Inæ*, p. 27.)

ORDEAL.

It is manifest that numerous openings for fraud were admitted in several of the above processes. On Feasts and Fasts, Ordeals were prohibited. (*Id. Fædus Eadweardi et Guthrun*, c. 9. p. 53.) A Mint-master, if accused, was to appeal to the Ordeal of Hot iron. (*Id. Leges Æthelstani*, c. 14. p. 59.) A composition was sometimes allowed, (60.) and even after the conviction of a Thief by the Ordeal, a fine equivalent to the value of the goods stolen, and a security for his future good behaviour, might save his life. (*Id. Judicia Civitatis Landoniæ*, p. 65.) The fasting, which was always rigidly enjoined, was not total abstinence; bread, salt, water, and vegetables were permitted. (*Id. Leges Æthelstani*, c. 23. p. 61.)

Queen Emma's Ordeal.

One of the most celebrated Iron Ordeals in Anglo-Saxon History is that which Queen Emma, Mother of Edward the Confessor, underwent, in order to clear herself from the imputation of an intrigue with Alwayne, Bishop of Winchester. The narrative is briefly given by John of Bromton, (*X Scriptores*, 942.) by Henry de Knyghton, and by Rainulphus Higden, (*Polychronicon*, lib. vi. *ad ann.* 1043.) and each relates it in precisely the same words. Bromton also affords numerous particulars concerning Ordeals in his abstracts of the Anglo-Saxon Laws. But Queen Emma's History may be found to greatest advantage in the verse of Robert of Gloucester, who has painted the scene most vividly, and his language, although obsolete, may be readily understood with slight glossarial assistance. Of all the men whom Edward brought out of Normandy, "Roberd, a Clerc, he lovede mest," and he promoted him successively to the mitres of London and of Canterbury. The Archbishop having gained the King's ear, told him more than was sooth about his mother, and not only accused her of incontinence with Alwayne, but threw out more than hints also, that she had poisoned her son Alfred. The King accordingly, having imprisoned Alwayne, and deprived him of his See, occupied his mother's lands, and put her in ward in the Abbey of Worwell. The Queen "made dole enow," and demanded an appeal to the Fire Ordeal, which the Archbishop arranged accordingly.

"Let nyme four yrene ssares vor hÿr sulve al afure,
An fyve vor þe byssop, & gýf heo yt may dure,
Wanne hii lÿggeþ in þe flor to steppe up echon
After oþer barevot and heo býleve non,
þat heo ne steppe wýþ folle fot wyþoute quakýnge
And gýf vet bet þanne sauf, woute ený wemmýnge
Graunteþ hem al quýt. ac gýf heo quakeþ out
Oþer stepþ býsýde, oþer hyre vet in ený wemme be ýbrogt,
Holdeþ hem gultý of þe dede & lateþ hem also
Al her lyf as wýckemen in strong prison be ýdo."
þys fourme was ygranted þo, & certeyn day al so
At Seyn Swythýne's at Wýnchestre, wanne yt ssolde be ýdo.*

Towards the appointed time a great throng gathered at Winchester, but the Archbishop feigned himself sick, and abode at Dover.

* Let there be taken four iron shares for herself all on fire, and five for the Bishop, and if she may endure it, when they lie on the floor to step upon each, one after the other, barefoot, and she leaves none that she does not step upon with her full foot without quaking, and if her feet come thence safe without any hurt, be it granted them that they are altogether acquitted. But if she quaketh any whit, or steppeth on one side, or her feet be brought in any harm, hold them guilty of the deed, and let them also, all their life be committed as criminals to strong prison. This form was then granted, and a certain day also at St. Swythyn's at Winchester, when it should be performed.

ORDEAL.

þe Quene, þoru þe Kynge's heste, ybrogt was also
 Fram Worwelle to Wynchestre, þys jugement to do.
 To Seyn Swythynes sstræne þen wey heo nom wel rýgt,
 Gladlyche þo heo þuder com, and býleved al nýgt
 In wop & in orýsons, þat reuþe yt was to se,
 And evere bed þe holy man hyre help vorto be.
 As heo vel in a lute slep, Seyn Swýthyn to hýre com,
 "Dogter," he seýde, "be studevast to undervonge þý dom.
 Icham Swýthyn, wam þou býst, and verzyf þý sone þys dede;
 An to passý þe furý ýre, nane þou non drede."
 þe Quene heo was glad, þo heo awok of þat þýs godemon seyde.
 þet folc com þýcke a morwe, to se þys wonder dede,
 An þe heymen com echon, þen dom to hure sone.
 An þe Kyng þen dom vorto zýve, an heý sat on hýs trone.
 Bývore hym, vorto avonge hýr dom, þe Quene me brogte al so.
 þe Kyng hýr este sturnelyche, wer heo wolde þe dom do?*

The Queen having then earnestly protested her innocence was brought to the trial.

þe Quene was þo vorþ ylad mýd moný a wepynde eye
 Of býssopes and of heýmen & of opere þat yt yseýe.
 Hýre rýche cloþes were of ýdo, bote þat heo was by weved.
 Hyre body wýþ a mantel, a wýmpel aboute her heued.
 þe legges bare býneþe þe kne, þat me mýgte eche stape ýse.
 Away! vnele býcome yt Quene so bar vorto be.
 Me brogte vorþ þys furý ssares, & leýde ýs al arewe,
 In þe bare erþe ýsuope, Gode's grace to ssewe.
 þe býssopes blessed þe ssares & þe Quene al so,
 And ladde hyre vorþ in eýþer half, þýs jugement to do
 þe Quene þogte al on God & to Heuene caste hýre eye,
 And ne lokede no þýng donward, & as hii alle ýseýe,
 Heo stap up þýs furý ýre, everych stap al clene.
 Nuste heo hýr sulf wanne yt was, ne blenýte nozt ene.
 þer was joye & blýsse y nou & mony a wepynde eye,
 Vorst vor fere, & supþe vor joye, þo hii þys ýseýe.
 þe býssopes, þat hyre ladde vor joye wepe al so,
 And herede God & Seyn Swýthýn, þo þýs myracle was ydo,
 An ladde hyre outward of þe Chýrche, þe Quene býgan to crie
 "Vor þe loue of Ihesu Crist ne doþ nozt þe vylenye,
 To do mý penance wýþoute, ac in alle manere,
 As yt me ýloked war in holý chýrche here."—
 "Madame," quap þe býssopes, "þou aste ydo ýwýs."—
 "So helpe me God," quap þe Quene, "ynuste nozt er þys.
 No fur ýne velde, nene sey in þysse place
 But nou ých ýt verst ýse, ýrede be Gode's grace."†

* The Queen, by the King's command, was also brought from Worwelle to Winchester to undergo this trial. Then she took her way even to St. Swythyn's shrine; gladly then she came thither, and abode all night, in weeping and praying, that piteous it was to see, and ever she besought the holy man to be her help. When she fell into a little sleep, St. Swythyn came to her. "Daughter," he said, "be steadfast in undergoing the doom. I am Swythyn to whom thou prayest; and forgive thy son this deed; and of passing the fiery iron, have thou not any fear." The Queen she was glad when she awoke of what this good man said. The people came thick on the morrow to see this wondrous deed, and the Highmen came each one, soon to hear her judgment, and the King sate on his throne to give her judgment. Before him men also brought the Queen to undergo her trial. The King asked her sternly whether she would perform the trial.

† The Queen was then led forth with many a weeping eye of Bishops and of Highmen, and of others who saw it; her rich clothes were stripped off, but after that she was covered, her body with a mantle, a veil about her head; her legs were bare beneath the knee that men might see each step. Alas! ill was it becoming a Queen to be so naked. Men brought forth the fiery shares, and laid them all in a row, on the bare earth swept, to show God's grace. The Bishops blessed the shares, and the Queen also, and led her forth on either side to perform the trial. The Queen thought altogether on God, and cast her eyes to Heaven, and never looked at all downward, and, as they all saw, she stepped upon these fiery irons every step quite clean: neither did she herself know when it was, nor did she stop once. There was joy and pleasure enough, and many a weeping eye, first for fear, and afterwards for joy, when they saw this. The Bishops who led her also wept for joy, and praised God and Saint Swythyn who had done this miracle, and led her out of the Church; the Queen began to cry, "For the love of Jesus Christ do me not the wrong to inflict my penance without, but in all manner as it was ordained me here in the holy Church." "Madam," quoth the Bishop, "thou hast performed it already." "So help me God," quoth the Queen, "I did not know it before; no fire I felt nor saw in this place. But now I first see it, praised be God's grace."

ORDEAL. She was then led to the King, who entreated her pardon, and received absolution at the hands of the Bishops with scourging. The Queen and Bishop Alwayne each presented St. Swithin with nine manors, and Archbishop Robert, who was "sory ynou," hastening across the sea, abandoned his Province, and never again came near it.

Of the similar Ordeal which Cunegunda, Empress of Henry II., underwent between thirty and forty years before this exhibition of Queen Emma, and with equal success, some account may be found in our *Historical Division*, ch. lxix. p. 532.

Few of the enormities committed by William Rufus appear to have impressed Eadmer, a Monk of Canterbury, to whom we are indebted for a contemporary History, with greater horror than the incredulity which that Tyrant manifested respecting the especial interference of Heaven in the conduct of Ordeals; *ad hoc usque lapsus est*, is the holy man's climax of wickedness, *ut Dei Judicio incredulus fieret, injusticiæque illud arguens, Deum aut facta hominum ignorare aut æquitalis ea lance nolle pensare astrueret*. Under the Norman Government, a violation of the Forest Laws was a heinous crime, and fifty Saxon Gentlemen were on one occasion apprehended on a charge of catching, killing, and eating the Royal Deer; *ceperint, mactaverint, manducaverint*. Eadmer's description of his oppressed Countrymen is most piteous; they were, he says, *viriquibus adhuc illis diebus* (how bitterly do those few words denounce the grinding cruelty of their conquerors!) *ex antiquâ Anglorum ingenuitate divitiarum quædam vestigia arridere videbantur*. On their arrest, they appealed to the Fire Ordeal. Their deliverance and the impious fury of the Tyrant must be told by the venerable Chronicler himself. *Statuto itaque die, præfixi pænæ judicii pariter subacti sunt, remotâ pietate et misericordiâ. Erat ergo miseriam videre. Verum Omnipotens Deus, cui misericordiam et judicium canit Davidicus Psalmus, innocentia (m) eorum, servatis misericorditer ab exustione manibus omnium, cunctis ostendit, et malitia hominum eos impiè destruere cupientium quem injusta fuerit, justo judicio declaravit. Igitur cum Principi esset relatum condemnatos illos tertio Judicii die simul omnes inustis manibus apparuisse, stomachatus taliter fertur respondisse. "Quid est hoc? Deus est justus vindex? Pereat qui deinceps hoc crediderit. Quare per hoc et hoc meo judicio amodò respondebitur; non Dei, quod pio voto cujusque hinc indè plicatur."* (*Hist. Novorum*, ii. p. 48. a Seldeno.) If the blasphemer had directed his suspicions against his Priests instead of his God, he would not have been so widely mistaken; but it was far safer in those days of darkness to give utterance to profane outrages upon Heaven than to breathe a whisper which should reflect upon the purity of the Church. Spelman, who briefly relates this story in his *Codex Legum Veterum*, (*ap. Wilkins, Leges Anglo-Saxonice*, p. 298.) sufficiently accounts for the anger of the Red King. He says that the accused were *diliores* whom William submitted to the Ordeal solely *pecuniæ emulgendæ spe*.

The Cold Water Ordeal depended upon a fanciful connection with Baptism, *quo Princeps Mundi mendax et pater ejus foras ejicitur*; because if the nature of the person committed to the water be impure, *non potest mergi, quia pura natura aquæ naturam humanam per aquam Baptismatis ab omni mendacii figmento purgatam, iterum mendacio infectam non recognoscit puram*, Water Ordeal.

Impiety of William Rufus.

ORDEAL. *et ideo eam non recipit sed rejicit ut alienam.* (Hincmarus Remensis *de Divortio Lotharii et Tetburgæ*, p. 60. *Ap. Du Cange, Gloss. ad v. Aquæ Judicium.*) The Water Ordeals, whether hot or cold, but especially the latter, were for the most part confined to the lower orders: *tenetur accusatus se purgare per Dei Judicium, scilicet per Ferrum candens si sit liber homo, vel per Aquam si fuerit Rusticus, secundum diversitatem conditionis hominum.* (Glanville, xiv. 1.) Hence it may fairly be deduced that fraud was more easily practised in the Iron than in the Water Ordeal. Instances, however, are not wanting in which Nobles appealed to the Water Ordeal. The Cold Water Ordeal, after having been repeatedly forbidden by the Emperors and by the Church, (*Decretal V. tit. 34. c. 8.*) was nevertheless retained to a very recent date, as the popular trial in cases of Witchcraft; when the miserable victim, with the right hand bound to the left foot, and the left hand *vice versâ* to the right foot, was cast into some pond amid the yells of the rabble, and cleared and convicted according as it had the luck to sink or swim. Yet either an Act of Parliament, or an Order of the King in Council, so early as 3 Henry III., abolished Ordeals in England. (Coke, 9. *Rep.* 2.) Meyer, in a note on his *Esprit, Origine, et Progrès des Institutions Judiciaires des principaux Pays de l'Europe*, i. 6. p. 321. mentions that even as late as the years 1815 and 1816, two instances of this barbarous trial of Witchcraft were exhibited in Flanders.

Ordeals
abolished in
England.

Sufferings
from the
Hot Water
Ordeals.

The rain of Brimstone from which Lot escaped, the future punishments of Hell, and the Babylonian furnace of Nebuchadnezzar, were the types to which the Hot Water Ordeal was referred. How fearful was the effect of this Ordeal, when the Monks determined that the Water should really scald, may be determined from a relation cited by Du Cange from an ancient document. (*Ibid.*) A claim to some vineyards which had been bequeathed to a Religious House was asserted by the Heirs in Blood of the deceased testator, and the right was to be decided by appeal to the Hot Water Ordeal. The champion selected by the Appellants, after the celebration of Mass, the reception of the Eucharist, and being sworn upon Reliques, was so stricken with dimness of sight that he could scarcely find his way to the caldron. *Immissam vero manum ita ex aquâ lotam retraxit, ut ipse non solum in manu, verum etiam interius pænè ad intima cordis se combustum confiteretur, et ille et magistri sui, prædicti scilicet calumniatores, reatum suum signi virtute cognoscere cogerentur. Qui etiam dum in manum, sicut moris est, sigillare permetteret rogaretur, aiebat se nullatenus posse præ dolore pati ut aliquid manum illam contingeret. Servatus in manu nudâ usque ad diem tertium, inflatam admodum et excoriatam, sanieque jam carne putridâ effluentem dexteram invitus ostendit. Ita divinitus ostensâ veritate et falsitate detectâ, rectè acquisitione omnino remanserunt Cænobio vineæ.* Most feelingly did this poor wretch, who had been deluded to undergo the trial either by his simplicity or his avarice, prove the force of those words, which doubtless, from the nature of this Ordeal, have passed into a Proverb. Never was any one more completely in *Hot Water*. There is another common form of speech derived from both sorts of Ordeal, and the liberty to perform them by proxy, *viz.* going through *Fire and Water* to serve another.

The cors-
ned.

The Corsned, or morsel of execration, *copy, execratum, pæd, offa*, was another mode of Ordeal in use among

the Anglo-Saxons. A piece of cheese or bread was ORDEAL. charged with imprecations, and presented to the accused at the same time with the Eucharist. The guilty were supposed to be incapable of swallowing the Corsned; which we are assured proved fatal to Godwin, Earl of Kent, in the reign of Edward the Confessor. *Cum Godwinus Comes in mensâ Regis de nece sui fratris impeteretur, ille post multa sacramenta tandem per buccellam deglutiendam abjuravit, et buccellâ gustatâ interiit.* (Ingulphus, 898.) The death of Godwin forms part of the carved work on the frieze of Edward the Confessor's Chapel in Westminster Abbey. A memory of the long abolished custom still exists in certain popular phrases, as "May this morsel be my last!" "I will take the sacrament on it!"

The forms of Service for the different species of Ordeal Services at have been given by Spelman in his *Glossary, ad v. Ordeals.* from the *Textus Roffensis*, and notwithstanding their length, they are sufficiently curious to deserve extraction. In the Cold Water Ordeal, the three days' fast is to be observed by the accused who are then to be brought into the Church to the celebration of Mass. Before communicating, the Priest is to adjure them as follows:

Adjuro vos N. per Patrem et Filium et Spiritum S. et per vestram Christianitatem, quam suscepistis, et per unigenitum Dei fil, et per S. Trinitatem et per S. Euangelium, et per istas sanctas reliquias, quæ in istâ Ecclesiâ sunt; et per illum Baptismum; quò vos Sacerdos regeneravit, ut ne præsumatis ullò modò communicare neque ad Altare accedere, si hoc fecistis, aut consensistis aut scitis, quis hoc egerit.

If they are silent and forbear any reply, the Priest himself is first to communicate, and afterwards to admit them to the Communion. At its conclusion,

Incipit Missa Judicii.

Justus es Domine et rectum judicium tuum; fac cum servo tuo secundum misericordiam tuam.

Ps. Beati immaculati in vitâ.

Oratio.

Absolve quæsumus Domine tuorum delicta famulorum, ut à peccatorum suorum nexibus, quæ pro sua fragilitate contraxerunt, tuâ benignitate liberentur, et in hoc judicio, prout meruerint, tuâ justitiâ præveniente, ad veritatis censuram pervenire mereantur, per Dominum nostrum.

Then is to be read this passage from *Leviticus*:

In diebus illis, loquutus est Dominus ad Moysem, dicens: Ego sum Dominus, Deus vester; Non facietis furtum, nec mentiemini; nec decipiat unusquisque proximum suum. Non perjures in nomine meo; nec polluas nomen Dei tui. Ego Dominus. Non facias calumniam proximo tuo: nec vi opprimas eum. Non moretur opus mercenarii tui apud te usque manè. Non maledices surdo: nec coram cæco ponas offendiculum, sed timebis Dominum Deum tuum, quia ego sum Dominus.

Or else the following from St. Paul's *Epistle to the Ephesians*:

F. R. S. Renovamini spiritum mentis vestræ, et induite novum hominem, qui secundum Deum creatus est, in justitiâ et sanctitate veritatis.

Propter quod deponentes mendacium, loquimini veritatem unusquisque cum proximo suo, quoniam sumus invicem membra. Irascimini et nolite peccare.

ORDEAL.

*Sol ne occidat super iracundiam vestram.**Nolite locum dare Diabolo.**Qui furabatur, jam ne furetur: Magis autem labore operando manibus suis, quod bonum est, ut habeat, unde tribuat necessitatem patienti.**Rs. Propitius esto, Domine, peccatis nostris, ne quando dicant gentes ubi est Deus eorum?**Vs. Adjuva nos Deus salutaris noster et propter honorem nominis tui Domine libera nos.**Alleluia. Deus iudex justus, fortis et patiens; nunquid irascetur per singulos dies?**Then from St. Mark.**Cum egressus esset Jhesus in viâ, percurrens quidam genu flexo ante eum, rogabat eum dicens, Magister bone, quid faciam, ut vitam æternam percipiam? Jhesus autem dixit illi: Quia me dicis bonum: Nemo bonus, nisi solus Deus. Præcepta nosti? Ille dixit, Quæ? At non occidas. Non adultereris. Non fureris. Non falsum testimonium dicas. Non fraudem feceris. Honora patrem tuum et matrem tuam.**Magister, hæc omnia custodivi à juventute meâ. Jhesus autem intuitus eum, dilexit eum et dixit ei, Unum tibi deest; vade, quæcunque habes, vende et da pauperibus et habebis thesaurum in cælo; et veni sequere me.**Of. Immittet Angelum Dominus in circuitu timentium eum et eripiet eos: gustate et videte quàm suavis est Dominus.**Here is to be made the Offertory.**Intercessio Sanctorum tuorum misericordiæ tuæ, Domine, munera nostra conciliet; et quam merita nostra non valent, eorum deprecatio indulgentiam valeat obtinere, per Dominum.**Præfatio.**O æterne Deus: Qui non solum peccata dimittis: sed ipsos etiam justificas peccatores: et reis non tantum pœnas relaxas, sed dona largiris et præmia. Cujus nos pietatem supplices exoramus, ut famulos tuos N. non de præteritis iudices reatibus sed hujus culpæ veritatem spectantibus insinues, quatenus et in hoc Populus tuus præconia nominis tui efferat, et te vitæ præsentis et perpetuæ auctorem agnoscat per Christum.**Benedictiones ad Judicium.**Deus, de quo scriptum est, quia justus es et rectum, judicium tuum, fac cum his servis tuis, secundum misericordiam tuam, ut non de pristinis judicentur reatibus, sed in hoc, prout meruerunt, tuâ benedictione præveniente veritatis subsequantur judicium. Amen.**Et qui justus es et amator justitiæ, et à cujus vultu videtur æquitas, fac in conspectu populi tui, ut nullis malorum præstigiis veritatis tuæ fuscantur examina. Amen.**Petitiones nostras placatus intende et culparum omnium præteritarum eis veniam clementer attribue; et si culpabiles sunt, tua larga benedictio non eis ad suffragium, sed hujus culpæ ad insinuandam veritatem proficiat. Amen.**Here let them communicate after the Priest, and let the Priest say,**Corpus hoc et sanguis Domini nostri Jhesu Christi, sit vobis ad probationem hodie. Then let the Communicants answer, Justus Dominus et justitiam dilexit, æquitatem videt vultus ejus.**After the Communion.*

ORDEAL.

*Perceptis Domine Deus sacris muneribus, suppliciter deprecamur, ut hujus participatio Sacramenti et à propriis nos reatibus indesinenter expediat, et in famulis his veritatis sententiam declaret, per Dominum nostrum.**At the conclusion of Mass, the Priest is to consecrate Holy Water, and to go to the place in which the Ordeal is to be performed. And when he is come to the place he is to give all of them Holy Water to drink. Afterwards he is to exorcise the water to be used in the Ordeal, according to the words following.**Deus, qui per aquarum substantiam judicia tua exercens, diluvii inundatione millia populorum interemisti; et Noe justum cum suis salvandum censuisti. Deus, qui in mari rubro cuneos Ægyptiorum involvisti, et agmina Israëlita imperterrita abire jussisti, virtutem tuæ benedictionis † his aquis infundere et novum ac mirabile signum in illis ostendere digneris: ut innocentes à crimine, cujus examinationem agimus more aquæ, in se recipiant et in profundum pertrahant; conscios autem hujus criminis à se repellant atque rejiciant, nec patiantur recipere corpus, quod ab onere bonitatis evacuatum ventus iniquitatis alleravit, et in hanc constituit; sed quod careat pondere virtutis, careat pondere propriæ substantiæ in aquis, per Dominum nostrum.**Or.**Adjuro te creatura aquæ in nomine Dei Patris † Omnipotentis qui te in principio creavit et jussit ministrare humanis necessitatibus, qui etiam jussit te separari ab aquis superioribus; Adjuro te etiam per ineffabile nomen Jesu Christi † filii Dei vivi sub cujus pedibus mare et elementum divisum se calcabile præbuit; qui etiam baptizari se in aquarum elemento voluit: Adjuro etiam te per Spiritum † Sanctum qui super Dominum baptizatum descendit: Adjuro te per nomen sanctum † et individue divinitatis cujus voluntate aquarum elementum divisum et populus Israel siccis pedibus statim transivit; ad cujus etiam invocationem Heliseus ferrum quod de manubrio exierat super aquam natare fecerat, ut nullo modo suscipias hos homines N. si in aliquo sunt culpabiles de hoc quod illis objicitur. Scilicet aut per opera, aut per consensum vel per conscientiam, seu per ullum ingenium, sed fac eos super te natare et nulla possit esse contra te causa facta, aut ullum præstigium Inimici quod illud possit occultare. Adjurata autem per nomen Christi præcipimus tibi ut nobis, per nomen ejus obedias, cui omnis creatura servit, quem Cherubin et Seraphin collaudant dicentes, "Sanctus, Sanctus, Sanctus, Dominus Deus exercituum," qui etiam regnat et dominatur per infinita sæcula sæculorum. Amen**Or.**Adjuro te creatura Aquæ per Dominum Patrem † et Filium † et Spiritum † Sanctum, et per tremendum diem Judicii, et per xii Apostolos, et per lxii Discipulos, et per xii Prophetas, et per xxiv Seniores qui assidue Dominum laudant, et per cxliv millia quæ sequuntur Agnum, per omnia agmina sanctorum Angelorum, Archangelorum, Thronorum, Dominationum, Principatûm, Polestatûm, Virtutûm, Cherubin atque Seraphin, et per omnia millia sanctorum Martyrum, Virginum, et Confessorum.**Adjuro te per sanguinem Domini nostri Jesu Christi et per iv Evangelia et per iv Evangelistas, nec non et per lxxii libros Veteris ac Novi Testamenti et per omnes Scriptores sanctos et Doctores eorum.*

ORDEAL.

Adjuro te per Sanctam Ecclesiam Catholicam, et per Communionem Sanctorum et per Resurrectionem eorum ut fias Aqua exorcizata, adjurata, et obfirmata adversus Inimicum Hominis Diabolum, et adversus hominem qui ab eo seductus (furtum hoc vel homicidium aut adulterium) cujus ratio agitur perpetraverit, ut nullatenus eum in te summersum aut in profundum trahi permittas, sed a te repellas atque rejicias. Nec patiaris recipere corpus quod ab onere bonitatis inane factum, sed quod caret pondere virtutis, careat pondere propriæ substantiæ in te; innocentem vero à prædicto crimine more Aquæ in te recipias et in profundum innocuum pertrahas, per Dominum nostrum.

Or.

Deus judex, justus, fortis, auctor et amator pacis, patiens et multum misericors, qui judicas quod justum est, et rectum judicium tuum; qui respicis super terram, et facis eam tremere. Tu Deus omnipotens qui per adventum Filii tui Domini nostri Jesu Christi mundum salvasti, et per ejus passionem genus humanum redemisti, hanc aquam ferventem (vel hoc ferrum candens) sanctifica ✠. Qui tres pueros Sidrac, Misac et Abednego jussu Regis Babiloniæ in camino ignis, accensâ fornace salvasti illæsos, per Angelum sanctum tuum eduxisti; tu clementissime Pater, dominator omnipotens, præsta ut si quis innocens de hoc cujus inquisitio agitur in hanc aquam ferventem (vel in hoc ferrum fervens) miserit manum suam salvam te præstante Domino nostro permaneat; et sicut tres pueros supradictos de camino ignis liberasti et Susannam de falso crimine eripuisti, sic manum innocentem omnipotens Deus ab omni læsionis insanie (â) salvare dignare. Et si quis culpabilis vel noxium (s) et tumido corde induratoque pectore vel superbâ mente reus, de hoc cujus inquisitio agitur manum miserit in hanc aquam ferventem (vel hoc ferrum candens) tu Deus omnipotens justissimâ pietate et rectissimo judicio illud declarare et manifestare digneris; ut anima ejus per pœnitentiam salvetur. Et si ille nocens vel culpabilis sit, et per aliquod maleficium, vel per herbas aut per causas diabolicas induraverit, et peccatum quod fecerit confiteri noluerit, tua dextra quæsumus, Domine, hoc declarare dignetur, per, &c.

Or.

Deus innocentie restitutor et amator, qui auctor pacis es et judicas æquitatem, te subnixis rogamus precibus ut hanc aquam ferventem (vel hoc ferrum ignitum) ordinatam ad justitiam et examinationem cujuslibet dubitatis, benedicere ✠ et sanctificare ✠ digneris; ita ut si innocens de hoc cujus inquisitio agitur et unde purgatio quærenda in hanc ferventem (vel, &c.) et tuâ benedictione sanctificatam aquam (vel, &c.) manum vel pedes miserit, tuâ benignissimâ miseratione illæsus appareat. Si autem culpabilis atque reus contempserit, et quasi temptator judicium tuum adierit, aut per herbas vel quæcunque temptamenta sive molimina maleficia peccata sua contueri et defendere inflatus, per afflatorem malitiæ, contra veritatis tuæ examen, voluerit, justissime et misericordissime Domine Deus ad hoc virtus tua quæ omnia superat, in eo cum veritate quæ permanet in sæcula sæculorum declaratur quatenus justitiæ tuæ non dominetur iniquitas; sed veritati subdatur falsitas, ut et cæteri hoc videntes ab incredulitate suâ te miserante liberentur. Qui vivis et regnas, &c.

After this Exorcism the accused are to be undressed, they are to kiss the Gospels and the Cross, and to be

sprinkled with Holy Water; and then, all persons present fasting, they are to be thrown into the water; if they sink they are absolved, if they swim they are convicted.

A similar service *mutatis mutandis* belonged to the Hot Water and Iron Ordeals, in which the following adjurations were employed.

*Deus, qui per ignem signa magna ostendens Abraham puerum tuum de incendio Chaldaeorum eripuisti: Deus, qui rubum ardere ante conspectum Moysi et minimè comburi permisisti: Deus, qui ab incendio fornacis Chaldaici, plerisque succensis, tres pueros tuos illæsos eduxisti: Deus, qui incendio ignis populum Sodomæ et Gomorræ involvens, Loth famulum tuum, cum suis, saluti donasti: Deus, qui in adventu Sancti Spiritûs tui illustratione ignis fideles tuos ab infidelibus sece-
visti, ostende nobis in hoc parvitatibus nostræ examine virtutem ejusdem S. Spiritûs; et per hujus ignis fervorem discerne fideles et infideles, ut ad tactum ejus rei cujus inquisitio agitur (furti, homicidii, &c.) conscii exhorrescant et manus eorum vel pedes comburantur aliquatenus; immunes verò ab ejusmodi crimine liberentur penitus et illæsi permaneant, per, &c.*

At the conclusion of this adjuration, Holy Water is to be tasted by all present, and the chamber is to be sprinkled with it. Then the Iron is to be produced, and carried by the accused over a space of nine feet. After which his hand is to be sealed up, and not inspected till the third night is past; then if it be clean, let thanks be given to God; but if it appears festered on the mark of the iron, *si autem insanies crudescens in vestigio ferri inveniat*, he must be esteemed guilty. So also in the Ordeal of Boiling Water.

In the Corsned (*panis ordeaceus*) all in like manner must be fasting, and after the Litanies the Priest must say,

Consecrator et creator humani generis; dator gratiæ spiritualis; largitor æternæ salutis; emittit Spiritum tuum super hanc creaturam panis vel casei cum timore et tremore magnitudinis brachii tui, adversus eum, qui cum superbiâ et contumaciâ ac zelo iniquo venit, et vult subvertere justitiam et conculcare judicium. Fac eum, Domine, in visceribus, angustari ejusque guttura concludere, ut panem vel caseum istum in tuo nomine sanctificatum devorare non possit hic, qui injustè juravit ac negavit hoc quod quærebatur, et jusjurandum pro nihilo habuit, et nomen tuum nominavit, ubi rectum non erat. Te quæsumus, ut non ei permittas abscondere, quia justus es Domine et rectum judicium tuum, qui custodis veritatem in seculum, faciens judicium injuriam patientibus, et custodis pupillum, ac viduas suscipis, et viam malignorum exterminabis; Ideò ostende nobis misericordiam tuam, ut humiles ac mansueti et recti propter veritatem gaudeant; superbi autem ac iniqui et cupidi contristentur et humilientur, usque dum confiteantur magno et sancto nomini tuo et cognoscant cæteri, quia nomen tibi Dominus, et tu solus super omnem terram altissimus, et servi tui in te gloriantur et laudent nomen tuum in secula seculorum, Amen.

Or.

Domine Jesu Christe qui regnas in cælis et in terris, et mirabilis es in omnibus operibus tuis, dominator dominantium, Deus Angelorum, Deus Patriarcharum, Prophetarum, Apostolorum, Martyrum, Confessorum, Virginum, et omnium Electorum; præsta, quæsumus, per

ORDEAL.

ORDEAL. *sanctum et admirabile nomen tuum, ut qui reus est de hoc (huius furti vel homicidii, sicut adulterii, seu maleficii) cujus inquisitio agitur, vel in facto vel in conscientia, ad appositam ei pro ostensione veritatis creaturam panis sanctificati vel casei faur ejus claudatur, guttur ejus stranguletur, et in nomine tuo ante illud rejiciatur quam devoretur. Sed et Spiritus Diabolicus, cui nulla est communio cum tua superna veritate in hoc negotio, ad subvertendum Judicium pravis prastigiorum suorum molitionibus nil praevalcat, sed qui reus et conscius est rei praefatae ad hoc pabulum sanctificati panis vel casei, et praesertim per Dominici corporis et sanguinis communionem quam accepit, tremat, et tremendo pallescat, et nutabundus in omnibus membris appareat. Innoxius vero et inscius sobrie ad salubritatem sui, cum omni facilitate, hanc partem panis vel casei in nomine tuo signatam manducando deglutiat; ut cognoscant omnes quia tu es iudex justus, qui salvos facis sperantes in te, et non est alius praeter te. Qui vivis et regnas, &c.*

Or.

Deus cujus scientia senariam circumscriptionem Angelicis et humanis elongatam sensibus sola interius penetrat et exterius concludit; quem nulla caelestium vel terrestrium aut inferiorum vota fallere possunt, quanto magis cor hominis unius culpabile; respice ad preces nostrae humilitatis, quibus famulatum sacri indidisti ordinis, et praesta non nostris exigentibus meritis, sed tuorum omnium suffragantibus Sanctorum precibus; sed quod in hac culpa humanos latet oculos, et sermonum humanae procacitatis obtegatur defensionibus, tua caelesti et superna moderatione sine ullo reveletur obtruncamine; et sicut solus verus es, veritatis in hoc sententiam elucidare digneris, quatenus innocens sine ulla difficultate hoc pabulum probationis deglutiat; obnoxius autem obtrepidante mentis statu et totius compagine corporis vacillante, quod in tuo sancto nomine consecratur et benedicitur, nullatenus devorandi valetudinem percipiat, sed coram omnibus valetudine confusus, quod praesumptione immerita suscepit cum irrisione projiciat per Dominum nostrum Jesum Christum.

Hindú Ordeals.
1. The Balance.

In an early volume of the *Asiatic Researches* may be found a Paper on Hindú Ordeals, communicated by Warren Hastings. They are nine in number: 1. by the Balance; in which the accused, having fasted during a whole day, having bathed in sacred water, and presented the *homa*, or oblation, is carefully weighed in scales previously adjusted. As soon as he is taken out, the Pundits prostrate themselves before the scales, murmur a certain *mentra*, or incantation, appointed in the Sastras, and bind a written accusation round the head of the suspected person. Six minutes afterwards, he is weighed a second time; if he weighs more than at first, he is held guilty; if less innocent; if exactly the same, he must be weighed a third time; when, as it is

written in the *Mitaishera*, there will certainly be a difference. If the Balance should break down, it is considered a clear proof of guilt. 2. By Fire; in which the accused must walk barefooted into a trench nine hands long, two spans broad, and one span deep, filled with a fire of pippal wood. 3. By Water; in which the accused stands up to his navel in Water, accompanied by a Bramin holding a staff. Three arrows are then shot on dry ground; after which a man is despatched to bring that one which has been shot furthest, and as soon as he has picked it up, a second person runs from the edge of the Water to bring the other two. At the moment at which he starts, the accused is to grasp the staff or the foot of the Brahmin, to dive under water, and if he would prove his innocence, to remain there till the arrows are brought back. In the villages near Benares arrows are not employed, but the submersion of the accused is to continue as long as a man can walk fifty paces very gently. On the coast of Malabar, the Water Ordeal is far more terrific. The accused has to swim across a large river abounding with Crocodiles. 4. By Poison; in which the accused swallows from the hand of a Brahmin two *rettis* and a half (seven barleycorns) of a poisonous root called Vishanaga, or of Sana'hya, (white arsenic,) mixed in eight *mashas*, i. e. sixty-four *rettis* (192 barleycorns) of clarified butter; or else dips his hand into a deep earthen vessel containing some token which he is to bring out, without being bitten by a Naga, or hooded snake, which has been thrown into it at the same time. 5. By *Cosha*; in which the accused drinks three draughts of water in which certain Idols have been washed, and his acquittal depends upon his freedom from sickness during the ensuing fourteen days. 6. By Rice; a quantity of dry rice is weighed with the sacred stone named *Salgram*, or imbued with judicial virtues by having certain *slocas* read over it. The suspected persons are then ordered, after chewing the rice to throw it on some leaves of pippal, or some bark of the *b'hurja patra*. The man from whose mouth the rice comes dry, or stained with blood, is considered guilty. 7. By Hot Oil. 8. By Hot Iron; both of which differ but little from the similar European Ordeals. 9. By Dhar'mach; in which an image named Dharma, or the Genius of Justice, made of silver, and another of an antagonist Genius Adharma, made of clay or iron, or those figures painted respectively on white and black cloth, are thrown into a large jar, from which the accused is instructed to draw at hazard.

In Siam, if a dispute arise which is to be determined by Ordeal, the method, in the first instance, is summary enough to prevent any very frequent appeal. A Tiger is let loose upon both parties; if he spares either, the fortunate survivor is esteemed innocent; if neither, both are considered guilty; if both, they must submit to some more certain criterion.

O'ORDER, n. } Fr. *ordre*; It. *ordine*; Sp. *orden*; Lat. *ordo*. Scaliger, de *Causis*, c. 35. says, *Ordinis nomen Graecum est. Dicebant militibus tribuni. Hactenus tibi licet: hic consistes; eò progredi, huc revertere; ὅπου ἐστί, inde ordo.* Scaliger adds, "*sic et Graeci τὰς ἀπὸ ἀκείας directionem.*" And

going, being with or accompanying; to compose, to further, "*Est igitur ordo, loci ratio, quā quid aut praestit, aut sequitur: vel ante, vel retro, vel dextrorsum, vel sinistrorsum, vel sursum, vel deorsum.*" *Ὁπου ἐστὶν τὸ τέλος, hunc tibi do.*" Vossius, who also suggests the Gr. *ὁρῶς, rectus.*

To order; to put, place, or set in rank or station; as going before or preceding, following or succeeding,

Ordeal in Siam.

ORDER. dispose; to arrange, to methodize: to direct, to rule, to regulate, to determine, to establish. And *order, n.*

The regular position, disposition, or arrangement; the rank or station; regular or established procession or succession; course, tenour, or series; rule, regulation, or regularity, direction or command. *Order* is also applied to

A class of persons *ordained* or appointed to any Civil or Religious rank; to a brotherhood or fraternity.

And made an hous of monekes, to holde her *ordre* bet.

R. Gloucester, p. 282.

To þe *ordre* of Cisteans he gaf tuo þousand mark.

R. Brunne, p. 136.

Ich fond þer frerus. all þe foure *ordres*.

Piers Plouhman. Vision, p. 3.

And it bifel that whanne Zacarye schould do the office of presthod in the *ordir* of his cours to fore God.

Wiclif. Luke, ch. i.

O blisful *ordre*, o wedlock precious

Thou art so mery, and eke so vertuous.

Chaucer. The Marchantes Tale, v. 9221.

This desire, if so be that a man do his diligence to performe it, al be it that his desire ne take non effect, yet, it is to him a dedly sinne: and if he be *ordered*, he is irregular.

Id. The Persones Tale, vol. i. p. 354.

Men shulde it in the prestes fynde,

Their *order* is of so high a kynde,

That thei be diuiseurs of the weie.

Gower. Conf. Am. book i. p. 25.

No force for that, for that is *ordered* so,

That I may leape both hedge and dike full wele.

Wyat. The Courtier's Life. To John Pains.

The children *orderly*, and mothers, pale

For fright,

Long ranged on a rowe stode round about.

Surrey. Virgil. Aeneis, book ii.

Vpon the waltring waues, his foistes and gallies fleete,

More forrest like than *orderly*, for such a man most meete.

Gascoigne. Flowers. A Deuise of a Maske for Viscount Montacute.

Why was my breeding *order'd* and prescrib'd

As to a person separate to God,

Design'd for great exploits; if I must die

Betray'd, captiv'd, and, both eyes put out,

Made of my enemies the scorn and gaze;

To grind in brazen fetters under task

With this heav'n-gifted strength?

Milton. Samson Agonistes, l. 30.

That thou but as an upright *orderer*

Sought'st to reform th' abus'd kingdom here,

And got thy right; and what was thine before:

And this was all; thou would'st attempt no more.

Daniel. History of Civil Wars, book i.

I whom thy royall father sent, as *orderer* of thy force,

When to Atrides from his Court, he left thee, for this course.

Chapman. Homer. Iliad, book ix. fol. 125.

Though to pull back th' on-running state of things,

(Gathering corruption, as it gathers days)

Unto the form of their first *orderings*,

Is the best means that dissolution stays.

Daniel. Musophilus.

This *order* with her sorrow she accords;

Which *orderless*, all form of *order* brake;

So then began her words, and thus she spake.

Id. History of Civil Wars, book ii.

And now what cure, what other remedy,

Can to our desp'rate wounds be ministred?

Men are not good, but for necessity:

Nor *orderly* are ever born, but bred.

Id. Ib. book vii.

[Perkin] considering the delay of time, and obseruing their *orderly*, and not tumultuary arming, doubted the worst.

Bacon. King Henry VII. fol. 141.

VOL. XXV

As may be gathered from these words of his, *τὴν φύσιν, κ. τ. λ.* That Nature does rationally (or *orderly*) together with Reason and Mind govern the whole universe.

Cudworth. Intellectual System, book i. ch. iii. fol. 110.

Secondly, a due *ordering* of our words, that are to proceed from, and to express our thoughts; which is done by pertinence and brevity of expression.

South. Sermons, vol. ii. p. 95.

But it is no harm for him, who is, by right, and in the greatest propriety, the supreme *orderer* of all things, to *order* every thing in such a manner as it would be a point of wisdom in Him to chuse that they should be *ordered*.

Edwards. On the Freedom of the Will, part iv. sec. 9. p. 374.

O'RDNANCE, or } Fr. *ordonnance*, *gens ou com-*

O'RDENANCE. } *pagnies d'ordonnances*. "Gen-

darmes des ordonnances. The ordinary men of arms of France; first reduced by Charles VII. (in the year 1444) into certain companies, and under particular orders." It was indispensable that these men should have been archers; (Fr. *artillier*;) and in v. ARTILLERY, we have seen that from them the modern *artillery* took its name, and by them was conducted; and from these *gens d'ordonnances*, the single word *ordonnance* may have been applied to the guns now distinguished by the name of *ordnance*.

Now do they mount their *ordinance* for the day.

Drayton. The Battle of Agincourt.

Behold the *ordenance* on their carriages

With fatall mouthes gaping on girded Harflew.

Shakspeare. Henry V. fol. 77.

For certaine it is, that *ordnance* was known in the city of the Oxidrakes in India; and was that which the Macedonians called thunder and lightning and magicke.

Bacon. Of Vicissitude of Things. Essay 58.

O'RDURE, } Fr. *ordure*; It. *ordura*; *lordezza*,

O'RDUROUS. } from the Fr. adj. *ord*, which some de-

rive from *horridus*, and others from *sordidus*. Menage.

Filth or foulness, nastiness, dirt, dung.

For right as a sowe wroteth in every *ordure*, so wroteth she hire beautee in stinking *ordure* of sinne.

Chaucer. The Persones Tale, p. 148.

Before this time, Smithfield was a loistal for all *ordure* and filth, and the place where felons were put to execution.

Baker. Henry I. Anno 1112.

And the rude times their *ord'rous* matter fling

Into the sacred and once hallow'd spring.

Drayton. Pastorals. Eclogue 11.

Those let me curse; what vengeance will they urge,

Whose *ordures* neither plague nor fire can purge?

Nor sharp experience can to duty bring,

Nor angry Heaven, nor a forgiving king!

Dryden. The Medal.

ORE, *n.* A. S. *ora*; D. *oor*, *oore*: Skinner writes it *oar*, *metallum crudum*, and supposes it may be the Fr. *or*; Lat. *aurum*, *quia aurum est metallum*, κατ' ἐξοχὴν. Junius, from Gr. *ὑπεῖν*, to guard with care. Ore was also the name of a coin introduced among the Anglo-Saxons by the Danes. It is applied to Metal unrefined; to metal, generally.

For though that I be olde, foule, and pore,

In'olde for all the metal ne the ore,

That under erthe is grave, or lith above,

But if thy wif I were and eke thy love.

Chaucer. The Wif of Bathes Tale, v. 6646.

A second multitude

With wond'rous art found out the massie ore,

Severing each kind, and scum'd the bullion dross.

Milton. Paradise Lost, book i. l. 708.

As much difference betweene them as betwixt gold in the ore, and in the wedge.

Hall. Works, vol. i. fol. 417. The Impress of God, part ii.

4 s

ORDER.

ORE.

ORE.
—
ORGAN.

For besides other minerals, that may be found profitable to the physician, the drugster, or the mineralist, the *ores* or wombs of metal themselves, may be divers times found disguised in the form of earth, or of mud, easy to be dried.

Boyle. *Works*, vol. v. p. 501. *A previous Hydrostatical Way of estimating Ores*, sec. 11.

Of gold, indeed, we cannot produce many specimens, yet sufficient to shew that it is found in this island; but silver is found in great abundance in our lead *ores*, and veins of native silver in the copper *ore* of Muckrus, on the lake of Killarny.

Pennant. *British Zoology*. Preface, p. 8.

OREAD, Gr. *ōpetas*; a mountain Nymph; from *ōpos*, a mountain.

[She] like a wood-nymph light,
Oread, or Dryad, or of Delia's train,
Betook her to the groves, but Delia's self
In gait surpass'd and goddess-like deport.

Milton. *Paradise Lost*, book ix. l. 387.

OREOBOLUS, in *Botany*, a genus of the class *Triandria*, order *Monogynia*, natural order *Cyperaceæ*. Generic character: glumes two, spathe-formed, deciduous; calyx six-parted, cartilaginous, persisting after shedding the seed; style deciduous; stigmas three; seed crustaceous.

One species, *O. pumilio*, native of New South Wales.

OREOCALLIS, in *Botany*, a genus of the class *Tetrandria*, order *Monogynia*, natural order *Proteaceæ*. Generic character: corolla irregular, open on one side, four-toothed; stamens inserted in the concave summits of the corolla; germen on a foot-stalk; stigma oblique; seeds numerous with a terminal wing.

One species, *O. grandiflora*, a magnificent shrub, native of the mountains of Peru.

ORFRAY, Fr. *orfrais*; Low Lat. *aurifragia*, *frange d'or*, a fringe of gold. Du Cange. Fr. Broad welts, or gards of gold or silver embroidery laid on copes and other church vestments. Cotgrave. Gold embroidery. Tyrwhitt.

And of fine *orfrais* had she eke
A chapelet, so semely on,
Ne neuer wered maide upon.

Chaucer. *The Romant of the Rose*, p. 175.

Of *orfraies* fresh was her garland,
I whiche seene have a thousand
Saw never ywis, no garland yet,
So well wrought of silke as it.

Id. *Ib.* p. 177.

O'RGAN, n.	} Fr. <i>organe</i> ; It. <i>organo</i> , <i>organizzare</i> ; Sp. <i>organo</i> , <i>organizar</i> ; Lat. <i>organum</i> ; Gr. <i>ὄργανον</i> , from <i>ὄργα</i> , <i>ἐργα</i> , from the obsolete <i>ἐργειν</i> , to do or make.
O'RGAN, v.	
ORGA'NICK,	
ORGA'NICAL,	
ORGA'NICALLY,	
O'RGANIZE,	
O'RGANISM,	
O'RGANIST,	
ORGANIZA'TION.	
Organick, instrumental, working, operating; acting as means or instrument.	

Would'st thou be treated with in the ineffable dialect of heaven? Alas! fond creature, thou art elemented and *organed* for other apprehensions, for a lower commerce of perception.

Mannyngham. *Discourse*, (1681,) p. 89.

This woman was not inspired with the Holy Ghoste, nor sent from God, (as the Frenchmen beleue) but an enchanteresse, an *organe* of the deuill.

Hall. *Henry VI. The ninth Yere*.

And his brother's name was Jubal, of him came all that exercyse themselves on y^e harpe & on the *organs*.

Bible, Anno 1551. *Genesis*, ch. iv.

Ye vnderstand by this word (really) corporaliter. i. Corporally, so that by the bodie of Christ is vnderstanded a naturall bodie and organically.

Fox. *Martyrs*, fol. 1301. *Queen Mary*. Anno 1554.

Who made the mouth? who th' eye? or who the ear?
Or who deprives those *organs* of their use?

Drayton. *Moses His Birth and Miracles*, book i.

It is true that in *organs* there is a confused murmur for a while, after you have played; but that is but while the bellows are in falling.

Bacon. *Natural History*. Cent. iii. sec. 207.

His gentle dumb expression turn'd at length
The eye of Eve to mark his play; he glad
Of her attention gain'd, with serpent tongue
Organic, or impulse of vocal air,
His fraudulent temptation thus began.

Milton. *Paradise Lost*, book ix. l. 530.

12. Besides the figure and number of *organical* parts in the brain of a man; how much superior is it, with respect to its bulk alone compared with his body, to that of any other creature?

Grew. *Cosmo Sacra*, book i. ch. v. fol. 25.

Not to give them a quicker sight, as some learned anatomists have thought, for it is the advantageous *organism* of the eye by which that is procured.

Id. *Ib.* book ii. ch. iii. fol. 42.

In the bodies of animals, the true and proper cause of motion, or the determination thereof at least; is not the matter itself *organized*; but the soul either as cogitative, or plastically-self-active, vitally united thereunto, and naturally ruling over it.

Cudworth. *Intellectual System*, book i. ch. v. fol. 668.

Whereby it [matter] hath a perfect knowledge of whatsoever it self could do or suffer (though without animal consciousness) and can form itself to the best advantage, sometimes improving itself by *organization*, to sense in brutes, and to reason and reflexive understanding in men.

Id. *Ib.* fol. 687.

But oh! what art can teach,
What human voice can reach,
The sacred *organ's* praise?
Notes inspiring holy love,
Notes that wing their heavenly ways,
To mend the choirs above.

Dryden. *Song 3. For Saint Cecilia's Day*. 1687.

All stones, metals, and minerals, are real vegetables; that is, grow *organically* from proper seeds, as well as plants.

Locke. *Works*, vol. iv. p. 590. *Elements of Natural Philosophy*, ch. viii.

After the Restoration of King Ch. II. he (Christoph. Gibbons) was principal *organist* of his chappel, his principal *organist* in private, master of the singing boys belonging thereunto, *organist* of Westminster, and one of his Majesty's private music.

Wood. *Fasti Oxoniensis*, vol. ii. fol. 158.

A great part of this difference is undoubtedly to be ascribed to the ideas and feelings which the habitual studies and amusements of the poet have associated with his *organical* perceptions.

Stewart. *Philosophy of the Human Mind*, part ii. ch. v. sec. 3. p. 393.

That, nevertheless, we are not to conclude that every *organized* being is informed with such an essence, as to have an actual principle of motion and perception.

Brookes. *Universal Beauty*, book iv. n.

Natural superiority of intellect can arise only from an happier *organization* of the senses, or the sensorium.

Beddoes. *Mathematical Evidence*, p. 61.

ORGASM, Fr. *orgasme*; Gr. *ὄργασμος*, from *ὄργαζειν*, *incitare*, *instigare*, to incite or instigate. Applied to

Any sudden excitement or strong emotion.

By means of the curious lodgment and inoculations of the auditory nerves beforementioned, the *orgasmes* of the spirits should be allayed, and perturbations of the mind in a great measure quieted and stilled.

Derham. *Physico-Theology*, book iv. ch. iii. p. 135.

Vain, ah vain the hope
Of future peace, this *orgasm* control'd!

Shenstone. *Economy*.

ORGAN.
—
ORGASM.

ORGIES. **ORGIES**, Fr. *orgies*; Lat. *orgia*; Gr. ὄργια, for which various Etymologies are proposed. Ἀπὸ τῆς ὀργῆς, *a furore*; (*bacchantium*;) ἀπὸ τῶν ὀρῶν, *a montibus*, in which they were celebrated; ἀβ ἑργ-ειν, *arcere*, because the uninitiated were driven from them; or perhaps ἑργα θεῶν, *divine deeds or ceremonies*. See Vossius.

As when with crowned cups unto the Elian god
Those priests high *orgies* held.

Drayton. *Poly-olbion*, song 6.

Yet thence his lustful *orgies* he enlarg'd,
Even to that hill of scandal, by the grove
Of Molock homicide, Lust hard by Hate;
Till good Josiah drove them thence to hell.

Milton. *Paradise Lost*, book i. l. 243.

In solemn show she bade the dames advance,
And in dissembled *orgies* led the dance.

Pitt. *Virgil. Æneid*, book vi.

ORGULOUS, Fr. *orgueilleux*, *orgueil*, pride, arrogance. *Orgellice* is used in the A. S. version of Boethius, p. 41. Caseneuve derives from Gr. ὀργίλος, *iracundus*, from ὀργίζεσθαι, *irasci*.

Proud, swelling.

But they wust nat how to passe y^e ryuer of Derne, whiche was
fell and *orgulous* at certayne times, and especially rather in Somer
than in Winter.

Lord Berners. *Froissart. Cronycle*, vol. ii. ch. 102. p. 297.

In Troy there lyes the scene: from Iles of Greece
The Princes *orgillous*, their high blood chaf'd,
Haue to the port of Athens sent their shippes
Fraught with the ministers and instruments
Of cruell warre.

Shakspeare. *Troilus and Creseide. Prologue*.

ORGYIA, in Zoology, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* short, deeply bipectinated in the males, abruptly terminated; serrated in the females, each serrature producing a bristle; *palpi* two, short, compact, hairy, biarticulate, the basal joint small, the terminal large, broad, ovate, subacute; *maxillæ* obsolete; head small, hairy; *thorax* slender, not crested; wings deflexed, short, triangular, or wanting; legs rather stout, anterior elongated; the *femora* and *tibiæ* of all, and the *tarsi* of the anterior, fringed with elongate hairs. *Larva* with distinct fascicles of hair on the sides, and several dorsal tufts, two or more, composed of capitate hairs, on the sides of the body and head, one on the penultimate joint, and some shorter ones at the apex; *pupa* slightly pilose, with an acute spine at the tip; *folliculus* ovate, of a very loose texture.

Type of the genus, *Phalæna bombyx antiqua*, Linnaeus; Donovan, vol. i. p. 6. The insects of this genus are remarkable, at least the males, for their peculiar vacillating or vapouring flight, and the females, which are apterous, appear scarcely to leave the folliculus in which they are hatched, but after impregnation deposit their eggs on the outer surface of the folliculus itself. There are at least six species known, of which two are natives of Britain.

ORIBITA, in Zoology, a genus of *Acari*.

Generic character. Head small, produced anteriorly and covering the trophi; eyes minute; body covered by a coriaceous skin; *abdomen* subglobose; legs eight; *tarsi* furnished with short claws.

Type of the genus, *O. geniculata*; Latreille, *Genera Crust. et Ins.* p. 149. A numerous genus, the species of which are found under stones, beneath damp bark, &c.

ORICALCH, Lat. *aurichalcum*, or *orichalcum*; Gr. ὀρείχαλκος, *æs montanum*: from ὄρος, a mountain, and χάλκος, brass. But see Vossius, and **AURICALCHUM**.

Not Bilbo steele, nor brass from Corinth fet,
Nor costly *oricalche* from strange Phœnice;
But such as could both Phœbus arrowes ward,
And th' hayling darts of Heaven beating hard.

Spenser. *Muipotmos*.

O'RIENT, *adj.* } Fr. *orient*; It. *oriente*; Sp. *orient*; Lat. *oriens*; Gr. ὀρ-ειν, to rise, or raise; rising, and consequentially, shining, brilliant, (as with the rays of the Sun,) also Eastern; because the Sun rises in the quarter we call *East*.
O'RIENT, *n.* }
O'RIENCY, }
O'RIENTAL, *adj.* }
O'RIENTAL, *n.* }
O'RIENTALISM, }
O'RIENTALIST, }
O'RIENTALITY. } *Orientalism*; an idiom or form of speech peculiar to the Eastern Languages.

For of, o perle, fine *orientall*,

Her white crowne was imaked all.

Chaucer. *Legend of Good Women. Prologue*, p. 300.

In the *orient* with many a faire citee,
Appertenaunt unto the majestee
Of Rome.

Id. *The Monkes Tale*, v. 14320.

And fry Phebus riseth up so bright
That all the *orient* laugheth of the sight,
And with his stremes drieth in the greves
The silver dropes, hanging on the leues

Id. *The Knightes Tale*, v. 1426.

Of the which line, from a little crosse in the bordure vnto the centre of the large hole, is cleaped the east line, or els the line *oriental*.

Id. *The Conclusions of the Astrolabie*.

His climate is in *orient*,

Where that he is most violent.

Gower. *Conf. Am.* book vi. p. 210.

On the other side that was *ounde* was sette with signes called cifers of fine gold, the whiche were set with great and *oriental* perles.

Hall. *Henry VIII. The twelfth Yere*.

And that which is without the two said transuersall lines is onely to shew how the *orientall* part is joined with the occident, and occident with the *orient*.

Hakluyt. *Voyages*, &c. vol. i. fol. 215. M. Rob. Thorne.

He chose so many as made a faire chaine, which for their likeness and uniformity in roundnesse, *orientness*, and pideness of many excellent colours, with equality in greatnesse, were very faire and rare.

Id. *Ib.* vol. iii. fol. 269. M. Thomas Hariot.

If he [chameleon] be laid upon blew, or red or white; the green spots receive a more *orient* lustre.

Bacon. *Natural History*, Cent. iv. sec. 360.

Black and thorny plum tree is of the deepest *oriency*.

Evelyn, book iii. ch. iv. sec. 12.

For the Jews, and all the *Oriental*s, took all those prophecies relating to the Messiah, and state of the Christian church, that is the kingdom of Christ, in a literal sense; with expectation of a worldly kingdom, whereof Jerusalem should be the head.

Grew. *Cosmo Sacra*, book iv. ch. i. fol. 142.

Whose revolution being regular, it hath no power nor efficacy peculiar from its *orientality*, but equally disperceth his beames, unto all which equally, and in the same restriction, receive his lustre.

Sir Thomas Brown. *Vulgar Errours*, book vi. ch. vii. p. 382.

But when, the dewy shade emerging bright,
Aurora streaks the sky with *orient* light,
Let each deplore his dead: the rites of woe
Are all, alas! the living can bestow.

Pope. *Homer. Odyssey*, book iv.

Here he began a practice he continued in Italy, of retiring to a cave without the town for the purpose of study, but in fact the idea was, like most others of his, *oriental*.

Observer, No. 9.

ORIFICE. **ORIFICE**, *n.* Fr. *orifice*; It. and Sp. *orificio*; Lat. *orificium*; from *os*, a mouth, and *facere*, to make or form.

ORIGIN.

Any opening in form of a mouth; any opening, or perhaps more strictly applied to the superficial gap or opening.

The lower *orifice*, or mouth of the stomach, is not placed at the very bottom, but at the side, and is called the janitor, (or porter,) as sending out the food now concocted, through the entrails.

P. Fletcher. The Purple Island, can. 2. note 35.

Let me see the wound:

This herb will stay the current, being bound

Fast to the *orifice*.

Beaumont and Fletcher. The Faithful Shepherdess, act iv. sc. 1.

The action of the stomach is totally stop'd by too great repletion, in which case both the *orifices* of the stomach by a necessary mechanism close, and neither will admit or expel any thing.

Arbuthnot. On Aliments, ch. i. prop. 2. p. 7.

Sulphureous exhalations rise from the crevices; and from an *orifice* at one of the extremities a thick vapour by day, and a pale blue flame by night, burst forth with a murmuring sound and great impetuosity.

Eustace. Italy, vol. ii. ch. xii. p. 424.

ORIFLAMBE, (a banner so called, *q. d. aurea flamma*.) Fr. *oriflambe*. "The great and holy standard of France; borne at first only in war made against the Infidels; but afterwards used in all other wars; and at length utterly lost in a battle against the Flemings." Cotgrave.

And see the *Historical Division*, ch. lxxiii. p. 615.

Sir Reynolde Camyan baneret, that daye bare the *oryflambe*, a speciall relique that the Frenshe kynges vse to bere before them in alle battayles.

Fabyan, vol. ii. p. 467. Anno 1355.

ORIGAN, Lat. *origanum*; Gr. *ὀρείαννον*.

Origan or *orgament*, which in tast (as wee have said) resembleth *saverie*, hath many kinds, and all medicinable.

Holland. Plinie, vol. ii. ch. xvii.

ORIGANUM, in *Botany*, a genus of the class *Didynamia*, order *Gymnospermia*, natural order *Labiata*. Generic character: flowers collected into a four-sided strobilus, or dense spike; superior lip of the corolla erect, flat; inferior three-parted, segments equal; flowers interspersed with broad bracteal leaves.

Seventeen species, natives of the Northern hemisphere. *O. vulgare*, Common Marjorum, is a native of England. Several species are cultivated in the gardens.

O'IGIN, *n.* Fr. *origine*; It. *origine*; Sp. *origen*; Lat. *origo*; from *oriri*, to rise.

ORIGINA'LITY, *n.* Rise, spring, source, or fountain; beginning; first or primary state of being or existence; first issue or procession; derivation or descent.

O glotonie, full of cursednesse;

O cause first of our confusion,

O *original* of our damnation,

Til Crist had bought us with his blood again.

Chaucer. The Pardoner's Tale, v. 12434.

Thus maie no reason well forsake.

That thilke sinne *original*.

Gower. Conf. Am. book v. p. 136.

The scrypture loketh syngularly vnto the hearte, and vnto the rote and *orygynall* fountayne of all synne, whiche is vnbeliefe in the bottom of the heart.

Bible, Anno 1551. Prologue to the Romaynes.

The same church is likewise I say the very true church, sith that *originally* y^e scrypture is knowen as Tindall hymselfe confesseth by none other churche, as the faythe is *originallye* learned by none other scrypture.

Sir Thomas More. Workes, fol. 734. The Second Part of the Confutation of Tyndall.

The Goths, Vandals, and Longobards, whose coming down like an inundation overwhelmed, as they say, all the glory of learning in Europe, have yet left us still their laws and customs, as the *originals* of most of the provincial constitutions of Christendom.

Daniel. Defence of Rhyme.

Because *originally*, most princes were fathers of families.

Grew. Cosmo Sacra, book iv. ch. viii. fol. 238.

And by alternate gratitude supplies

The thirsty earth, and makes new streams arise,

Which by an ever active imitation,

Return from whence they had *origination*.

Brome. Paraphrase upon the first Chapter of Ecclesiastes.

The *origin* of forms, Pyropilus, as it is thought the noblest, so, if I mistake not, it hath been found one of the most perplexed enquiries that belong to natural philosophy.

Boyle. Works, vol. iii. p. 37. An Examen of the Origin and Doctrine of Substantial Forms.

The greatest commendation, which my own partiality can give to my productions, is, that they are copies, and no farther to be allowed, than as they have something more or less of the *original*.

Dryden. Dedication to Juvenal.

No. I think he would have set out just as he did, with the *origin* of ideas: the proper starting-post of a grammarian who is to treat of their signs.

Tooke. Works, vol. i. p. 34. Some Considerations of Mr. Locke's Essay, ch. ii.

In the state bed-chamber is a portrait of Edward VI. It was *originally* a half length, but has been very badly converted into a whole figure since the time of Holbein.

Walpole. Anecdotes of Painting, vol. i. ch. iv. p. 130.

I have sometimes thought that it might *originate* in the school of Thales, who held water to be the first principle of all things.

Observer, No. 1.

ORIOLOUS, from the Latin *aurum*, Gesner; *Oriole*, Pen. In *Zoology*, a genus of animals belonging to the family *Dentirostres*, order *Passeres*, class *Aves*.

Generic character. Beak longish, conical, and compressed horizontally at the base; upper mandible having an elevated ridge, and notched at the point; nostrils basal, lateral, naked, and pierced horizontally in a broad membrane; wings of moderate length, first alar-quill very short, second longer, and third longest; tarsus rather shorter than, or of equal length with the middle toe; toes three before and one behind, the outer connected with the middle toe.

These birds were included by Linnæus among the *Cassici*, which they resemble only in colour. They approach nearest to the Thrushes, from which they are distinguished merely by the greater strength of their beak and the comparative shortness of their tarsi. They all belong to the Old World, and are remarkable for having their plumage generally black and yellow. The females differ from the males in being either greenish or dingy-yellow, and the young birds always resemble the female. They live among the woods and brambles in solitary pairs, and collect in flocks during Autumn for the purpose of migration. They feed on insects, on different kinds of berries and soft fruit, especially cherries.

O. Galbula, Gmel.; *le Lorient*, Buff.; *Golden Oriole*, Lath.; *Witwall*, Willugh. Ten inches long, about the size of a Thrush; of a golden-yellow colour; a spot between the beak and eye; the wings and tail black, the latter tipped with yellow; beak red; irides bright red; legs bluish-grey. The female is olive-green on the upper part of the body, and greyish-white tinged with yellow beneath, the feathers all streaked on their stems with brownish-grey; wings brown edged with olive-grey; tail olive tinged with blackish. Is common in many parts of Europe, but rare in England; lives in the

ORIGIN.
—
ORIOLOUS.

ORIOLOUS. woods, and hangs its nest very artificially between the slender branches of oaks; lays four or five eggs, white spotted with brown or black. Its note is loud, and somewhat resembles its French name. The Italians think that it points to the ripening of figs by its song, and that it utters the words *Contadino è maturo lo fico?*

ORISSA.

O. Chinensis, Gmel.; *le Lorient de la Chine*, Buff.; *Chinese Oriole*. Of a golden-yellow colour; the upper part of the back, the wings and edges of the tail-quills black. This species is considered by Horsfield as merely a variety of the preceding. From the Indian Archipelago.

O. Xanthonotus, Horsf.; *Yellow-backed Oriole*. Rather smaller than the Chinese Oriole, measuring only seven inches in length; its general colour black; the lower part of the neck, breast, and belly whitish streaked with black; scapulars, rump, and caudal-quills yellow above; bill reddish-brown; irides yellow; legs dusky-blue. Is found solitary in a few parts of the Isle of Java, and never quits the closest shade. The female of this bird has been described in the Addition to the Ornithological Article of the *Encyclopédie* as *le Lorient Grivelé*.

O. Melanocephalus, Lin.; *le Lorient Rieur*, Le Vaill.; *Black-headed Oriole*. About eight inches and three-quarters long. Dumeril doubts whether it be not the same species as the *Lorient Coudougnan*, the two birds having so great resemblance to each other. The plumage of both is merely black and yellow, the head and neck as far as the chest being black, and the wings and tail having some black; but the black-headed species has the beak longer and stronger than the other, its tail shorter and more square, and the black marking of the neck terminating in a point, whilst in the *Coudougnan* it expands into a broad arc. In the female an olive tinge pervades the plumage, giving it a more sombre hue than in the male. It lives in the woods, and builds, in the highest trees, a nest composed of wood and flexible roots, covered externally with moss, and within with feathers; in this the female lays four eggs of a dingy white colour, with brown spots on the larger end.

O. Viridis, Vieill.; *Gracula Viridis*, Lath.; *Green Oriole*. About ten inches long; the general colour pale-green, spotted with brown and black on the throat; chest whitish; wings and tail blackish; beak horn colour; legs black. From New Holland.

O. Variegatus, Vieill.; *Varied Oriole*. Forehead black; upper part of the body, the throat, and chest black and white mingled on a greenish ground; sides yellow; belly and under parts white spotted with black; tail blackish with a greyish edge inclining to blue, and the eight lateral quills tipped with a large white spot; beak rosy; legs black. From New Holland.

O. Radiatus, Lath.; *le Lorient Rayé*, Vieill.; *Radiated Oriole*. Upper part of the body and tail orange; head, throat, front of the neck, and wings blackish, the feathers tipped with white.

O. Aureus, Lin.; *Paradisea Aurea*, Lath.; *le Lorient Orangé*, Vieill.; *Orange Oriole*. Rather larger than

the Common Oriole; the male of this species is remarkable for a large tuft of flexible feathers, which it has the power of spreading, and forms upon the back a kind of cloak, part of which falls over the upper part of the wings and chest; the upper part of the head and the tuft are of an orange-yellow colour, and brilliant as raw silk; the under part of the orbit and the throat are black, and terminate in a point at the lower part of the neck; the rump, the upper coverts of the tail and wings and the scapulars are golden-yellow, and all the under parts jonquil; the primary quills are black, the secondaries black only at their tips, and the tertials entirely yellow; the twelve caudal quills, which are of equal length, are black glossed with olive, and terminated above in a yellow spot, which is not seen beneath; the upper mandible and the tip of the lower black, the remainder of the latter brownish; legs black-brown. The female is mostly olive, the throat marked with olive streaks on a black ground; beak and legs black-brown. From New Guinea. This bird was considered as a Paradise Bird by Edwards, on account of its pendent silky tuft.

See Buffon, *Planches Enluminées*; Temminck, *Manuel des Oiseaux*; Latham, *General History of Birds*.

O'RISON, } Fr. *oraison*; It. *orazione*; Sp. *oracion*, from Lat. *orare*, to pray. See **ORATION**.

A prayer, a supplication; the second syllable, though etymologically long, is by our Poets usually made short: Dyer wanted it long, and has written it after the French.

Nou wer þer ý come from Bangor monekes monýon,
In vastyng and in orýsons, to bydde agen her son.

R. Gloucester, p. 235.

Anon as þýs holy mon adde hýs orýson ý do þere,
Stalward man of speche he was, holy man as he were,
þo gan he to tellen þus.

Id. p. 350.

Gracis I do to Crist bi al myn orisoun that ghe be dwellinge in him and lastinge bi the biheeste abidinge in the dai of doom.

Wiclif. *Lodicensis*, fol. 99.

Of orisons ye shul understond, that orisons or prayers, is to say, a pitous will of herte, that setteth it in God, and expreseth it by word outward, to remeve harmes, and to have thinges spirituel and perdurable, and sometime temporel thinges. Of which orisons, certes in the orison of the paternoster hath Jesu Crist enclosed most thinges.

Chaucer. *The Persones Tale*, p. 169.

Adam and first matrou Eve
Had ended now their orisons, and found
Strength added from above, new hope to spring
Out of despaire, joy, but with fear yet linkt.

Milton. *Paradise Lost*, book xi. l. 137.

An active life long orisons forbids;
Yet still she pray'd, for still she pray'd by deeds.

Dryden. *Eleonora*.

The pilgrim oft
At dead of night, 'mid his oraisons hears
Aghast the voice of Time, disparting towers,
Tumbling all precipitate down-dash'd,
Rattling around, loud thundering to the Moon.

Dyer. *The Ruins of Rome*.

O R I S S A.

ORISSA is a considerable Province of the Western Peninsula of India, to the North-East of the Dekan, properly so called, but comprehended within it according to its modern limits. Orisa, as the name of this Province was formerly spelt, is the Portuguese mode of

Orissa.

expressing Oríshah, or Oréshah, the prevalent corruption of Ut-désa, or Or-désa, itself an abbreviation of O'dra, or Urya-désa, (i. e. the Land of O'dra,) the ancient denomination of this Country. In the Puránas it is called Utkala désa, (the Celebrated Country,) the

ORIOLOUS.

ORISSA.

ORISSA.	first syllable of which is commonly pronounced Ur or Or, and is the root of O'dra or Urya. This name was originally applied only to the country round Katak, its Capital; but the Province, to which it is now given, extends nearly from 16° to 23° North, being contiguous on the North to Bengal; bounded on the East by the Sea and the Circars; on the South by the river Gódáverí; and on the West by the tract called Góndwánah, which separates it from Berár. Its extent is now nearly 400 miles from North to South, but it varies much in breadth. Its present subdivisions, going from North to South, are, 1. Sing'h-b'húmi; 2. Kunjúr; (Kéonj'hér;) 3. Móharbanj; 4. Balasore; (Baléswar;) 5. Khurdah; and 6. Katak.	to the South of the Mahánadí, differ little, if at all, from the Gónds. The Súr's inhabit the woods at the foot of the mountains to the North of the Mahánadí, principally about A't-garh and Dáljórá. They are of a jet-black hue, low in stature, and always armed with a wood-axe; in general harmless and inoffensive, but utterly destitute of any moral sense, and ready to shed human blood on the smallest incitement. They worship stumps of trees, blocks of stone, and clefts in rocks, the last probably in imitation of the Hindú adoration of the Yóni; and they live either settled in villages, or in a migratory state, cultivating millet for their subsistence, but eating almost every kind of food without scruple.	ORISSA. Khands. Soors.
Boundaries.			
Subdivisions.			
Natives.	Its maritime districts are more or less flat and alluvial, fertile and populous; but they are backed by a large tract of rugged and thickly-wooded hills, intersected by deep ravines, and inhabited by wild, uncivilized Tribes; the atmosphere also, pent up in these humid forests, is peculiarly pestilential. The natives of the plains are all Hindús, divided into castes, and scrupulously observant of the doctrines taught by their Gurus. (Ghostly Fathers.) The tradesmen, ranked in thirty-six páthaks, or guilds, are all either Súdras, or of the mixed class called Baran sanker. (Sankara-varna.) There are seven or eight families of pretended Kshattriyas, but the learned in genealogies hold them to be all Súdras. Only two classes of Baniyas, the druggists and money-changers, are believed to be pure Vaisyas. The Bráhmans are of the Utkala family, one of the six affirmed to have been originally brought from Saka dwipa. (<i>As. Res.</i> v. 55.) They acknowledge the same laws, and are of course under the same discipline as the Bráhmans elsewhere; being respected in proportion as they restrict themselves to the functions of their Order; but a large part of the agricultural population consists of Mastan (Mahást'hána) Bráhmans, who affect to despise the Béd (Véda) Bráhmans, engaged in learned pursuits and living on alms. The Mástáns possess large gardens of areca, betel, &c. which they employ themselves in cultivating. The inhabitants of the low lands are remarkable for their dulness and effeminacy, (<i>Ayín Akbarí</i> , ii. 11.) but they are gentle, quiet, and submissive. Even the men have small and delicate faces, and are scarcely distinguishable from women, except by their dress. The natives of the mountains are shy, sullen, and inhospitable, slaves of tyrannical Chiefs, who themselves are abandoned to debauchery and superstition. In Sanskrit they are called Pulinda; they consist of Kóls, K'hands, and Súr's, and are quite distinct from the Hindús in language, features, and manners. The Kóls are subdivided into thirteen Tribes, and are said to be the original inhabitants of the Kólánta désa, a hilly tract between the Súban-réka and Bráhmaní Rivers. "They are a hardy, athletic race," says Mr. Stirling, to whom we are indebted for the first account of them, "black and ill-looking, ignorant and sayage," yet they have houses built of wood, and cultivate the soil with skill and diligence. Though unacquainted with the Hindú Mythology, they venerate the Sahájina tree, (<i>Hyeranthera moringa</i>), pádí, (rice in the husk,) mustard-seed oil, and dogs, and ratify a compact by breaking a straw. (<i>Stipula</i> .) They are very fond of pork and spirituous liquors, eat of almost every thing, and are usually governed by their own Chiefs, styled Mánkís and Mandás, but are sometimes subject to the Hindú landholders. (Zemíndárs.) The K'hands, all of whom live	The Government of Orissa, like that of most parts of India, is in the hands of the great landholders, who hold their fiefs under the Sovereign by a military tenure, similar to that still prevailing in the Grand Signior's dominions, and in the Feudal times, established throughout Europe. These Chiefs, whose military services are, of course, no longer required, are styled Zemíndárs in the districts wherein the Moghuls were predominant; K'hándáíts (<i>i. e.</i> sword-bearers) in Orissa Proper; B'húniá, B'húyán, or B'húmi by the Hindús, from the Sanskrit words <i>b'húmi</i> , earth, or <i>b'húpati</i> , landlord; Sáwant, (from the Sanskrit <i>asávantah</i> , heroic,) equivalent to the Persian Serdár, or Sevákán arní dár, <i>i. e.</i> vassals holding their lands by an hereditary military tenure. In the Southern districts they often bear the Támil title of Palleigár, equivalent to Jágír dár, or Feudal lord. The supreme Chief was anciently styled the Gajapati, (Master of the Elephants,) and supposed to be one of the four great Rájás between whom the Indian Empire was divided by their Lord Paramount, who reigned at Hastiná pura, 59 miles North-East of Dihlí. All his great officers were of the military class, (Kshattriyas,) and hence the Uriya Zemíndárs claim that rank and title at this day, although their pretensions are not held to be valid.	Government.
Castes.			
Mountaineers.			
Coles.			
		The Uriya, or Language of Odra désa, is one of the purest Dialects of the Sanskrit, and approaches very nearly to the Bengalese. It prevails in the whole tract between Médiní-pura (Midnapore) and Mánaka-pattana, (Manick-patam,) and from the Sea to Sammallpúr (o Samb'helpúr) on the Mahánadí. The people of O'désah, says Abú-l-fazl, (<i>Ay. Akb.</i> ii. 11.) "write their letters on leaves of the tár* tree with a steel-pen, held in the clenched fist, so that paper and ink are seldom used." "The deviations of the Uriya character from the Dévanágari," as Mr. Colebrooke observes, (<i>As. Res.</i> vii. 225.) "may be explained from the practice of writing on palm-leaves with an iron style, or on paper with a pen cut from a porcupine's quill. It (the Uriya character) differs in this respect from the hand-writing of the Northern Tribes, and is analogous to that of the Southern inhabitants of the Peninsula."	Gudj putty.
			Oorea.
			Language.
		In the time of Akbar, Orésah was divided into five Districts; (Serkárs;) i. Jalésur, (Jellasore,) including Médiní-púr and the British territory North and East of the river Súbanríkah; ii. B'hadarak; iii. Katak; iv. Keling-dand-pát, (Calinga of the Hindús and Greeks,) now Síkakól; v. Rájá-Mahéndra, corrupted into Ráj-Mehinder, and Rájá-Mandirí. (<i>Ay. Akb.</i> ii. 11.) When Abú-l-fazl wrote, (A. D. 1593,) these Districts had been	Sircars, or Districts.

* Or tál, either the *Corypha umbraculifera*, *C. taliera*, or *Borassus flabelliformis*; all called tár, tál, or tálí; whence tálí pót, (tálí-patra, *i. e.* palm leaf;) tálí, or tādí, *i. e.* toddy, or palm-wine.

ORISSA. united to the Súbah (Province) of Bengal, of which the first of them has ever since continued to form a part, the Súbahrikah being still the North-Eastern boundary of Orésah.

Singboom. Of the six modern Districts, i. *Singh-b'hum*, or *Sing'h-b'húmi*, (Lion Land,) on the North-Eastern confines, is a small Principality, politically subordinate to the British Government, and bounded by the Bengalese districts of Chatá Nágpúr on the North-West, Médinápúr on the North and East, Móhar-banj on the South-East, and Kunjúr, or Kéónj'hér, on the South. Its population, in 1821, was estimated at 66,227 souls. On its South-Eastern boundary there is a vast forest of sál trees, (*Shorea robusta*), extending for more than 30 miles into the District of Sammallpúr. A valley belonging to this territory, called Lark'ha-kól from the Tribe inhabiting it, and watered by the rivers Róró and Kerkáí, was first discovered in 1820 by a detachment marching through that part of the country. The villages of this wild Tribe were in a very flourishing state; but as their possessors had wantonly attacked this detachment, and could not be brought to terms by amicable means, force was requisite, and in consequence of the desperate resistance made by these mountaineers, their habitations and granaries were destroyed. They are probably a branch of the Gónd race, and extend to the North-West, almost as far as Chunárgar'h on the Ganges. They burn their dead and bury their ashes, but do not appear to have embraced the Hindú Faith. Trade is carried on with their neighbours by barter, in pulse, sesamum, and g'hí, (clarified butter,) for which salt, coarse cloths, &c. are received in exchange.

Koonjoor or ii. *Kunjúr* is a zemíndárí or fief of very large dimensions, lying between Sing'h-b'húmi and Katak. It is said to extend upwards of 180 miles from North to South, and 120 from East to West, and is for the most part an open country, occasionally crossed by chains of hills, and in many places covered with wood; much of it also is rocky and broken into deep ravines, the beds of wintry torrents. The revenues of its Rájá, whose annual payment to the British Government, in 1815, was under 3000 rupees, (£300,) is estimated at 30,000, (£3000,) a very small sum considering the extent and fertility of his territory, which, besides the ordinary animal and vegetable productions of that part of India, has valuable iron mines, from which much ore is exported through Balasore to Calcutta. Its Capital, bearing the same name, is in the hills overhanging the Baítarani river, in 21° 31' North and 85° 32' East.

Mohurbunge. iii. *Móhar-banj*, another large zemíndárí, bounded on the North by Médinápúr, on the East by Balésúr, (Balasore,) on the South by Nílگیر, and on the West by the mountains inhabited by Gónds, measures about 150 miles one way, and 100 the other at its extreme points, but is very irregularly shaped, and has but a moderate proportion of cultivated ground. It is thinly peopled, ill-cultivated, and was formerly much infested by elephants. Its revenue, in 1814, was estimated at 40,000 rupees. (£4000.) Rice, timber, gum-lac, oil, and dámar, (a kind of pitch,) bows, arrows, and spears are its exports. This territory is not watered by any large streams, but several small ones rising in its hills descend into the Bay of Bengal. Its Capital is Hari-Har-púr, the residence of the Zemíndár, in 21° 51' North and 86° 42' East, and the town next in importance is Bastár, a little to the South-West of Jalésur. (Jellasore.) The Chief of this territory became finally subject to the Bri-

tish Government in 1803, on condition of paying an annual quit-rent of 1000 rupees. (£100.)

ORISSA. iv. *Balasore*, properly *Balésúr*, or *Baléswar*, from the Mythological Hero Bala Iswara or Baléswara, is a small District at the North-Eastern extremity of the Province, named from its principal city, in 21° 32' North and 86° 56' East, on the South side of the river Borá Bálang. It is still the principal port in this Province, and was once a place of great commerce, as the ruins of several European factories, long since deserted, attest. Near Chandpúr, on the shore a few miles distant, salt is manufactured by lixiviating the mud, and there the salt-agent for Katak resides. Balésúr has dry docks capable of receiving vessels which do not draw more than fourteen feet of water. In 1822 its population was estimated at 10,000 souls.

v. *Khurdah*, a small Principality, the Capital of which, *Khurdah-gar'h*, is about 20 miles South-West of Katak, though generally flat, is diversified by a few isolated hills of sand stone containing fragments of granite; and is entirely surrounded by a very broad belt of forests, carefully rendered impervious by the aid of thorny shrubs and creepers with which it abounds. In 1804 there were only three roads by which this belt could be traversed. Its Rájá, who is hereditary High-priest of the Temple of Jagannát'h, and keeper of the Deity's wardrobe, is the sole Fountain of Honour in Katak, and still bears the same titles as his great predecessor Ananga B'hím Déva in the XIIth Century. The Royal residence was first at Piplí, (Pippali?) about 15 miles East of Khurdah-gar'h, and about 30 miles nearly due North of Jagannát'h. After the conquest of Katak, this Chief was very unwilling to submit to the British Government; but his Capital was taken in 1804, and he soon afterwards voluntarily surrendered himself. In 1817, his Páiks or hereditary militia, instigated, as was supposed, by his Díwán (Prime Minister) Jag'hu Band'hu, rebelled against Great Britain, and under the cover of their forests, (jangals,) remained in a state of warfare for almost two years. The Rájá (Mukund Déó) and his son were then removed to Katak, and his territories have since that time been under the management of British Collectors; but he has an ample provision for the maintenance of his dignity, and still enjoys his authority over the Sanctuary of Jagannát'h.

vi. *Katak*, the largest District of this Province, takes its name from the Capital, and extends nearly 200 miles from the Súbahrikah to the frontiers of Ganjam, with an average breadth of more than 100 miles; Katak Proper, however, the District originally so named, was of smaller dimensions, being bounded on the East by the Sándí River, and by an ill-defined line on the West. Taken in its present extent, Katak may be said to consist of three distinct regions: 1. the alluvial tract formed by the Delta of the Mahánadí; (Great Stream;) 2. the Moghul-bandí, or central level; and 3. the Rájwára, (Royal territory,) or high lands, occupying altogether an area of about 9000 square miles. This Delta, though not in form strictly answering to that term, is more completely alluvial and maritime than those at the mouths of either the Nile or the Ganges. For nearly 20 miles from the beach, it is a dead flat covered with wood, completely inundated at high tides, and always supplied with fresh water by numerous streams descending from the adjoining hills, and passing through it into the Sea. Between the high lands and this marshy level lies the Moghul-bandí, a dry and fertile tract, raised bundy.

ORISSA. considerably above the level of the Delta, and forming a sort of terrace, about 20 miles in width, at the foot of the hills. With them commences a more elevated region, (Rájwára,) the boundary of which is not so clearly defined; it stretches as far Westward as the Country of the Góns, (Góndwáná,) and may be estimated at 100 miles in diameter one way, and 200 the other. This tract rises gradually, and consists of hills at first varying from 300 to 1200 feet in height, but further inland attaining a much greater elevation, though such as are visible from the Moghul-bandí are seldom more than 2000 feet high. They are said to consist chiefly of a coarse, red granite resembling sandstone, and containing vast quantities of imperfect and ill-formed garnets. In the Northern and Western divisions iron abounds.

Raujwarra. The principal rivers in this part of the Orissa, are the Súbanríkah, Bará-báláng, Sálándí, Baítaraní, Bráhmańí, and Mahánadí with its many branches; but few of them are more than mountain torrents, which are dried up in the hot season. They are at their greatest height in September, when the periodical rains have completely set in, and they then overflow their banks. The thermometer is, at that period, seldom below 60°. (Fahrenheit.) Fogs prevail during the forenoon in February and March; and the heat is greatest in the three following months, when severe thunder-storms frequently occur. Salt, yielding a revenue of more than 18 laks of rupees, (about £225,000,) is made near the beach; rice and other grain, pulse, aromatic-roots, spices, drugs, dyeing-woods, and sugar are produced by the intermediate tract; granite and slate, iron and gold-dust by the hills; the forests furnish excellent timber, but their atmosphere is pestiferous and they cannot be approached with any chance of escaping the "jungle-fever," except in April and May, the driest season of the year. The only towns of any extent are Katak, Balésór, (Baléswar,) and Jagannát'h; the kasbahs, or market-towns, are mere villages, the chief of which are Badarak, Sóró, K'hándíápurí, Harispúr, and Piplí.

Rivers. The soil of the Moghul-bandí, which is divided into 15 pergunahs, and contains 2361 separate farms, is very indifferent, though highly cultivated. It is almost impossible to keep up a garden; and domestic animals are both scarce and of an inferior breed. The whole district is divided into 16 zemíndáris or fiefs, held by as many Khándáíts, whose territories are subdivided into smaller and subordinate lordships, assigned hereditarily to the Zemíndár's great Officers of State. At the foot of the hills there are twelve more of these Feudal Principalities, some of which are governed by British laws and regulations; others exclusively by their own Chieftains. This District, which was never completely subdued by the Moghuls, was torn from their Empire by the Mahrattahs in 1743, and reduced, after a feeble resistance, by Great Britain in 1803.

Weather. The Moghul-bandí and a part of the Rájwára were, in 1822, divided into 18 police districts, containing 11,915 villages, 243,273 houses, and a population of 1,216,365 souls, to which must be added the inhabitants

of the town of Katak (containing 6512 houses)	40,000
Jagannát'h.	30,000
Balasore.	10,000
Giving a total of	1,296,365

Population and revenue. or about 144 persons to each square mile.

ORISSA. The land assessments, in 1821-22, for the Moghul-bandí and Khurda amounted to 13,25,539 rupees, for the Rájwára 1,20,411

Giving a total of . . . 14,45,950 (£144,595.)

Besides the revenue derived from the manufacture of salt, already mentioned, the variable imposts, customs, and tax on pilgrims to Jagannát'h, adds a clear annual sum of one lak; (£12,500;) so after all expenses are deducted, the annual receipt may be estimated at 30 laks of rupees. (£375,000.) The embankments in the low lands, which are well-turfed, solid mounds of earth, to keep the streams within their proper limits, form a large item in the expenditure, which, in 1814, amounted to 40,514 rupees. (About £5000.)

Katak, anciently *Katak Banáres*, the Capital of this Province, in 20° 27' North and 86° 5' East, is built on a tongue of land washed by two branches of the Mahánadí, (Great Stream,) by which the neighbouring country is inundated in the wet season. At that period, the river is two miles wide; in the dry season, it is barely three feet deep. The town is preserved from being overflowed by solid embankments, faced with stone and supported by buttresses, the importance of which was clearly shown in 1817, when the water rose eighteen feet in one night, and stood nearly six feet above the level on which the town is placed. Katak possesses a fine street containing many houses, a spacious market-place, (*chaúk*,) and some handsome Mosques, such as the Jámi'masjid, (Great Mosque,) and the Turbah, or Mausoleum, called Kadam Resúl, (the Prophet's Foot,) an octagon building surmounted by a dome, beneath which is placed a black stone brought from Mecca, and supposed to bear the impression of Mohammed's foot. A high bank called La'lbágh, (Ruby Garden,) once the site of the Rájá's Palace, is now covered with European villas.

Jagannát'h, (for *Jagat-nát'h*,) i.e. Lord of the World, one of the thousand titles of Vishnu, is the name of a town and Temple on the coast of this Province, which is considered by the Hindús as the most sacred of their many places of pilgrimage. The town, which is also named Púrí, and Purushóttam, stands in 19° 49' North and 85° 54' East, about 45 miles South by West of Katak. This sacred territory, in its widest acceptation, extends from the Vaítaraní to the Rásí-káílá River near Ganjam; but the part believed to be more especially holy, is an area of about eight miles in circumference, nearly in the centre of which, on a low ridge of sand-hills, stands the Temple held in such extraordinary veneration. This building, erected A. D. 1198, by order of Ananga B'híma Déva, the most renowned Gajapati of Orésah, though striking from its height and extent, will not bear a minute examination. Its execution is rude and clumsy; its proportions are deficient in symmetry; and its exterior is corroded by the weather and disfigured by the red paint with which it is daubed. A square space, measuring about 650 feet on each side, and surrounded by a high wall of stone, is the sacred enclosure containing the Temple of Jagannát'ha, and all the Chapels of his associate Deities. The principal entrance is on the Eastern side, and from it a flight of 22 very broad steps, leads to a second enclosure 445 feet square, and about 20 feet high, also surrounded by a high wall. On this terrace is the B'hóga-mandapa (Abode of Enjoyment) or vestibule of the Temple, from which a low portico leads to the Jagmóhan, (the World's Delight,) the proper antechamber opening into the Sanctuary,

Temple of Jagannát'h.

ORISSA. which is a square measuring 30 feet each way, surmounted by a pyramidal tower or steeple in the Hindú style of architecture, rising 200 feet from the ground, and 180 from the terrace on which it stands. The great entrance is guarded by colossal monsters somewhat resembling griffins, and by a figure of Hanumán, the monkey-god, commander of Ráma's monkey-allies, brought, in the middle of the last century, from the ruins of the Temple of the Sun at Kanarak, (the Black Pagoda,) 18 miles North of Jagannát'h. Beneath the central tower or pyramid is preserved the sacred Triad of Images which are the objects of such fervent devotion, and but too often of self-immolation. Three mishapen blocks of wood six feet high, painted scarlet, and surmounted by the rudest and most hideous caricatures of "the human face divine" that Art in its earliest infancy ever produced, (*As. Res.* viii. fig. I. p. 62.) represent the redoubted Jagannát'h himself, his brother Bala-Ráma, and his sister Sub'hadrá, placed between the two and deprived of the symbols of arms with which they are adorned. That objects so entirely destitute of any thing which can captivate the senses, should command not only veneration but adoration the most abject, is so contrary to common sense that at first it seems scarcely credible; but to say nothing of the debasing superstition by which the great Body of the worshippers are blinded, the idol in all his nakedness, is rarely revealed to their eyes; and a striped and spangled covering of broad-cloth, (annually furnished by the East India Company,) excepting for a short interval, veils the Deity from their sight. The disrespect, however, with which these very Idols in some parts of the ceremony are treated by their votaries, is not easily explicable on any other supposition, than that they are considered merely as symbols; and if so, the Hindús cannot be so incapable of comprehending a more abstract system of worship as some persons are inclined to maintain. The Legend which accounts for the shapelessness of these idols, asserts that Viswa-karma, armourer of the Gods, had promised Indra-dyumna, Rájá of Nílágiri,* to form an Image of Jagannát'ha which might serve as a shrine to hold the sacred bones of Kríshna, on condition of not being interrupted in his work; but so impatient was the Rájá that he repaired to the Temple on the dark blue Mountain (Nílágiri) where the divine artist was at work, before the Image was half completed, on which Viswa-karma, according to his threat, left his task unfinished. Eyes and a soul were given to this imperfect figure by Brahma himself,—hence its reputed sanctity. Jagannát'ha, or Paramésvara, the character in which Kríshna here appears, (*As. Res.* viii. 63.) is an incarnation of Vishnu, and so is Bala Ráma; and as such they represent the same Deity under different circumstances, and on different occasions, interposing by miraculous manifestations for the benefit of mankind. The face of the former is painted dark blue, the colour of Vishnu; that of the latter white, the hue of Siva; and Sub'hadrá's is yellow, as she is a form of Déví the consort of that God: thus the different incarnations of the Deity are brought together; and this union perhaps will account for the agreement of hostile Sects in the eagerness with which they crowd to Jagannát'ha Kshétra: where each finds his favourite Deity.

* Níla-giri, or Nílgir, (Neel-gur in modern and Nelligreen in old Maps,) is a very conspicuous group of five rocky hills, a few miles South-West of Balasore, and about 17 miles from the shore.

There are three great Festivals every year in honour of this God, but two of them are more fully attended than the third. The Snána yátrá, (or játrá,) *i. e.* the Going to Bathe, and the Rat'ha yátrá, or Going out in his Car. At the first, which is celebrated at the full moon of Jyáish'tha, (about the 24th of May,) the "Lord of the Universe" is brought forth, wrapped up in a splendid mantle, and placed on a seat prepared for him on a platform erected in an open space near the Temple, where the officiating Bráhmans pour water upon his head while sacred texts are recited, and the admiring multitudes perform various acts of adoration in full assurance of a plenary indulgence for all past transgressions in return for this meritorious act. This Festival is kept in memory of Kríshna's being bathed before he was first fed with rice. About seventeen days later, on the second day of the moon of Ashár'ha, (about the 12th of June,) the Rat'ha yátrá, the second of these great Festivals, is kept. It is thus named, because "the Image of Kríshna, in the character of Jagannát'ha, or Lord of the Universe, is borne by day in a car, together with those of Bala-Ráma and Sub'hadrá. When the moon rises the Feast begins, but must end as soon as it sets." (*Scánda Purána*, as quoted in *As. Res.* iii. 286.) The Idols are drawn out of their Sanctuary with ropes round their necks, and most irreverently dragged through the mud by the Bráhmans, (the multitude in the mean while shouting out "Victory to Jagannát'h!") till they reach the car, on an elevated part of which they are seated on benches. This car, the instrument of so much self-immolation, of which so much has been said, is a wooden structure forty-three feet in height, borne by sixteen wheels six feet and a half in diameter, shabbily decorated with clumsy, and, according to the Missionaries and other observers, very indecent sculptures.* As soon as his gilt or golden feet, hands, and ears have been affixed by the Bráhmans to Jagannát'h, the Service begins. The Khúrdah Rájá, distinguished by a richly ornamented broom as the Great Neocorus, and the occupants of the neighbouring districts, (perganahs,) who hold their lands rent-free on condition of performing this Service, seize the ropes and drag the ponderous vehicle along, while the charioteers throw themselves into a variety of "frantic and indecent" postures. Two or three days are employed in thus conveying the Deities to the country Palace. It is during this part of the ceremony that the wretched votaries of this debasing idolatry throw themselves under the wheels of the sacred car, in full persuasion of obtaining, in a second life, the happiness, riches, honours, health, &c., for which they have vainly sighed and laboured in this. (Ward, ii. 121.) After spending eight days at their country seat, the Gods are again hauled up by the neck and dragged back by their votaries in their ponderous car, to the Sanctuary whence they issued. The multitudes of Pilgrimage.

* "The crowds," says Mr. Ward, (i. 210.) "flock to gaze at the indecent figures, alluding to the abominations of the Gods, which are painted all over it." But he is speaking of the car used near Serampore; it is however no diminutive image of its more sacred prototype, if his estimate,—"between 30 and 40 cubits high,"—be correct. "If there be obscene sculptures on the car," says another writer quoted in the *East India Gazetteer*, (ii. 56.) "it requires very searching eyes to find them out." Where testimonies are so conflicting, it is probable that the truth lies midway: but it is manifest that if one party err from excess of zeal, the other cannot be acquitted of a very unchristian indifference. There is a model of the car in the Royal Asiatic Society's Museum.

ORISSA.

grims who flock from the remotest parts of India to join in these celebrations, can only be exceeded by the crowds assembled at Mecca for the procession to Mount Arafat; and the sandy plain of Jagannáth presents a motley and amusing, but to a reflecting mind, humiliating spectacle, where fraud and superstition with scarcely any disguise, are exercising their full sway over weakness and ignorance; and where vice of almost every kind is openly practised under the sanction of Religion. Ascetics of all the various classes, astonish the multitude by their voluntary and extravagant penances. Some stand for hours on their heads; others fill their mouth and eyes with straw and dirt; others bury themselves in mud: a bed of spikes; arms constantly extended; a scorching fire; or imprisonment in a cage, are the torments to which others of these jógis subject themselves; but alms are received by all,—no offering is refused, whether to a God or to a mendicant, and the last pāis of the poorest Hindú is as eagerly grasped as the krórs of rupees which are occasionally expended by devout Rájás or Bábús. The Musulmáns, from the intolerant principles of their Faith and their just horror of idolatry, were not at first disposed to suffer a continuance of these Pilgrimages. The God was more than once expelled from his Sanctuary; but the obstinate though passive devotion of the Hindús clung to its prostrate Deities; and the love of lucre, in time, taught the Musulmán zealot to tolerate what he ought to have discouraged. A tax was imposed upon the Pilgrims, and nine laks of rupees (£112,000) are said to have been the annual revenue derived from this unholy source. The East India Company followed this example; since the care of repressing the tumults, which are but too sure to arise in so vast an assemblage of strangers, without levying a tax, would have been incurring a certain expense without securing any return; but the tax, though levied, was very liberally diminished, and thus was a fresh encouragement held out to the poorer classes of Pilgrims. The number, however, of those victims of delusion (for the indigent Pilgrims from distant Countries must suffer incredible hardships) appears happily to be on the decline, as the annexed Table will show. The amount of the tax is almost the only certain criterion by which the number of Pilgrims assembled can be estimated; but of the deaths and accidents little or no account seems ever to have been kept.

"Possession was taken of the town and Temple on the 18th of September, 1803," says Mr. Hamilton, (*East India Gazetteer*, ii. 57.) "the sacred will of the Idol* having been first ascertained through the medium of the officiating Priest." The amount of the tax subsequently received was as follows:

	Receipt. Rupees.	Expenditure. Rupees.	Net Revenue. Rupees.
In 1806	117,490	56,000	61,490
1813	69,902	31,417	38,485
1815	86,027	74,880	11,147

The number of pilgrims at the three great Festivals from 1818 to 1822 was:

1818	75,641
1819	41,111
1820	131,874
1821	33,446
1822	52,160

ORISSA.

The town of Jagannáth, most commonly called Púri, (*i. e.* The City,) owes its existence to the Temple, and is entirely rent-free. In 1822, it contained 5741 houses, and, consequently, at least 30,000 inhabitants, chiefly Bráhmans and officers attached to the Temple. From the Northern front of that edifice there is a wide and straight street, through which the Idol's car passes at the time of the Pilgrimage. Mat'hs, or Convents of Bāirágí Fakírs, and resting-places for the Idol, as well as many good houses adorn this street; and other parts of the town are well built, but it is chiefly remarkable for an accumulation of filth and rubbish, unusual in places esteemed holy by the Hindús. The British cantonment is on the beach, about half a mile from the town, in a very dreary spot, but being open to the cool breezes of the South-West Monsoon, it is one of the healthiest stations in India.

The early History of Orissa, like that of the rest of History-India, is involved in fable; and is the more obscure as the Uriya genealogists have endeavoured to engraft the fabulous legends of the Northern Hindús on their own scanty traditions. All that can be ascertained with certainty is, that the Country was in the possession of a foreign dynasty called Yavanas (Greeks?) for the greater part of the IVth and Vth Centuries of our Era; but they were driven out, A. D. 473, (Sakábdá, 395.) by an enterprising Prince, Yayati Késari, who received the title of a second Indradyumna, from his reestablishment of the worship of Jagannáth, at the Purushóttama-mahá-kshétra, (the great Sanctuary of the Best of Men, *i. e.* Vishnu,) whence the place has since been exclusively called Purushótem. One of his successors, Lalat Indra Késari, erected the great Temple of Mahá-déva, called Linga rája B'húvanéswara, A. D. 657. Nirúpa Késari founded a town on the site of Katak, A. D. 989, and Mád'hava Késari, of the same dynasty, built a large fortress at Sárán gar'h in the XIth Century. The Késari family was dethroned by Chóra Ganga, or Sáranga Déva, a military leader from the Karnátik, in A. D. 1131. (Sakábdá, 1053.) His successor Gangéswara Déva, who began to reign in A. D. 1151, extended his dominions from the Ganges to the Gódáverí; and Katak Banárási was only one of the five Royal residences (Katak) which he possessed. In A. D. 1174, the most illustrious of all the Ganga-vansas, Ananga B'híma Déva, ascended the Throne. He caused an actual survey of his dominions to be made, from Húgli to the Gódáverí, and from the Sea to Sónpúr, and its extent was found to be upwards of 40,000 square miles. Narasing'ha Déva, his successor, nicknamed Langóra, (in Sanskrit, Langúla,) on account of his tail, was famous, as tailed men in the East usually are, for his Herculean strength, and for having completed, A. D. 1277, (S. 1200,) the Temple of the Sun at Kanárák, commonly called the Black Pagoda. Eleven Princes, said to be of the Súrya-vansa race, (*i. e.* descendants of the Sun,) succeeded him and left several public monuments of their liberality. Kapila Indra Déva, the adopted son of the last of the Súrya-vansas, waged a successful war for many years against the Musulmáns and his Southern neighbours, and at length died on the banks of the Krishna, A. D. 1478. His successor, Purushóttama

* If this be correct, it is surely one of the strangest concessions made by Christians to the Faith of Idolaters, ever recorded. If the British Governors of India consult the Hindú Oracles without worshipping the Hindu Gods, what must the natives think of their Religion and good faith?

ORISSA. Déva, the hero of a romance called the Kánji-Káverí-pót'hí, was married to a daughter of the Rájá of Kánjiveram (Kánji-pura) whom he had defeated at the close of a long War, the subject of that Heroic Poem. Pratápa Rudra Déva, the next Rájá, who reigned from 1503 to 1524, was also a great warrior, and drove out the Afgháns who had invaded his territories; but a few years after his death, the Ganga Vansa race became extinct by the murder of all his sons by order of Govinda Vidyá D'hara, the Prime Minister, who usurped the Throne. The Kingdom was not long afterwards divided between Mukund Hari-Chandana, a native of Telinga, and Danárdana Vidyá D'hara, the Rájá of Khúrdah, and Head of the last dynasty of Gaja-patis. Internal divisions ensued, and in 1558 Orésah became an easy prey to Afghán invaders from Bengal. Twenty years later Khán Jehán, Akbar's General, subdued them and annexed Orésah to the Moghul Empire. In 1743, it was overrun by the Mahrattahs under B'háskar Pandit, and was formally ceded to them in 1756. Under their rule it suffered every extremity which

anarchy, rapacity, and violence could occasion; it was therefore in a most wretched state when conquered by Great Britain in 1803. Though doubtless in a far more flourishing condition now, when almost uninterrupted peace and comparative order have been enjoyed for nearly thirty years, a very large portion of its territory is still a vast forest infested by beasts of prey, or occupied by a thinly scattered population in open or covert hostility with their neighbours. Much time must be requisite to recover any Country from half a century of extortion and rapine; but perhaps more might have been done both here and elsewhere, if an overstrained apprehension of offending the prejudices of the natives had not prevented the British authorities from stepping in to release them from the oppression and misgovernment of their Countrymen.

ORISSA.
—
ORKNEY
ISLANDS.

ORITES, in *Botany*, a genus of the class *Tetrandria*, order *Monogynia*, natural order *Proteaceæ*. Generic character: corolla, petals four, equal, the summit recurved; stamens inserted above the middle of the petals, prominent; four nectariferous glands; germen sessile, seeds two; winged at the top.

Two species, shrubs, natives of Van Diemen's Land.

ORITHYA, in *Zoology*, a genus of *Brachyurous Crustacea*.

Generic character. Shell ovoid, tubercular; eyes placed in a slender, cylindrical peduncle; antennæ four, exterior shorter than the inner ones; exterior *pedipalps* with the third joint triangular; legs natatorial, placed in the same horizontal line; anterior with short, equal forceps; the three following pairs terminated by

a straight and pointed claw; and the fifth by a compressed, oval, ciliated joint.

Type of the genus, *O. mamillaris*, Fabricius; Latreille, *Hist. Nat. Crust. et Ins.* vol. vi. p. 130. pl. 1. fig. 3. Inhabits the Indian seas.

ORIXA, in *Botany*, a genus of the class *Tetrandria*, order *Monogynia*. Generic character: calyx inferior, four-cleft, very short; corolla, petals four, lanceolate, spreading; germen superior; stigma capitate, obtuse.

One species, *O. Japonica*, a shrub, native of Japan.

ORIZONT, *i. e.* horizon, *q. v.*

Parformed hath the sonne his ark diurne,
No longer may the body of him sojourne
On the orisont, as in the latitude.

Chaucer. *The Marchantes Tale*, v. 9671.

ORKNEY ISLANDS.

Situation,
number,
&c.

The ORKNEY ISLANDS, the *Orcades* of the Ancients, lie on the Northern coast of Scotland, from which they are separated by the Pentland Frith, a small strait varying from ten to eleven miles in breadth. Their number, including the lesser islets, or holms, amounts to sixty-seven, of which only twenty-nine are inhabited. Even of these latter, some are so small as not to exceed a mile in length; but the Mainland, or principal Island, extends to nearly thirty. They are divided from one another by narrow channels, denominated sounds, friths, or ferries, of which some are scarcely a mile in width, whereas others are upwards of five. Their whole extent from South-West to North-East is not less than seventy miles; and their distance in the other direction is upwards of forty. The modern and ancient names of the inhabited Islands are as follows:

ORKNEY ISLANDS.

General appearance.

Although these names may at first sight appear whimsical and arbitrary, they are probably derived from circumstances of soil, size, appearance, or situation; and some perhaps were named in memory of the Mother Country whence their original settlers came. The general appearance of these Islands presents no very remarkable diversity. On the Western coast the land for the most part rises into a bold and steep swell, of which, however, the greatest altitude is not more than 1200 feet; but the Eastern coast, especially towards the North, is so low that shipwrecks of a fatal character are frequent on it. The hills towards the South-West, where they are highest, may be considered as a continuation of those in Strathnaver, and diminishing as they approach the North they sink down, as it were, into a plain. This circumstance, conjoined with the remarkable similarity of the Eastern coast to the opposite one of Great Britain, favours the supposition that they once formed part of the continent of the latter. The soil, the nature of the rocks, and the angle which they form with the horizon are the same in the one as in the other; and the two high heads of Berey in Waas, and Dunnet in Caithness, which may be deemed the jaws of the Pentland Frith, have been observed to contain in them strata of evident similarity. The aspect of these Islands is for the most part wearisome to the eye, presenting a monotonous tract of heath and uninclosed common, barely diversified by a few dwarf trees and stunted shrubs, which are seen, however, only in the immediate neighbourhood of the towns. Yet the rocks on the Western side display many romantic configurations, and astonish alike by the bold and arch-like masses into which they have been worn by the billows, and the yawning chasms opening into gloomy caves, the result of the same overpowering element. Spacious and secure havens are indeed not uncommon, and from whatever quarter ships may come there is almost at all times an easy and ready access to such as are acquainted with the proper channels. Around their whole coasts, with a few exceptions, land may be discerned at the distance of ten leagues, where the water is in depth fifty-two fathoms. So near the Western shore as one league, the depth of water is between forty and fifty fathoms; but on the opposite side of the group, at the same distance from land, the depth of the water does not exceed thirty-two fathoms.

Pomona.

Pomona, or *Mainland*, the largest of the group, is about thirty miles in length, but its breadth is by no means so considerable, for though it reaches nearly sixteen miles on the Western side, the Eastern does not extend above five or six; and near the middle it is so narrow as to form a neck of land, of little more than a mile in length, which divides the Island into two peninsulas. The spacious and beautiful bay of Scalpa bounds one side of this isthmus, and the bay of Kirkwall the other; and the ground which lies between them is at once so flat, and so damp, as to render it probable that the sea some time or other has occupied the whole space between them. The ancient town of *Kirkwall*, the Capital of these Islands, stands on the North of this isthmus towards the South-Eastern side of the bay of the same name, in latitude $58^{\circ} 44'$ North, and in longitude $3^{\circ} 23' 6''$ West of Greenwich. It runs from North to South in a sweeping direction along the skirts of a small *oyse*, or inlet of the sea, from the bay, and consists of one street about a mile in length. This, although narrow and dirty, yet from the varieties of light and shade produced by the scattered and irregular groups of buildings, from the foreign style

Town of Kirkwall.

of the houses turned gablewise to the street, and the majestic pile of its Cathedral, produces on its first view a somewhat imposing effect. The population, as given by the census of 1821, amounts to 938 males and 1274 females, making a total of 2212 persons. Several recent improvements have greatly contributed to the better appearance of the town, and to the comfort and advantage of its inhabitants. Its streets are now lighted; it enjoys a very excellent subscription Library; and among other important additions may be enumerated the construction of a harbour, together with two strong and solid piers. The expense of the latter amounted to £4963. 12s. sterling, of which the Government advanced £1800, the residue being defrayed from the funds of the Burgh and by voluntary subscription. Of the numerous antiquities of this Island, the Cathedral forms the most prominent object from every quarter. It is built chiefly of red free-stone, intermixed sometimes regularly, about the West end in particular, with white. The whole length of the Cathedral from East to West is 226 feet, its breadth 56. The arms of the cross or transepts are each 28 feet beyond the side walls, and 28 feet in breadth. From the floor to the ridge of the roof the height is 71 feet, and to the summit of the spire on the central tower about 135 or 140. The roof is finely arched, and the aisles behind the columns by which it is supported, are closed above by a series of groined arches. The tower in the middle of the cross is supported on four massy Gothic columns, 24 feet in circumference, and from these rise four handsome pointed arches. The total number of pillars is thirty-two, and of windows one hundred, of which number only twenty-eight were open and glazed in the year 1770, since which time all have been restored. The steeple is furnished with a set of well-toned bells, presented in 1525 by Robert Maxwell when he became Bishop of Orkney. Around the largest of these is the following inscription, "Robert Borthwick made me in the Castle of Edinburgh," being undoubtedly the work of the founder of cannon so celebrated in Scottish story. This venerable pile was founded in 1138 by Earl Rognvald, or Ronald, in pious honour of his uncle Magnus, who, assassinated by a rival, was afterwards canonized. This first erection forms the central portion of the present edifice, to which the chief additions were made by two different Prelates of the See of Orkney, Bishop Edward Stewart and Bishop Robert Reid. Fortunately, from its remote situation, it escaped the devastating hands of the Reformers; but notwithstanding the care which has been taken to preserve the fabric, it has suffered much from the ravages of time. These, however, of late years, owing to the increased revenues of the Church, have been in many instances tastefully repaired; and the bequest of £1100 by the late Gilbert Meason, Esq., the interest of which is to be appropriated to the restoration of this antique pile, will contribute greatly to its preservation.

Between forty and fifty years ago, on removing some stones in the side of one of the large pillars of the choir, a coffin covered with a rich pall was found, containing bones, which are conjectured to have been either the remains of the tutelary saint of the Church, or of the *Maid of Norway*, who died in Orkney in 1290, on her way to take possession of her hereditary Kingdom.

Of the different buildings, near the Cathedral, which form part of the group, the *Bishop's Palace* is the most ancient. The date of its erection is not known; but it

ORKNEY ISLANDS.

Cathedral of St. Magnus.

ORKNEY is now nearly all dilapidated, with the exception of a round tower built at the North end of it by Bishop Reid.

On its North-West wall there is a stone tablet, with an alto-relievo of the founder, which has luckily been suffered to remain, little injured by the general, wanton destruction of the Bishop's residence, the other parts of which are now in a state of entire decay; and its interior is occupied partly with a cow-house and dunghill. All that remains of the "Palace of the yards," (as this building has long been styled,) in which Haco of Norway dwelt and died, is thus occupied. The height of the still existing round tower is $58\frac{1}{2}$ feet to the parapet; and its outward circumference below the parapet is 91 feet. Although circular outwardly, it is square within, and its walls are of immense thickness. On the Eastern side of this tower stood two others, one a large and ancient donjon, the other smaller and circular. The last remnant of these was some years ago torn down, to build a house for the storekeeper to the King's tenant in the Bishopric.

Castle

The *Castle of Kirkwall* was built by Henry St. Clair, the first Earl of that name, in the year 1400. It was from early times the central fort of the Earls, and its massy reliques, degraded as they now are to the meanest purposes, attest the workmanship of the olden time. It was to this Castle that Bothwell fled for refuge after the Battle of Carberry Hill; but being refused admittance by its Governor Balfour, he wreaked his revenge on the town of Kirkwall, and other parts of Orkney.

Earl's Palace.

The *Earl's Palace* was erected by Earl Patrick Stewart, in that style of architecture prevalent in Scotland about the reign of James I. It formed, with the Bishop's Palace, a hollow quadrangle, measuring 240 by 201 feet, and the dimensions of its remains are as follows: Eastern side 89 feet by 26 feet; Western front, including its wings, 101 feet; Southern side $53\frac{1}{2}$ feet by 22 feet. The great hall was lighted by four mullioned windows, and warmed by two fire-places, one of which is 15 feet wide.

Kirkwall, at a very remote period even, appears to have been a place of no small consequence; but with the nature of its constitution, and extent of its privileges under a foreign government, we are in a great measure unacquainted. Whatever they were, they were all, soon after the cession of the Islands, confirmed to it by a Charter from James III., who created it into a Royal Burgh. The government is in the hands of a Provost, four Magistrates, a Dean of Guild, a Treasurer, and fifteen Councillors, elected annually at Michaelmas. Kirkwall, with the four Northern Burghs, Wick, Dornock, Tain, and Dingwall, choose a Burgess to represent them in the British Parliament.

It has been mentioned that the Island of Pomona is divided into two unequal parts, united by a narrow isthmus. Of these two parts the Eastern division contains, besides the united Parishes of Kirkwall and St. Olave, the Parish of Holm, and the joint Parishes of St. Andrew's and Deerness.

Parish of Holm.

Holm is in length nearly five miles, and in breadth not above one. It forms one of the most compact and prosperous Parishes in the Country. The houses are well built, clean, and neat, with gardens in trim array, and the farmers raise the artificial grasses in great perfection. Flax also is abundantly produced here, which is spun by the females of the family, to be manufactured into linen, of a *grist* or fineness between nine and eighteen hundred, and above 20,000 yards are annually consigned to the English market.

St. Andrew's and *Deerness*. These Parishes consist of an extensive tract of plain ground, part of which is tolerably cultivated, and they reach to the furthest quarter of the Mainland on the East. Ben asserts that a gold mine was discovered in the former Parish about the commencement of the XVIth Century, but that from a superstitious dread it was soon deserted. Deerness forms a peninsula, in length upwards of four miles, and varying from one to three in breadth. It is separated from St. Andrew's by a capacious harbour, locked in by the land, with a fine bottom of clay and sand, and good depth of water. It presents a bold headland, termed the Mull, to the Northern Ocean.

ORKNEY ISLANDS.

Parishes of St. Andrew and Deerness.

The Western division of the Island contains the united Parishes of Firth and Stennis, Sandwick and Stromness, Evie and Reudal, Birsay and Harray, and the single Parish of Orphir.

The Parish of *Stennis* most probably derives its name from the celebrated standing stones here, and is a corruption of Stonehouse. The Loch of Stennis is the largest lake in Orkney, being about ten miles in length; and is divided near the middle in two portions, which obtain the respective names of the Lochs of Stennis and Harray. Trout in vast numbers and of an excellent quality are caught in it; and there are many small *holms* in its Northern part, where several species of wild fowl, as swans, ducks, lapwings, gulls, terns, and mergansers, build in great numbers.

Parish of Stennis.

The *Stones of Stennis* consist of two clusters. One of these is a complete circle, sixty fathoms in diameter, including the wide ditch which surrounds it. This circle stands conspicuously on a peninsula, gently elevated on the Northern side of the Loch of Stennis. On the Southern side of the lake (which is connected with the opposite promontory by a low mound of stones, having an opening for the tide to pass) there are now only three pillars remaining, of what seems to have been another circle, and one detached stone at the Southern end of the bridge of Broigar. Each of the remaining pillars is about 18 feet above ground; one was lately thrown down, but has not been broken; and three were, in December 1814, torn from the spot on which they had stood for Ages, and shivered to pieces. A similar detached pillar, with a hole cut through it, was likewise destroyed at the same time. It stood on the Eastern side of the larger stones, and may perhaps have been the rude altar to which the sacrificial victims were bound. In later times it was a consecrated spot for the meeting of lovers, and when they joined hands through the stone, the pledge of love and troth thus given was seldom violated. This ceremony was termed *the promise of Odin*. It is impossible to decide whether these circles be of Druidical or of Scandinavian origin; but however we regard them, whether as a place of assembly or *ting*, or as a Temple, they must ever have constituted a place of great consequence in the eyes of the early inhabitants of Orkney.

Stromness, the only place in Orkney, besides Kirkwall, deserving the appellation of town, is situated at the North-Western corner of Pomona. This place has risen within the last century from being a fishing hamlet, containing a few scattered huts; and it owes its increase to its admirable harbour and convenient position, by which it is rendered a safe resort, in those stormy seas, to vessels of all nations trading in the North of Europe and with America. This harbour is a fine natural basin, extending from North to South about one mile, and is about a quarter of a mile in width. Its soundings vary

Stromness.

ORKNEY
ISLANDS.

Sandwick.

Evie and
Rendal.Birsay and
Harray.

from one to four fathoms. The houses, in a straggling, irregular form, have for the most part been placed as near the sea as possible, the ends often within flood-mark; and they are protected by bulwarks, quays, and jetties, built by individuals according to their own convenience or taste. This range of clustered buildings extends along the side of the harbour, and is connected together by a narrow lane, never exceeding 12 feet in width, and sometimes as narrow as four or five. It runs in a zig-zag direction, is ill-paved with flag-stones of unequal sizes, and is usually very filthy. Although the Burgh and Parish of Stromness contains a population of 3000 souls, yet it is united into one cure with another Parish, Sandwick, where the inhabitants amount to nearly 1030. Thus service is performed in each Parish on every alternate Sunday only. In 1758, a decision of the House of Lords annulled the power, until that time exercised by the Magistrates of Kirkwall, of assessing Stromness along with other villages in its jurisdiction; and, in 1817, the inhabitants obtained a Royal Charter, erecting their town into an independent Burgh or Barony, under a corporation of two Baillies, nine Councillors, a Town Clerk, a Fiscal, and seventy-two Burgesses. Since that time the herring fishery has been introduced into Orkney, on an extended scale, and the people of Stromness are among the most spirited adventurers. The only sort of public building which this place affords, is a plain, unornamented Church. A Library has recently been established by subscription among the inhabitants; and some public-spirited individuals have lately instituted the necessary proceedings in the Teind Court, under the sanction of the General Assembly, for the endowment of parochial Schools. One improvement that merits attention was introduced into the Parish of Sandwick by Mr. Watt of Skail. This is the raising of flax of an excellent quality, for the dressing of which he has erected a mill; and to these he has added the novelties in this Country of a tannery and a brewery.

Evie and Rendal. Turning Northward we meet with these united Parishes, which extend along the shores of the Mainland ten miles in length, and from one to two in breadth. The land is of fine quality, equally adapted to the raising of corn and to pasturage. The hills support 3000 sheep, which are suffered to roam without a shepherd; and the swine, from 500 to 600 in number, are in no more restraint. Although the fishers by profession are far from numerous, few places appear better calculated than this for a fishing station. Along the shores of Evie are several of the ancient monuments termed Picts' houses, and some tumuli, or barrows, are likewise to be seen.

Birsay and Harray. These are separated from the two preceding Parishes by a ridge of hills, running Westward, till it terminates in Costa-head, which is constantly covered with a variety of rock birds. These Parishes discover much difference of soil, it being in Birsay dry and sandy, whereas in Harray it is mostly of deep clay, intermixed with swampy plots of ground. The people are employed on their little farms during the Spring and harvest; during the Summer they burn about twenty tons of kelp, and fill up the intervals by fishing for their own consumption. In Birsay are to be seen the ruins of a magnificent Palace, reared by the ancient Norwegian Earls, and enlarged by Earl Robert Stuart, the natural son of James V. of Scotland. On the principal gateway is still to be read the following inscription, *Dominus Robertus Stuartus filius Jacobi*

Quinti Rex Scotorum, hoc opus instruxi. The grammatical error of *Rex* for *Regis* was probably unintentional; but as it stands it makes the founder claim for himself the throne of Scotland. This formed, it is said, one of the charges on the trial of his son, in evidence of treasonable intent. In Harray the Norse Tongue was the vernacular one a century ago, but it is now extinct. The Western extremity of these Parishes is bounded by the hills of Sandwick, Orphir, and Rendal.

Orphir. This is separated from the last-named Parish by a range of low hills. On its borders is Summerdale, where a battle of some celebrity in Orkney history was fought. This Parish is in a state of very fair cultivation, especially in its North-Western portion.

Damsay, scarcely a mile in circuit, is situated in the bosom of the Bay of Frith, and is three miles distant from Kirkwall. From the singular beauty of its appearance it has been styled the *Temple* of the Islands.

Gairsay is two miles long and one broad, and consists for the most part of a conical hill of considerable magnitude. Towards the East it is more plain and fertile. Its inhabitants amount to about 80 persons.

Weir, seated in the midst of numerous Islands, and necessarily covered by the variety of conflicting tides with quantities of sea-weed, or *ware*, probably derived its name from this circumstance. The principal object which arrests the attention is the ruin of the Castle of Cubberou. It is seated on an eminence, and was the stronghold of Kolbein Henga, an Orkney Chief of much celebrity in the XIIth Century. After this, an ancient Chapel deserves notice, from its contiguous church-yard containing graves, few of which are less than seven feet in length. Indeed the present inhabitants of the Island exceed, in general, the ordinary stature. Population 80.

Enhallow is hardly a mile in circumference. It raises a sufficiency of grain and other produce to pay its rent in kind, and is inhabited by two families, its whole population. Formerly it was the scene of various miracles, whence its original appellation of *Eyin-helga*, Holy Isle. From its supposed sanctity, the residents still fondly boast exemption from the visitation of "rats and mice, and such small gear!"

Ronsay, Rolfsay, Rolf's or Rolla's Island, is on its Eastern side fronting Eagleshay, and its South-Western corner is beautifully situated, and abundantly fertile. Its whole middle space consists of high hills, on which are reared great numbers of sheep, swine, and black cattle. Ben asserts that these hills formerly blazed spontaneously by night. Sigurd, the Hero of Clontarf, had a Castle here, and about a quarter of a mile to the West of its ruins are seen a number of graves, formed with stones set on edge. These bear the name of Swendrou, which points it out, with much probability, as the scene of the capture of Earl Paul, and the massacre of his attendants, by the treacherous Swein, the son of Asleif. Population 834.

Eagleshay, a small Island, divided from Westray by an impetuous frith, was the favourite residence of the Douglasses and Monteiths, its proprietors. It was the scene of the murder of St. Magnus, the tutelary Saint of these Islands; and the church is built on the spot where the sanguinary deed took place. This church is the only remaining specimen of Scandinavian Ecclesiastical Architecture in Great Britain. The Island is two miles long by one in breadth, and produces abundant supplies of kelp and shells. Population 226.

Westray, or the *Western Island*, terminates the cluster

ORKNEY
ISLANDS.

ORKNEY ISLANDS. on the North-Western quarter, and, probably, derives its name from that circumstance. Its shape bears some resemblance to a cross, the body of which may be estimated at eight, and its arms at five miles; and if reduced into a form capable of measurement, it may contain about fourteen square miles. The cultivated land and the principal grass pasture are on the Eastern and the Northern and Southern shores, with a large portion of the South-Western. Corn in considerable quantity is raised here, but its quality is indifferent. The grass is excellent for producing good milk and butter, and the feeding black cattle. Fish, too, are abundant in the strong, rapid tides and boisterous seas, which encircle it on every quarter. The only safe harbour it affords is that called *Pier-a-wall*, on the North-Western coast, which is now fit for small vessels only, since the drifting of the sand is daily lessening its depth of water. This circumstance has also spread desolation over some of the best land; and it has no doubt been produced by the injurious practice of cutting and pulling up the *bent*, (*Arenosa arundo*, Linnæus,) which delights in a sandy soil, and serves to bind and fix it. Tumuli or barrows are not unfrequent here; and in two extensive plains, one on the North, the other on the South of the Island, the drifting of the sand has opened to view a multitude of graves, all formed in nearly the same manner. Several of them have been opened, and skeletons, in a reclining posture, together with weapons of war, and domestic utensils, have been found in them. Of the battle, or battles, which must have taken place on this spot, tradition gives no account. Near to this dreary waste is the town of Waal, in whose name (*Waal, strages, Ihre, Gloss. Snigoth.*) the memory of this slaughter is perhaps perpetuated. By the side of it, on the borders of a beautiful loch, stands the Castle of Noltland, an extensive structure, the principal parts of which still remain entire. The kelp manufactured in this Island averages 300 tons annually. The oldest names of places are, Garth, Gorn, Clet, Skeal, Skealwick, and of men, Meal, Hercus, and Seater, all of Gothic origin. Population 1650.

Papay-
Westray.

Papay-Westray, or *Little Westray*, is scarcely a mile distant from the former, and is four miles long and one broad. It produces excellent corn, and as fine natural clover as is any where to be found, from a rich loamy bottom. In a fresh-water loch at its South-East corner is a beautiful islet, on which are the remains of a Pict's house, and the ruins of the once noble chapel of St. Tredwall. The extensive fishing bank which lies two miles to the North of it, has lately proved attractive to our British fishermen.

North Ro-
naldsay.

North Ronaldsay is most probably called, like its Southern namesake, after one or other of the Ronalds, ancient Counts of Orkney. It is the most Northerly of the group, contains about four square miles, and is but little raised in its whole extent above the level of the sea. Hence it is often fatal to mariners, but its dangers have been greatly lessened by the erection of an excellent light-house on the North-Eastern point of the Island. A monumental stone, ten feet high and four broad, stands in the midst of a plain here, around which the inhabitants are accustomed to assemble on New Year's day, and to indulge in the hearty mirth of the season. Tumuli are met with here, and a skeleton placed upright was found in one opened some years back. The supply of corn and grass is abundant and excellent, notwithstanding the slovenly system of agriculture; and

kelp is manufactured to the amount of one hundred tons yearly. Population 420.

ORKNEY ISLANDS.

Sanday.

Sanday, or *Sandy Island* extends fully twelve miles in length, while its mean breadth does not exceed a mile and a half. Its shape is extremely irregular, and from the lowness of its shores, and the number of creeks and bays which indent it, many shipwrecks have occurred here. A light-house, however, has recently been erected on the Start Point. It affords two excellent harbours, Kettletoft on the South, and Otterswick on the North, and these being separated by a low plain, the sea in the high tides threatens to divide the Island. The bay of Otterswick, now a league in length, is reported to have formerly been not dry land only, but a forest. This Island by far surpasses the rest in fertility, and may be regarded as the granary of Orkney. Its produce in kelp, too, amounts to a fifth part of that supplied by the whole of the Isles. On the Western side, the shore, contrary to the general formation of the Island, consists for a space of two hundred feet of a shelving rock bearing some marks of calcination. It is called Heclaboi, from a supposed resemblance, perhaps, to the famous Icelandic volcano. Near the Church of Burmess, is a remarkable and isolated mass of granite about fourteen tons in weight. Some remains of Picts' houses, and one or two ruined chapels, form the antiquities of the place. Population 1860. Some of the oldest names of the people are, Torfs, Tullachs, Muirs, Swaney, and Feas; and of places, Torsness, or Thorsness, Odinswick, Odinskar, and Hillitrons, all undoubtedly derived from that dialect of the Gothic denominated Norse.

Eday.

Eday, situated nearly in the centre of the North Isles, is five miles long and two broad; and is supposed to derive its name either from the heath which covers its Western and Northern hills, or from the rapid eddy-tides with which it is surrounded. The level is mostly laid out in pasture, but this disadvantage is more than overbalanced by the quantity of fuel afforded by its peat-moss, not only for its own consumption, but for that of the other Islands. The village of Carrick on this Island was erected into a Burgh of Barony by Charles I., in compliance with the request of the Earl of Carrick, its founder. He dying without lawful issue, the title became extinct, his residence fell into decay, and the village sunk into obscurity. During the last century, the notorious pirate Goas entered the harbour here, and would, doubtless, have committed much injury, had not a proprietor, of the name of M'Fea, roused the inhabitants to seize the pirate, his crew, and his ship. The original documents concerning this capture are given in Peterkin's *Notes on Orkney*. Population, including the next Island, 643.

Fairey, or *Fridarey, Isle of Reconciliation*, is a small Isle near the former, rather flat, and covered with verdure.

Stronsay, Strionsay, or Strunsay, is so indented by the sea, as to be almost cut into three distinct Islands; and hence, perhaps, its name of Stronsay, or the Isle of Strands. It possesses two fine harbours, Luiga Sound on the West, Papay Sound on the North-East side. A vein of lead ore was discovered here many years ago, but it was, probably, not worth the working. A recent discovery, however, of a bed of limestone, is likely to further the interests of its agriculture. The people are occupied similarly to those of the other Isles, and in the Summer months they manufacture about 300 tons of kelp annually. This Island has three mineral springs, and its

ORKNEY ISLANDS.

antiquities are tumuli, Picts' houses, and the ruins of chapels. Torness and Odness, the names of two promontories, are, perhaps, derived from the two Scandinavian Deities, Thor and Odin; and in the creek of Guigdin, (*Bay of Odin*), the sea-weed called dulse (*Fucus palmatus*), is believed to possess valuable qualities in some disorders.

Papay Stronsay

Papay Stronsay, or *Little Stronsay* is a pleasant islet, lying, as it were, in the bosom of the former, on its North-Eastern quarter, and does not exceed three miles in circumference. It is distinguished for its beauty and fertility; and even in this small place there were formerly two chapels, one dedicated to St. Bride, and the other to St. Nicolas. Its few inhabitants resort at present to Stronsay for Religious edification. Population of the two Stronsays 1013.

Shapinshay.

Shapinshay, formerly *Skipensay*, or *Ship Island*, is the first of the Northern Isles that presents itself, at a distance of three miles from Kirkwall. Its dimensions are about seven miles by five. In common with the rest, this Island exhibits some monuments of antiquity, such as tumuli, Picts' houses, and more especially an immense stone on its Northern shore, called the Black Stone of Odin. On this spot Odin is supposed to have landed on his descent here. Besides its other productions, there is a considerable bed of limestone here, and its manufacture of kelp yields a hundred tons per annum. The Rev. Dr. Barry, Historian of Orkney, was Clergyman of this Parish. Population 779.

Copinsay.

Copinsay lies directly East from the Mainland, at about five miles distance, and furnishes a landmark for ships. Hence its name, which in some of the Gothic Dialects signifies the Trade or Mercantile Island. It extends a mile in length by about half a mile in breadth; and supports, with ease, two or three families.

Lambholm.

Lambholm, or *Lamon*, is near *Holm*, and derives its name from its being chiefly appropriated to the pasturing of sheep; it produces likewise excellent grain, and affords a comfortable abode to one family.

Southern Isles.
Burray.

Burray is separated from South Ronaldsay by Water Sound, a ferry of a mile broad, and extends four miles in length by one in breadth. Potatoes, carrots, peas, onions, and cabbage are raised here in great perfection, and the turnips are not surpassed in even the best cultivated parts of Scotland. This crop, together with its rich natural grass, consisting principally of red and white clover, renders its cattle the finest in Orkney. On its sandy parts rabbits breed in considerable numbers. It contains 245 inhabitants. This Island, together with *Swanay*, *Pentland Skerry*, and the *Holms* as pen-dicles, forms part of the pastoral charge of

South Ronaldsay.

South Ronaldsay, or *Ronald's Island*, which of all the Isles South of the Mainland is the most considerable in point of population. It contains about eighteen square miles, and its situation, near the entrance of the Pentland Firth, as well as its excellent harbours of St. Margaret's Hope and Widewall, give it many advantages. Among these, it may be mentioned, that a rich and enterprising English Company carry on the cod and lobster fishing to a great extent, conveying the fish weekly to the London market in *welled* smacks. The arable and grass grounds here bear a much greater proportion to the common pasture than elsewhere; and the mode of agriculture is in general superior, so that grain forms an export of some consequence. Neither is the Island destitute of some interesting objects of antiquity. Not only are tumuli met with in different quarters, but also

several Picts' houses in ruins, among which what is called the *How of Hoxa* is very remarkable. In the Eastern side, on the summit of a hill near Stow's-head, are the remains of a triangular monument of stones, two of which are broken down. Respecting these tradition is entirely silent. This Island was the scene of the conversion of the Pagan Earl of Orkney to Christianity, by St. Olave of Norway, who threatened instant death in case of refusal. The post-office mail arrives here four times a week in an open boat; yet, notwithstanding the boiling eddies and tides of the Pentland Firth, the post-boat has been lost but once in the period of eighty years. Governor Tomason, of the Hudson's Bay Company's establishment, has endowed an excellent school here. Population 1949.

Swanay, formerly *Swiney*, *Swine Island*, lies in the very heart of the Pentland Firth, and was once dreaded for the wells and swelchies, *i. e.* gulfs and whirlpools, which surround it. But the improved principles of navigation have diminished their terrors, and ships sometimes pass through this formidable channel at dead of night. It is about a mile long, and half as much in breadth. This Island, with the two Skerries, contains a population of 37 persons.

Pentland Skerry is one of two of the same name, Pentland which lie in the mouth of the Firth, almost equally distant from Caithness and Orkney. On this, the larger of the two, there is a most excellent light-house.

Flotay, or *Flat Island*, is situated in the sea that divides *Waes* from *South Ronaldsay*, from each of which it is distant about three miles. A large bay, termed *Panhope*, from the salt-works once carried on here, almost divides the Island into two portions. This part, together with the long point called the *Rone*, gives shelter to numbers of moor-fowl. The rest of it is either clothed with grass, or cultivated for corn, and is very productive. It is three miles long by one in breadth. Population 297.

Cavay, or *Cheese Island*, subsists three families, and formerly had salt-works, which sunk under the revenue laws. There are the remains of a chapel here.

Faray and *Ressay*, situated near each other, are noted chiefly for their excellent sheep pasture.

Waes, or *Waes*, (from *voes*, *creeks*), pastures some thousands of fine sheep, together with a vast number of horses and black cattle. Our North-bound fleets, in time of war, are accustomed to make its spacious harbour of Longhope their place of rendezvous; and the cod-fishery carried on here is extensive and highly valuable. Towards the East and South, the land is low and level, and produces the ordinary grains of a superior quality to those raised in other places in the country. Besides the harbour above-mentioned, it possesses the excellent havens of Orehope and Kirkhope. Population 940. This Island is, in point of fact, joined by a narrow isthmus to

Hay, *Haey*, *High Island*, which is formed of three large hills, ranged in the shape of a triangle, of which that to the North-East is the largest, rising almost perpendicularly to the height of about 1600 feet. These hills often slope into delightful valleys, intersected with rivulets, whose banks are decked with flowers, and sheltered by shrubs, such as the birch, the hazel, &c., which are, from their rarity, sometimes honoured with the title of trees. The precipices on the Western side are of the most imposing description, forming the constant abode of the eagle, and often worn by the action of the sea into

ORKNEY ISLANDS.

ORKNEY ISLANDS. huge, isolated pillars, towering in solitary grandeur from amidst the waves. There are few monuments of antiquity to be found in this Island. The *Dwarfie Stone* has obtained celebrity from the mention made of it in Sir W. Scott's Novel of *The Pirate*. Tradition assigns it to the *Trows*, or *Drows*, Beings of small stature, but great power, a species of goblin-demon. Its greatest length is 32 feet, its breadth 17, its thickness above the surface of the earth not less than $7\frac{1}{2}$ feet; and the inside is divided into three apartments. In all probability it has been the cell of some hermit. Population 288.

Græmsay. *Græmsay*, or *Græm's Island*, contains, through almost the whole extent of the interior, a bed of schistus, or slate. Its inhabitants are distinguished for their strength, stature, and skill in fishing; and had they a place of worship within the Island, as formerly, their situation would be very comfortable. It lies about a mile and a half from Stromness. Population 220.

Climate. From their contiguity on every part to the Ocean, these Islands are not subject to any violent extremes of heat or cold. Between the lowest point of cold in Winter, and the highest of heat in Summer, the whole range varies but from 25° to 75° of Fahrenheit's thermometer. Its medium heat, as appears by the Springs, amounts to 45° . In the Spring, Summer, and harvest months, the South-West and South-East winds prevail, and while these last, the atmosphere is not unfrequently thick, dark, and foggy. But the Northerly winds during the rest of the year, bring, for the most part, cold, dry, and wholesome weather. Calms are seldom of long continuance here; and the winds, from whatever quarter, being seldom tempestuous, though often loud and strong, serve to render the climate peculiarly salubrious. The annual quantity of rain amounts to twenty-six inches at an average; snow is less frequent, and continues but a short time on the surface of the earth; thunder and lightning are seldom observed in Summer, but most commonly in Winter.

Geology. Both the Northern and Southern Isles, though differing in their external appearance, have their strata, which are either horizontal or slightly inclined, for the most part consisting of sandstone, sandstone flag, schistose clay, and limestone; in some instances of basalt, and in some of breccia. In the beds of limestone, traces of marine remains occur; and in some places hæmatitical iron ore has been found in large quantities under the upper stratum of sandstone, whilst all attempts to find galena, or lead ore, have been discontinued, from the smallness of the quantity obtained. On the West shore of the Mainland, near the house of Skail, the sand-stone flag approaches the silicious genus, and is so hard as to be cut into mill-stones. At a place named Yasnaby, on the Western border of the Island, veins of barytes are seen traversing the sandstone, and in several places calcareous spar, iron pyrites, and galena are interspersed with it. A few miles to the North of this, a large stratum of black-coloured limestone is met with, alternating with a rock, intermediate between schistose flag and schistose clay, and containing in it large crystals of hornblende, and, occasionally, small cavities filled with bitumen. The sandstone flag is well calculated for building, as it splits readily into layers; and together with indurated shale, it forms the greatest portion of Orkney. Yielding easily to the action of the elements and of the Ocean, the lofty cliffs of the coasts present an unusual aspect of ruin and decay. The only exception to the usual formation of these Isles,

ORKNEY ISLANDS. occurs in an extent of a few miles that environ the town of Stromness. Here is found granite occupying the central part, and is covered with gneiss, micaceous schistus, and hornblende rock. At the mill of Kairston, these rocks dip under a breccia, composed of fragments of the same rocks, and further Westward, they are covered with indurated shale, which is traversed at no great distance from the granite formation by veins of sulphate of barytes, mixed with calc-spar, and detached masses of sulphuret of lead. Dr. Traill discovered in one of these veins a compound of carbonate of strontia and sulphate of barytes so perfectly homogeneous, that he considered it as a mineral species, and gave it the name of *Stromnite*.

Zoology. The quadrupeds of these Islands are, the horse, ox, sheep, hog, dog, cat, otter, shrew-mouse, noll-mouse, field-mouse, Norwegian rat, rabbit, and seal. The ox is of a very diminutive size, but strong and hardy, and is supposed to have been originally introduced from Scandinavia. The sheep also is a peculiar breed, and, probably, of the same stock with that of Iceland, the Ferroses, and Shetland. This valuable animal is most improperly managed here, being never housed; and the mutton is, in general, very ordinary, as the sheep feed much on sea-ware. Dr. Barry states, that if a man or a dog come suddenly on a pregnant ewe, in the uninhabited holms, where they are put to breed for greater quiet, they have been known to die from fright. From the hair of the Orkney hog, a small-sized variety of the common sort, the fowlers make the ropes, by the aid of which they ply their dangerous occupation on the cliffs. The Norwegian rat is of great size, measuring about eighteen inches from the tip of the nose to the point of the tail, and so fierce as to have been known to brave the attack of man. Rabbits are met with in abundance, so that their skins form a valuable branch of commerce; but the hare has disappeared within the two last centuries. In Ornithology, no part of the British Isles presents so wide and interesting a field as the Orkneys. The domestic birds are the same as elsewhere, but the wild birds, both migratory and indigenous, are met with here in immense variety. Its vast cliffs and precipices are the haunt of eagles, falcons, and owls, and swans, with the rare British birds, the red-throated diver, and the Arctic gull, breed on the edges of the fresh-water lakes. The *Stryx nyctea*, the snowy owl, and *Picus major*, the greater spotted woodpecker, are occasional visitors. The great black-backed gulls breed in Souli-skerry, a low flat holm, ten leagues from Hoy, in such abundance, that it is difficult to walk on it without destroying their eggs. The eider-duck and the great duck have been found in Papay-Westray. Grouse are common in all the mountainous Isles, but partridges are unknown. The marine animals which frequent the coasts of these Islands, are no less numerous than the birds which build in their rocks. Seals are abundant on the coasts, and the oil extracted from them, as well as their skins, forms an article of some importance in the eyes of the natives. Of fish, lobsters, crabs, coal, cod-fish, haddock, and herrings are met with in abundance; skate are found from one to five feet in diameter, and the *Squalus canicula*, the panther shark, is very common. The spermaceti, the bottle-nose, and the round-lipped whale are frequently thrown ashore on these Islands; and to the order of the *Sygnathus hippocampus*, the sea-horse pipe fish, must probably be referred the extraordinary animal cast on the beach of Stronsay in

ORKNEY ISLANDS.

1808. It measured 55 feet, although a part of the tail was broken off, and its skull and vertebrae are preserved in the Museum of the University of Edinburgh. The strange animal seen near Coll, of which an account was sent by the Rev. Mr. Maclean to the Secretary of the Wernerian Natural History Society,* the sea-snake of Pontoppidan, and the American sea-snake, may, it is not improbable, belong to this new species.

Botany.

The *Flora Orcadensis*, enlarged by the late additions of Mr. Neill, contains a list of 462 plants. To enumerate these would, of course, be foreign to the plan of our Work, and it need only be stated, that the ordinary vegetables and flowers are raised with success. Black, white, and red currants are excellent here, but other fruits are of inferior growth, both as to size and flavour. Trees are seldom seen, but when they are properly planted and due attention is paid to the growth of the young shoots, they will flourish here as elsewhere.

History.

The first ancient author who makes mention of these Islands is Pomponius Mela, (lib. iii. ch. vi.) who in the forty-fifth year of the Christian Era, states their number to be thirty. Pliny, Ptolemy, and Tacitus, each speak of them, differing, however, as to their number. When the Roman Empire was partitioned amongst the sons of Constantine, the Orcades were classed with Britain, Gaul, and Spain, in the division allotted to the younger son. Of their previous History, little is known, except that they were inhabited by a Scandinavian Tribe, termed Picts, or Piks, who overran and settled in the Northern and Eastern coast of Scotland, at a remote and unknown period. Near the close of the IXth Century, they were reduced under the dominion of Harold *Harfager*, the *Fairhaired*, King of Norway, who also subdued the Hebrides and the Isle of Man. That Prince delegated the rule over Orkney and Zetland to Ronald, Count of Mercar, from whom was descended William the Conqueror. The ancient Scandinavian jarls (earls) took their rise from this family; and these hardy *Sea-kings* for a long succession of years harassed the coasts of Scotland and even of Ireland. On one of these expeditions, Sigurd II. fell at Clontarf, near Dublin, and the *Fatal Sisters* of Gray, a translation from the Norse, is supposed to refer to that event. The materials for the early History of Orkney may be found in the *Orkney-inga Saga*, and in the *Orcades* of Torfæus, a correct Historian, as far as his imperfect materials would allow. A good abridgement of that Work may be perused in Dr. Barry's History; but our attention must be more especially directed to what may be termed the authentic annals of these Islands. After the battle of Largs, Magnus IV. of Norway, and Alexander III. of Scotland entered into a Treaty in the year 1266. By that settlement, Orkney and Zetland were reserved to Norway, and a tribute of 1000 marks, afterwards called the *annual* of Norway, was secured from the Scottish to the Norwegian Monarch. As this tribute was never paid, its arrears, and the additional sum of 60,000 florins for which Orkney was pledged, redeemable on payment, were made over to James III. on his marriage with a Danish Princess as the dowry of his Queen. This pledge was never redeemed, and, consequently, these Islands have, since that period, formed a part of the Scottish Monarchy. Queen Mary invested her natural brother, Lord Robert Stuart, with the Earldom of Orkney and all the Crown lands. This Nobleman effected an exchange of his temporalities as Abbot of Holyrood with the Bishop of Orkney;

* Vide KRAKEN.

and seizing the right to summon or dismiss the Great Fowde Court, he became, in point of fact, Sovereign of the Country. This change led to the greatest abuses. The rules of succession in property, and the tenure by which it is held, (the latter being still in full operation,) were essentially different from those in the rest of Scotland. This tenure was the *udal*, (in modern Danish *odel*;) derived from the Danish and Swedish *oede*, signifying *waste, uncultivated*; and *udaller* means the first cultivator of *waste*, and till then unappropriated land, or his descendants. The udal lands were free from all taxes, and the udallers without superior; nor could such lands be alienated without the passing of a *Shynde Bill*, with consent of the heirs, in the Fowde Court. The Earl and his son, Patrick Stuart, availed themselves of the power they had usurped over this Court, to introduce feudal in the place of udal tenures in Orkney, and thus gaining possession of extensive property, forced the rightful proprietors to take out charters from them. These, with numerous other acts of injustice, compelled the inhabitants to lay their complaints before the Throne, and, accordingly, Earl Robert was recalled, and his son thrown into prison, whence he was released but to be led to the scaffold. After his attainder, as the lands were not immediately declared to be forfeited, the Orkney proprietors committed the ruinous mistake of taking out charters from the Crown in the customary feudal form, and thus completed the ruin of the original udal tenures. Subsequently the revenues of the Crown were managed by Commissioners, but in 1643, Charles I. made a grant of them to Earl Morton. After passing several times to and from the hands of the Morton family, Sir Lawrence Dundas bought the estate of Lord Morton, in 1776, for £60,000. Since that period, the Islands have remained in the family of his descendant, Lord Dundas; but lately, various questions have arisen betwixt him and the Orkney proprietors, which involve the discussion of many points essentially connected with the land rights.

The ancient Law-courts of Orkney consisted of *judicatories*, composed of a *foud*, or lawman, who was assisted both legislatively and judicially by a Court of Assize. There was a Supreme Foud, as well as inferior local ones, and the Courts were termed *lawtings*. The counsellors in the Supreme Court, called *lag-ut-men*, that is, law-right men, varied in number from twelve to twenty, and appear to have possessed not merely the power of passing laws, but of judging in all causes Civil and Criminal. The Supreme Foud and Lawting had an appellate jurisdiction from the inferior Courts. Since 1748, however, all traces of their jurisdiction, with their different formulæ and various titles of office, have merged into the forms of the Scottish law.

One Member of Parliament is returned as the representative of both Orkney and Zetland; but with a strange inconsistency, the elective franchise is confined solely to the freeholders of the former. The want of a valuation for the lands in Zetland is said to be the occasion of this anomaly; owing to which there is no method of ascertaining the qualifications of a freeholder. From the same circumstance (the want of a valuation) in all public assessments, Zetland has paid one-third, and Orkney two-thirds of the whole impost. Indeed, the original valuation book of Orkney has been either lost or purloined; and the defective state of valuation in this Island, with the absence of all valuation in the other, call aloud for Parliamentary interference.

Government.

Political state.

ORKNEY ISLANDS.

Ancient and present state of Religion.

The Norwegian invasion brought with it the sanguinary superstition of Odin; previously to which the worship of the Sun, with Druids as priests, appears to have formed the prevalent Religion. Towards the conclusion of the Xth Century, Christianity was forcibly introduced by Olaus Friguesson, King of Norway, otherwise called St. Olave. After the Earl of Orkney, Sigurd, had compulsorily embraced the Christian faith, Christianity became the Religion of the Orkneys, which were formed into one Bishopric with Shetland. Before the Reformation, there were eighteen resident Clergymen appointed to the duties of these Islands; and after the establishment of Presbyterianism the same number was retained. These now compose a Provincial Synod, divided into three Presbyteries, consisting of six Members each; and the three Presbyteries choose three Members, and the Borough one, to represent them in the General Assembly. Lord Dundas is Patron of all the Parishes of both Orkney and Shetland.

Population. According to the census taken in 1821, Orkney contains:

Males.....	12,469
Females.....	14,710
Total....	27,179

These form 5746 families, which may be thus distributed,

Families engaged in agriculture, including kelp-making.....	3152
Families engaged in traffic.....	1274
The residue variously employed....	1320
	5746

This population is dispersed among the Islands, as follows:

	Males.	Females.	Inhabitants.	Houses.
Pomona....	6670	8392	Total 15,062	2759
North Isles.	3945	4177	8,122	1435
South Isles.	1854	2141	3,995	737

Agriculture.

The ordinary sluggish acquiescence in custom, and hatred of innovation, observable in those Countries in which general education has made little progress, is but too apparent in these Islands; yet of late years, a better spirit has begun to prevail. The attempts of several spirited land-owners, and a laudable emulation among the gentlemen farmers, are daily eradicating the mischievous prejudices and errors that have hitherto interfered with improvement; and as the experiments they are making, and have made, become crowned with success, the eyes of the natives will be opened to the injurious effects of their long apathy and ignorance. It is almost impossible to give with accuracy the amount of square miles, or of acres, contained by these Islands, since their great irregularity of form precludes an exact computation. The following estimate, however, may be regarded as no very distant approximation to the truth. Between the hill-dikes, which are a sort of very imperfect turf-fences, raised for the purpose of keeping cattle, is a quantity of heathy, marshy, or green ground, possessed as a common, amounting to about 85,000 acres; in field, pasture, and meadow 33,000; land in tillage 26,000; land occupied by houses and gardens 2000; covered by fresh-water lakes 4000; thus forming a total of 150,000 square acres. Through this extent almost every variety of soil occurs; and the soils are frequently so intermixed, that several of them may be found at a very inconsiderable distance from one another. The most common are sand, brick-clay, loam, and a

mixture of peat-moss, which are in general of no great depth; as rock and *till* (schistose clay) often lie only a foot or two beneath the surface, and sometimes still nearer, so that the latter is in danger of being turned up, and the former of impeding or breaking the plough.

The proprietors, generally speaking, hold their estates of the Lord Superior, subject to large feu-duties payable in kind. Few of the ordinary class of tenants have leases, but are tenants at will, paying their rents in corn for their arable land, and in butter for their pasture. As the farms usually embrace a portion of the sea-shore, a part of the adjacent rocks is allotted to each, from which they cut the tang, or sea-weed, for the manufacture of kelp. This is purchased by the proprietor, who, by specific contract, binds himself to pay a certain rate per ton; and had they not this method of paying part of the rents of their farm, they would speedily become insolvent. The resource thus possessed is plainly detrimental to the best interests of agriculture; since as long as the farmers can, by this means, meet their agreements, they will be but little solicitous either as to their style of farming, or the quality of their produce. A scarcity of grain too is in their favour, by the consequent rise of the market, and relying on the proceeds of their kelp, the consumer and the best interests of rural economy both suffer. The farms are small, seldom much exceeding forty, and sometimes only eight or ten acres, which are thought sufficient to employ one plough, exclusively of a correspondent quantity of grass-ground intended for pasture.

The principal and most lucrative manufacture of the Orkney Islands is that of kelp. This is made of seaweed, or sea-wrack, that is of such of the leafy fuci, principally the *Serratus* and *Vesiculosus*, as grow on rocks on the sea, between the high and low-water mark. It is gathered from May to August, cut with a scythe as close to the rock as possible, and it is carried away on barrows, or floated up in rope-nets, made for this purpose. After being spread out to dry, gradually burned, either in circular pits, or of late years in kilns, over a small peat fire; and when incinerated, it is stirred about with iron bars, the less burned portions being occasionally added, until it becomes a semi-fluid mass. When cool, it is broken into large lumps and is ready for the market. The average of many years' production in Orkney amounts to about 2800 tons, the price of which varies from £8 to £11 per ton, so that the profits of this manufacture may be estimated at £25,000 per annum. The kelp-burners average about £2 per ton, and a kelp-pit generally contains six hundred weight, or one-fourth of a ton.

The linen manufacture, together with the spinning of flax, forms one of the staples of the place; 60,000 yards of linen have been annually stamped, and the export of yarn has at times amounted to 100,000 spindles. The greater part of the flax is imported from Russia and Holland; and the yarn is in general disposed of to the merchants of Newcastle, Edinburgh, and Glasgow.

Straw plaiting some years back brought into the Country £20,000 per annum; but the alterations of fashion have reduced this amount as low as £2000 yearly.

Orkney possesses 46 registered vessels, and a Green-land ship is fitted out annually, without, however, having hitherto met with much success. It is of 279 tons

ORKNEY ISLANDS.

ORKNEY
ISLANDS.
ORNEED.

The fish-
eries.

register, carrying 50 men; and the measurement of the 46 ships above mentioned amounts to 2841 tons. The English and Scotch whale ships were formerly accustomed to take in a considerable number of hands here, but the decline of this trade has lowered the number of men annually employed from 600 to less than half that amount. These hardy seamen once brought £12,000 into the Country every year, their wages averaging £20 for the voyage. The wages have now fallen to £9, and their yearly amount to about £2600.

The fisheries, the most important and highly valuable branch of trade, have only of late years attracted the attention which they deserve. The most extensive fishing banks have been, until very recently, neglected; and although, for half a century, a London Company has employed a dozen *welled* smacks to carry cod and lobsters alive to the Metropolis, yet the natives have for nearly all that period neglected to avail themselves of the advantages their situation offers. However, 55 tons of cod and ling were exported in 1820, and the trade will most probably increase to a considerable extent. The natives catch the lobsters, and the fishers receive

twopence halfpenny apiece for them. They are sent to ORKNEY ISLANDS. London to the number of 65,000, and return about £750 per annum to the Country. The herring fishery, owing to the state of the markets in the Southern part of the Empire, has been on the decline since 1820. In that year 17,989 barrels of herrings were exported, realizing to the fishermen about £10,000.

The ships belonging to the Hudson's Bay Company's trade touch yearly at Stromness, and engage about 60 persons, who may transmit to their native Country from £2000 to £3000 per annum.

The principal imports are wood, iron, flax, coal, sugar, spirits, wines, snuff, tobacco, soap, leather, hardware, broad cloth, and printed linens and cottons. The chief exports, in addition to those already enumerated, are oatmeal, bear, rabbit-skins, hides, feathers, and tallow.

But who is this, what thing of sea or land?
Female of sex it seems,
That so bedect *ornate*, and gay
Comes this way sailing
Like a stately ship
Of Tarsus.

Milton. *Samson Agonistes*, l. 714.

The Queens Maiestie now living hath appointed huge summes of monie to be emploied vpon the *ornature* and alteration of the mould.

Holinshed. *The Description of England*, vol. i. ch. xv. p. 239.

That very portion, which (by faithful skill
Employ'd) might make the smiling Public rear
Her *ornamented* head.

Thomson. *Liberty*, part v. v. 348.

"See here my staff," cries Strap; trembling behold
Its radiant paint, and *ornamental* gold:
Wooden authority when thus I wield,
Persons of all degrees obedience yield.

King. *The Constable*.

The intervals between these compartments were richly *orna-mented* with inlaid plates of glass and ivory, and marble bass-relievos.

Observer, No. 51.

ORNE-
ODES.

ORNEODES, in Zoology, a genus of *Lepidopterous* insects.

ORNI-
THO-
RHYN-
CHUS.

Generic character. Wings all divided into five or six ciliated lobes, of nearly equal size; *palpi* two, produced, longer than the head, the second joint thickly scaly, the last rather naked, erect, and horn-like; legs long; *larva* with sixteen legs, slightly pubescent; *pupa* elongated, enclosed in a transparent cocoon.

Type of the genus, *Pterophorus hexadactylus*, Fabricius; Hübner, *Schmett* (*Alucitæ*.) pl. v. and vi. Six or eight species, three of which inhabit Britain.

ORNITHOGALUM, in Botany, a genus of the class *Hexandria*, order *Monogynia*, natural order *Asphodeli*. *Generic character*: corolla, petals six, erect, persisting, the upper part spreading; filaments dilated at the base or subulate, angular, three-celled, seeds roundish, naked.

A genus of about fifty species of elegant bulbous plants. *O. luteum*, *pyrenaicum*, and *umbellatum* are natives of England.

ORNITHO'LOGY, } Gr. ὀρνιθολόγος; ὄρνις,
ORNITHO'LOGIST, } ὄρνιθος, a bird, (from ὀρνειν,
ORNITHO'LOGICAL. } and this from ὀρειν, to rise,)
and λέγειν, to discourse.

In the *ornithology* the European names are prefixed to the author referred to in the synonyms.

Pennant. *British Zoology*. Preface, p. xxiii. note.

Mr. Montagu supposes this to be a distinct species, and has given a very detailed description of it in his excellent *ornithological* dictionary. *Id.* *Ib.* vol. ii. p. 88. *The Wood Sand-Piper*.

This is the gyrfalco of all the *ornithologists* except Linnæus, whose bird we are totally unacquainted with.

Id. *Ib.* vol. i. p. 218. *The Peregrine Falcon*.

ORNITHOMYIA, in Zoology, a genus of *Dipterous* insects.

Generic character. *Antennæ* lamelliform, hirsute, inserted before the eyes on the clypeus; *labium* rounded at the apex; head narrower than the thorax, the latter with an emargination in front; wings two, nearly of equal width, with the apex rounded; eyes very distinct, ovate; *ocelli* three, placed on the crown in a triangle; legs short, robust; *tarsi* with tridentate claws.

Type of the genus, *Hippobosca avicularia*, Linnæus. Leach in *Wern. Trans.* vol. iii. pl. xxv. Ten species, four of which are indigenous.

ORNITHOPUS, in Botany, a genus of the class *Diadelphia*, order *Devandria*, natural order *Leguminosæ*. *Generic character*: calyx tubular, teeth somewhat unequal; keel of the corolla small, compressed; pod jointed, round, arched.

Eight species, natives of the Northern hemisphere. *O. perpusillus* is a native of England.

ORNITHORHYNCHUS, from the Greek ὄρνις, ὄρνιθος, a bird, and ῥύγχος, a beak, Blumenb.; *Onithorhynque*. In Zoology, a genus of animals belonging to the family *Monotremata*, order *Edentata*, class *Mammalia*.

Generic character. Muzzle much elongated in form of a Duck's beak, covered with horn, which increasing in thickness at the base, forms a kind of collar about the forehead and chin; along the edge of the upper jaw a groove, into which, when the mouth is shut, a ridge on the margin of the lower jaw is received, and the ridge itself finely toothed by numerous transverse and oblique grooves; true teeth none, but in their stead resting on the gums, but not implanted in the jaws, some flattened, quadrilateral, fibrocorneous substances, four in each jaw;

head small and round; eyes small; no external ears; nostrils round, very close to each other; tongue large, broad, soft, fleshy, its edges furnished with tolerably large and black horny papillæ; cheek pouches; body nearly cylindrical; tail short, very wide, and flattened; legs very short and far apart, inclining outwards rather than downwards; feet five-toed, those of the fore feet slender, of nearly equal length, distinct, furnished with narrow, flat nails, and enveloped in a very wide membrane, which extends beyond the ends of the toes, forming a broad paddle with an irregular edge, hind toes connected only as far as the nails; on the inner hinder part of the heel a strong, pointed, hollow spur, connected with a poison-bag.

This curious genus was first brought into notice by Blumenbach in 1803, and named by him from the remarkable form of its muzzle, which closely resembles the beak of a Duck; it has no true teeth, but some peculiar horny substances occupy their place, which are thus described by F. Cuvier. "These teeth do not at first sight seem to have any thing in common with teeth properly so called, they have the appearance of callosities from their form, and of horny substance from their colour and consistence. In the upper jaw we first find on the front of the maxillary bone, one of them, long, narrow, yellowish, presenting three longitudinal ridges, the central of which is larger than the two lateral. Far behind this, and corresponding to the situation of the molar region in the jaws of *Mammalia*, another masticating organ is found, a tooth of the same kind, a third longer than its width, bounded by a curved line on its outer edge and its extremities, and by a straight line on its inner edge, the contour of which is elevated into a kind of crest, a little thicker within than without. These organs beneath and at the part corresponding to the root, present some projections answering to the central and hollow part above, but which are more prominent than the cavities are deep. In the lower jaw exactly the same parts are found, and there is no difference, except that the hind teeth are a little more rounded on their inner edge, and their crown is divided into two equal parts by a slight transverse ridge. These teeth meet crown to crown between the two jaws. Their composition, according to Chevreul, is very similar to horn, like which they burn on the fire, and contain but a very small quantity of phosphate of lime."

The neck of the Ornithorhynques is very short and thick; the body rounded; the whole enveloped in a close fur of two kinds, the one long, flattened, crisped, shining, and pointed, and the other very fine and silky; the beak, webs, and soles of the feet are the only parts which are bare.

The poisoning apparatus consists of the spur, which is situated on the inner and hinder part of the metatarsus of the male, and connected with a poison-gland, placed immediately under the skin and close to the hip-joint. The gland consists of numerous lesser glands connected together, and forming a mass about an inch long and half an inch wide; from it passes a canal, which descends behind the thigh and leg, and terminates in a bag deeply situated in the hollow of the foot. From this bag another membranous canal passes to the spur, and is continued to the orifice in that organ. The poison appears to be active in reference to some animals, but according to M. Quoy's observations, it does not seem to have any great influence on Man, nor is it at Port Jackson generally thought to be dangerous.

ORO-
BANCHE.

Ornithorhiques have not hitherto been found except in Australia; formerly they were not uncommon in Nepean River, at the foot of the Blue Mountains, but they are now rare: they are most commonly met with at Newcastle, in Fish River near Bathurst, in the Macquarie and Campbell Rivers. They are very active, swim and dive well, and live principally in rivers and lakes, often rising to the surface to breathe. When ashore they scramble along pretty quickly, advancing each foot alternately before the other, and rake with their beak in the mud like Ducks. In the marshes they build their habitation, consisting of a round chamber, tolerably large, lined with rushes and moss, and opening externally by a long gallery; in this nest they are said to lay two eggs as large as Fowls' eggs, and of a white colour, and the female sits for a long time, nor will she leave them except upon compulsion. When attempted to be taken they snap with their beak, the softness of which, however, prevents them from doing any mischief; but the male strikes with its spur, the wound from which however cannot be very severe, as the natives merely wash with fresh water and suck it. It is probable that the animal feeds on aquatic insects and their larvæ, but nothing certain is known about it.

O. Rufus, Peron; *O. Paradoxus*, Blum.; *Platypus Anatinus*, Shaw; *Rufous Ornithorhynque*. About fourteen inches in length, of which four inches belong to the head, and of these two to the bill, and five to the tail, which is about two inches wide at the base. It is entirely covered with very close fur, the inner very fine and light grey, the outer very long, fine at its root, but becoming broader and flatter, and at last terminating in a point, is reddish-brown above, and silvery-white beneath; around the eyes a white circle; irides deep brown, pupil very small, and of a Prussian-blue colour.

O. Fuscus, Peron; *Dusky Ornithorhynque*. Similar in form and size to the preceding, but of a more dingy colour. Cuvier considers it as probably only a variety from age.

See Blumenbach, *Abbildungen Naturhistorischer Gegenstände*; Peron et Lesuer, *Voyage aux Terres Australes*; Desmarest, *Mammalogie*; Shaw, *General Zoology*.

ORNITROPHE, in *Botany*, a genus of the class *Octandria*, order *Monogynia*, natural order *Sapindi*. Generic character: calyx four-parted; corolla, petals four, bearded in the middle; germen double; berries two, one-seeded.

Eight species, natives of the East and West Indies and the Island of Ceylon.

ORNUS, in *Botany*, a genus of the class *Diandria*, order *Monogynia*, natural order *Jasmineæ*. Generic character: calyx four-parted; corolla four-parted, petals long, strap-shaped; filaments long; nut winged.

This genus, established by Persoon, contains only one species, *O. Europæa*, the *Frazinus ornus* of Linnæus.

OROBANCHE, in *Botany*, a genus of the class *Didynamia*, order *Angiospermia*, natural order *Pedicularæ*. Generic character: calyx four or five cleft, segments mostly unequal; corolla ringent; capsule ovate, acute, one-celled, two-valved, seeds numerous; a gland beneath the base of the germen.

This genus contains about twenty species, mostly natives of Europe and North America. Their mode of growth is singular; although growing in the earth, they are parasitic on the roots of other plants, from which they draw their nourishment.

OROBITIS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* geniculated, twelve-jointed, rather slender, inserted in the middle of the rostrum, the funiculus seven-jointed, its basal joint rather long, obconic, the four following very short, also obconic, the two next lenticular, the club ovate, acuminate; head nearly concealed, produced in front into an inflexed rostrum, which is inserted in a groove, not continued on the breast, slightly elongated, rather slender, curved; eyes large, depressed, approximating on the forehead; *thorax* very short, transverse, truncate at the base and apex; *elytra* rounded, very convex, glossy, attenuated posteriorly, the apex of each round and gaping; legs elongate, remote at the base; *femora* with a short groove beneath; *tibiæ* straight, the apex truncate, curved; *tarsi* with two claws.

Type of the genus, *Cur. cyaneus*, Linnæus. Two species; one of which (the type) is indigenous, and is found in sandy places amongst herbage.

OROBUS, in *Botany*, a genus of the class *Diadelphia*, order *Decandria*, natural order *Leguminosæ*. Generic character: calyx, the base obtuse, five-cleft, superior; segments shorter; pod cylindrical, long, tapering, one-celled, two-valved.

Seventeen species, natives of the Northern hemisphere. *O. tuberosus* and *O. sylvaticus* are natives of England.

ORONTIUM, in *Botany*, a genus of the class *Hexandria*, order *Monogynia*. Generic character: spadix cylindrical, covered with flowers; corolla usually six petals; style and stigma nearly obsolete; seed-vessel one-seeded.

Two species, natives of North America and Japan.

O'RPED, } Skinner says, A knight whose garments glittered with gold either true or base. *Fr. oripeau* is base gold.

Orpiment. *Fr. orpiment*; *It. orpimento*; *Sp. orpiment*; *Lat. auripigmentum*. See the Quotation from Pliny. But Skinner's explanation of Gower does not suit Fabian. Hearne says that *orped* also signifies courageous, stout, manly, or manfully; and he produces two instances (from prose additions to Robert of Gloucester) of the word *orpedlyche*, or *orpedly*; for the latter of which (he adds) 'tis *manly* in Caxton. *Orpedlice* in A.S. is interpreted openly, manifestly. Lye and Somner.

The first spirit quicksilver cleped is;

The second orpiment.

Chaucer. *The Chanones Yemannes Tale*, v. 16291.

He made him knight, and yafe hym londe:

Whiche afterwarde was of his honde

An orped knight in many a stede,

And great prowes of arms dede.

Gower. *Conf. Am.* book iii. p. 91.

He was reasonable of speche and well lettered, and *orped*, and also noble i knyght hod, wyse in counsayll, & dredde to moch destenysse.

Fabyan, vol. i. ch. xxxv. p. 273.

Moreover, there is one device to make artificial gold, to wit, of *orpiment*, a minerall digged out of the ground in Syria where it lieth very ebb, and painters use it much: in colour it resemblith gold, but brittle in its substance like as glass stones.

Holland. *Plinie*, vol. ii. ch. iii.

O'RPHAN, *adj.* } *Fr. orphenin, orphelin*; *It. orfano*; *Sp. huerphano*; *Lat. orphanus*; *Gr. ὀρφανός*; *orbis*, bereaved, deprived. See Scheidius in Lennep, v. ὀρῶ.
O'RPHAN, *n.* }
O'RPHANED, }
O'RPHANAGE, }
O'RPHALIN, or }
O'RPHELIN. } Bereaved, deprived, of any thing; of children, parents, friends.

CARPUS.

The soueraigne men of the cite, toke thee in cure and keping, when thou were *orphelyn* of father and mother and were chosen in affynite of princes of the cite.

Chaucer. *Boecius*, book ii.

And yet the dolor was not onely hys for the ladyes souned for the deathes of theyr husebandes, and *orphelines* wepte and rent their heares for the losse of their parentes.

Hall. *Henry V. The third Yere.*

But come not afore I send Artemas or Tichicus to thee, to be there for the in my steade, leste they departing shoulde leade Crete destitute, and as it were an *orpheline*.

Udal. *Titus*, ch. iii.

And saith he will not leaue them *orphanes*, as fatherlesse children, but wil come again to them himself.

Sir Thomas More. *Workes*, fol. 173. *A Dialogue concerning Heresies*, &c.

Each new morne,
New widdowes howle, new *orphans* cry, new sorrowes
Strike heauen on the face.

Shakspeare. *Macbeth*, fol. 146.

Return, and let thy father's worth excite
Thirst of pre-eminence; see! how the cause
Of widows, and of *orphans*, he asserts
With winning rhetoric, and well-argu'd law.

J. Philips. *Cider*, book ii.

So wept Lorenzo fair Clarissa's fate;
Who gave that angel boy, on whom he dotes;
And died to give him, *orphan'd* in his birth!

Young. *The Complaint*. Night 5.

In London the share of the children (or *orphanage* part) is not fully vested in them till the age of twenty-one, before which they cannot dispose of it by testament.

Blackstone. *Commentaries*, book ii. ch. xxxii.

ORSODACNA, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* short, simple, inserted before the eyes, with all the joints obconic, the terminal ones distinctly and gradually thickened; *palpi* four, elongate; maxillary with the terminal joint incrassate, obliquely truncate; labial with the terminal joint subconic; mandibles slightly emarginate at the apex; head exserted; eyes globose; *thorax* narrowed behind; body oblong; legs rather long and simple; *tarsi* tetramerous, short.

Type of the genus, *O. chlorotica*, Latreille. Six species, three or four of which are indigenous.

ORT, commonly used in the plural, because usually spoken of many vile things together; the past participle of the A. S. verb *orett-an*, *turpare*, *vilefacere*, *deturpare*. *Oret*, or *ort*, means

Any thing, something, made vile or worthless. See Tooke. Any worthless leaving or refuse.

Where should he haue this gold? It is some poor
Fragment, some slender *ort* of his remainder.

Shakspeare. *Timon of Athens*, fol. 94.

The fractions of her faith, *orts* of her loue:
The fragments, scraps, the bits and greazie reliques,
Of her ore-eaten faith are bound to Diomed.

Id. *Troilus and Cressida*, fol. 102.

ORTEGIA, in *Botany*, a genus of the class *Triandria*, order *Monogynia*, natural order *Caryophyllæ*. *Generic character*: calyx three-leaved; corolla none; capsule, the apex three-valved, one-celled, many seeded; stigmas one and three.

Two species, natives of the South of Europe.

ORTHO-CARPUS, in *Botany*, a genus of the class *Didynamia*, order *Angiospermia*, natural order *Labiata*. *Generic character*: calyx tubular, slightly four-cleft; corolla two-lipped, closed, upper lip small, compressed, margin inflected; lower lip concave, slightly three-toothed; capsule two-celled, two-valved, many seeded.

One species, *O. luteus*, native of North America.

ORTHO-CERA, in *Zoology*, a genus of *Mollusca*.

Generic character. Shell not spiral, multilocular, elongated, straight or a little curved, subconical, marked externally with numerous longitudinal grooves; cells formed by transverse septa, perforated by a tube, which is either central or marginal.

Type of the genus, *Nautilus jugosa*; Montagu, *Test. Brit.* p. 198. pl. xiv. fig. 4. About forty recent species and seventeen fossil ones are found in Britain and on its coasts; a few others occur in Europe.

ORTHOCHÆTES, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* geniculated, twelve-jointed, inserted between the base and apex of the rostrum; the scape reaching to the base of the latter, and a little incrassate at the tip; funiculus six-jointed, slender, its basal joint rather longest, clavate, remainder lenticular, setose, subequal; club thick, ovate-globose, subsolid; head small, produced into a long, rather stout, slightly bent, rugose, carinated rostrum; eyes small, globose; *thorax* cylindric, narrowed towards the apex, slightly emarginate behind; *scutellum* wanting; *elytra* oblong-oval, united, setigerous; legs short, subequal; *femora* unarmed; *tibiæ* a little sinuated within, with the apex truncate, unarmed.

Type of the genus, *O. setiger*; Germar. *Novæ Spec. Coleopt.* p. 304. One species only, which inhabits Britain and Germany.

O'RTHODOX, } Fr. *orthodoxe*; It. *ortodoso*; Sp.
ORTHODOXAL, } *orthodoxo*; Lat. of the Lower Ages,
O'RTHODOXLY, } *orthodoxus*; Gr. *ὀρθόδοξος*, one
O'RTHODOXNESS, } whose opinion (*δόξα*) is right,
O'RTHODOXY. } (*ὀρθή*.)

One whose opinion or doctrine is right; right faith or doctrine: in Religion, consistent with, according to the Scriptures; in Polemics, according to particular creeds.

But also hath excommunicated them as heretikes which appeare heere to be more *orthodoxasticall* christians than they themselues.

Fox. *Martyrs*. Anno 1237. fol. 258.

Do not confound yourself with multiplicity of authors, two is enough upon any science, provided they be plenary and *orthodox*.

Howell. *Letter* 5. book i. sec. 5.

In plaine termes, how hath he made us a truly-*orthodoxe* church: eminent for purity of doctrine, for the grave and reverend solemnities of true sacraments, for the due form of government, for the pious and religious forme of our publique lyturgie?

Hall. *Works*, vol. ii. p. 314. *Sermon Preacht at Westminster*, April 5, 1628.

This was the partiality, this degrading of the bishops, a thing wholesome in the state, and *orthodoxal* in the church both ancient and reformed.

Milton. *Works*, vol. i. p. 392. *Answer to Eikon Basilike*.

Thus many ways it may *orthodoxally* be understood how God or Moses suffer'd such as the demanders were, to divorce for hardness of heart.

Id. *Ib.* fol. 250. *Of Nullities in Marriage*.

If any question be moved concerning the doctrine of the church of England expressed in the thirty-nine articles, give not the least ear to the movers thereof: that is so soundly and so *orthodoxly* settled, as cannot be questioned without extreme danger to the honour and stability of our religion.

Bacon. *Works*, vol. ii. p. 260. *Advice to Sir George Villiers*.

I confess an *orthodox* faith can never bring us to heaven, without an holy life, but so neither can an holy life do it, without an *orthodox* faith; for heresies are damnable, as well as sins, 2 Pet. ii. 1.

Bishop Beveridge. *Works*, vol. ii. *Sermon* 138.

Tillemont vainly endeavoured to shew that Crystostom (according to the notions of *orthodoxy*) was *orthodox* in this point.

Jortin. *Dissertation* 2. p. 27.

ORTHO-
CERA.
—
ORTHO-
DOX.

ORTHO-
EPY.
—
ORTHO-
NYX.

ORTHOEPY, Gr. ὀρθοεπεία, formed from Gr. ὀρθός, right, and εἶπεν, a word; ἔπ-ειν, to speak.

Right speech or pronunciation.

Part of grammar concerning the most convenient marks or sounds for the expression of such names or words, whither by writing, orthography, or by speech, *orthoepy*.

Wilkins. Real Characters, part iii. ch. i. fol. 298.

ORTHOAGONAL, Fr. *orthogonal*; Sp. *orthogonio*; Lat. of Lower Ages, *orthogonius*; Gr. ὀρθογώνιος, formed from the Gr. ὀρθός, right, and γωνία, an angle. Rectangular.

It is not Necham, or any else that can make me entertain the least thought of the signification of Dulcarnon to be Pythagoras's sacrifice after his geometrical theorem in finding the squares of an *orthogonal* triangle's sides, or that it is a word of Latin deduction.

Drayton. Preface to the Polyolbion.

ORTHOGRAPHY, } Fr. *ortographe*; It. *orto-*
ORTHOGRAPHER, } *grafia*; Sp. *orthographia*;
ORTHOGRAPHICAL. } Lat. *orthographia*; Gr. ὀρ-
θογραφία, from ὀρθός, right, and γραφή, writing, describ-
ing. It is applied to

The right mode of writing or spelling words; and also in Architecture, to the description of the erect elevation of a building. And see the Quotation from *Wilkins* and *Holland*.

Ransake yet we would if we might,
Of this worde the true *ortographie*
The very discent and ethimologie.

The Remedy of Loue. Imputed to Chaucer.

Orthographie, that is to say, the forme and precise rule of writing set down by grammarians, he did not so much observe: but seemeth to follow their opinion rather, who thinke, *Men should write according as they speake*.

Holland. Suetonius. Augustus, ch. lxxxviii.

He was wont to speake plain and to the purpose, (like an honest man and a souldier,) and now is he turn'd *orthography* (i. e. *orthographer*;) his words are a very fantastical banquet iust so many strange dishes.

Shakspeare. Much Ado about Nothing, fol. 107.

Orthography is that part of grammar which concerns the doctrine of letters, which being the most simple elements of speech, it ought therefore to be so stated, that there may be a sufficient number of them to express all articulate sounds, and not more then are necessary to this end.

Wilkins. Real Characters, part iii. ch. x. fol. 357.

Orthography, or the erect elevation of the same in face or front, describ'd in measure upon the former idea, where all the horizontal lines are parallels.

Evelyn. Miscellaneous Writings, p. 371. *Of Architects and Architecture*.

I received from him the following letter, which after having rectified some little *orthographical* mistakes, I shall make a present to the public.

Addison. Spectator.

ORTHOLOGY, formed of Gr. ὀρθός, right, and λόγος, a word. See the Quotation.

The natural, and as it were the homogeneal, parts of grammar be two; *orthology*, and *orthography*: in both which parts of it, God hath put his special hand; as even by the Heathen themselves is acknowledged in the first of them, *orthology*; in teaching men the right imposition of names: the second of them, *orthography*; in teaching them the rare invention of letters.

Fotherby. Atheom, (1622,) p. 346.

ORTHONYX, from the Greek ὀρθός, straight, and ὄνυξ, a nail, Tem. In *Zoology*, a genus of animals belonging to the family *Tenuirostres*, order *Passeres*, class *Aves*.

Generic character. Beak very short, compressed, almost straight, notched at the point; nostrils lateral, and in middle of the beak, which they completely perforate, and surmounted with hairs; wings very short, first five quills graduated, the sixth the longest; tail

broad, long, the quills strong with very long sharp points; tarsus much longer than the middle toe, which is of equal length with the outer; claws longer than the toes, strong, but slightly curved; grooved laterally.

But one species only of this genus has hitherto been discovered.

O. Spinicaudus, Tem.; *Spiny-tailed Orthonyx*. Of a rusty-red colour above, marked on the shoulders with some brown streaks; lesser wing-coverts grey streaked with brown; feathers on the crown slightly lengthened into a kind of tuft; tail rounded and of a dingy-brown colour, the stem of each feather terminating in a point garnished with little rough hairs; on the breast of the male a very bright orange, and on that of the female a white badge. It climbs trees like the Woodpeckers, and is found in the Southern parts of Australia.

See *Temminck, Planches Coloriées*.

ORTHOPERUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* short, clavate, rather slender, the two last joints forming the club; *trophix* minute; head also minute, narrow, not concealed beneath the thorax, which is ample, subovate, slightly convex, the sides not deflexed; *elytra* rather convex, subovate, the apex somewhat truncate; legs slender; *tibiæ* simple; *tarsi* pentamerous, obscurely articulated.

Type of the genus, *Dermestes punctum*; *Marsham, Ent. Brit.* vol. i. p. 80. Six indigenous species, extremely minute.

ORTHOPOGON, in *Botany*, a genus of the class *Triandria*, order *Digynia*, natural order *Gramineæ*. *Generic character*: glume two-flowered, two-valved, exterior valve aristate, interior valve short; florets dissimilar, sessile; exterior florets, males or neuters, interior, hermaphrodite; seeds enclosed in the cartilaginous calyx.

Four species, grasses, natives of New South Wales.

ORTHORHINUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* geniculated, twelve-jointed, rather slender, the basal joint long, sublinear, second and third obconic, the fourth to the eighth short, with the apex truncate, the remainder forming an oblong-ovate club; head small, produced in front into an elongate, straight, perpendicular, cylindric rostrum; eyes small, ovate, depressed, somewhat approximating in front; *thorax* long, coarctate in part, and a little produced on the anterior margin in the middle; *scutellum* minute, distinct; *elytra* oblong, with a callus towards the apex; legs simple, anterior rather long; *tibiæ* compressed, with a hook at the apex; *tarsi* tetramerous.

Type of the genus, *Rhynchænus cylindrirostris*; *Fabricius, Syst. Eleut.* vol. ii. p. 463. One species only, a native of New Holland.

ORTHOSIA, in *Zoology*, a genus of *Lepidopterous* insects.

Generic character. *Antennæ* simple in the females, bipectinated, or ciliated in the males; *palpi* nearly horizontal, densely clothed with elongate scales, the terminal joint scarcely projecting, triarticulate; basal joint a little bent, above half the length of the second, and more robust, second nearly straight, terminal about the length of the basal, obscurely pear-shaped; *maxillæ* shorter than the *antennæ*; head small, with long scales above; *thorax* not crested, stout, woolly; *abdomen* short, tufted at the apex in the males, stout and acute in the females; wings slightly deflexed during repose, entire;

ORTHO-
NYX.
—
ORTHO-
SIA.

ORTHO-SIA. anterior elongate, the apex a little rounded and somewhat acute; posterior short, ovate-triangular; legs moderate. *Larva* naked, longitudinally streaked; *pupa* subterraneous.

ORTHRA-GORIS-CUS. Type of the genus, *Noctua instabilis*; Dennis and Scheiffermüller. Hübner, *Noct.* pl. xxxv. fig. 165. A genus of plain moths, of which about seventeen are found in Britain.

ORTHOSTEMON, in *Botany*, a genus of the class *Tetrandria*, order *Monogynia*, natural order *Gentianæ*. Generic character: calyx tubular, four-toothed; corolla one petal, border deeply four-cleft, withering; stamens prominent; anthers bursting lengthwise; stigmas two.

A genus of herbaceous plants, natives of New Holland.

ORTHOTRICHUM, in *Botany*, a genus of the class *Cryptogamia*, natural order *Musci*. Generic character: capsule oblong, terminal, outer fringe of sixteen teeth, inner fringe of eight or sixteen thread-like teeth, sometimes wanting; veil angular.

A genus of Mosses, mostly natives of Europe, several of the species are natives of England. *Eng. Bot.*

ORTHORAGORISCUS, from the Gr. ὀρθραγορίσκος, a sucking pig, Schneider; *Sunfish*, Ray. In *Zoology*, a genus of animals belonging to the family *Gymnodontes*, order *Plectognathi*, class *Pisces*.

Generic character. Gills furnished with membrane and opercule; jaws undivided, bare, and toothless; body compressed, truncated behind, and not capable of inflation; tail very short and vertical; no ventral fins; dorsal and anal deep pointed and connected with the caudal fin, which is in form of a narrow band.

The name applied to this genus is that which, according to Pliny, was given by the ancient Lacedæmonians to a large fish which when first caught uttered a noise like the grunting of a Pig; and the *Sunfish* of the Mediterranean, according to Rondeletius, producing this sound; Schneider has employed the term to designate some individuals taken from the Linnæan genus *Tetraodon*.

O. Mola, Schneid.; *Tetraodon Mola*, Lin.; *la Lune ou Mole*, Rondel.; *Short Sunfish*, Pen. Its vertical and longitudinal dimensions are from four to twelve feet; but in the year 1735, one was taken on the Irish coast which measured twenty-five feet, and consequently at night exhibited a disc of more than four hundred square feet: its weight varies from three to five hundred pounds; the mouth is very small, the body compressed, but not spiny like the *Tetraodons*, nor capable of inflation like the *Diodons*; dorsal and anal fins very long, consisting of unequal rays, of which the anterior are the longest; skin hard and rough; general form of the fish nearly circular, and hence its name Sun or Moonfish; back varied with deep and black cloudings; the sides and belly are very brilliant, silvery-white, especially when exposed to the Sun, but at night also it is equally resplendent, giving out a phosphorescent light, depending on the quantity of oil with which its skin is imbued, and is said to be often mistaken for the reflection of the Moon on the sea. Whilst swimming it rolls over like a wheel, and when caught utters the grunting noise above referred to. It is not much sought after as its flesh is both unsavoury and fetid, but it yields a tolerable quantity of oil. It is found in almost all latitudes between the Cape of Good Hope and the North Seas.

O. Oblongus, Schneid.; *Sunfish*, Pen. About two feet and a half long; body twice as long as its breadth,

VOL. XXV.

and marked with small hexagonal figures. Found in the Atlantic.

O. Fasciatus, Schneid.; *Striped Sunfish*. About three feet long and two broad; body spherical, rough, and striped; tail rounded. In the North Seas.

O. Hispidus, Schneid.; *Hispid Sunfish*. Top of the head grooved; four rows of very sharp points passing on each side from the head to the tail.

See Lacedpe, *Histoire des Poissons*; Bloch, *Ichthyologia a Schneider*.

ORTOCHILE, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* capitate, very closely approximating, shorter than the head, three-jointed, the first slender, subelongate, cylindric-obconic, the other two forming a subglobose capitulum, and bearing on the back an elongate, single, hair-like seta; *palpi* small, filiform, porrect; *proboscis* also small and porrect, acuminated at the tip: wings two, iridescent; legs short, rather stout; posterior *femora* slightly incrassated.

Type of the genus, *O. nigro-cæruleus*; Latreille, *Gen. Crust. et Ins.* vol. iv. p. 289. One species only, a native of France and England, in the latter Country rare.

ORTOLAN, Fr. *ortolan*; It. *ortolano*; which Menage derives from *hortulanus*, *q. d.* a bird that frequents gardens, the hedges of gardens.

Not *ortolans*, nor godwits, nor the rest
Of costly names that glorify a feast,
Are at the princely tables better cheer
Than lamb and kid, lettuce and olives here

Cowley. *Horace. Epod. Ode 2.*

Cawthorn had once a mind to fix
His carcase in a coach and six,
And live, if his estate would bear it,
On turtle, *ortolans*, and claret.

Cawthorn. *The Lottery.*

ORYCTEROPUS, from the Gr. ὀρύσσω, I dig, and πούς, a foot, Geoffroy. In *Zoology*, a genus of animals belonging to the family *Edentata*, order *Edentata*, class *Mammalia*.

Generic character. Head very long and nose taper; molar teeth six on a side in each jaw, cylindrical and composed of bundles of tubes surrounded with bony substance, the first very small, second larger, and consisting of two cylinders joined together, third and fourth of same form but larger, the fifth the largest of all, and the sixth a little larger than the third; tongue extensile; ears very long and pointed; fore feet four-toed, hind feet plantigrade and five-toed, all furnished with very strong claws nearly resembling hoofs, and fit for digging; tail long and rounded; skin very tough, similar to that of the *Pachydermata*, and covered with few coarse hairs.

This genus, on account of its food, was long confounded with the Ant Eaters, from which, however, it differs remarkably in having molar teeth, and in its nails being flat instead of sharp and cutting. There is but one species.

O. Capensis, Geoff.; *Myrmecophaga Afra*, Pallas; *Ground Hog* of the Cape Colonists. This animal is about four feet in length from the snout to the root of the tail, which is two feet long and tapering towards its tip; in shape it has been compared to the Hog, but the resemblance is not very close; it stands low on the legs; the body thick and rounded; general colour dingy-grey inclining to reddish on the sides and belly; the extremities of the feet dark brown; hair on the back and

sides longer than elsewhere, but sparing; the tongue is about sixteen inches long, and covered with a viscous secretion for the purpose of entangling the Ants on which they feed, and which they catch in great quantities, establishing themselves for this purpose in the neighbourhood of ants' and termites' hills. They live in burrows, which they dig with their claws and snout. The great size of these burrows is well exemplified in an account given by Thompson in his *Travels in Southern Africa*, of a man's life having been preserved by falling into one of them. Two persons were hunting Gnoos on the plains, and one of those animals having been wounded by a musket-ball (in which condition they are very furious) gave chase to the gentleman and was gaining fast upon him, when all at once he disappeared in one of these holes which was concealed by the long grass. There he lay for some time secure from the enraged animal, which after searching for him in vain scampered off in another direction, nor could his friend, who was galloping to his assistance, conceive what had become of him, until he saw to his great satisfaction and amusement, his head cautiously emerging from the bowels of the earth. They are much sought for as food by the Hottentots, but Le Vaillant says, that the flesh has a disagreeable taste, and smells strongly of formic acid. Is found in the neighbourhood of the Cape of Good Hope.

See Pallas, *Miscellanea Zoologica*; Desmarest, *Mammalogie*; Pennant, *History of Quadrupeds*.

ORYCTES, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* clavate, with the basal joint very robust, clavate, pilose; the second smaller, subglobose; the third still less, globose; the four following transverse, very short; the remainder forming a triphyllous plicatile club; *palpi* four in number, with the terminal joint oval; mandibles with their external edge without teeth; *maxillæ* entire, one-lobed, ciliated; *mentum* ovate, pilose; head triangular, horned; *thorax* retuse, with the sides dilated and a little rounded; body ovoid, convex, pilose; anterior *tibiæ* tridentate externally; posterior ciliated.

Type of the genus, *Scarabeus nasicornis*, Linnæus; Roësel, *Ins. Belustigung*, vol. ii. pl. vi. and vii. A not very extensive genus, found chiefly in temperate regions, and of which one species (the type) is supposed to be indigenous.

ORYSSUS, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* many jointed, inserted near the mouth; *labium* entire; mandibles without teeth on the inner edge; *palpi* maxillary long, depending, five-jointed; head nearly globular; wings clouded, anterior with one marginal and two submarginal areolets, the latter incomplete; body sessile, cylindric; *ovipositor* hair-like, rolled spirally in the abdomen.

Type of the genus, *O. coronatus*, Fabricius; Klug, *Monog. Sirri*, pl. i. fig. 1—3. One species only, a native of Europe; found, but very rarely, in England.

ORYZA, in *Botany*, a genus of the class *Hexandria*, order *Digynia*, natural order *Gramineæ*. *Generic character*: flower a terminal panicle; calyx, glume two-valved, one-flowered; corolla two-valved, nearly equal; stigma plumose, rather long; seed oblong, compressed.

One species, the valuable *O. sativa*, producing the rice, which is cultivated in a greater quantity than any other vegetable, the wheat perhaps not excepted; like the wheat, it is not certainly known in what Country it

is indigenous; there are several varieties, or, according to Loureiro, species, from one of which the *O. glutinosa*, the Chinese extract an intoxicating fermented liquor which they call Samsu.

ORYZOPSIS, in *Botany*, a genus of the class *Triandria*, order *Digynia*, natural order *Gramineæ*. *Generic character*: calyx one-flowered, two-valved, valves loose, obovate, about the length of the corolla; corolla coriaceous, two-valved, pubescent at the base, exterior valve awned.

One species, *O. asperifolia*, native of North America.

OSBECKIA, in *Botany*, a genus of the class *Oclandria*, order *Monogynia*, natural order *Melastomæ*. *Generic character*: calyx four-cleft, the lobes separated by ciliated scales; corolla, four or five petals; capsule four or five celled; receptacle compressed.

Two species, natives of China and Ceylon.

O'SCILLATE, } Fr. *osciller*, *oscillation*; Sp. *oscil-*
OSCILLA'TION, } *lacion*; Lat. *oscillo*, which Vossius
OSCI'LLATORY. } and Francis Junius think is *obs* and
cillere, i. e. *movere*, to move; *nam per uera librati* movebantur. Applied to

The motion of a pendulum; motion backward and forward; this way and that; wavering.

The perpetual *oscillations* of this elastic and restless element operate without ceasing on all things that have life, whether animal or vegetable, keeping their fibres, vessels, and fluids in a motion, always changing; as heat, cold, moisture, dryness, and other causes alter the elasticity of the air.

Berkeley. *Works*, vol. ii. p. 528. *Siris*, sec. 138.

Stimulating substances, taken in diet, increase heat, because they increase the *oscillatory* motion of the solids, but most of all inflammatory spirits.

Arbuthnot. *On Aliments*, &c. prop. iv. sec. 36. p. 116.

If to please an administration, the Judges can go one way to-day, to please the crowd they can go another to-morrow; if they will *oscillate* backward and forward between power and popularity, it is high time to fix the law in such a manner as to resemble, as it ought, the great Author of all law, in whom there is no variableness nor shadow of turning.

Burke. *Works*, vol. x. p. 122. *Powers of Juries in Prosecutions for Libels*.

OSCINIS, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* much shorter than the head, triarticulate, the basal joint very short; the second triangular, obconic; the third longer than the second, rather larger, compressed, rounded, and somewhat semiorbicular at the apex; at the base of the second is a simple, incrassated, jointed seta; body rather short; wings decumbent; legs moderate; *femora* slightly incrassated.

Type of the genus, *Musca formosa*; Panzer, *Faun. Ins. Germ.* pl. lix. fig. 21. A numerous genus, of which several species are found in Britain.

O'SCITANT, } Fr. *oscitation*; Sp. *oscitancia*;
O'SCITANCY, } Lat. *oscitatio*, *oscitare*, *ab ore*
O'SCITANTLY, } *ciendo*, from moving the mouth, the
OSCITA'TION. } jaws of the mouth.

Gaping, yawning; and consequently, idle, lazy.

His [God] legal justice cannot be so fickle and so variable, sometimes like a devouring fire, and by and by connivent in the embers, or, if I may so say, *oscitant* and supine.

Milton. *Works*, vol. i. fol. 188. *The Doctrine and Discipline of Divorce*.

We have also shown, that, according to Moses his philosophy, the soul is secure both from death and from sleep after death; which those drowsy nodders over the letter of the Scripture have very *oscitantly* collected, and yet as boldly afterwards maintained,

LUS.

It might proceed from the *oscitancy* of transcribers, who, to dispatch their work the sooner, used to write all numbers in cyphers.

Addison. *Spectator*.

But I shall defer considering this subject at large till I come to my treatise of *oscitation*, laughter, and ridicule.

Tatler, No. 63.

Now blame we most the nurslings or the nurse?
The children crook'd, and twisted, and deform'd,
Through want of care; or her, whose winking eye,
And slumb'ring *oscitancy* mars the brood?

The nurse no doubt.

Cowper. *The Task*, book ii.

OSCULARY, from *osculum*, a kiss.

Some [brought forth] *oscularies* for kissers.

Latimer. *Sermons* p. 12.

OSIER, Fr. *osier*, the low-water-willow, perhaps (Skinner) from the Gr. *οἰσῖα*, *salix*. Salmasius forms *οἰσαριον*, from *οἶσρον*, thence *hausarium*, and from that the Fr. *osier*.

The trivial name of the *Salix viminalis* of Linnæus.

Ye shall have of these *osiers* some that are very fine and passing slender, wherof are wrought pretie baskets and many other daintie devises; others also that are more tough and strong, good to make paniers, hampers, and a thousand other necessarie implements for countrey houses, and to fit the husbandmen.

Holland. *Plinie*, book xvi, ch. xxxvii.

Those with bending *osier* bound,
That nameless heave the crumbled ground,
Quick to the glancing thought disclose,
Where toil and poverty repose.

Parnell. *A Night Piece. On Death*.

Logs of green wood that quench the coals
Are married just like Stoic souls,
With *osiers* for their bands.

Watts. *Few Happy Matches*.

OSMIA, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* geniculated; *palpi* maxillary with four joints, a little decreasing; labial with the second joint not longer than the basal; mandibles broad, irregularly dentate; *abdomen* convex above, thickly clothed with a silken down beneath in the females; transversely truncate at the base, subovate; wings four, the anterior with the extremity of the lower discoidal areolet not reaching beyond that of the submarginal one; legs short, stout.

Type of the genus, *Anthophora bicornis*, Fabricius; Panzer, *Faun. Ins. Germ. Hist.* pl. lvi. fig. 10; pl. lv. fig. 15; pl. lxxv. fig. 20. Ten species found in Britain, on flowers, &c.; they nidificate in old banks, &c. other species are found on the Continent of Europe.

OSMITES, in *Botany*, a genus of the class *Syngenesia*, order *Frustranea*. *Generic character:* calyx imbricated, scariose; radial florets strap-shaped; receptacle chaffy; down chaffy, many leaved, short, sometimes wanting.

Four species, natives of the South of Africa.

OSMYLUS, in *Zoology*, a genus of *Neuropterous* insects.

Generic character. *Antennæ* moniliform, consisting of numerous, very short articulations; *labium* transverse, margined, the apex straight; head small; *ocelli* three, approximating, placed in the forehead, in a triangle; *thorax* with the anterior segment (or collar) lower and narrower than the posterior; wings four, ample, reticulated; body small.

Type of the genus, *Hemerobius maculatus*, Fabricius; Reaumer, *Gen. Inst.* pl. xxv. fig. 1. A pretty genus, of which the type inhabits England and Scotland, frequenting rivulets in the vicinity of woods.

OSNABURG, or OSNABRUCK, a Province of Hanover, lies between the Grand Duchy of Oldenberg and the Prussian Province of Westphalia.

This Principality is bounded on the North and South by Munster; on the East by Hoya, Minden, and Ravensburg; on the West by Techlenburg and Lingen. It is traversed by the river Hase from North to South.

It forms an irregular oblong, stretching from South to North; and contains an area of about 920 square miles, varying in breadth from 16 to 24 miles, and being about 40 miles in length. The moiety of this Province consists of heath-lands; but its want of wood is compensated by turf from the bogs, and by its coal-mines. The corn raised is chiefly rye, oats, and buck-wheat, besides hemp and flax in great quantities. The principal manufacture carried on by the inhabitants is the linen termed *Osnaburgs*, and the spinning of yarn; the annual proceeds of which may amount to £200,000. It exports hams too in considerable quantities. In the Summer time the inhabitants, to the number of 5000 or 6000, travel into Holland, where they are employed, partly in agriculture and partly in the breweries, and oil and sugar-works, while others engage in the fisheries. The greater part of these return home in Winter, and find employment in the linen trade of their Country. This Bishopric is the oldest in Westphalia; and at the Peace, in 1648, it was settled that it should have alternately a Roman Catholic and a Lutheran Bishop; the latter to be chosen out of the House of Brunswick-Luneburg, and from the posterity of Duke George; on failure of which the Bishop was to be selected from the descendants of Duke Augustus. However, on the settling of the indemnities at Ratisbon, in 1802, it was agreed that the Bishopric should devolve in perpetuity on the House of Hanover, on condition that the King of England, as Elector of Hanover, should resign all pretensions to his rights in the cities of Hamburg and Bremen, together with his pretensions to Hildesheim, Corvey, and Hexter, &c. By the Peace of Tilsit, in 1807, it was annexed to the Kingdom of Westphalia; but at the General Peace of 1814 it was restored to Hanover. This Principality has its Provincial States, Chancery, Consistory, and Local Government, like the other Provinces of Hanover. The Land-States are, the Chapter, the Knights, and the principal Towns. The Land-Diets are appointed by the Bishop, and held in the town of Osnaburg. Its population amounts to about 117,896 persons. It is divided into six bailiwicks, and its public revenue is about £60,000 sterling.

Osnaburg, or *Osnabruck*, the Capital, was made the Metropolis of a Diocese by Charlemagne; and here likewise the celebrated Treaty of Westphalia was signed in 1648 by the Emperor and the Swedish Plenipotentiaries, whose portraits are preserved in the Maison de Ville in which they assembled. The origin and etymology of the town are equally uncertain; some maintaining that it was derived from Osenbrück, (Bridge on the Osen,) and others from Ochsenbrück. (Bridge for Oxen.) However, the petty river which traverses the town is not the Osen, but the Hase. It is divided into the Old and New Towns, and is fortified in the ancient style with walls and ditches. With the exception of a few streets, and particularly the one leading to the Castle, it is irregularly

OSMY-
LUS.
—
OSNA-
BURG.

OSNA-BURG. and ill-built. The chief buildings are the Cathedral, the Maison de Ville, the Castle, a large edifice, surrounded by a garden and adorned with fountains; and it contains four Churches, two Lutheran and two Roman Catholic, four Hospitals, and a Roman Catholic and Lutheran Gymnasium. In addition to these may be mentioned an Orphan Asylum for the Lutherans, and a Workhouse. Notwithstanding the preponderance of the Bishop, who was Sovereign in the town, Osnaburg was one of the first places that embraced the Reformed Religion. There are at present two Bishops of Osnaburg, a Roman Catholic and an Anglican. A public walk here, called the Freyung, is the favourite resort of the inhabitants. The manufactures consist of coarse woollen, leather, and tobacco, and of the linen termed Osnaburgs.

Two Fairs are held here every year, to which are brought the commodities which have been purchased at the Fairs of Brunswick, Leipsick, and Frankfort. George I., King of England, died in this town on his way to Hanover. Population 9300. North latitude $52^{\circ} 16' 35''$, East longitude $8^{\circ} 1' 11''$.

Iburg, in the South-West of Hanover, contains a Benedictine Abbey and a Castle, and is situated on the river Colbeck. Ten miles South-West of Osnaburg, and 30 North-East of Munster.

Wiedenbruck is seated on the river Ems, 32 miles East South-East of Osnaburg, and has a population of 1800.

Quackenbruck is a small town, traversed by the river Hase, which divides itself here into seven small channels; at a short distance below the town these reunite into two. It is 26 miles North of Osnaburg, and 44 South-West of Bremen.

Catteau de Caleville, *Voyage en Allemande*; Peuchet, *Dictionnaire de la Geogr. Commerç*; and Mangourit, *Travels in Hanover*.

OSPHRONEMUS, from the Greek *ὀσφραίνωμαι*, I smell; Commerson; *Goramy*. In *Zoology*, a genus of animals belonging to the family *Squamipennes*, order *Acanthopterygii*, class *Pisces*.

Generic character: the whole head and the branchiostegous membrane scaly, as also the roots of all the vertical fins; mouth small, teeth very fine and short; preopercule and suborbital finely toothed on their edge; one of the rays of the ventral fins forming a long thread as long as the whole body, and similar to the antennæ of some insects.

This genus was founded by Commerson from a specimen he met with in the Isle of France, in which the pharyngeal bones, mistaken by him for the ethmoid, had a very complicated structure, which he imagined to assist in smelling. There is but one species.

O. Olfax, Commers.; *Goramy*. Is about two feet long, and the body very deep and compressed, so that the lower part of the belly and tail, and the posterior part of the back assume a keel shape; on this part of the back, at a short distance from the tail, is a kind of notch, which much diminishes the height of the animal: the body, tail, gill-flaps, and head are covered with broad scales, and smaller ones envelope large portions of the dorsal and anal fins. The *Goramy* is of a brown colour, marked with a reddish tinge on the fins, and deeper on the back; sides and under part have the scales silvery and edged with brown, so as to give the appearance of network. The fish is indigenous to China and Batavia, but it has been conveyed to the Isle

of France, where it has multiplied exceedingly in the rivers, and it is considered one of the best flavoured freshwater fish.

O. Gallus, Lacep.; *Labrus Gallus*, Gmel. Is of a deep green colour, and each scale marked with a little transverse violet or purple line; two blue bands extend along the belly; the dorsal and anal fins are violet at their base, and blue on their outer edge; pectorals blue, and violet in the centre; thoracic blue; caudal yellow, and orange in the middle, violet on the sides, and blue on the circumference. This fish was found by Forskael on the coast of Arabia; it is considered by the natives to be very poisonous.

See Lacepede, *Histoire des Poissons*.

O'SPRAY, } Fr. *offraye*, *ossifrague*; Lat. *ossi-*
O'SSIFRAGE. } *fraga avis*; because of their strength to break bones, (*frangere ossa*.)

The trivial name of the *Falco Ossifragus* of Linnaeus.

The ospray oft here seen, though seldom here it breeds.

Drayton. *Poly-olbion*, song 25.

Moreover, these *orfraies*, or *ospreies*, (the *Haliartos*), are not thought to be a severall kind of eagles by themselves, but to be mungrels, and engendred of divers sorts. And their young *ospraies* be counted a kind of *ossifragi*.

Holland. *Plinie*, book x. ch. iii.

Some reckon yet another kind of eagle, which they call *barbatae*; and the Tuscans, *ossifrage*. Id. Ib.

OSSÆA, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Melastomaceæ*. Generic character: calyx four-lobed, lobes short, acute; corolla, petals four, acute, lanceolate; stamens short; style filiform; stigma simple; berry four-celled, crowned with the lobes of the calyx; seeds ovate, angular.

A genus divided from *Melastoma*, containing fifteen species, mostly natives of the West Indies.

O'SSEOUS, } Fr. *osseux*, *ossifier*; It. *ossoso*;
O'SSICLE, } Lat. *osseus*, from *os*, *ossis*, a bone;
O'SSIFY, } Gr. *ὀστούν*, *ὀστέον* παρὰ το σῆμα, *στέον*,
OSSI'FICK, } καὶ *ὀστέον* τὸ αἴτιον τῆς στάσεως,
OSSIFICA'TION, } that by which we are enabled to
OSSI'VOROUS. } stand. See in *Lennepe*.

To become bone, or bony.

Ossivorous, devouring bones.

Osteology; Gr. *ὀστέον*, and *λέγειν*, to discourse.

Brown, *Christian Morals*, uses *osseous* met. "the *osseous* and solid part of goodness."

There are three very little bones in the ear, upon whose right constitution depends the due tension of the tympanum; and if the action of one little muscle which serves to draw one of these *ossicles*, fixt to the tympanum, be lost or abated, the tension of that membrane ceasing, sound is hindered from coming into the ear.

Holder. *On Speech*.

Ossifications, or indurations of the artery, appear so constantly in the beginnings of aneurisms, that it is not easy to judge whether they are the cause or the effect of them.

Sharp. *Surgery*.

The dilated aorta every where in the neighbourhood of the cyst is generally *ossified*. Id. Ib.

And you may thereby dry the bone, and dispose it by virtue of its *ossifick* faculty to thrust out a callus, and make separation of its caries. Wiseman. *Surgery*, vol. i. book ii. ch. vii. p. 297.

In the fox, which both feeds on bones, and swallows whole, or with little chewing; and next in a dog, and other *ossivorous* quadrupeds, 'tis (the bone of the gullet) very large, viz. to prevent a contusion therein.

Dr. Grew. *Comparative Anatomy of Stomach and Guts*, ch. v.

OSPHRO-NEMUS.

OSSEOUS.

OSSEOUS. The bone in these places is kept soft and imperfect in consequence of a more complete and rigid *ossification* being prevented from taking place by the continual motion and rubbing of the surfaces.

Paley. Natural Theology, ch. viii.

Osteologists have very well observed, that the parts appertaining to the bones, which stand out at a distance from the bodies, are either the adnate or the enate parts.

Smith. On Old Age, p. 176.

He [John Vandergutch] is much commended by Cheselden in the preface of his *Osteology*, in the prints of which he had much share.

Walpole. Anecdotes of Painting, vol. v. p. 221.

OSSES. Holland renders *bonis ominibus*, "with good *osses* and luckie forespeakings:" he explains his own meaning in the second Quotation.

But these complaints, which will be nothing pleasant, no not when perhaps they shall be needfull, banish we must (howsoever we doe) at our first entrance of so weightie a matter: when as we rather should begin (if, as the Poets use, it were our manner also) with good *osses* and luckie forespeakings, with voves and praiers to Gods and Goddesses to vouchsafe their furtherance and happie succeſſe to the enterprize of so great a worke.

Holland. Livius, fol. 3.

Osses be words cast forth at unwares, presaging somewhat.

Id. Plinie. Explanation of the Wordes of Art.

OSTENT, n.

OSTE'NSIBLE,

OSTE'NSIBLY,

OSTE'NSIVE,

OSTE'NSIVELY,

OSTE'NTIVE,

OSTE'NTATE,

OSTENTA'TION,

OSTENTA'TIOUS,

OSTENTA'TIOUSLY,

OSTENTA'TIOUSNESS,

OSTE'NTOUS.

Fr. *ostensible, ostentation*; It. *ostentare, ostentazione*; Sp. *ostentarse, ostentacion*; Lat. *ostentare, ostendere*; obs. and *tendere*, to reach or hold forth; to exhibit.

Ostent; exhibition, presentment; appearance; (ominous or portentous) appearance.

Ostentation; exhibition, show, display; vain show or display.

Ostensible; that may or can be shown or exhibited; shown, exhibited, apparent; presented or pretended.

Which myraculous *ostent* passing the ordinary course of naturall causes, as was sent of God, no doubt to foreshew the great and terrible persecution, which afterward fell.

Fox. Martyrs, fol. 809. col. 2.

The dyuel and hys witches and necromancers, al theyr wonderful workes draw to no fruteful end, but to a fruitelesse *ostentacion* and show.

Sir Thomas More. Workes, fol. 1191. A Dialogue of Comfort against Tribulacion.

It is my glory (putting trust in Jove and other Gods)

That I shall now expulse these dogges, fates sent to our abodes; Who bring *ostents* of destinie, and blacke their threatning fleet.

Chapman. Homer. Iliad, book viii. fol. 115.

Who is so open-hearted and simple, but they either conceal their defects, or *ostentate* their sufficiencies, short or beyond what either of them really are.

Bishop Taylor. Artificial Handsomeness, p. 169.

So lost his treasure getting nought in lieu,

But *ostentation* of a foolish pride,

While women fond, and boys stood gaping wide.

P. Fletcher. The Purple Island, can. 7.

These things were in the letters, with many more ceremonies of a kind of holy *ostentation*.

Bacon. King Henry VII. fol. 105.

Upon the highest mountain 'mongst the Alps, he left this *ostentous* inscription upon a great marble pillar.

Howell. Letter 29. book i. sec. 5.

Though once *ostentive*, curious to be seene,

Thou in some corner now would'st wish to lurke.

Stirling. Doomes-day. The sixth Houre.

— Their mother flew,

And hover'd round her care; but still in view;

Till the fierce reptile first devour'd the brood;

Then seiz'd the fluttering dam, and drank her blood;

This dire *ostent* the fearful people view.

Dryden. Ovid. Metamorphoses, book xi.

It was a custom also, for *ostentation* of strength and valour at their public sights and shows, for persons to entertain the spectators with duels, and to die like fools to please they knew not whom.

South. Sermons, vol. x. p. 221.

Blind *ostentatious* madness! to display

Your wealth to whom ev'n Civil war's a play,

And tempt an armed guest to seize the prey.

Hughes. Lucan, book x.

From Antwerp he [Rubens] was called to Paris by Mary de' Medici, and painted the *ostensible* history of her life in the Luxembourg.

Walpole. Anecdotes of Painting, vol. ii. ch. ii. p. 140.

It is certain that he [D'Ouville] ingratiated himself much with that favourite and attended him into Spain, where he was even employed in the treaty of marriage, though *ostensibly* acting only in the character of a painter.

Id. Ib. ch. ii. p. 91.

Affecting cynical grimace

With philosophic stupid face,

In dirty hue, with naked feet,

In rags and tatters stroll the street;

Ostensively exceeding wise.

Lloyd. A Familiar Epistle to a Friend.

I mention this not *ostentatiously*, as taking credit on the score of industry and discovery, but hoping that the labour of the task will be some apology on my behalf.

Observer, No. 148.

OSTEOLOGY. See **OSSEOUS.**

OSTEOMANTY, Gr. *ὀστέον*, a bone, and *μαντεία*, divination.

Divination by bones; a word apparently invented for the occasion.

But why she could not as well divine of whose flock it [a ram's shoulder bone] was, as the other secret, when I have more skill in *osteomanty*, I will tell you.

Selden. Illustrations of Drayton's Poly-olbion, song 6.

OSTEOSPERMUM, in *Botany*, a genus of the class *Syngenesia*, order *Necessaria*. Generic character: calyx many-leaved; receptacle naked; down none; seeds globular, bony.

Twenty-eight species, mostly natives of the South of Africa.

OSTIARY, Lat. *ostiarius*, a door-keeper, from *ostium*, a door or entrance.

Ostiary was formerly the name of the keeper or porter of the church door; and as in the Quotation from Brown.

It is generally esteemed, and by most unto our dayes received, that the river Nilus hath seven *ostiaries*; that is, by seven channels disburdeneth itself into the sea.

Sir Thomas Brown. Vulgar Errours, book vi. ch. viii. p. 387.

OSTLER, also written *hostler*. See **HOST.** Fr. *hostelier*, a host.

Applied to the servant at an inn who has the care of the horses.

The inne-keeper was old, fourescore allmost,

Indeed an embleme rather then an host;

In whom we read how God and Time decree

To honour thrifty *ostlers*, such as he.

Corbet. Her Boreale.

OSTRACION, from the Greek *ὀστρακον*, a shell, Lin.; *Trunk Fish.* In *Zoology*, a genus of animals belonging to the family *Sclerodermes*, order *Plectognathi*, class *Pisces*.

Generic character. Body polygonal and with the head covered, instead of scales, with regular bony plates, which united together form an inflexible coat of mail, so that no part is movable except the tail, the fins, the mouth, and a kind of lip which is situated about the branchial aperture, all of which pass through holes in this armour; jaws each furnished with ten or twelve

conical teeth; to the gills there seems merely a cleft edge with a cuticular lobe, but within there are an opercle and six rays; no ventral fins; dorsal and anal single and very small.

The remarkable covering of this genus bears some analogy to the dorsal and ventral shields of the Tortoises, or rather to the bony armour of the Armadillos, and the cretaceous coverings of the *Crustacea*, many of the *Mollusca*, and the *Testacea*, from the supposed resemblance to the latter of which their name has been derived. But in reality they most closely approach the Armadillos, their hard covering being indeed bony, and the several portions of which it consists being so well joined together, that the whole seems but a single bone, in shape of an oblong box or coffer, in which the body of the fish is placed to protect it, the fins and tail being the only parts which are exposed. The form of the box varies considerably, sometimes it is triangular, at others quadrangular, that is, the two surfaces which occupy the sides unite on the back, and form there a more or less sharp ridge, and at other times are connected with a fourth face situated horizontally on the upper part of the body. Besides, there are occasionally longish processes or points on the bony coat which are most commonly grooved, and to which the name of horns has been given; but other species have none. These horns are situated on various parts, sometimes before the eyes, at the hinder under edge near the tail, or not merely at this part but also near the eyes. From these various circumstances Cuvier has arranged them, but he thinks it not improbable that some may be sexual differences. These fish are found only in Tropical Seas, in the Red and Indian Seas, and in that which bathes the American coast. They feed on *Crustacea* and *Testacea*, the shells of which they easily break down with their teeth.

a. Body triangular without spines.

O. Triquetus, Bloch; *O. Concatenatus*, Bloch.

b. Body triangular, armed with spines at the hind part of the belly.

O. Bicaudalis, Bloch; *O. Trigonus*, Bloch.

c. Body triangular, armed with spines before and behind.

O. Quadricornis, Bloch.

d. Body triangular, armed with spines on the edges.

O. Stellifer, Schneid.

e. Body quadrangular, and without spines.

O'STRACISM, } Fr. *ostracisme*; It. and Sp. *os-*

O'STRACIZE, } *tracismo*; Lat. *ostracismus*; Gr.

OSTREA'CEOUS. } *ὀστρακισμός*, from *ὀστρακον*, a shell;

because the name of the person to be banished was inscribed upon a shell given in by the voters; Potter calls it a *tile*.

By this, as if by *ostracism*, t'abate

That great presumptive wealth whereon they stand;

For first, hereby impoverishing their state,

He kills the means they might have to withstand.

Daniel. *History of Civil Wars*, book iii.

Therefore the democratick stars did rise,

And all that worth from hence did *ostracise*.

Marvel. *Lachrym. Mus.* 1650.

This distinction of two interior vehicles or tunics of the soul, besides that outer vestment of the terrestrial body, (styled in Plato *τὸ ὀστρεώδες*, the crustaceous or *ostreaceous* body,) is not a mere figment of the latter Platonists since Christianity, but a tradition derived down from antiquity.

Cudworth. *Intellectual System*, book i. ch. v. fol. 790.

Every one taking an *ὀστρακον*, or tyle, carried it to a certain part of the market-place surrounded with wooden rails for that purpose, in which were ten gates appointed for the ten tribes; every one of which entered at a distinct gate. That being done, the archons numbered all the tyles in gross; for if there were fewer than six thousand, the *ostracism* was void; then laying every name by itself, they pronounced him, whose name was written by the major part, banished for ten years, enjoying his estate.

Potter. *Antiquities of Greece*, book i. ch. xxv.

The *ostracism*, or ten years' banishment, was not so much intended to punish this or that great man, as to pacify and mitigate the fury of envy, who delights in the disgrace of superior characters, and loses a part of her rancour by their fall.

Langhorn. *Plutarch*, vol. i. p. 311. *Themistocles*.

OSTREA, in Zoology, a genus of *Acephalous Mollusca*.

Generic character. Shell adhering, inequivalve, irregular, with the beaks separated; ligament half internal, placed in a hollow, which, in the fixed valve, increases with age as the upper valve is displaced and advanced.

Type of the genus, *O. edulis*, Linnæus; Lister, *Conch.* pl. cxviii. A very numerous genus abounding in fossil species; the typical species (the common Oyster) is found on the coasts of Britain, and is well known for its domestic utility.

OSTRICH, Fr. *austruche*; It. *struzzo*; Sp. *aves-truz*; Lat. *struthio*; Gr. *στρουθός*, a sparrow: but why the *ostridge* was called *στρουθός*, or *στρουθοκαμήλος*, is not satisfactorily explained. See Vossius, in *v. Passer*.

The trivial name of the *Struthio* of Linnæus.

And first to begin with *ostriches*. They are the greatest of all other fowles, and in manner of the nature of four-footed beasts; (namely, those in Affricke and Æthiopia,) for higher they bee than a man sitting on horsebacke is from the ground: and as they be taller than the man, so are they swifter on foot than the very horse.

Holland. *Plinie*, book x. ch. i.

The covetous man of the first kind is like a greedy *ostrich*, which devours any metal.

Cowley. *Essay 7. Of Avarice*.

OSTRYA, in Botany, a genus of the class *Monoecia*, order *Polyandria*. Generic character: catkin imbricated; male flower, calyx scaly, filaments branched; female flower, catkin naked; capsule inflated, imbricated, one seed at the base. Two species, *O. vulgaris*, native of the South of Europe, and *O. Virginica*, native of North America.

OSYRIS, in Botany, a genus of the class *Dioecia*, order *Triandria*, natural order *Santalaceæ*. Generic character: male flower, calyx three-cleft; corolla none; female flower, one style; stigma round; berry one-celled.

Two species, natives of the South of Europe and the Island of Japan.

OTACOU'STIC, } Gr. *ὠτακουστ-εῖν*, to hear with
OTACOU'STICON. } the ears, to listen attentively; *ὠτα*, the ears, and *ἀκουστικός*, (whence *acoustics*), that can or may hear. Applied to

An instrument to assist hearing.

Tomkins. *Albumazar*, act i. sc. 3.

OTARIA, from the Greek *οὐς ὠτίς*, an ear, Peron, *Otary*. In *Zoology*, a genus of animals belonging to the family *Amphibia*, order *Sarcophaga*, class *Mammalia*.

Generic character. Distinct though small auricles or external ears; incisive teeth, *above*, six, of which the middle four have a double cutting edge, whilst the outer are single and smaller, *below*, four, forked, molar simply conical; membrane of the hind feet expanded into a kind of lobe reaching beyond each toe; nails flat and slender.

The animals forming this genus were separated by Peron from the *Phoci*, or *Seals*, in consequence of their being furnished with an external ear, and also from the variation in the form of their teeth. Like the *Seals*, however, they are aquatic animals, and spend but little time ashore, except during the breeding season. Although living together in herds, each family remains perfectly distinct from other of their companions, and any even accidental intrusion is speedily repelled by violence. Each male is accompanied by many females, sometimes amounting to sixty or seventy in number, but varying in the different species; these they guard with great jealousy, and fierce contests are frequently the result of any attempt at abduction. They live upon fish, mollusca, marine plants, and occasionally prey upon each other. The females produce one or two cubs annually, which they suckle and tend with the greatest care. Generally, they are natives of the Polar regions, but some species are found in the Mediterranean, and others off the Cape of Good Hope.

O. Jubata, Desm.; *le Phoque à crinière*, Cuv.; *le Lion Marin*, Steller; *Leonine Seal*, Pen.; *Lion-maned Otary*. The length of the male is about twelve, and of the female seven or eight feet; the body is very fat, bulky, and cylindrical; the head rather small, with the nose blunt and slightly turned up, the upper lip extends beyond the lower, and has upon it five rows of tough, long, black bristles extending along the gape, and which become grey in age; ears about half an inch long, conical, and erect, the cartilage contained in them being very firm, smooth on the inside, and hairy without; eyes large and prominent, the irides green; eyebrows consisting of black hairs; teeth thirty-six in all, the middle four upper incisives having two points, and the outer single resembling cuspid teeth; cuspid teeth conical, much longer than the incisive, and slightly curved at their tip; fore feet resembling broad flat bands, covered with a black, hard, smooth membrane devoid of hair, and having in the middle slight marks of the nails which are scarcely visible; hind feet similarly covered to the former, but divided into five long toes flattened and enveloped in a delicate membrane, which extends beyond their nails, which are very small, in form of thongs; tail conical, and covered with short hair. The

male is remarkably distinguished from the female in having the head and the whole of the neck covered with thick, coarse hair, from two to three inches in length, of a deep yellow or tan colour, and forming a mane capable of elevation when the animal is enraged, which extends along the neck; (from this circumstance the inhabitants of Chili call them *Thapel Came*, or the Seal with a mane;) the other parts of the body are clad in short, reddish hair, which in the female is ochrous. Such is the description given by Forster of the animal found in the South Seas, and it does not seem to differ materially from that given by Steller of the species found in the North except in size, the latter rarely exceeding eight feet. As to manners, also, they nearly resemble each other, except that whilst the Southern males have ten or twelve females, the Northern have never more than three or four. They do not migrate, but merely change their Winter and Summer stations; live principally on rocky shores or lofty rocks some distance at sea; they bring only one cub at a birth, which is taken by both parents to sea to learn to swim, and when wearied they frequently climb on the back of the dam, from which resting place the male often pushes them till they are able to take care of themselves. The bellowing of the old ones resembles that of Oxen, and the young bleat like Sheep, so that Steller almost fancied himself in a grazing district among the herds. Though the males have a very fierce appearance, they are very cowardly, taking to flight immediately on the appearance of Man, and if disturbed whilst asleep are extremely alarmed, tremble, and tumble about very awkwardly in their attempts to escape; but if they cannot get away they become desperate and fight with great noise and fury. They soon, however, become accustomed to the sight of Man, and Steller, who lived in a hut amidst large herds of them, found that they easily became reconciled to his presence, and would lie down opposite him, watching his motions with the greatest calmness, and even allowing him to handle their cubs. They inhabit the Islands in the Sea of Kamtschatka, and are found in great numbers in Penguin and Seal Islands off the coast of Patagonia, also within Magellan's Straits, on Falkland Islands, and New Year's Islands, off the West coast of Staten Land.

By the Kamtschatkans the chase of this Otary is considered noble sport, and the person who kills the greatest number of them is held in the highest honour. They are, however, very cautious in attacking them on shore, approaching them against the wind whilst asleep, and striking into the breast a harpoon attached to a long thong, the end of which is fastened by their companions to a stake; and this done, they make their escape as speedily as possible to a distance, whence the sport is concluded by shooting arrows, or throwing lances into the animal till he is exhausted, when they approach again and destroy him with their clubs. When, however, they discover one on the rocks at sea, they shoot it with a poisoned arrow, the pain of which induces the animal to plunge into the sea, where it is either speared, or left to die from the effect of the poison, which always happens in twenty-four hours. It is considered disgraceful to leave any part of the spoil behind; and hence it now and then occurs, that after having gone some distance to sea in pursuit, they so overlade their boats as to sink both themselves and their booty.

O. Ursina, Desm.; *Phoca Ursina*, Lin.; *Ours Marin*, Brisson; *Ursine Seal*, Pen.; *Ursine Otary*. The male of this species measures from eight to nine feet in length,

OTARIA.

OTARIA. but the female is considerably smaller; the weight is about eight hundred pounds; the nose projecting like that of a Pug Dog, and the forehead very high; nostrils oval and distinct; the whiskers few and triangular; eyes large and prominent, with black irides and smaragdine pupils; lips thick and serrated; ears small and sharp pointed, hairy without, smooth and polished within; body of a conical shape, wide around the shoulders, and narrowing towards the tail, which is about two inches long; fore legs two feet in length, and distinct from the body; hind legs not quite so long; the webs on all the feet extend slightly beyond the tips of the toes, of which the nails are very small; the hair is long, rough, and of a black colour, beneath which is a soft bay fur; the female is ashy; in old males the hair is tipped with grey; they have no mane, but in the male the hair is rather longer and erect; the young animals are black. The Ursine Otary is found in great numbers on the Islands between Kamtschatka and America, but rarely land on the Asiatic coast; they are never caught except in the three Kurilian Islands, and thence in the Beaver Sea as far as Kronoski headland off the River Kamtschatka, so that they seem confined between 50° and 56° North latitude; and it has been observed that they never double the southern cape of the Peninsula, nor are found on the Western side the Penschinska Sea, but that their greatest resort is to Behring's Islands; on the Western side only of which, the shore opposite to Asia, are they found, where they first appear in their migration Northward, which is as regular as that of birds, and in the early part of Spring. When they first arrive they are very fat, and most of the females with young; and they remain for three months, during which time the young are whelped; and whilst continuing here they remain in great indolence and almost constant sleep, taking but little food; so that Steller, who dissected many of them on this Island, found their stomachs quite empty. They re-migrate in September, when they are exceedingly thin, and take their young with them, passing by the same parts of Kamtschatka which they had traversed in the Spring; but where they reside during Winter is unknown. Pennant thinks it probable that their retreat is between the Kurili and Japan, in the Islands discovered by Martin Uriel in 1642, and known as States Land and Company Land; the latter of which is not very far distant from the most Southern Kurili Island, and in which it is certain, from his account, the natives are employed in the capture of Seals. This species is also found in the Southern hemisphere even from under the line, in the Isle of Gallipagos to New Georgia, in latitude 54° 15' South, and longitude 37° 15' West. In the intermediate parts they are found also in New Zealand, Massa Fuera, and perhaps along the coast of Chili to Terra del Fuego and Staten Land; in Staten Land, New Georgia, and Juan Fernandez, they are in immense numbers; and, like their fellows of the North, have their seasons of migration. Alexander Selkirk, who passed three years on the latter Islands, says that they come ashore in June and remain till September. Captain Cook found them in their place of re-migration in equal numbers on Staten Land and New Georgia in December and January; and Don Pernet on the Falkland Islands, in February.

They live in large herds, each male having from eight to fifty females, which he guards with the greatest jealousy; and though they lie by thousands on the shore, each family often amounting to more than a hundred,

young and old together, keeps entirely apart from the others. The males are much attached to their offspring; and when any attempt is made to capture them, stand boldly on the defensive, whilst the female carries them off. Those among them, which from age or weakness are incapable of protecting their females, and consequently are left alone, become sulky and quarrelsome, grow enormously fat, and are only roused from their usual indolence by the intrusion of any other unfortunate on their own seat: this leads to a fierce contest, in which they strike at each other with their long cuspid teeth in the same way as Boars use their tusks: in the course of the fight the combatants often intrude on the seats of other as captious individuals as themselves, till at last the whole shore is one long-extended scene of battle. As to their voice, it is said, that when on shore and amusing themselves, they low like Cows; but this in battle is converted into hideous growls; and when the contest is over, if victors, they chirp like Crickets; but if severely wounded or defeated, they mew like Cats. The Ursine Otaries do not appear to be generally alarmed at the sight of Man; and it is only when surprised by a sudden loud shout, that they are disturbed, and hurry off by hundreds into the sea, where, after recovering their astonishment, they swim about and satisfy themselves of the cause of their disturbance. When they first leave the water they shake themselves, and smooth their hair with their hind feet; often apply their nose to the females as if kissing; lie down and bask in the sun with their hind legs up, which they frequently move about as a Dog wags his tail, lie on their backs, sometimes roll themselves up into a ball and fall asleep; but their sleep is very light, as they are awakened by the slightest noise. At sea they swim with great strength and swiftness, and often on their backs; they dive well, and continue long under water.

The Kamtschatkans take them at sea with the harpoon, as they never land on their shores. To the harpoon a line is fixed, by which they draw the animal towards them after it has been completely tired; as, if pulled in quickly, they will hold on the boat and sink it. The skins of the young which have been cut out of the bellies of their dams are employed for clothing, and fetch about three shillings and fourpence apiece, whilst that of an old one will not bring more than four shillings. The flesh of the old males is rank and nauseous, that of the females is said to resemble Lamb, and of the young ones that of a sucking Pig.

O. Pusilla, Desm.; *le petit Phoque*, Buff.; *Little Seal*, Pen.; *Little Otary*. Rather more than two feet long; the head round and slightly flattened, the nose very short and furnished with round slender whiskers; upper incisive teeth six, the middle four large and grooved transversely on their edge, the outer two resembling cuspid teeth; lower incisive four, of which the middle two, placed close together, are as large or larger than the largest upper incisive, and terminate in three little lobes, the outer two short and pointed, their points resting in the transverse grooves of the upper; front molars short, small, single pointed, and far apart; auricles narrow, and an inch and a half in length; the inner toe of the fore feet the longest; all these toes wanting distinct nails; the feet themselves hairy above but entirely naked beneath; hind feet extending back in the direction of the body, five-toed, the joints and nails of the middle three very distinct, the others only furnished with a rudimental nail hardly visible; the web extending

OTARIA.

OTARIA. beyond the tips of the toes terminating in a waving edge, each projecting part of which corresponds to a toe; the hair is soft, smooth, and long, above dusky, inclining to iron-grey, but lighter on the belly. Common among the rocks at Simmons' Bay, Cape of Good Hope, and at Rottness Island on the Western coast of New Holland.

—
OTCHA-
KOFF.

O. Coronata, Desm.; *Phoca Coron.*, Blainville; *Crowned Otary*. About eighteen inches long; the general colour of the coat is bright black irregularly spotted with yellow; head black but marked with one golden-yellow band on the skull and another upon the muzzle; anterior extremities rather forward, short, and terminating in broad hands, the fingers of which, nearly equally long, are webbed and furnished with very strong, curved, and pointed nails; hind feet fan-shaped and larger than the former, with the web extended beyond the fingers. Its Country is unknown.

O. Cinerea, Desm.; *Otarie cendrée*, Peron and Lesuer; *Cinereous Otary*. About nine or ten feet long; hair coarse and greyish-ash-coloured; its skin extremely thick, and from its fat an abundance of fine oil is obtained. From the shores of the Ile de Decrès on the coast of New Holland.

O. Albicollis, Desm.; *Otarie Albicolle*, Per. and Les.; *White-necked Otary*. From eight to nine feet long; is marked on the middle and upper part of the neck with a large white badge. From the Ile Eugene on the coast of New Holland, where it abounds.

O. Flavescens, Desm.; *Phoca Flav.*, Shaw; *Yellow Otary*. Nearly two feet long; the head small; nose rather pointed; whiskers long and white; ears very narrow, pointed, and nearly an inch long, which are therefore in relation to its size longer than in any other species; fore feet not furnished with any distinct nails; hind feet strongly webbed and provided with distinct and long nails, of which the middle three are much wider than the others; the hair is entirely pale yellow or cream colour. From the Straits of Magellan.

O. Falklandica, Desm.; *Phoc. Falk.*, Shaw; *Falkland Isle Seal*, Pen.; *Falkland Otary*. About four feet long; nose short; upper lip furnished with black whiskers; ears short, narrow, pointed, and covered with hair; upper incisive teeth grooved transversely, lower vertically; molar very strong with a little appendage on each side near the base; fore feet not clawed, and the web extending beyond the tips of the fingers; hind feet four-toed, with long, sharp nails, beyond which the web also extends. Native of the Falkland Isles and about Cape Horn; they are seen further at sea than any other kind, are very playful, dipping up and down like Porpoises, and when they sleep one fin generally appears above water.

See Linnæi *Systema Naturæ* a Gmelin; Steller, in *Nov. Com. Petrop.*; Cuvier, *Règne Animal*; Peron and Lesuer, *Voyage aux Terres Australes*; Pennant, *History of Quadrupeds and Arctic Zoology*.

OTCHA'KOFF, or OCHA'KOV, (a Slavonian derivative from the Turkish word O'ják, a Barrack,) more commonly spelt after the Polish system of orthography Oczakow, is the name of a place at the-mouth of the Dnièpr, (the ancient Borysthenes,) once a fortress of some importance, but now reduced to an insignificant village. It was called O'zî by the Turks, and was the seat of a Beglerbeg, or Páshá. The Dnièpr was also called by them O'zî súyî, i. e. the Water of O'zî, and the Zaporovian Cossacks living on its banks O'zî

VOL. XXV.

Kazághî, the Kazáks of the O'zî. It is situated on a projecting point of land, on the right, here the Northern bank of the Dnièpr, in 46° 37' 29" North and 31° 26' 24" East, immediately opposite to Kil búrunú, (Hair Point,) the extremity of a very narrow neck of sand on the Southern side of the river; and was, when Baron de Tott saw it, in 1767, a fortress in the shape of an inclined parallelogram placed on a gentle slope towards the river, defended only by a ditch and a covered way, and provided with a large park of ill-mounted artillery. (De Tott, *Mém.* i. 192.) The mouth of the stream between the two points is about five miles wide, but the greater part is so shallow that the ferry-boats are pushed along with a pole. The exact distance across, in the narrowest part, is 2400 toises, (2 $\frac{1}{11}$ miles,) and no vessels drawing more than 16 feet can pass. Beyond it, the river forms a fine and spacious basin extending Northward nearly to Nikolájev and Kherson. Ochákov, says Lechevalier, (*Voy.* 349.) is a fortress of small extent, about 200 toises (quarter of a mile) in length, by 100 (214 yards) in breadth, and its fortifications are antiquated and ill placed. It was taken by the Russians in 1737, before any breach was made, solely in consequence of their having set fire to the magazines and houses which were all of wood. A large retrenchment of earth, ill-supported, enclosing the suburbs, and the fort of Hasan Páshá, an indifferent redoubt of stone-work placed on a point of sand about 500 toises (three-quarters of a mile) from the town, were all the additions which had been made to the works in 1787. The French engineers sent at that period, to assist the Turks, would doubtless have put the place in a better state of defence, had their counsels been followed; how little they were, may be collected from the hints furnished (p. 356.) by the writer last quoted: it was therefore no great proof of the superiority of the Russian arms, that the place was taken by storm on the 6th of December, 1788, after it had been invested for nearly a year, the Captain Páshá's fleet and flotilla having been destroyed some months earlier. (De Castelnau, ii. 190.) The loss, moreover, of two Generals and 3500 soldiers is a clear proof that their adversaries were not disposed to yield without resistance. The position of Ochákov on a point of land at the mouths of two rivers, the Dnièpr and the Berézen, gives it two harbours, and it formerly carried on a considerable trade in grain, wool, and furs, brought by waggons drawn by oxen from Poland; (Lechevalier, p. 360.) but the partiality of the Russian Court for Odessa, a place of its own creation, has ruined Ochákov, of which Dr. E. D. Clarke, who passed near it in his road from Nicholájev, was told (ii. 364.) that "not a stone now remains to tell where it stood. Without a guide," he says, "it would be impossible to ascertain its former position, every trace of it having disappeared." But it is probable that he was misinformed, for a later writer speaks of it as still a village of about eighty houses. Its name has been sometimes rendered in Latin by Axiaco, Ordessus, or Olbiopolis, from a notion that it was on or near the site of those ancient Cities; but the last-named was, as remains of antiquity found on the spot plainly show, exactly at the confluence of the Bugh (Hypanis) and the Dnièpr, (Borysthenes,) several miles to the North-East of Ochákov, and about 25 miles from the sea. (Clarke, ii. 364.)

OTHER, Goth. *anþar*; A. S. *other*; D. *ander*; Sw. *andre*, *alius*, *alter*. Of unknown Etymology. It is applied to express

Some one more; some one different: in our old writers, *either*.

Otherwise, or *otherways*; in a different *wise* or *guise*; in a different *way*.

Otherwhile; at a different time.

Otherwhere; at a different place, where.

And þer nas of olde house in þe lond non,
þat he ne amendede myd som lond oþer myd byldyng,
Oþer myd boc, oþer ryche cloþ, oþer oþer ryche þyng.
R. Gloucester, p. 271.

Alas! non with oþer chastised git wille be.
R. Brunne, p. 289.

Of som he grantise his wille for to do,
& som said oþerwise, þat it suld not be so.
Id. p. 208.

He asked þe barons in þat parlement,
If he schewed a þing, oþerwaies he ment.
Id. p. 4.

Oþerwise þan God wolde. by warnyng of þe prophete.
Piers Plouhman. Vision, p. 59.

And thanne many schulen be sclaudrid and bitraie ech oother,
and thei shulen hate ech oother.

Wiclif. Matthew, ch. xxiv.

And then shal many be offended, and shal betraye one another,
& shal hate one y^e other.
Bible, Anno 1551.

If any man techith *otherwise* and accordith not to the hoolsum
wordis of oure Lord Iesu Christ, and to that techyng that is bi pitee
he is proud and can do no thing.

Wiclif. 1 Timothy, ch. vi.

If any man teach *otherwise*, & is not content wyth the wholsome
wordes of our Lord Iesu Christ, & with the doctrine of godlines, he
is pufte vp and knoweth nothyng.
Bible, Anno 1551.

"It were," quod he, "to thee no gret honour
For to be false, ne for to be traytour
To me, that am thy cosin and thy brother
Ysworne ful depe, and eche of us to other."
Chaucer. The Knightes Tale, v. 1134.

For which anon duk Theseus let crie,
To stenten alle rancour and envie,
The gree as wel of o side as of other,
And eyther side ylike as others brother.
Id. Ib. v. 2736.

Housbondes at the cherche dore had she had five
Withouten other compaignie in youth.
Id. Prologue to the Canterbury Tales, v. 463.

Ther was none other remedie ne rede.
Id. The Knightes Tale, v. 1218.

But telleth me what mastere men ye ben,
That ben so hardy for to fighten here
Withouten any jage; other officere,
As though it were in listes really.
Id. Ib. v. 1714.

A man mote ben a fool other yonge or old,
I wot it by myself ful yore agon:
For in my time a servant was I on.
Id. Ib. v. 1814.

Scornest thou me (quod I) or els plaigest thou, or discieuest thou
me that haste so wonnen with thy reasons, the hous of Dedalus so
enterlasing, that it is vnable to bee vnaced, that thou *otherwhile*
entrest there thou issuest, and *otherwhile* issuest there thou entrest.
Id. Boecius, book iii.

For I say that it is no folie to chaunge conseil whan the thing is
chaunged, or els whan the thing semeth *otherwise* than it semed
afore.
Id. The Tale of Melibeus, p. 118.

But *otherwaies* not iwis,
Yet Austen gabbeth not of this.
Chaucer. The Romant of the Rose, p. 220.

Thei be nothyng in thilk cas
Of Symon, whiche the foldes gate
Hath lete: and goth in *other* gate:
But thei gone in the right waie.
Gower. Conf. Am. Prologue, p. 10

For if he doo I wote wel this,
That *outher* he shall die or I
Within a while.
Id. Ib. book iii. p. 85.

And tho she toke hir child in honde
And yafe it souke, and euer amonge
She wepte, and *otherwhile* song.

For *other wise* she shulde haue failed,
If that he had nought trauailed.
Id. Ib. book iv. p. 111.

If I do it not of loue to God, but to get a liuyng thereby & for a
worldly purpose and had rather *otherwayes* lyue, then do I that
office which God hath put in me, and yet please not God myself.
Tyndall. Workes, fol. 85. *Parable of the Wicked Mammon.*

What next I bring shall please thee be assur'd,
Thy likeness, thy fit help, thy *other* self,
Thy wish exactly to thy heart's desire.
Milton. Paradise Lost, book viii. l. 450.

[There were at that time manie noblemen in England, whose
wyues and daughters the king hadde oppressed; and *othersome*,
whom with extreme exactions he had brought into great pouertie;
and *othersome*, whose parents and friends the king hadde banished,
and had turned their inherence vnto his owne vse.
Stow. King John, Anno 1212.

Then let me aske you this withouten blame;
Where were ye born? some say in Crete by name,
Others in Thebes, and *others otherwhere*.
Spenser. Faerie Queene. Of Mutabilitie, can. 7.

Otherwhile and often thy back is turned unto him through neg-
ligence.

Hall. Works, vol. i. ch. xxiii. fol. 107. *The Art of Divine Meditation.*
In human works, tho' labour'd on with pain,
A thousand movements scarce one purpose gain;
In God's, one single can its end produce;
Yet serves to second too some *other* use.
Pope. Essay on Man. Epistle 1. l. 56.

OTHERA, in *Botany*, a genus of the class *Tetrandria*, order *Monogynia*, natural order *Berberides*. Ge-
neric character: calyx four-parted; corolla, petals four,
lanceolate.

Two species, natives of the Island of Japan.

OTHIUS, in *Zoology*, a genus of *Coleopterous* insects.
Generic character. *Antennæ* short, filiform, with the
terminal joint entire and slightly acuminate; *palpi* fili-
form, maxillary with the terminal joint conic-acuminate;
thorax slightly elongate; *elytra* very much abbreviated;
abdomen linear; legs short, simple; *tibiæ* slightly cili-
ated on the outer edge; anterior *tarsi* dilated.

Type of the genus *Staphylinus fulgidus*; Paykull, *Faun. Swe. (Ins.)* vol. iii. p. 377. Ten indigenous species.

OTHONNA, in *Botany*, a genus of the class *Syn-
genesia*, order *Necessaria*. Generic character: calyx one-
leaved, many-cleft, cylindrical; receptacle naked; down
nearly obsolete.

Thirty-five species, mostly natives of the South of
Africa.

OTION, in *Zoology*, a genus of *Cirripedes*.

Generic character. Body supported on a tubular
peduncle, enveloped in a membranous tunic, ventricose
above, with two tubes disposed in the form of horns
directed backwards, open at their extremity, truncated
and placed at the summit of the tunic; a lateral open-
ing, with many articulated ciliated arms; shell with two
small testaceous semilinear valves, adhering near the
lateral opening.

OTHER.
OTION.

OTION.

—
OTIS

Type of the genus, *O. Cuvieri*, Leach, *Mém. du Musée*, vol. ii. pl. v. fig. 12. Inhabits the Northern Ocean, and has been found on the Southern coast of England.

OTIORHYNCHUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* geniculated, twelve-jointed, long, generally slender, rarely stout; the scape reaching beyond the eyes; funiculus with its two basal joints rather long, obconic, the remainder somewhat shortened, obconic, or robust and lenticular; the club narrow, oblong, or subovate, acuminate; head produced in front into a short rostrum, which is dilated and thicker at the apex, which is emarginated and divaricating; eyes rounded moderately, or but little prominent; *thorax* with the sides rounded, convex above; *elytra* united, ovate or oblong-ovate; body apterous; *scutellum* minute; *abdomen* concave towards the base in the males; legs moderate, stout; *femora* clavate, sometimes dentate, at others unarmed; *tibiæ* sometimes crenulated within; the apex dilated, truncate, furnished with a minute, horizontal denticulation, or unarmed; *tarsi* tetramerous.

Type of the genus, *Cur. ligustici*, Linnæus; *Bornsdorf*, *Cur.* vol. ii. pl. i. fig. 33. A very extensive genus, of which several of the species are very destructive in their larva state to the roots of plants; twenty-one species occur in Britain.

OTIOSE, It. *ozioso*; Lat. *otiosus*, from *otium*. See NEGOTIATE.

Leisurely, idle, indolent.

We lay out of the case such stories of supernatural events as require, on the part of the hearer, nothing more than an *otiose* assent. *Paley. Evidences*, vol. i. ch. i. p. 334. *Prop. 2.*

OTIS, Lin., Cuv.; *Bustard*, Pen. In *Zoology*, a genus of animals belonging to the family *Pressirostres*, order *Grallæ*, class *Aves*.

Generic character. Beak not quite so long, or as long as the head, straight, conical, compressed or slightly depressed at the base; point of the upper mandibles slightly arched; nostrils close to each other, oval and patulous, and far from the base; wings of moderate length, the third quill-feather the longest, the second not so long, and the first the shortest of the three; legs long, naked above the knee; feet three-toed, the toes short, united at their roots and edged with membrane; claws flattened.

The Bustards seem to form the connecting link between the Gallinaceous and Wading birds, by the firm carriage and the connection of the toes together with their membranous edging of the former with the long bare legs of the latter. They are shy, heavy birds, rarely flying, except when they cannot escape pursuit by running, in which they are very swift, and then they fly long and rapidly. They prefer sandy and rocky districts far from water, and feed on herbs, grain, insects, and worms. There is but one male to several females, and the latter become solitary when they begin to lay; they make their nests in hollow places among the corn, and the young shift for themselves as soon as hatched. They moult twice a year, and the colours of the male are more varied than those of the female.

Temminck has divided them into two sections; those which have the beak compressed, and those which have it depressed at the base.

a. *Mandibles compressed at the base.*

O. Tarda, Lin.; *la Grande Outarde*, Buff.; *Great*

Bustard, Pen. About three feet three inches in length, but of less size according to the locality. Pennant says it measures nearly four feet in length, nine in breadth, and that it weighs twenty-five or twenty-seven pounds. On each side of the lower mandible a tuft of long, delicate, thread-like feathers; the head, neck, chest, and edge of the wings ash with a longitudinal band along the middle of the head; back yellowish-rust streaked with black; under parts white; greater quill-feathers black; tail consisting of twenty feathers white tinged with reddish for three-fourths of its length, and striped across with two black bands; beak bluish. The female is distinguished by not having the tufts of feathers on the lower mandible, by the stripe on the head not being so distinct, and by the ashy colour of the head being deeper. The young are buff-coloured varied with black above. The Bustard feeds on green corn, clover, and turnip tops; it makes its nest in rye or other corn, and lays two eggs of an olive-brown colour, blotched with rusty and grey spots. It is found in some parts of France, in Italy, and Germany, but less commonly in Northern than in Southern Countries. It is rare in England, was formerly found on Salisbury Plain, but is now very uncommon, though it still exists in Norfolk. How the bird has acquired the cognomen *Tarda* seems difficult to understand, as it runs extremely fast, and when put up flies many miles and not very slowly. The males are very remarkable for being provided with a large pouch which is capable of holding near seven quarts of water; it opens beneath the tongue and descends along the neck; it is supposed that this apparatus is provided to enable the bird to carry water to the female whilst sitting; and Bewick states that it serves him also as a defence against the predacious birds by which he is occasionally attacked. Bustards are considered fine eating, and fetch good prices, even in those Countries where they are not very scarce; thus in Paris, the ordinary cost is about 100 or 120 francs; and after being stuffed with and packed in powdered charcoal, they are occasionally sent to this Country. As they are so shy, it is difficult to get even within bullet-shot of them, and various methods, such as an artificial cow, in which the sportsman is hid, a movable hut, or a covered cart have been employed for this purpose; but Magné de Marolles, in his *Chasse au Fusil*, Paris, 1788, prefers the following stratagem. As Bustards rarely wander far from their usual resting place, he recommends that whilst the birds are out feeding, the sportsman should speedily dig a pit sufficiently deep to receive him, and cover it with a hurdle, merely leaving him room to pass out his gun and take aim; and this is made still less discoverable if a fall of snow should cover the trap. Besides being used as food, the Bustard affords its feathers like those of the Goose and Swan for pens. Various attempts have been made to domesticate these birds; they are easily brought up, but they will not breed, as has been noticed both by Pallas and Montagu.

O. Tetrax, Lin.; *la petite Outarde ou Canepetière*, Buff.; *Little Bustard*, Pen. About the size of a Pheasant, being eighteen inches in length, and rather more than two feet and a half in width; the top of the head is light-yellowish marked with brown spots; sides of the head and neck deep ash, a collar of white descends like a St. Andrew's cross from the back of the head to the lower part of the throat; all the lower part of the neck covered with deep-black feathers which are longest on the back; the chest encircled with a

OTIS.

OTIS.

broad, white band, beneath which is another narrower and black; all the upper parts light-yellowish marked with numerous blackish zig-zags which take the form of the feathers, and some large black spots; under parts, edge of the wings, and upper tail-coverts white; beak and legs grey. The female and first year's males have the throat white; sides of the head, neck, and upper part of the chest light-yellowish streaked with brown; on the white chest, sides, edge of the wings, upper and under tail-coverts are some transverse black rays. They feed on grain, seeds, and insects, are found in open districts, very rarely in England, common as birds of passage in the Southern parts of France, but are stationary in Sardinia, where they are called *Gallina pratajuola*; they are found also in Italy, Spain, Greece, and Asia Minor, and Pallas has frequently seen them in small flocks in the Southern plains of Russia. They are as shy and as swift as the last species. They are much esteemed as game, are hunted like the others, and the males often allured by imitating the cry of the Hen, one of which stuffed is placed within his view.

β. Mandibles depressed at the base.

O. Houbara, Lin.; *le Houbara, ou Outarde huppée d'Afrique*, Buff.; *Undulated Trumpeter*, Lath.; *Ruffed Bustard*, Pen. From twenty-four to twenty-five inches long, and about the size of a Capon; forehead and sides of the head ferruginous-ash marked with little brown points; occiput, cheeks, and upper part of the head whitish and varied with brown and ashy lines; upon the head a large tuft of white, slender feathers, and on the neck a row of long, black feathers, followed by some white ones with loose webs, which descend on either side like a ruff; under parts pure white; back of the neck, back, and wings ochrous-yellow varied with delicate black streaks, but not marking the middle of each feather; primaries white, black towards their extremities, and tipped with white; caudal quills rusty-ochrous, striped transversely with three broad, ashy-black bands, and all except the middle two tipped with white; beak brownish-ash; legs greenish. It is not known whether the female differs in plumage from the male. It is found in Barbary and Arabia, is very common in Turkey, and occasionally is seen as a bird of passage in the South of Spain.

O. Bengalensis, Lath.; *l'Outarde moyenne des Indes*, Buff.; *Bengal Bustard*. Rather larger than the preceding; the top of the head, the neck, and the under parts black; sides of the head and ocular circlets pale tawny, which becomes more brown and mingled with black on the back, tail, and upper part of the chest, where it forms a broad zone on the black ground; the feathers are partly white mingled with black, and their tips deep ash. The general colour of the female is pale ash on the head, neck, and belly, but on the other parts it is more deeply clouded and blackish. From Bengal, where it bears the name of *Churge*.

O. Afra, Lin.; *African Bustard*. This is considered by Latham to be the same as the last-described bird, which it equals in size; the top of the head is blackish-brown barred irregularly with white; on the sides of the head a large white spot and streak, other parts of the head blackish, as also the under parts of the body and neck, around which is a half collar of white; the blackish-brown ground of the back, tail, and wings is striated irregularly with rust; primary quills black, and longer than the secondary, a broad white band extending

along their whole length; legs encircled with a kind of white garter; tarsi yellow; claws black. The female has no white spot on the side of the head, nor the half collar on the neck. Found at the Cape of Good Hope.

O. Araba, Lin.; *l'Outarde Lohong*, Buff.; *Arabian Bustard*. Beak, neck, and legs very long, and upon the head a reclining, pointed, black tuft; the forehead whitish, and on each side of the head a black spot; other parts of the head, the neck, and upper parts of the body chestnut mingled with black; the throat and front of the neck bluish-ash crossed with brown lines; under parts white; primaries entirely black; secondaries spotted with black and white; caudal quills white barred transversely, except the outer, which are whitish; legs pale brown.

O. Aurita, Lath.; *Eared Bustard*. About eighteen inches long; a large white spot encircles the ear, and there is a white badge at the junction of the neck with the back; on each side of the occiput are four narrow delicate feathers, which terminate like an arrow point; the upper part of the wings and tail white, delicately streaked with black and brown.

O. Cærulescens, Sonnini; *Bluish Bustard*. Rather larger than the Little Bustard; has all the upper parts reddish, pointed and streaked with blackish; the neck, chest, and belly have a bluish tinge. This species was shot by Le Vaillant in his journey through the interior of Africa, and its note is said to resemble the croak of a Toad.

See Cuvier, *Règne Animal*; Temminck, *Manuel d'Ornithologie*; Latham, *General History of Birds*; Pennant, *British Zoology*.

OTOLINCUS, Illig., Cuv.; *Galago*. In *Zoology*, a genus of animals belonging to the family *Lemurida*, order *Quadrumana*, class *Mammalia*.

Generic character. In the upper jaw incisive teeth four, vertical, in pairs, and these separated by a gap; cuspid teeth large and triangular; molar five on a side, the first pair single pointed and resembling the cuspid; the others furnished with four tubercles: in the lower jaw six very narrow, long, and procumbent incisive teeth; cuspid, thick and curved; molar as in the upper jaw: muzzle sharp; face hairy; eyes large; ears large and bare; tail very long and hairy; all the feet furnished with thumbs; nails flat, that of the fore finger or second toe of the hind feet falcular; the tarsi longer than the legs.

The Galagos have great similarity in their general form to the Lemurs, but the length of the hind feet much exceeding that of the legs, and giving to these limbs a very disproportionate appearance, their very large membranous ears, their short, round head and large eyes situated very low, distinguish them from the latter animals. Like the Lemurs they are also nocturnal animals, which is immediately noted by the large size of their eyes. During daytime they live in the hollows of trees where they make their nest of dry grass, and in the evening, about twilight, leave it for the purpose of hunting after insects and fruit, upon which they feed. They have a long, bushy, and very movable tail, but it is not prehensile. They have hitherto only been found in Africa and Madagascar.

O. Crassicaudatus, Geoffr.; *le Grand Galago, ou Galago à queue touffe*, Cuv.; *Thick-tailed Galago*. About the size of a Rabbit; ears oval, and about two-thirds the length of the head; the fur very thick and silky, and of a ferruginous-ash colour. Its habits and Country are unknown.

OTIS.

OTOLINCUS.

OTOLIC-
NUS.
OUAH.

O. Madagascariensis, Geoffr.; *Lemur Murinus*, Gmel.; *le Rat du Madagascar*, Buff.; *Little Maucauco*, Pen.; *Madagascar Galago*. Rather less than the Black Rat; head rounded; nose sharp; whiskers long; ears about half the length of the head; upper parts of the body cinereous, under parts white, the space around the eyes dark; tail much longer than the body and covered with short hairs. It eats holding its food in the fore paws and elevating its tail, like a Squirrel; is lively, and utters a weak cry; when it sleeps it rolls itself up. Native of Madagascar.

O. Senegalensis, Geoffr.; *Lemur Galago*, Schreber; *Senegal Galago*. About the size of a Rat; its ears are as long as its head; fur long and thick; the lips and upper part of the nose yellowish-white, and the same colour prevails between the eyes up to the forehead; top of the head, region of the eyes, and cheeks blackish; back dusky-yellow; sides, fore arms, and thighs of the same colour but a lighter shade; neck, chest, belly, arms, and legs yellowish; tail much longer than the body, ferruginous, and terminating in a pencil-like form. It is further remarkable for having only two incisive teeth in the upper jaw. It is a mild, inoffensive animal, lives in the hollows of trees, feeds on insects, and is found in Senegal.

O. Dermdorffii, Fischer; *le petit Galago*, Cuv.; *Dermdorff's Galago*. Rather less than the Common Rat; ears shorter than the head; general colour dusky-rufous; the nose blackish; tail much longer than the body, terminating in a pencil like form. It has, also, but two incisive teeth in the upper jaw. Perhaps from Senegal.

O. Guinensis, Desm.; *Lemur Potto*, Lin.; *Potto* of Bosman. This animal is unknown except from the imperfect description and engraving in Bosman, *Bestuio van de Guin. kust* 11. Its general colour is ferruginous; Geoffroy places it among his *Nycticebi*, the *Stenopes* of Illiger, but the length of the tail sufficiently distinguishes it from them.

See Linnæi *Systema Naturæ* a Gmelin; Geoffroy in *Ann. du Mus.* vol. xix.; Illiger, *Prodromus Mammalium*; Cuvier, *Règne Animal*; Pennant, *History of Quadrupeds*.

OTTER, A. S. *oter*, *otor*, *otter*, *otyr*; D. and Ger. *otter*; Sw. *utter*, which some derive from the Lat. *lutra*, the same animal; others from the Gr. *ὕδωρ*. Ihre observes that Islandic *udr*, also signifies water, the proper element of this animal. In Fr. it is *loutre*; It. *lutra*; Sp. *lutra*, *nutra*.

As for the *otters*, albeit a kind of beaver they are, yet because I never heard that they came into the salt-water, I make no great reckoning of them. Holland. *Plinie*, book xxxii. ch. xi.

As otrey (that her name doth of the *otters* take,
Abounding in her banks.)

Drayton. *Poly-olbion*, song 1.

Ouah.

OUAH is nothing more than the French way of expressing the Egyptian word Wáhe, preserved by the Arabs, and changed by the Greeks into the well-known terms Oasis, or Auasis. An account of the Southernmost and largest of those "Isles in the ocean of sand" having been already given, the second, or intermediate one, will be described in this place, and that of Ammon under SIWAH. "The second Oasis," says Strabo, (xvii. p. 813.) "is near the Lake Mæris." This, therefore, can be no other than the Wáh-el-Bahriyeh, i. e. the Northern Oasis of the Arabs, deriving its distinctive epithet from its

position with regard to the Great Oasis; which, it should have been observed, is divided into two parts, the Wáh-el-khárijeh, or Exterior, and the Wáh-el-dákhileh, or Interior* Oasis. It is not improbable that these fertile tracts might formerly be more extensive, and therefore separated by shorter intervals; and thence arose the discordance as to their number, in writers of different Ages. A chain of low hills and an elevated plain of sandstone, occasionally alternating with calcareous rock, and occupying an interval of about 31 Geographical miles, separate the Wáh-el-khárijeh from 'Ain Amúr, a spring overshadowed by some date-trees on a natural terrace half-way down the side of a hill named from it. This place was, according to the Arabs, anciently called Malaga. (Malakah?) Some excavations in the adjoining rock, and the remains of an Egyptian Temple, about 68 feet long, and adorned with sculptures, show that the place was once inhabited. (Cailliaud, ii. pl. xlii. fig. 1.) Another Oasis, named Umm-el-debádeh, or El-lenjeh, containing a similar Temple, is said to lie about a day's journey to the North-East of 'Ain Amúr. A broad plain of calcareous rock, similar to that already mentioned, and measuring about 30 miles across, intervenes between 'Ain Amúr and the commencement of El Wáh-el-dákhileh. This valley, which runs nearly due East and West for about 30 miles, but is fertile only here and there, contains eleven villages, and a population of more than 3000 souls. Several of its valleys have streams of water; that of Balát (Palatium?) being esteemed the best. At El birbá, there are the foundations of an ancient Temple; and at El Mezwakah, one which appears to belong to the Age of the Ptolemies, with surrounding cloisters, and hieroglyphics round the portals, is nearly perfect; a Roman castle, some vaulted buildings, apparently of the same Age, tombs, and mummy-pits, show that it once was a place of some magnitude. It is now called Deir-el-hajar, i. e. Stone Convent, and was perhaps used as a Church after the extinction of Paganism. In the midst of this village, the largest in this Oasis, and therefore styled Medinet-el-kasr, i. e. the City of the Castle, there is a copious spring of warm, sulphureous water; it supplies two baths, and forms a stream which waters all the surrounding fields and gardens. Its temperature on the 24th of February was 101° 3', (Fahrenheit,) when that of the air was 71° 6'. Medinet-el-kasr, according to M. Cailliaud's observations, is in 25° 41' 32" North and 28° 59' 30" East. El Kalamún, to the South-East of El Kasr, has some springs impregnated with a mineral acid. (Quatremère, *Rech.* p. 221.) At rather more than 95 Geographical miles North-West of Kasr-el-dákhil, is the small Oasis of Feráfereh, or Ferferún; the intervening road passes over calcareous heights, much resembling those already described; and does not measure more than 65 or 70 miles. The principal, if not the only village in El Feráfereh, is in 27° 2' 59" North and 28° 10' 52" East, has 180 inhabitants, and a fortress of modern and very rude construction, called El Kasr. There are several fertile tracts scattered about in this neighbourhood, which seen from a height appear, says the same traveller, (i. 211.) "like so many green spots lost in an immense expanse of Desert." Several springs of excellent water enable the inhabitants to make good use of their ground, which is laid out

El Wah el
Bahrieh.

- OUAH. principally in gardens well stocked with various kinds of fruit. In January and February they sometimes have showers; and dangerous fevers prevail in the Summer months. "El Ferferún," says the Spanish Geographer, El Bekrí,* (Quatremère, *Rech.* p. 220.) "contains mines of plumose and rock-alum, many kinds of vitriol, acid, and diversely savoured waters. It has abundance of palms and other trees; and contains sundry villages inhabited by Coptic Christians." From Feráfereh to El Kasr, the Capital of El-Wah-el-Bahriyeh, (*i. e.* the Northern Oasis,) is a journey of five days, with a distance of about 92 Geographical miles. The greater part of the route passes over high plains of calcareous rock, sometimes impregnated with oxide of iron; but two valleys intervene, in the latter of which there is herbage and a grove of palms. It was formerly inhabited, but its sources are now overwhelmed by the sand of the Desert. About two miles beyond it, there is a copious spring of good water called 'Ain-el-wadí (River Head) still flowing. El Haiz, (*i. e.* the Court Yard,) in 28° 0' 32" North, and considerably to the East of Feráfereh, is the first place, on this route, belonging to the Northern Oasis. At about three miles to the South-East of the village, there are some ruins called Uksor. (The Castles.) They consist of a Christian Church, (Cailliaud, pl. xlii. fig. 5, 6. pl. xxxvi. fig. 2.) a walled enclosure, (*Ibid.* pl. xxxvi. fig. 1.) some tombs, and an ancient bath, in a deep valley. This place is thinly inhabited, and has only a small portion of productive soil. The temperature of the spring near El Uksor was 85·5°, when that of the air was 67°. About a mile to the West of the tomb of Sheikh 'Alí, the patron saint of the place, there is also a spring of fresh water impregnated with iron. El Haiz is separated from the Oasis to which it belongs, by a chain of barren, calcareous hills, resting upon sandstone, of which a little further Northward the soil exclusively consists; but the uniformity of the Desert is broken by isolated, conical hills; and at the foot of the chain of mountains to the East and West, there are a few fertile spots, covered with date trees. The distance between these places is about 20 Geographical miles.
- The Northern Oasis extends further from East to West than from North to South, and is divided into two parts by a hill running in the latter direction. In the Eastern valley are the hamlets El-Zabú, El-Mendisheh, and El-'Ajúzah; in the Western, El Báweítí, and the Capital, El Kasr. At the latter there are the remains of a Roman edifice with a Triumphal Arch. This monument, of which Belzoni (p. 415.) had so much difficulty to obtain a sight, was examined almost at their leisure by Mr. Hyde and M. Cailliaud, who happened to meet in this place. At the Northern extremity of the village there is a Triumphal Arch, with columns of the Doric Order, (Cailliaud, ii. pl. xxxix.) on an elevated platform, about 31 feet high and 121 feet long, built against the side of a low hill. The Arch is in a tolerably good style; but there is no inscription, except single Greek letters for masons' tallies, to show which stones were to be placed together. Belzoni supposed this to be part of a Temple; but he saw the place under great disadvantages, and very imperfectly; and was evidently misled by his persuasion that this was the Oasis of Jupiter Ammon. There are remains of another small building of hewn stone at El Kasr, but none in the Egyptian style throughout this Oasis. (Cailliaud, i. 185.) Near El Zabú, about five miles North-East of El Kasr, there are the remains of a Coptic village, now called Kasr Nasráni, (Christian Castle,) containing the relics of three large buildings, two of which were Churches, (Cailliaud, ii. pl. xxxviii. fig. 2, 3.) and the third appears to have been a fortress. This ancient town was about 530 yards in circuit. At El Mendisheh there are several ancient water-courses, most of which are still in use. The water conveyed by them is very clear and palatable, though strongly impregnated with oxide of iron. In a valley about three miles to the North-West of Zabú, there is a pit about 6½ yards in circumference, and rather more than a yard deep, surrounded by a copse of date-suckers, tamarisks, &c. It is called El Márún, and is believed to be a panacea, provided the patient can bathe in it seven times: "but he often dies," they say, "before he has completed that number." Its temperature on the 9th of January, when the thermometer in the air stood at 72°, was 88°. Near El Mendisheh there are the walls of a building of sandstone, and to the South-East of El Zabú some ancient Catacombs, in the meanest Egyptian style. El Mendisheh, about a quarter of a mile to the South-East of El Zabú, is a walled village, built on a sandstone rock, and containing about 600 inhabitants. It is surrounded by palm-groves well watered by ferruginous springs. The principal reservoir, close to the town on its Western side, is filled with palatable water, though either red or yellow, according to the quality of the predominant oxide. Its temperature on the 6th of December was 81·7°, that of the air being 66·5°. Beled el 'ajúzah, about a quarter of a mile to the West of El Mendisheh, is in a very pretty situation overshadowed by groves of palms, apricots, and pomegranates, with gurgling streams traversing its gardens in various directions. It is inhabited by a colony from Síwah, and is evidently on the site of an ancient town. El Kasr has about 800 inhabitants, El Báweít about 600, and the whole population of the Oasis does not exceed 2500. The Western valley, though of less extent, is much the most productive, and after the dreary monotony of the surrounding Deserts, may well be looked upon as an earthly paradise. (Caill. i. 172.) Its soil is a sandy clay, almost everywhere impregnated with sea-salt and iron-oxide. A little rain falls in January, but the springs are never dry. Flights of locusts sometimes come, as in Egypt, from the South. The inhabitants dress much like the peasantry in Egypt, (Caill. pl. lvii. fig. 10.) and are ignorant, superstitious, bigoted, and not very well disposed. They take great care of their gardens, and especially of their date trees. Their different villages are often at war with each other. The plague is almost unknown, and ophthalmia very rare; but putrid fevers and agues are very prevalent and tedious during Spring and Summer. Their gardens produce almost all the fruits known in Egypt, but dates are the staple article of produce. Camels, oxen, and buffaloes are rare, but the ass is common; they have also a few mares, and some sheep and goats. Poultry is very scarce. In the surrounding Deserts, there are wolves, foxes, abundance of antelopes, and the Bakar el wahsh, or wild cow of the Arabs. (*Antilope bubalis.*) Ser-

pents of various kinds are very common. From this Oasis to Siwah, (the Oasis of Ammon,) is a journey of eleven days, and much more fatiguing than those already described. At 'Ain el beledi, (Village Spring,) about five miles from El Kasr, there is some herbage; but, for the four following days, neither water nor vegetation is seen. Rugged beds of calcareous rock, or a vast expanse of sand impregnated with salt, as fatiguing to the eye of the traveller as wearisome to the foot of his camel, are almost the only varieties of soil and scenery which occur. Petrified oysters and fossil nummulites, quartzose breccias, some hematites, and abundance of crystals of carbonate of lime, are the most remarkable minerals found on this dreary route. Just mid-way between these two Oases is El Bahrein, so named from two salt lakes, one of which is about five miles from East to West, and rather more than a mile across. On the North it is bounded by a bleak mountain, on the South by a sand-bank, with beds of reeds and a grove of palms and dums. (*Cucifera Thebaica*.) The temperature of its waters was about 18° higher than that of the air; and it is said to be deep. Its borders are encrusted with natron. At Arāi Abū-l Bahrein, half-way between this lake and Siwah, there is a valley containing water and herbage; but it is now completely abandoned, and often infested by predatory hordes.

For authorities, see OASIS, and SIWAH.

O'VAL, *adj.* } Fr. *oval*, It. *ovale*; Sp. *oval*;
O'VAL, *n.* } Lat. *ovum*, an egg.
O'VARY, } Having the form or shape of an
O'VATE. } egg; like an egg.

The *ovals* and other imperfect secular forms, have the same exceptions, and less benefit of capacity.

Reliquiæ Wottonianæ, p. 14.

The *ovary* or part where the white involveth it, is in the second region of the matrix, which is somewhat long and inverted.

Sir Thomas Brown. Vulgar Errors.

Mercurius nearest, to the central sun
Does in an *oval* orbit circling run;
But rarely is the object of our sight
In solar glory sunk, and more prevailing light.

Blackmore. Creation, book ii.

He to the rocks
Dire clinging gathers his *ovarious* food.

Thomson.

An *oval* is never mistaken for a circle, nor an hyperbola for an ellipsis.

Hume. Essays, vol. ii. part i. sec. 7. p. 60.

These perceived in all such animals as produced their young alive, two glandular bodies, near the womb, resembling that *ovary* or cluster of small eggs, which is found in fowls; and, from the analogy between both, they gave these also the name of *ovaria*.

Goldsmith. Animated Nature, vol. i. part ii. ch. ii. p. 239.

OVATION, Fr. *ovation*; It. *ovazione*; Sp. *ovacion*;
Lat. *ovatio*, from *ovis*, a sheep.

See the Quotation from North.

At the great triumph and entry made, the captain or generall that triumpheth as a conqueror did offer the sacrifice, (by the old orders and ancient customs of Rome,) one or divers oxen; whereas at the second triumph called the *ovation*, he onely sacrificed a mutton, which the Romans call in their tongue *ovem*, and thereof it was called *ovation*.

Sir Thomas North. Plutarch, fol. 265. *Marcellus*.

Yea, after we have triumph'd in a supposed *εὐννα*; a new-sprung difficulty mairs our *ovations*, and exposeth us to the torment of a disappointment.

Glanvil. The Vanity of Dogmatizing, ch. vi. p. 66.

OUCH, } Mr. Tyrwhitt thinks *nouch* to be the
NOUCH. } true word, *ouch* the corruption; and he
cites Du Cange to show that the Teut. *nuschin* means

fibula, a clasp or buckle; but how it so means, neither he nor Du Cange explain. *Nouche* and *ouch* are, perhaps, both correctly used, as they appear to have the same or very nearly the same meaning; the first, from Fr. *niche*, a *notch*; and the second from the Fr. *oche*, also a *notch*, from *ocher*, *hacher*; to hack, *incidere*, to cut into. Skinner derives *ouched* (*vox fæcialium*, as he calls it) from this Fr. verb *ocher*, *incidere*, *oche*, *aena incisura*. And thus *ouch*, or *nouches*, (sc. of gold.)

Niches or *notches* of gold (in which the onyx or any other stones were set. See the Quotations from the Bible,) or bits of gold *niched* or *notched* in, or inserted in *niches* or *notches*.

— And with hir fingres smal

A corone on hire hed they han ydressed,
And sette hire full of *nouches* gret and smal.

Chaucer. The Clerkes Tale, v. 8258.

My hosbond had a legend of his wif
Eriphile, that for an *ouch* of gold
Hath prively unto the Grekes told,
Wher that hire hosbond hidde him in a place,
For which he had at Thebes sory grace.

Id. The Wif of Bathes Prologue, v. 6325.

But for to proue in all wise,
As fine as ducket in Uenise,
Of which to lite all in my *pouche* is,
And they were set as thick as *ouches*.

Id. The House of Fame, book iii.

And al that is vnder theyr gouernance shal prospere and come to perfection, and as a precious stone in a riche *ouch* they shal be beholden and wondred at.

Sir Thomas Elyot. The Governour, book iii. ch. xxviii.

We wishe that while we liued, ye neuer had folowed our fantasies, nor neuer had so cockered vs, nor made vs so wanton, nor hadde geuen vs other *ouches* than ynyons or great garlike headdes, nor other pearles for oure parlettes and our pastes, then fayre oriente peason.

Sir Thomas More. Workes, fol. 337. *The Supplication of Soules*.

After the worcke of a stone graner, enē as sygnettes are grauen, shalt y^a graue the ii. stones with the names of the chyldren of Israel, and shall make them to be set in *ouches* of golde.

Bible, Anno 1551. Exodus, ch. xxviii.

And they wrought onix stones closed in *ouches* of golde and graued as sygnettes are grauen wyth the names of y^e childre of Israell.

Id. Ib. ch. xxxix.

OUDE, AUD'H, or more properly AWAD'H, an abbreviation of the Sanskrit word Ayód'hyá, is the name of a Kingdom in Hindústán, connected by very close ties of dependence and amity with the British Government, to whose aid and forbearance it owes its existence as a separate State. Bounded to the North and East by a woody range of hills on the confines of Népál; to the North and West by the Súbahs of Dihlí and Agrah; to the South and South-East by Allah-ábád and Bahár; it measures about 250 miles from North-West to South-East, but not much more than 100 miles in its greatest extent from North to South. Its whole surface forms an almost imperceptible declivity from the North-Eastern hills to the Western bank of the Ganges, and consists of a rich soil for the most part deposited by the many streams which traverse that Country in a South-Eastern direction; care, therefore, and judicious management alone are wanting to make it highly productive. Indigo, opium, and nitre are among the valuable articles of commerce which it furnishes, for as it lies between 26° and 28° North latitude, its climate is favourable to the growth of almost all the plants found under the Tropics. Having been originally a Province

of the Moghul Empire, and, as such, formed into a separate State, its subdivisions have never been altered and are still the same as in the time of Akbar; viz. the Serkars of (Districts) 1. Górak'h-púr; 2. Awad'h or Aúd'h; 3. B'haráich; 4. Khaír-ábád; and 5. Lak'hnaú.

1. Górak'h-púr, at the Western extremity of the Súbah of Aúd'h, is inclosed on three sides by a part of the Né-pálese territory, Bahár and Allah-ábád, all now subject to Great Britain, to which this District also was ceded by the Nuwwáb of Aúd'h, in A. D. 1801. The Déva or G'hág'hra divides it into two portions: i. Górak'h-pur Proper, North, and ii. 'Azímgar'h, South of that river. The former had, in A. D. 1813, 363,872 pakká (large) big'hás (about 111,960 acres) cultivated, and 768,272 big'hás (236,391 acres) fit for cultivation; the latter 350,190 big'hás (107,750 acres) in cultivation, and 263,003 big'hás (80,924 acres) fit for it. The former was then assessed at 792,205 rupees; (£79,220;) the latter at 954,135 rupees; (£95,413;) the rest of the land was waste. The whole of this District North of Górak'h-púr was then covered with wood, the resort of elephants, wild beasts of various kinds, and of the beautiful bustard called Florican. (*Otis houbara*.) This vast forest extends to the base of the lower range of hills, and varies much in breadth and density. It covers the *teriyáni*, or low lands, at the foot of the hills, is intersected by numerous streams falling into the Ráptí, and, in May and June, is the seat of the *teriyáni* fever, one of the most rapid and fatal ever prevalent. As the heat is more moderate here than in Bengal, this district would be very healthy but for the abundance of wood and stagnant water. Górak'h-púr, its Capital, is in 26° 46' North and 83° 19' East. This Serkár contained, in Akbar's time, (*Ay. Akb.* ii. 208.) 24 pergana's or townships, and yielded a revenue of 11,978,025 dáms. (£35,229.)

2. Awad'h, or Aúd'h, the ancient Capital of this Súbah, stands on the South side of the G'hág'hra, in 26° 48' North and 82° 4' East. In Abú-l-fazl's time (*Ay. Akb.* ii. 32.) it was esteemed by the Hindús as one of the largest cities and most sacred places in Hindústán; grains of gold were also sometimes found on digging the earth round it. The site of Ayód'hyá, though still visited by pilgrims, is now only marked by heaps of rubbish, almost buried in thickets, where the reputed places of the Temples of Ráma, Sítá, Lakshman, and the Hanumán (Commander-in-chief of Rám's monkey corps) are pointed out for the veneration of the devout, who are now, it is said, chiefly religious mendicants. The modern town is tolerably populous, and stretches along the banks of the river as far as Faiz-ábád. (The Abode of Bounty.) The latter, which is properly speaking a continuation of Aúd'h, was the residence of the Court till 1775, when Asafu-l daúlah removed to Lak'hnaú. The remains of a fortress and Shujá'u-l daúlah's Palace may still be seen; but the population, though considerable, has consisted almost exclusively of tradesmen and mechanics, since it was abandoned by the Nuwwáb. It was till her death, in 1815, the residence of the B'haú Bégu'm, widow of the celebrated Shujá'u-l daúlah, and mother of his successor Asafu-l daúlah. According to the *Ayín Akbarí*, (ii. 207.) this Serkár had 21 pergana's, and paid into the treasury 42,636,592 dáms. (£123,637.)

3. B'haráich,* contiguous to the Serkár of Aúd'h, and

* Biráich, in the Map published by the Serampore Missionaries; but the names in it are unfortunately often strangely misspelled.

lying between the G'hág'hra and the Né-pálese hills, has an open, productive territory watered by that river and the Ráptí. Much of it is still in possession of Pat'háns, (or Afgháns,) one of whom is the Khán or Feudal Lord of B'haráich; a few of the Northern pergana's were ceded to Great Britain in A. D. 1800. Its principal town is B'haráich, in 27° 33' North and 81° 30' East; an ancient city on the banks of the Sarjú, (Sarayú,) much frequented by Mohammedans on account of the Tombs of Rejeb Sálár, brother of the Emperor Tughlák Sháh, and Sálár Mas'úd, a near relation of Sultán Mahmúd Ghazneví; who, though their history and genealogy are somewhat doubtful, says a Musulmán Writer, being martyrs, are deservedly much venerated by the faithful. It formerly had 11 pergana's, and paid a revenue of 24,587,007 dáms. (£72,314.)

4. Khaír-ábád, (Good Abode,) the North-Western Province of the territory of Aúd'h, lies between the G'hág'hra and the Ganges, and has a fertile though light, friable soil, forming thick clouds of dust in the dry season, while in Winter the crops are often injured by frosts. Its Capital, Khaír-ábád, is situated in 27° 30' North and 80° 40' East, on a small stream running into the Gúmtí. In Akbar's time it had 22 pergana's, and paid 45,357,723 dáms. (£133,405.)

5. Lak'hnaú, contracted from the Sanskrit Lakshma-navati, and at present the Capital of Aúd'h, as well as of the District bearing its name, is situated on the South side of the Gúmtí, in 26° 51' North and 80° 50' East. Like Constantinople (which to the eye is now an Asiatic city) it has a much finer appearance when seen at a distance than on a closer examination. Its gilt cupolas, tapering minarets, lofty edifices in a splendid and fantastic style of Architecture; its vast extent of buildings, broken by groups of overhanging trees, seem at first to realize the most brilliant scenes ever painted in an Asiatic Romance; but on entering the town, narrow streets, 10 or 12 feet below the level of the ground, choked up with filth and wretchedness, completely destroy the illusion; and a good chaúk (market) with one or two respectable bázárs are a poor compensation to its inhabitants, upwards of 300,000, for being crowded into ill-built and ill-ventilated houses with little chance of enjoying either health or comfort. The South-Eastern and newest portion of the city wears, however, a very different aspect. A fine street of well-built houses, with bázárs at right angles to it and a spacious chaúk in the centre, terminated at one extremity by the Royal Palace called Farah-bakhsh (Inspirer of Delight) and the house of the British Resident, at the other by the park of Dil kushá, (Heart-ravishing,) well-watered and well-stocked with peacocks and antelopes, presents a picture of luxury and splendour unalloyed by squalidness and decay, such as is seldom beheld in any Asiatic city. But upon the North-Western side of Lak'hnaú, separated from the quarter last named by a mean bázár, is that portion of it which is most worthy of a stranger's attention. Here he sees an assemblage of Mosques and Palaces erected by its different Sovereigns in the richest style of Musulman Architecture, without any of that barbarous intermixture of European decorations which so often offends the eye in buildings of a later date. The Imám bári (Imám's Sacred Enclosure) with a splendid Mosque and Gateway called Rúmí Derwázah, (Grecian Gate,) contains the Sepulchre of Asafu-l daúlah richly illuminated at night, strewed with flowers by day, adorned with cakes of sacred barley from Mecca, and attended by

OUDE. Dervíshes, who day and night chant Fátihahs* for the rest of his soul. The Panj-Mahall, (Five Palaces,) Husein-Bágh, (Husein's Garden,) Haider-Bágh, (Lion Garden,) &c., together with less distinguished Palaces, adorn this part of the city. The Royal Menagerie on each side of the Gúmtí, with its rhinoceroses, elephants, Bactrian camels, and well-trained pigeons, is likewise one of the curiosities which deserve notice. Constantia, the singularly constructed house of the celebrated General Claude Martine, said to have cost £150,000, is also another remarkable object near this city. The Serkár of Lak'hnaú, according to the *Ayín Akbari*, (ii. 210.) contained 55 pergunahs, and yielded a revenue of 84,288,686 dáms. (£247,907.)

The traditional and Mythological legends respecting Ayód'hyá, King of Dasarathá, and his son Ráma, have been already noticed in the summary of the History of INDIA. After the Musulman invasion, Aúd'h soon became a part of the Moghul Empire, to which it remained nominally attached till a very late period, though virtually separated from it in the reign of Mohammed Sháh. Under that weak Prince, Sa'adat Khán, a native of Nishápúr, in Khorásán, was appointed Súbahdár of Aúd'h, and that dignity has ever since been hereditary in his family. He was succeeded, in A. D. 1739, by his nephew Sefder Jang, a man of considerable military skill and a great favourite at Court; who, on the death of the celebrated Nizámu-l mulk, in 1748, was appointed Vezíru-l Memálik, and, in 1756, was succeeded as Nuwwáb of Aúd'h by his son Shujá'u-l daúlah. This Chief, well known by his unsuccessful contest with the British troops in favour of Kásim 'Alí Khán, Nuwwáb of Bengal, and his subsequent alliance with Great Britain in 1765, by which he regained his conquered territory, possessed considerable powers of mind, and considering the circumstances in which he was placed, deserves to rank high as an able and equitable ruler. To a bold and enterprising spirit he united a love of justice, order, and economy, very rarely manifested by statesmen educated in Indian Courts. But neither his Religious nor his Political prejudices were calculated to check the violence of his temper, or leave any scruples when revenge or ambition was to be gratified. Hence the many acts of cruelty by which he was disgraced, and his treacherous conduct towards the Róhillah Afgháns, in the ruin of whom, he availed himself but too successfully, of the aid of his new allies. He was created Vezíru-l Memálik (Prime Minister of the Empire) by Sháh 'A'lam, but as the authority of the Emperor was then merely nominal, he was, with regard to Aúd'h, already virtually an independent Sovereign. His alliance with Great Britain preserved his territories from being overrun by the Mahrattas when in the zenith of their power, and he died in peaceable possession of his throne, in A. D. 1775. His eldest son, Asafu-l daúlah, (the Asaph of the Empire,) succeeded to his dignities without opposition, his claims to the office of Vezír having been strongly supported by the British influence at the Court of Dihlí; and in the same year he concluded a Treaty with Great Britain, by which he engaged to employ no Europeans in his service without the consent of his British allies; to pay a subsidy of 260,000

rupees (£26,000) a month for the charge of a brigade of British troops stationed in his territory; to discharge the balance due on account of Kórah, Allah-ábád, and the Róhil-K'hand; and to cede in perpetuity to Great Britain the territory of Benáres, held as a feudal Lordship by Rájah Chét'h Sing'h. The fear of the Mahrattas on one hand, and of the Sik'hs on the other, rendered an augmentation of the subsidiary force requisite; and in 1781 and 1784, fresh agreements for that purpose were made. The revenues of this fertile Province would have been amply sufficient to meet all the expenses thus incurred, had Asafu-l daúlah possessed any prudence or self-control; but as he was entirely devoted to personal indulgences, his extravagance knew no limits. His Ministers were expected to furnish money whenever called upon; his treasury was exhausted; and the collection of his revenues was intrusted to professed money-lenders, who not only supplied the sums demanded at an exorbitant interest, but were left to exercise, in the office of collectors, every species of extortion. The prospect of inevitable ruin with which the Province of Aud'h was thus threatened, rendered an interference on the part of his allies necessary, and, in 1786, a new Treaty was concluded, by which the continuance of the two brigades was made permanent, and the subsidy was fixed at £500,000 a year, all claims for balances were relinquished, and the entire defence of the State was undertaken by Great Britain, the management of the revenues and internal Government being left, as before, exclusively in the hands of the Nuwwáb. His extravagance, however, was not in any degree diminished, and his private debts amounted, in 1793, to £1,500,000, the annual interest on which was upwards of £400,000, while his territories were daily deserted, and the receipts of his treasury rapidly decreasing. In 1795, the Vezír, who now took a more active part in public business, paid off his European creditors, and compounded with the natives to whom he was indebted; but there was no real improvement in the management of his affairs; nor, till alarmed by the threatened invasion of the Afghán Chief, Zemán Sháh, could he be prevailed upon to appoint a Minister on whose probity any reliance could be placed. Soon after that event, he died suddenly in the month of June, 1797. Mírzá 'Alí, acknowledged by him as his illegitimate son, was appointed his successor, and confirmed by the British Government, notwithstanding the claim of Sa'adat 'Alí, eldest brother of the deceased Nuwwáb, on the plea of Asafu-l daúlah's never having had any offspring. The conduct of Vezír 'Alí, as he was now styled, was in the highest degree flagitious; he showed no regard for any obligations however sacred; and, though feared, was the object of universal detestation. Lord Teignmouth, then Governor-General, in the hope of repressing such misconduct, visited Lak'hnaú, investigated the history of his birth, ascertained that Sa'adat 'Alí's averments were correct, and that the reigning Nuwwáb was the child of some menial servants; and had been purchased by his reputed father for 500 rupees, (£62,) immediately after his birth. He was, therefore, formally deposed, and Sa'adat 'Alí, the eldest surviving son of Shujá'u-l-daúlah, was placed on the throne in January 1798. A new Treaty was likewise made, by which, in addition to the stipulations of former Treaties, the subsidiary force was raised to 10,000 men, the subsidy to £912,000; the fortress of Allah-ábád was ceded to Great Britain; the British Government was to be consulted as to the management of the revenue; and a pro-

vision was to be made for the reputed children of Asafu-l daulah; 150,000 rupees (£1500) being annually paid as an allowance for Vezir 'Alí, and 12 laks (£120,000) to Great Britain, in compensation for the expenses incurred in thus settling the affairs of Aud'h. Vezir 'Alí was allowed to reside at Benáres, where he employed his ample revenues to excite a spirit of insurrection in the subjects of Great Britain and of the Nuwwáb; and when, consequently, ordered to fix his residence at Calcutta, he formed the desperate project of massacring all the English in Benáres; and actually succeeded in assassinating Mr. Cherry, the British Resident there. He was subsequently joined by a battalion of native troops sent from Aud'h to seize him; and, for a time, spread desolation and alarm through the plains of Górák'h pur; but, after the dispersion of his adherents, he was treacherously given up by a Rájpút Chief with whom he had taken refuge, and finally imprisoned in Fort William. Near the close of 1799, Sa'adat 'Alí finding it almost impossible to retrieve his affairs from the state of confusion into which they had fallen, proposed to abdicate the throne in favour of one of his sons, and to leave the management of the Government, Civil and Military, entirely to the British Authorities; on further consideration, however, this plan was relinquished, but the pressure of his difficulties was not removed; the subsidies fell into arrear; the expenses of the British Government made some indemnification indispensable, and at length it was agreed, by a Treaty signed on the 10th of November, 1801, that territories producing a revenue of 13,523,474 rupees (£1,353,000 nearly) should be ceded by Aud'h to the King of Great Britain; in consequence of which the several Districts in the Dúáb, the Serkár of Górák'h pur, and the Súbah of Allah-ábád were finally annexed to the British territories.

Sa'adet 'Alí died very suddenly, either from a fit of apoplexy or the rupture of a blood-vessel, in July 1814, and was succeeded without any tumult or interruption by his son Gháziul dín Haider, who assumed the title of Vezir, as Sa'adat 'Alí had done before, without applying for the sanction of the Court at Dihlí. By a Treaty concluded on his accession to the throne, many questions, long kept in abeyance, were settled; and so well were his finances regulated, that, in 1815, he was able to accommodate the British Government with a loan of two karór of rupees, (£2,500,000,) one of which was subsequently redeemed by the cession of the Teriyání, given up by the Sovereign of Népál. The fickleness, however, and prejudices of this Prince have hitherto prevented his removing the grievances by which his subjects are oppressed, or materially improving their condition. In 1819, having resolved to throw off his nominal allegiance to the Court of Dihlí, he assumed the title of Pádisháh, (Emperor,) before exclusively given to the Great Moghul. In 1827, he was again able to lend to the British Government a karór of rupees; for, defective as is the revenue-system of Aud'h, that Country, under every discouragement, is so productive, that its Sovereign, with the smallest prudence, having no considerable force to maintain, nor any wars to drain his coffers, can easily accumulate a very large capital.

For Authorities, see BENGAL, BEHAR, &c.

OVEN, Goth. *auhn*; A. S. *ofne*; D. *oven*; Ger. *ofen*; Sw. *ugn*. Wachter thinks the Goth. *auhn* or *auchn*, a corrupt pronunciation of *ofn*; and Junius derives *ofn* from the Gr. *ἰπνός*, *furnus*. Tooke thinks

the A. S. *ofne*, and Eng. *oven*, are the past participle of the A. S. *heaf-an*, Eng. to *heave*; the regular past tense being A. S. *haf, hof*, Eng. *hove*, and by the addition of the termination *en* was formed the participle *hafen, hofen, hoven*, and by the mere omission of the aspirate *afen, ofen, oven*, and meaning, *heaved*, raised, or lifted up.

Oven means, a place, (a fire or furnace,) *heaved* or raised.

And if God clothith thus the hey that to day is in the feeld: and tomorowe is cast into an *ouene*: how myche more you of litil faith? *Wiclif. Luke, ch. xii.*

The fourth finger is kissing: and trowely he were a gret foole that wold kisse the mouthe of a brenning *oven* or of a fourneis.

Chaucer. The Persones Tale.

In steed of bread they drie a kind of fish which they beat in mortars to powder, and bake it in their *ovens*, vntill it be hard and drie.

Holinshed. The Description of Britaine, vol. i. ch. x. p. 76.

O'VER, } In A. S. *ufa, ufera, ufemæst*, are the
O'VEREST. } nouns *altus, altior, altissimus*; *ufera, ofere, ofer, altior*; *over* or *upper*. *Ufemæst, altissimus, upmost, uppermost, upperest, overest*. In Ger. *auf, au-ber, oben, ober, oberste*; D. *op, opper, over, opperste, overste*; Sw. *uppe, up, oofwer, oofre, oofwerste, upperst*. Tooke supposes the A. S. *ufon, ufa*, (from the comparative of which our preposition and adjective *over*,) means *top* or *head*, and to be originally derived from the same source as *head*, i. e. the A. S. *heaf-an, heof-an*, to heave, to lift up.

Over lip, the upper lip.

Overest slop, his uppermost slop.

Over is much used in Composition. In some words it is used merely with the same force that it would have if it followed the verb; as to *over-come* us, to *come over* us, to *over-blow*, to *blow over*, to *over-glance*, to *glance over*, to *over-flow*, to *flow over*, *superfluere*; and hence the application when a superfluity, or excess is intended; *over* is then equivalent to *too much, more than, more than sufficient* or *needful*; and may, when prefixed to adjectives and adverbs, be supplied by the word *too*, (which we do not attach by the hyphen,) as *over-bold*, *too bold*; *over-credulous*, *too credulous*; *over-earnestly*, *too earnestly*, or with an excess of boldness, credulity, earnestness. In these *over* is an adverb and need not be affixed.

In nouns, *over-greatness*, excessive *greatness*, *over-moisture*, excessive *moisture*; in these *over* is an adjective and need not be affixed.

In verbs, to *over-go*, to exceed, to surpass; *over-do*, *do to excess*; *over-burden*, to *burden to excess*.

It is sometimes used with a *subaudition* of the verb; the storm was *over*; i. e. gone, past *over*. In some words the application is consequential, as to *over-come*, to *come over*, sc. a country, a territory with superior power, and thus, to subject, to subdue, to conquer; to *over-throw*, as in wrestling, to *throw over*, and thus, to gain the superiority, the victory; to *over-throw*, sc. a tower, and consequently, to destroy. To *over-hear*, to *over-reach*, met. to *over-take*, require more particular explanations.

To nothing it is worth *over*, no but to be cast out, and be defouled of men. *Wiclif. Matthew, ch. v.*

For with ire strogling wel and mightily

The theef fell *over* bord al sodenly,

And in the see he drench'd for vengeance.

Chaucer. The Man of Lawes Tale, v. 5342.

Hire *over* lippe wiped she so clene,

That in hire cuppe was no ferthing sene

Of grese, whan she dronken hadde hire draught.

Id. Prologue to the Canterbury Tales, v. 133.

OVEN.
—
OVER.

OVER.
—
OVER-
ARCH.

Ful thredbare was his *overest* courtsey,
For he hadde gotten him yet no benefice,
Ne was nought worldly to have an office.
Chaucer. Prologue to the Canterbury Tales, v. 292.

His *overest* sloppe it is not worth a mite.
Id. The Chanones Yemannes Prologue, v. 16101.

And *ouer* that he tolde pleine,
In what maner he was beseine.
Gower. Conf. Am. book v. p. 146.

For he, be sure,
In height or depth, still first and last will reign
Sole king, and of his kingdom lose no part
By our revolt, but *over* Hell extend
His empire, and with iron scepter rule
Us here, as with his golden those in Heav'n.
Milton. Paradise Lost, book ii. l. 330.

See how he lies at random, carelessly diffus'd
With languish't head unpropt,
As one past hope, abandon'd,
And by himself given *over*;
In slavish habit, ill-fitted weeds
O're worn and soiled.
Id. Samson Agonistes, l. 124.

For all of ancient that you had before,
(I mean what is not borrowed from our store,)
Was error fulminated *o'er* and *o'er*.
Dryden. The Hind and the Panther, part ii.

But O, *o'er* all, forget not Kilda's race,
On whose bleak rocks, which brave the wasting tides,
Fair Nature's daughter, Virtue, yet abides.
Collins. On the Superstitions of the Highlands.

OVER-AFFECT. Lat. *afficere, affectum*, to make
to or towards; to act to or towards, sc. with good will
or love.

To love too much, to be partial to.

God so love me, as I do the tranquillity and happiness of his
Church, yet can I not so *overaffect* it that I would sacrifice one
dream of truth to it.

*Hall. Works, vol. ii. part ii. fol. 74. To the Lord Bishop of
Salisbury.*

OVER-AGAINST, implies that some thing, some
space, or distance has been, or is to be, passed *over* from
the one object opposed or *against* the other.

All other places there about (yielded unto him) except only the
town of Rhegium, *over-against* Sicily.

Raleigh. History of the World, book v. ch. iii. sec. 12. fol. 643.

OVER-AGITATE. Lat. *agit-are, atum*, to keep in
constant action; in commotion; to shake.

To move or shake too much; to excess; to disturb
excessively the calm or tranquillity; to discuss too much,
too frequently.

What is fit to be determined in a business so *over-agitated*; I
shall shut up in these ten propositions.

Hall. Works, vol. iii. fol. 830. Cases of Conscience, dec. iii. case 7.

OVER-ALL, more than the whole or *all* the rest,
expressed or understood.

Vor me mygte bere by hys daye & lede hardelyche
Tresour aboute & oþer god *oueral* apertlyche.
R. Gloucester, p. 375.

His youth shall be cast away
Upon such one, whiche as the wey
Is olde, and lothely *oueral*;
But nede he mot, that nede shall.
Gower. Conf. Am. book i. p. 30.

OVER-ARCH, v. Lat. *arcus*, a bow or curve.
To bow or curve over.

In the ground
The bended twigs take root, and daughters grow
About the mother tree, a pillar'd shade
High *overarch't*, and echoing walks between.
Milton. Paradise Lost, book ix. l. 1107.

Hast thou yet found the *over-arching* bower
Which guards Parthenia from the sultry hour.
Gay. Dione, act. iii. sc. 2.

Beneath this high *o'er-arching* canopy
Of clustering oaks, a sylvan colonnade,
Aye listening to the native melody
Of birds sweet echoing through the lonely shade.
West. Education.

OVER-AWE, *awe* perhaps from Goth. *agyan*, to
fear, to dread, to cause fear or dread.

To cause too much, an excess of, fear, dread, or re-
verence; to subject to fear, to subdue by fear.

None doe you like, but an effeminate prince,
Whom like a schoole-boy you may *ouer-awe*.
Shakspeare. Henry VI. First Part, fol. 96.

The nations *overaw'd*, surcease to fight,
Immovable their bodies, fixt their sight.
Dryden. Virgil. Æneid, book xii.

OVER-BA'LANCE, v. } *Balance, bis lanx*, equal
OVER-BA'LANCE, n. } weight in each plate.
(*Lanx*.)

To weigh more than equally; to carry the scale or
weight beyond an equality or equipoise.

For deeds always *overbalance* words, and down-right practice
speaks more plainly than the fairest profession.
South. Sermons, vol. vii. p. 275.

So much power as the scale has to give itself an *overbalance* from
an equipoise, so much self moving, self preponderating power it has,
and no more.

Edwards. On the Freedom of the Will, part ii. sec. 7.

OVER-BARREN, *barr-en* or *barr-ed*, i. e. stopped,
shut; from which nothing can issue or proceed; sterile.

Too barren, too sterile, or unproductive.

A plaine, moderately dry; but yet not *over-barren* or sandy; nor
altogether without trees, and shade; is very convenient for length
of life.
Bacon. History of Life and Death, fol. 22.

OVER-BATTLE, *battle*, (see *BAIT*, and *BATTLE*),
fertile, fruitful; it may be opposed to *barren*.

Too fertile, too productive, too fruitful.

In the Church of God sometimes it commeth to passe, as in *ouer
battle* grounds, the fertile disposition whereof is good; yet because
it exceedeth due proportion, it bringeth forth abundantly, through
too much rauknesse, things lesse profitable, whereby, that which prin-
cipally it should yeeld, being either preuented in place, or defrauded
of nourishment, faileth.

Hooker. Ecclesiasticall Politie, book v. sec. 3. fol. 191.

OVER-BEAR, v. } To bear *over*, sc. by pushing or
OVER-BEARING, n. } pressing against; to suppress,
to subdue.

But the East wynde shall *ouerbear* the into the myddest of the
sea.
Bible, Anno 1551. Ezechiel, ch. xxvii.

Whose scoffed words he taking halfe in scorne,
Fiercely forth prickt his steed as in disdaine
Against that knight, ere he him well could torne;
By meanes whereof he hath him lightly *overborne*.
Spenser. Faerie Queene, book iv. can. 2.

The judgement being the hegemonical power, and director of
action, if it be led by the *over-bearings* of passion, and stored by
lubricous opinions in stead of clearly conceived truths, and be pe-
remptorily resolved in them, the practice will be as irregular, as the
conceptions erroneous.

Glanvil. The Vanity of Dogmatizing, ch. xxiii.

OVER-BEND, A. S. *bend-an*, to move out of a
straight line.

To bow, to crook, to curve, too much; to incline,
strain, or stress, to a certain point, in a certain direction;
to an excess.

OVER-
ARCH.
—
OVER-
BEND.

OVER-
BEND.
—
OVER-
BOLD.

His recreations (for even these humane frailty will sometimes call for) are such as may be meet relaxations to a mind *over-bent*, and a body tired with honest and holy imployments.
Hall. Works, vol. iii. fol. 628. *The Christian*, sec. 3.

OVER-BID, A. S. *biddan*, to *bid*, require, or demand, sc. for a certain price; to offer a price.

To offer too much; to offer or propose to give, more than the value, or fair price.

—What money? Speak.

MORE. Six thousand pound, Sir.

CAP. Take it, h'as *overbidden* by the sun: bind him to his bargain quickly.

Beaumont and Fletcher. The Scornful Lady, act ii. sc. 1.

OVER-BLOW, A. S. *blaw-an*, *flare*, to *blow over*; to pass *over* as the wind; *overblown*, *blown* too much, to an excess; puffed or swelled out, (as with wind.)

This Eneas, that hath thus deepe iswore,
Is wearie of his craft within a throw,
The hote earnest is all *ouerblow*,
And priuely he doeth his ships dight,
And shapeth him to steale away by night.

Chaucer. The Legend of Dido Queene of Cartage, p. 309.

All this recouered in a throwe,
The colde wyndes *ouerblowe*
And stilled ben the sharpe showres.

Gower. Conf. Am. book v. p. 183.

Led with delight, they thus beguile the way,
Untill the blustering storme is *overblowne*.

Spenser. Faerie Queene, book i. can. 1.

If when I was new blossom'd, I did fear
Myself unworthy of Miranda's spring:
Thus *over-blown*, and feeded, I am rather
Fit to adorn his chimney than his bed.

Beaumont and Fletcher. The Knight of Malta, act iv. sc. 1.

OVER-BOARD, G. *uber-bord*; *board*, by transposition of the letter *r*, is *broad*. *Over-board* is opposed to *aboard*, *q. v.*

Over-board; over the *board*, or *boarded* deck of the ship; and, consequently, to throw *overboard*, is to throw into the sea; to throw or cast away, where it may perish or be lost. See an Extract from *Chaucer in v. OVER*.

Which cast the best freight *ouerboorde* away.

Gascoigne. Hearbes. Voyage into Holland, Anno 1572.

The owners partly cheated, partly robbed of truth, despoiled of their rich freight, and at last turn'd *over-boord* into a sea of desperation.

Hall. Works, vol. i. fol. 477. *The Best Bargaine*.

The trembling dotard to the deck he drew,
And hoisted up, and *over-board* he threw.

Dryden. Virgil. Æneid, book v.

OVER-BOIL, } Lat. *bullire*, to *boil*.

OVER-BOI'LING, n. } To *boil over*, *boil* too much;
to heat, to effervesce, to an excess.

Yet still I felt, what young men often feel;

(Impossible to tell, or to conceal.)

When nothing makes them sick but too much wealth,

Or wild *o'er-boiling* of ungovern'd health.

Harte. The Vision of Death.

OVER-BOLD, } *i. e.* too *bold*, fearless, or courageous
OVER-BOI'DLY. } ous; *bold*, fearless, or courageous
to an excess.

This was the sentence how that I and all,
Should euer dread to be to *ouerbold*
Her to displease, and truely so I shall.

Chaucer. The Court of Loue, p. 369.

For till I markt the aime thy satyrs had,
I thought them *ouerbold*, and Thirsis mad.

Browne. Thirsis and Alexis.

If *ouer-boldly* we haue borne our selues
In the commerse of breath your gentleness
Was guilty of it.

Shakspeare. Love's Labour Lost, fol. 143.

OVER-BOUNTEOUS, *i. e.* too *bounteous*; *bounteous*, benevolent, beneficent, or liberal in gifts to an excess. OVER-BOUNTEOUS.

Whether it were his envy not to be *overbounteous*, or that the submissness of our asking stirr'd up in him a certain pleasure of denying.

Milton. Works, vol. i. fol. 398. *An Answer to Eikon Basilike*.

OVER-BROW, *brow*, A. S. *bræwe*, *bruwa*, the edge, the impending edge. *Ofer-browa*, *supercilium*. To hang over or impend, as the *brow* of a hill, the eye-brow.

Where, tangled round the jealous steep,
Strange shades *o'erbrow* the valleys deep,
And holy genii guard the rock.

Collins. Ode on the Poetical Character.

OVER-BUILT, *builded*, *built over*; also *built* too much, covered with too many *buildings*.

—The other way Satan went down
The causey to hell gate; on either side
Disparted Chaos *over built* exclaim'd,
And with rebounding surge the barrs assail'd,
That scorn'd his indignation.

Milton. Paradise Lost, book x. l. 416.

"'Twere well," says one, sage, erudite, profound,
Terribly arch'd, and aquiline his nose,
And *overbuilt* with most impending brows,
"'Twere well, could you permit the world to live
As the world pleases: what's the world to you!"
Much.

Cowper. The Task, book iii.

OVER-BULK, *bulk*, *bulged*, (*g* hard) *bulged*, *bulk*. Large or big as any thing *bulging* out, To *bulk* too much, to an excess; to place too great a *bulk* upon; to oppress with *bulk*.

—The seeded pride
That hath to this maturity blowne vp
In ranke Archilles, must or now be cropt,
Or shedding breed a nursery of like euil
To *ouer-bulke* vs all.

Shakspeare. Troilus and Cressida, fol. 85.

OVER-BU'RDEN, } A. S. *byrden* or *byrthen*, to
OVER-BU'RDENSOME. } *bear* or *carry*.

To *burden* too much, to an excess, to impose or place too much, too great a weight to be *borne* or *carried*.

But I neither wil for so plain a matter *ourburden* the reader in this boke, with the more manyfold then necessary rehersyng of euery place.

Sir Thomas More. Workes, fol. 824. *An Answer to a little Boke that John Frith made*.

Eumenes did not only think all carriages to be *over-burdensome* but the number of his men to be more troublesom than available.

Raleigh. History of the World, book iv. ch. iii. sec. 11. fol. 497.

OVER-BUY, *v. buy*, A. S. *byc-gan*, distinguished from, barter or exchange; opposed to, sell.

To procure or acquire by giving too much, too great a price: to give too much for.

But sure I thinke (and you may iudge the same)
She was to him a goddess in his thought,
Although perhaps her shrines was *ouerbought*.

Gascoigne. Dan Bartholmew of Bathe.

You bred him as my play-fellow, and he is
A man, worth any woman: *ouer-byes* mee
Almost the summe he payes.

Shakspeare. Cymbeline, fol. 370.

OVER-CANOPY, *canopy*, Gr. *κωνωπεῖον*, a veil or covering to exclude gnats, *κωνωπες*; generally, a covering. To *canopy*; veil or cover over.

OVER-CANOPY.

OVER-CHARGE.

I know a banke where the wild time blowes,
Where oxslips and the nodding violet grows,
Quite *ouer-cannoped* with luscious woodbine,
With sweet muske roses, and with eglantine.
Shakspeare. Midsummer Night's Dream, fol. 150.

Where'er the rude and moss-grown beech
O'er-canopies the glade.

Gray. Ode on the Spring.

OVER-CARE, *i. e.* excessive care, immoderate care.

The very *over-care*
And nauseous pomp, would hinder half the prayer.
Thou hop'st, with sacrifice of oxen slain,
To compass wealth, and bribe the god of gain,
To give thee flocks and herds, with large increase.

Dryden. Persius. The Second Satire.

OVER-CARRY, to carry over, too far; beyond moderate bounds.

Their appetite *over-carries* to a misconceit of a particular good.
Hall. Works, vol. iii. fol. 738. Select Thoughts, 89.

OVER-CARVE, to carve, kerve, to cut over or across.

The zodiake, the whiche is partie of the eight sphere, *ouerkerueth* the equinoctial and he *ouerkerueth* hym again in euen partes.
Chaucer. The Conclusions of the Astrolabie.

OVER-CAST, to cast or throw over; *sc.* darkness, gloom; both lit. and met. to encloud, to cover. To cast (see to CALCULATE) too much, too highly; to reckon too much.

His folk went vpto lond, him seluen was þe last,
To bank ouer þe sond, plankes þei ouer kast.
R. Brunne, p. 70.

Now shineth it, and now it raineth fast,
Right so can gery [fickle] Venus *overcast*
The hertes of hire folk.
Chaucer. The Knightes Tale, v. 1538.

Where behynde a man's backe
For though he [Defraction] preise, he fint some lacke,
Whiche of his tale is ay the laste,
That all the price shall *ouercaste*.
Gower. Conf. Am. book ii. p. 47.

Behold, and I shall now the cloud remoue,
Which *ouercast* thy mortal sight doth dim:
Whose moisture doth obscure all things about.
Surrey. Virgil. Æneis, book ii.

But the King, in his accompt of peace, and calmes, did much *ouer-cast* his fortunes, which proued for many yeares together full of broken seas, tides, and tempests.

Bacon. King Henry VII. fol. 17.

His eyes with heavy slumber *overcast*;
With force invade his limbs, and bind him fast.
Dryden. Virgil. Georgics, book iv.

Reputation is said to accompany goodness, as its shadow; but the day may be *overcast*, and the shadow may disappear.
Jortin. Dissertation 4. p. 116.

OVER-CAUGHT, *i. e.* overtake, *q. v.*

She sent an arrow forth with mighty draught,
That in the very dore him *overcaught*,
And, in the nape arriving, through it thril'd
His greedy throte.

Spenser. Faerie Queene, book iv. can. 7.

OVER-CHANGE, *i. e.* excessive change or mutability; fickleness or versatility.

Thou art a shameless villain,
A thing out of the *overchange* of nature;
Sent like a thick cloud to disperse a plague
Upon weak catching women.

Beaumont and Fletcher. The Maid's Tragedy, act v.

OVER-CHARGE, *v.* } To charge or load too
OVER-CHARGE, *n.* } much, too heavily; to im-

pose too great a cargo, weight, or burthen; to put on or in too heavy a load, too great a quantity; to lay on too great a price.

But here me thinks, my priests begin to frowne,
And say, that thus they shall be *ouercharg'de*,
To pray for al, which seems to do amisse.

Gascoigne. The Steele Glas.

As thought saint Poule had leuer that the priest had twety [wives] saue for *ouercharyng*.

Sir Thomas More. Workes, fol. 229. A Dialogue concerning Heresies, &c.

Your love-sick heart that *ouercharg'd* hath been,
With pleasures surfeit, must be purg'd with art.

Daniel. The Complaint of Rosamond.

My woman's strength
Is so *o'recharg'd* with danger like to grow
About my marriage that these under things
Dare not abide in such a troubled sea.

Beaumont and Fletcher. Philaster, act i. sc. 1.

So corn in fields, and in the garden flow'rs
Revive, and raise themselves with moderate showers;
But *ouercharg'd* with never-ceasing rain,
Become too moist, and bend their heads again.

Waller. Instruction to a Painter.

OVER-CLIMB, *A. S. ofer-climan, transcendere.*

To climb over, to mount, ascend, or get over.

This fatal gin thus *ouerclambe* our walles,
Stuft with arm'd men.

Surrey. Virgil. Æneis, book ii.

OVER-CLOUD, *v.* to cloud or cover over; to throw or otherwise place a cover or shade over, to obscure.

A gathering mist *o'erclouds* her chearful eyes,
And from her cheeks the rosy colour flies.

Dryden. Virgil. Æneid, book xi.

Then as the silver empress of the night,
O'erclouded, glimmers in a fainter light,
So frozen with age, and shut from lights supplies,
In lazy rounds scarce roll his feeble eyes.

Tickell. The Phenix from Claudian.

Yet still, *o'erclouded* with a constant frown,
He does not swallow, but he gulps it down.

Cowper. Conversation.

OVER-CLOY, to cloy or clog up to an excess, the senses or sensitive powers; to pall, to surfeit, to an excess.

For the Dukes cousin,
Is by this time in's violent fit of mirth,
And a device must be sought out for suddainly,
To *over-cloy* the passion.

Beaumont and Fletcher. The Passionate Madman, act iv. sc. 1.

OVER-COLD, *D. ouer-koud, præfrigidus*, too cold or chilling; met. too chilling, too frigid, too unimpassioned.

It seemeth by these instances of water, that for nourishment, the water is almost all in all, and that the earth doth but keep the plant upright, and save it from *over-heat* and *over-cold*; and therefore is a comfortable experiment for good drinkers.

Bacon. Natural History, Cent. v. sec. 411.

Whom he dares not openly to backbite, nor wound with a direct censure, he strikes smoothly with an *over-cold* praise.

Hall. Works, vol. i. fol. 180. Characterisms of Vices, book ii.

OVER-COME, } *A. S. ofer-cuman; D. overko-*
OVER-CO'MER, } *men, supervenire, superare, vin-*
OVER-CO'MING, *n.* } *cere, "from over, super, and come,*
OVER-CO'MINGLY. } *venire, ut superare a super," says*

Skinner.

To come over; to come over a country or territory, *sc.* with a superior power; and thus, to subject, to subdue, to conquer; to surmount, to surpass, to excel.

OVER-COME.

OVER-
COME.OVER-
COVER.

Understoundeþ eke þe dedes þat þulke Rychard dude al so,
þat he ne ouercome nogt kynges alone, ac ȝut more þerto
Ac ouer com þe deuyl, & adoun hym caste
To gadere as hii wrestled.

R. Gloucester, p. 361.

Twenty grete batailes Ine ouerkam.

R. Brunne, p. 6.

In the world ghe schulen haue disease, but triste ghe I haue
ouercome the world.

Wiclif. John, ch. xvii.

For in the world shal ye haue tribulacion : but be of good cheare.
I haue ouercome the worlde.

Bible, Anno 1551.

For of whom ony man is ouercomun of him also he is seruauent.
Wiclif. 2 Peter, ch. ii.

Wiclif. 2 Peter, ch. ii.

For of whomesoeuer a man is ouer come vnto y^e same is he in
bondage.

Bible, Anno 1551.

And therefore I pray you, that in this necessitee and in this nede
ye caste you to ouercome your herte. For Senek sayth, that "he
that ouercometh his herte, ouercometh twies."

Chaucer. The Tale of Melibeus, p. 119.

This manne ouercomer had comprehended all this thyng, by nom-
ber of accompting in astronomie.

Id. Boecius, book i. p. 408.

He ouercomer, as it is saied, hath put an vnmeke lord, fodder to
his cruel horse, that is to saie, Hercules slough Diomedes, and
made his horse to fretten him.

Id. Ib. book iv. p. 445.

This kyng, whan that his daie was come,
With strength of dethe was ouercome.

Gower. Conf. Am. Prologue, p. 13.

He found the meanes to subdue both the one and the other, com-
pelling as well the ouercomers, as the ouercome, to be his tributaries
and subiectes.

Brende. Quintus Curtius, fol. 4. col. i.

When with a thousand tongues swift-wing'd Fame comes
And tells of March's gallant victories ;

Who what withstands subdues ; all ouercomes ;

Making his way through fiercest enemies.

Daniel. History of Civil Wars, book vii.

Mac. Can such things be,
And ouercome vs like a summer's clowd,
Without our speciall wonder ?

Shakspeare. Macbeth, fol. 142.

All runnes here to the over-commer : and ouercomming implies
both fighting and successe.

Hall. Works, vol. i. fol. 336. dec. 5. epist. 5.

That they should so boldly and ouercomingly dedicate to him
such things as are not fit.

More. Conj. Cabbala, (1653,) p. 73.

So long she traveild, till at length she came
To an hilles side, which did to her bewray

A litle valley subiect to the same,

All cover'd with thicke woodes that quite it ouercame.

Spenser. Faerie Queene, book iii. can. 7.

So (after Diomed) instantly, the field was ouercome
With thicke impressions of the Greekes.

Chapman. Homer. Iliad, book iv. fol. 60.

About his [Hector] lips, a fume
Stood, as when th' ocean is inrag'd, his eyes were ouercome
With fervor, and resembl'd flames ; set off by his darke browes.

Id. Ib. book xv. fol. 213.

OVER-COSTLY, too costly ; too highly valued or
prized, too expensive.

Those playes which are usually acted and frequented in over-
costly, effeminate, strange, meretricious, lust-exciting apparell, are
questionless unseemly, yea unlawful unto Christians.

Prynne. Histrio-Mastix, act v. sc. 7.

OVER-COVER, to cover over, to conceal.

The denyll our aduersary is not onely content to sette vs in this
lowe and vyle offyce, but also hee hath taken awaye the lyght of
doynge good workes, and ouer covered vs with darckness.

Fisher. The Seuen Penytentyall Psalmes, sig. y. 5.

And wouldest thou haue hir to looke at thee so ouer-covered with
naughtynes.

Vives. Instruction of a Christian Woman, sig. I.

The bags were old and overcovered with dust as if they had lain
there 40 years.

Wood. Fasti Oxoniensis, vol. ii. fol. 67.

OVER-COUNT, to count or compute too much, too
many, in comparison with another ; more than ; to tell
or number more than.

At land thou know'st

How much we do o're-count thee.

Pom. At land indeed

Thou dost orecount me of my father's house.

Shakspeare. Antony and Cleopatra, fol. 349.

OVER-CREDULOUS, too credulous, credulous to
excess ; believing, trusting too easily.

Let us not be so over-credulous, unless God hath blinded us, as
to trust our dear souls into the hands of men that beg so devoutly
for the pride and gluttony of their own backs and bellies, that sue
and solicit so eagerly, not for the saving of souls, the consideration
of which can have here no place at all, but for their bishopricks,
deaneries, prebends, and chanonies.

Milton. Works, vol. i. fol. 27. Of Reformation in England.

And thus I hope I have satisfactorily answered this objection
without shifts or evasions, and rectified these mistaken fathers'
meanings, with which our opposites have seduced the illiterate
over-credulous vulgar.

Prynne. Treachery and Disloyalty, &c. part iii. p. 143.

OVER-CROW, to crow over ; to triumph over, to
insult.

HAM. O, I dye Horatio :

The potent poyson quite ore-crowes my spirit.

Shakspeare. Hamlet, fol. 281.

Little him answered the oake againe,
But yeilded, with shame and grieve adawed,
That of a weede hee was overcrawed.

Spenser. Shepherd's Calendar. February.

Then gan the villain him to overcraw,

And brought unto him swords, ropes, poison, fire,
And all that might him to perdition draw.

Id. Faerie Queene, book i. can. 9.

OVER-DARE, to dare to an excess ; to face dan-
ger, to provoke it, to an excess, rashly, wantonly.

And danger ouer-dares, if it

From iustice disagree.

Warner. Albion's England, book iii. ch. xvi.

Could you not cure one, sir, of being too rash
And over-daring ? there now's my disease :

Fool hardy as they say.

Beaumont and Fletcher. Love's Cure, act iii. sc. 1.

OVER-DATE, to date or mark, note or fix a time,
gone or passed over ; to count or reckon passed or be-
yond the right time.

And had he also redeem'd his overdated minority from a pupilage
under bishops, he would much less have mistrusted his parliament.

Milton. Works, vol. i. fol. 440. An Answer to Eikon Basilike.

OVER-DEAR, too dear, dear to an excess ; too
highly prized, valued or esteemed.

þer ne ssolde non mete ne drynke, bote yt were ouerdeare.

R. Gloucester, p. 389.

Neither are these earthly comforts more defective in yielding full
satisfaction to the soul, then dangerous in their over-dear fruition :
for too much delight in them, robs us of more solid contentments.

Hall. Works, vol. iii. fol. 501. Of Contentation, sec. 7.

OVER-DEEP, too deep ; dipped or sunk too low ;
consequentially, holding too much.

Too much oyl puts out the lamp ; both reason and health are
drowned in over-deep cups.

Hall. Works, vol. iii. fol. 11. Christian Moderation, book i. sec. 7.

OVER-DELICATE, too delicate ; delicate, nice,
dainty, to an excess.

OVER-
COVER.OVER-
DELI-
CATE.

OVER-
DELI-
CATE.

Both religion and right reason require, that we should not be wanton, and *over-delicate* in our contentments, that our pleasures should be like ourselves, masculine and temperate.
Hall. Works, vol. iii. fol. 11. *Christian Moderation*, book i. sec. 7.

OVER-
EAGER.

OVER-DIGHT, *dight*, decked, arrayed or covered over.

Tho, soone as day discovered heaven's face
To sinful men with darknes *overdight*,
This gentle crew gan from their eye-lids chace
The drowzie humour of the dampish night,
And did themselves into their iourney dight.
Spenser. Faerie Queene, book iv. can. 8.

OVER-DO, } A. S. *ofer-done*, done too much.

OVER-DONE, } To do too much, to do or act, to an excess.

Thing that is *overdon*, it wol not preve
Aright, as clerkes sain it is a vice;
Wherfore in that I hold him lewed and nice.
Chaucer. The Chanones Yemannes Prologue, v. 16113.

For any thing so *over-done*, is frō the purpose of playing, whose end both at the first and now, was, and is to hold as 'twer the mirrour vp to nature.
Shakspeare. Hamlet, fol. 266.

Fear still supererogates and *overdoes*.
South. Sermons, vol. viii. p. 219.

OVER-DRESS, to dress too much; to dress, deck, clothe, or adorn with clothes to an excess.

But treat the goddess like a modest fair,
Nor *over-dress*, nor leave her wholly bare;
Let not each beauty every where be spy'd,
Where half the skill is decently to hide.
Pope. Essays. Epistle 4. v. 52.

To suit the dress demands the actor's art,
Yet there are those who *over-dress* the part.
Lloyd. The Actor.

OVER-DRIVE, A. S. *ofer-drifan*.

To drive or force to move along, too much, too far, too fast.

And he sayd vnto him: my lord knoweth y^t I haue tendre children, ewes and kyne with yong, vnder myne hande, which yf men should *ouerdryue* but euen one daye, the hole flocke woulde die.
Bible, Anno 1551. Genesis, ch. xxxiii.

OVER-DROWNED, *drowned*, drenched, steeped in moisture, wetted, too much, to an excess.

When casting round her *over-drowned* eyes,
She on a marble rock at hand, beheld,
In characters deepe cut with iron stroke,
A shepherd's moane.
Browne. Britannia's Pastorals, book ii. song 1.

OVER-DRY, too dry; dry or drained, parched to an excess. See an Example from Bacon in v. OVER-MOIST.

Such are butter'd meats, condite, powdered, and *overdried*.
Burton. Anatomy of Melancholy.

OVER-DYE, to dye too much; to dye, stain, or tinge with too much colour.

But were they false
As o're-dy'd blacks, as wind, as waters; false
As dice are to be wish'd, by one that fixes
No borne 'twixt his and mine; yet were it true.
To say this boy were like me.

Shakspeare. Winter's Tale, fol. 278.

OVER-E'AGER, } Too eager; eager, sharp,
OVER-E'AGERLY, } keen, ardent to an excess.

I have seen sad examples of extravagance in the more modest and private, but *over-eager* pursuits of these recreations, [games of chance].
Goodman. Wint. Ev. Conf. p. 1.

We cannot be sufficiently thankfull for what we have, whiles we do *over-eagerly* reach after what we have not.

Hall. Works, vol. iii. fol. 548. *The Balm of Gilead*, sec. 2.

OVER-EARNEST, too earnest; earnest, (*yearning*.) anxious, ardent, eager, solicitous, intent upon, to excess.

BRU. Yes Cassius, and from henceforth
When you are *ouer-earnest* with your Brutus,
Hee'l thinke your mother chides, and leaue you so.
Shakspeare. Julius Cæsar, fol. 125.

Whether happening by chance, or whether the two captains did *over-earnestly* seek each to get the upper hand.

Raleigh. History of the World, book v. ch. vi. sec. 3. fol. 784.

OVER-EXQUISITE, too exquisite; exquisite, sought, selected too nicely, too anxiously; too anxious or careful in selecting.

EL. BR. Peace, brother, be not so *over-exquisite*
To cast the fashion of uncertain evils.
Milton. Comus, v. 359.

OVER-EYE, to eye, see, or look over; to over-see, to over-look, to observe.

Here sit I in the skie,
And wretched fooles secrets heedfully *ore-eye*.
Shakspeare. Love's Labour Lost, fol. 133.

Within this eight hours, I took leave of him,
And *over-ey'd* him, having some slight business
That forc'd me out o' th' way.

Beaumont and Fletcher. The Wild Goose Chase, act i. sc. 1.

OVER-FALL, D. *ouer-vallen*; to fall over; the falls or over-falls of the Nile were called *Catadupi*. See CATADUPE.

Tostatus addeth, that those people which dwelt near those falls of waters are deaf from their infancy, like those that dwell near the Catadupe, or *over-falls* of Nilus. But this I hold as feign'd.

Raleigh. History of the World, book i. ch. iii. sec. 7. fol. 27.

OVER-FARRE, too far, to too great an extent or degree.

But though I could not with such estimable wonder *ouer-farre* beleue that, yet *thus farre* I will boldly publish her, she bore a minde that enuy could not but call faire.

Shakspeare. Twelfth Night, fol. 260.

OVER-FIERCE, } Too fierce; fierce, furious, or
OVER-MEEK, } violent to excess.

Too meek; meek, mild, or gentle to excess.

How coude August so many yeares well passe?
Nor *overmeke* nor *overferce* he was.

Vncertaine Auctors. Praise of Measure Keeping.

OVER-FLOAT, D. *ouer-vlieten*; Ger. *uber-fliessen*. To float (A. S. *fleot-an*) over; to flow over, to pass over upon the surface.

Ev'n in their lines and trenches they contend;
And scarce their walls the Trojan troops defend:
The town is fill'd with slaughter, and o'erfloats,
With a red deluge, their increasing moats.

Dryden. Virgil. Æneid, book x.

OVER-FLOW, v. } Lat. *flu-ere*; A. S. *flow-an*,
OVER-FLOW, n. } *ofer-flowan*, *superfluere*; D.
OVER-FLO'WING, n. } *ouer-vloeden*; Sw. *ofwer-floda*.

To flow over; to move as water over the brim, to rise, to be or exist in an excess of fullness, in superfluity, copiousness, or plenty; to be full or abundant, copious or plentiful to an excess; to abound.

To flow over; to submerge, to inundate; to run or spread over.

They schulen gye vnto youre bosum a good mesure and wel filled, and shakun togider and *overflowynge*.

Wiclif. Luke, ch. vi.

Here cares redouble; loue doth rise and rage againe,
And *ouerflowes* with swellyng stormes of wrath.

Surrey. Virgil. Æneis, book iv.

OVER-
EAR-
NEST.OVER-
FLOW.

OVER-
FLOW.
—
OVER-
FREELY.

Within that wood there was a covert glade,
Foreby a narrow foord, to them well knowne,
Through which it was uneath for wight to wade,
And now by fortune it was *overflowne*.
Spenser. Faerie Queene, book iii. can. 5.

LEO. A kinde *overflow* of kindnesse, there are no faces truer,
then those that are so wash'd, how much better is it to weep for joy,
then to joy at weeping?

Shakspeare. Much Ado about Nothing, fol. 101.

Thy *overflow* of good, conuerts to bad,
And thy abundant goodnesse shall excuse
This deadly blot in thy digressing sonne.
Id. Richard II. fol. 43.

Nor swelling streames of that god snakie-pac'd,
Which hath so often with his *overflowing*
Thee drenched.

Spenser. The Ruins of Rome.

Poets, that lasting marble seek,
Must carve in Latin or in Greek:
We write in sand, our language grows,
And like the tide our work *o'erflows*.

Waller. Of English Verse.

Other passions, like other rivers, are most liked, when they calmly
flow within their wonted banks; but of seraphic love, as of Nilus,
the very inundations might be desireable, and his *overflowings* make
him the more welcome.

Boyle. Works, vol. i. fol. 253. *Seraphic Love.*

Nor was it his indigence that forced him to make the world,
thereby to make new acquisitions; but his goodness, that pressed
him to manifest, and to impart his glory, and the goods, which he
so *overflowingly* abounds with.

Id. Ib. fol. 270.

OVER-FLUTTER, to *flutter over*; to move over,
as any thing *floating*, when shaken by the wind.

Already this hot cock in bush and tree,
In field and tent *o'erflutters* his next hen;
He asks her not who did so taste, nor when.

Donne. The Progress of the Soul.

OVER-FLY. A. S. *ofer-fleon*; D. *ouer-vliegghen*,
supervolare, to *fly over*.

— A sailing kite
Can scarce *o'erfly* them in a day and night.

Dryden.

OVER-FOND, } Too *fond*; *fond*, doating upon,
OVER-FO'NDLY. } loving to an excess.

Lament not Eve, but patiently
What justly thou hast lost; nor set thy heart,
Thus *over-fond* on that which is not thine.

Milton. Paradise Lost, book xi. v. 289.

But *Donnegilda*, cruel, crafty dame,
Great *Allas* mother, *over-fond* of fame.

Brookes. Constantia.

Perhaps, lest Israel *over-fondly* led,
In rating worth when envy leaves the dead,
Might plant a grove, invent new rites divine,
Make him their idol, and the grave their shrine.

Parnell. The Gift of Poetry.

OVER-FORCE, too much, too great, excessive *force*
or violence.

Then Jason; and his javelin seem'd to take,
But fail'd with *over-force* and whizz'd above his back.

Dryden. Ovid. Metamorphoses, book viii.

OVER-FRAUGHT, *fraught* or *freighted* too much;
freighted or laden too heavily.

I saw, I had Love's pinnace *overfraught*.

Donne. Air and Angels.

OVER-FREELY, too *freely*; *freely* or liberally, to
an excess.

Though we may easily play the prodigals in parting (*over-freely*)
with our gifts, we can scarce be so in the payment of our debts.

Boyle. Works, vol. i. p. 255. *Seraphic Love.*

OVER-FREQUENT, too *frequent*; repeated too
often, or too many times.

— You are
Observ'd, against the gravity long maintain'd
In Italy, (where to see a maid unmasq'd
Is held a blemish) to be *over-frequent*
In giving or receiving visits.

Beaumont and Fletcher. The Fair Maid of the Inn, act i. sc. 1.

OVER-FRIEZED, *friezed over*; or covered over
with *frieze*.

On their heddies were bonnettes all opened at the iiiii. quarters,
ouerfrysed with flat gold of damaske.

Hall. Henry VIII. The second Yere.

OVER-FRUITFUL, too *fruitful*; *fruitful* or pro-
ductive to an excess.

It had formerly been said, that the easiness of blank verse renders
the poet too luxuriant; but that the labour of rhyme bounds and
circumscribes an *over-fruitful* fancy.

Dryden. Prose Works, vol. i. p. 28. *Of Dramatick Poesie.*

OVER-FULL, too *full*; *filled* or laden to an excess.

But being *ouer-full* of selfe-affaires,
My mind did lose it.

Shakspeare. Midsummer Night's Dream, fol. 146.

OVER-GILD, A. S. *ofer-gildan*; *super-deaurare*;
D. *ouer-galden*; Ger. *uber-golden*.

To *gild over*; to cover over with gold.

Of siluere wele *ouer-gilt*.

R. Brunne, p. 167.

It was of laton *ouergylte*.

Gower. Conf. Am. book viii. p. 253.

What if they wold & I shew you, that thei haue sene that the
pece of siluer was *ouer gilte*.

Sir Thomas More. Workes, fol. 126. *A Dialogue concerning Heresies.*

OVER-GIRDED, *girded* or *girt*, too much, too
closely; *girded*, fastened, bound, constrained to an
excess.

When the gentle west winds shall open the fruitful bosom of the
Earth, thus *over-girded* by your imprisonment, then the flowers put
forth and spring, and then the sun shall scatter the mists, and the
manuring hand of the tiller shall root up all that burdens the soil
without thank to your bondage.

Milton. Works, vol. i. fol. 52. *Reason of Church Government.*

OVER-GLAD, too *glad*; *glad* or cheerful, joyous
or rejoicing to an excess.

But whan I am there, as she is,
Myn hert, as I you saide er this,
Sometyme of hir is sore adradde,
And sometye is *ouergladde*,
All out of reule, and out of space.

Gower. Conf. Am. book iv. p. 99.

OVER-GLANCE, to *glance over*; to throw or cast
the eyes over.

NATH. I will *ouerglance* the superscript.

Shakspeare. Love's Labour Lost, fol. 132.

OVER-GLIDE, to *glide over*; to move or pass,
smoothly, evenly, and steadily over.

[That sonne] whose glaunsing light the cords dyd *ouer glyde*.
Wyatt. Ps. 32. The Auctor.

OVER-GO, } A. S. *ofer-gan*; D. *ouer-gaen*; Sw.

OVER-GONE. } *ofer-ga*, *transire*, to go or pass over;
and consequently to surpass, to exceed, to excel.

To go or pass over; and consequently, to oppress or
tread down, to weigh down, to subject, to subdue.

he erle ansuerd nouht, he lete þat word *ouer-go*,
No þing þor on he þouht, tille vengeaunce felle on þo.

R. Brunne, p. 220.

OVER-
FRE-
QUENT
—
OVER-
GO.

OVER-
GO.

I trowe it is *ouergone* forgh William conqueroure.
R. Brunne, p. 66.

OVER-
GREEDY.

Edward is dede, allas! messengers *ouerwent*
To William. Id. p. 69.

And yet thou hast this comfort, lo parde,
That as her ioyes moten *ouergone*,
So mote her sorrowes passen everichone.
Chaucer. *Troilus and Creseide*, book i. p. 234.

But Saul let it *ouergone*,
And did not the gods heste.
Gower. *Conf. Am.* book vii. p. 236.

The daies whan the sonne brent,
A large cloude hem *ouerwent*.

Id. *Ib.* book v. p. 136.

Wherein these menne liste like lustye scholers to passe and
ouer goe theyr madde mayster in this poynte, and denye these
things all together. Sir Thomas More. *Workes*, fol. 478.

The bounds once *ouergone* that hold men in,
They never stay; but on from bad to worse.
Daniel. *History of Civil Wars*, book iv.

AMINT. Forgive what I have done;
For I am so *ore-gone* with injuries
Unheard of, that I lose consideration
Of what I ought to do.
Beaumont and Fletcher. *The Maid's Tragedy*, act iii.

OVER-GORGED, *gorged* too much; *gorged* or
glutted, crammed to an excess.

By diuillish policy art thou grown great,
And like ambitious Sylla *ouer-gorg'd*,
With gobbets of thy mother-bleeding heart.
Shakspeare. *Henry VI. Second Part*, fol. 137.

To turn purveyor to an *ouergorg'd*
And bloated spider, till the pamp'rd pest
Is made familiar, watches his approach,
Comes at his call, and serves him for a friend.
Couper. *The Task*, book v.

OVER-GRACE, to *grace* too much; to favour, to
honour, to decorate to an excess.

But that you think to *ouergace* me with
The marriage of your sister, troubles me.
Beaumont and Fletcher. *A King and no King*, act i. sc. i.

OVER-GRASSED, *grassed* too much; covered or
grown *over* with too much grass.

For they bene like fowle wagmoires *ouergrast*.
Spenser. *Shepherd's Calendar*. September.

OVER-GREAT, } D. *ouer-groot*, *permagnus*.
OVER-GREATNESS. } Too *great*; *great*, grown, in-
creased, augmented, enlarged, magnified; aggrandized
to an excess.

But when a man hath *ouergret* a wit,
Ful oft him happeth misusen it.
Chaucer. *The Chanones Yemannes Prologue*, v. 16116.

Well, though my folie be greater then my fortune, yet *ouergreat*
were mine vnconstancie, if (in mine owne behalfe) I should compile
so manie sundrie songs and sonets.
Gascoigne. *To the Readers generally*.

Which kinde of behauiour prouoked their rage the more, as if
this his *ouergreat* feare had certainly argued a guilty conscience.
Savile. *Tacitus*, book iii. fol. 104.

The *ouergreatness* of Seleucus brought no less danger to the rest
of the new kings than that of Antigonus had done.
Raleigh. *History of the World*, book iv. ch. v. sec. 5. fol. 526.

Neither was there ever prince bereaved of his dependance by his
Councell; except where there hath bene, either an *ouergreatnesse*
in one counsellour, or an overstrict combination in diuers; which
are things soone found, and holpen.

Bacon. *Essay* 20. p. 120.

OVER-GREEDY, too *greedy*; *greedy*, hungering,
ravenous after, to an excess.

While he is so *ouergreedy* to fix a name of ill sound upon ano-
ther note, how stupid he is to expose himself or his own friends to
the same ignomy.

Milton. *Works*, vol. i. fol. 107. *An Apology for Smectymnus*.
VOL. XXV.

OVER-GROSS, Ger. *ubergross*; too *gross*; *gross*,
great, coarse, to excess.

But then it must be such a fatness (for as for sweet things, they
are in effect always esculent) as is not *ouergross*, and loading of the
stomach. Bacon. *Natural History*, Cent. vii. sec. 630.

OVER-GROW, } To *grow over*; to *grow* too
OVER-GROWTH. } much or too large; to bud or
germinate, to vegetate; to increase, to enlarge to an
excess.

Then may I compt their loue, like seed that soone is sown,
Yet lacking droppes of heauely dew, with weedes is *ouergrowe*.
Gascoigne. *Hearbes*. *An absent Dame thus complayneth*.

So can oure soule haue no place for the good corne of spiritual
plesure, as long as it is *ouergrown* with the barreyne weedes of carnall
delectacion.

Sir Thomas More. *Workes*, fol. 74. *A Treatise vpon Wordes of
Scripture*.

Whereby the vulgar may become so wise,
That (with a self-presumption *over-grown*)
They may of deepest mysteries debate,
Control their betters, censure acts of state.
Daniel. *History of Civil Wars*, book vi.

There he dies, and leaves his race
Growing into a nation, and now *grown*
Suspected to a sequent king who seeks
To top their *over-growth*, as inmate guests
Too numerous.

Milton. *Paradise Lost*, book xii. l. 166.

The fortune, in being the first in an invention, or in a privilege,
doth cause some times a wonderfull *ouergrowth* in riches; as it was
with the first sugar man in the Canaries.

Bacon. *Essay* 34. p. 209.

Even treason itself dreads not a discovery, if the *over-grown*
traytor be but mighty enough to bear it out.
South. *Sermons*, vol. iv. p. 157.

OVER-HAILE, or } To *hale over*, to draw *over*;
OVER-HAUL. } to spread *over*, to spread out
for examination, and consequentially, to examine.

In Drayton it seems to signify, to exhaust or draw
forth; *sc.* the wind, the breath.

By that, the welked Phœbus gan auaile
His wearie waine; and now the frostie night
Her mantle black through Heaven gan *overhaile*.
Spenser. *Shepherd's Calendar*. January.

No hunter so but finds the breeding of the west
The only kind of hounds for mouth, and nostril best;
That cold doth seldom fret nor heat doth *overhail*.
Drayton. *Poly-olbion*, song 3.

OVER-HAND, D. *ouer-hand*; the upper *hand*;
the superiority.

As though he had gotten therby a great *ouerhand* on me in y^e
matter.
Sir Thomas More. *Workes*, fol. 965. *The Debellacion of Salem
and Byzance*.

[The kyngdome of Christe] shal haue the *ouerhande* tyl his ene-
myes be made hys fotestole.
Bible, Anno 1551. Psalm 110. note.

OVER-HANDLED, *handled* too much; treated of,
(in talk or discourse,) discoursed of, too much.

Nay, then, quoth Adon, you will fall again
Into your idle *over-handled* theme.
Shakspeare. *Venus and Adonis*.

OVER-HANG, D. *ouer-hangen*, *super-pendere*;
to hang *over*; to impend *over*.

Or if from where he is he doe espie
Some apricock upon a bough thereby,
Which *overhangs* the tree on which he stands,
Climbes up and strives to take it with his hands.
Browne. *Britannia's Pastorals*, book ii. song 4.

OVER-
HANG.OVER-
HEAD.

Look o'er thy head, Maximian,
Look to thy terrour, what *over-hangs* thee.
Beaumont and Fletcher. The Prophetess, act v. sc. 1.
Beside a poplar that *o'erhangs* the flood,
On the green turf his darts conspicuous stood.
Fawkes. Statius, book ix. v. 331.

OVER-HAPPY, too *happy*; enjoying too much
happiness or felicity.

Lord! would men let me alone,
What an *over-happy* one
Should I think myself to be,
Might I in this desert place,
Which most men by their voice disgrace,
Live but undisturb'd and free.

Cotton. The Retirement.

OVER-HARDEN, } Ger. *uber-harten*; to harden
OVER-HARDY. } too much; *overhardy*, met.,
is too *hardy*; firm, bold, daring, confident, to an excess.

He was *ouer hardy*, þe Danes he gan assaile.

R. Brunne, p. 23.

In youth I was often *ouerhardie* to put my name in ballance of
doubtful judgments.

Gascoigne. To the Reuerende Deuines.

By laying it in the air, it has acquired such a hardness, that it
was brittle like *over-hardened* steel.

Boyle.

OVER-HASTE, } D. *ouer-haesten, præprope-*
OVER-HASTY, } rare; too much *haste*; too much,
OVER-HASTILY, } too great speed or swiftness; or
OVER-HASTINESS. } despatch.

Over-hasty, met. having the feelings or passions too
quickly excited; too precipitate or rash.

Though thou to loves courte pursewe
Yet sit it wel, that thou eschewe,
That thou the courte not *ouerhast*,
For so thou might thy tyme wast.

Gower. Conf. Am. book iii. p. 85.

For it hath well appeared, & wel ben pruned too, that the spiritual
iudges haue yet hitherto in arresting for heresy, right wel examined
and considered fyrst both the cause and the necessite, and haue been
rather therin manye tymes to slowe, then anye time *ouerhasty*.
Sir Thomas More. Workes, fol. 1012. The Debellacion of Salem
and Byzance.

We would not have those that read this worke of Sylva Sylvarum
account it strange, or thinke that it is an *over-haste*, that we have
set down particulars untried.

Bacon. Natural History, Cent. vi. sec. 525.

The collection went not through the whole land, by reason there
was hope given of a peaceable reconcilment; so as many that were
not *over-hasty* in their payment, escaped without contributing at all.

Baker. King James, Anno 1621.

Manie of the Normans pursuing the Englishe *ouerhastilie* procure
their own death.

Holinshed. The Historie of England, vol. i. book viii. ch. x. p. 761.

To give him advice not to march away *over-hastily* from the place
wherein he was fortified.

Raleigh. History of the World, book v. ch. i. sec. 3. fol. 555.

His reply was, that it was well if the duke's *ouerhastiness* did
not turn to his disadvantage.

Raresby. Mem. p. 129.

OVER-HEAD, *over* or above the *head*; being, or
being raised, on high, aloft.

— Dire was the noise
Of conflict; *over-head* the dismal hiss
Of fiery darts in flaming volies flew,
And flying vaulted either host with fire.

Milton. Paradise Lost, book vi. l. 212.

While, *over-head*, a flock of new sprung fowl
Hangs in the air, and does the sun control;
Dark'ning the sky they hover o'er and shrowd
The wanton sailors with a feather'd cloud.

Waller. On St. James's Park.

OVER-HEAR, A. S. *ofer-hyran*.

Perhaps, to *hear over*, (sc. any thing behind which
a listener is placed,) or to *hear* too much, that which it
was not intended should be *heard* by the party *hearing*.

Whilst in this sort his suit he amorously preferr'd,
Moylvennil near at hand the north wind *over-heard*.

Drayton. Poly-olbion, song 10.

Ofspring of heav'n and earth, and all earth's lord,
That such an enemy we have, who seeks
Our ruin, both by thee inform'd I learn,
And from the parting angel *over-heard*.

Milton. Paradise Lost, book ix. l. 276.

Perhaps your sentiment is right,
Heav'n grant we may not suffer by't.
For should friend Davies *overhear*,
He'll publish ours another year.

Lloyd. The two Rubrick Posts.

OVER-HEAT, to *heat* too much; to *heat*, to in-
flame to an excess. See OVER-COLD for an example
from Bacon.

Ah! gracious God that I might see
A time when it were dangerous for me
To be *o'er-heat* with praise!
But I within me bear, alas! too great allays.

Cowley. Ode upon Verses of Lord Broghill's.

OVER-HEAVY, too *heavy*; weighing too much, of
too great a weight or burthen.

And as for such beastes as would not come home, if they be
not *ouerheauy* they may beare theim home, and those that be to
heauy to be boren home, tye ropes to theyr tailes and draw them
home.

Sir Thomas More. Workes, fol. 993. The Debellacion of Salem
and Byzance.

OVER-HELE, A. S. *ofer hel-an, operire*.

To *hele* or *heal*, i. e. to cover *over*.

Dost thou not know me? I too well know thee,
By thy rude voice, that doth so hoarsely blow;
Thy haire, thy beard, thy wings, *ore-hil'd* with snow.

Ben Jonson. Masques at Court, fol. 121. Twelfth Night, (1608.)

OVER-HEND, to overtake, *q. v.* to capture after
pursuit; to reach or come up to.

There, whilst thy entring th' one did th' other stay,
The hindmost in the gate he *overhent*,
And, as he pressed in, him there did slay.

Spenser. Faerie Queene, book v. can. 10.

OVER-HIGH, } Too *high*; raised, lofty, lifted up,
OVER-HIGHLY. } elevated, exalted to an excessive
degree or distance.

See OVER-LOW for an example from Chaucer.

For their ambition, looking *over-high*.
Could in no measure aptly understand
Upon their heads the danger that they drew,
Whose force, too soon, they and their faction knew.

Drayton. The Miseries of Queen Margaret.

Neither of these two authors is *over-highly* commended of
trustiness.

Raleigh. History of the World, book ii. ch. xxv. sec. 4. fol. 340.

OVER-HIP, to *hop over*; to skip, leap, or jump
over, to pass *over*, to omit.

Oure kyng Sir Edward ouer litille he gaf,
Tille his barons was hard, *ouer-hipped* þam ouer haf.

R. Brunne, p. 296.

For by his will he (Couetise) wolde embrace
All that this wide worlde beclippeth,
But euer he somewhat *ouerhippeth*.

Gower. Conf. Am. book v. p. 138.

Now seyng he had occasion to make mention of the dead, and
spake not one word of purgatory, it is playne inough that he knew
nothyng of it or els was hee very negligent to *ouerhypp* it.

Frith. Workes, fol. 17. Answer to Rastal's Dialogue.

OVER-
HEAR.
—
OVER-
HIP.

OVER-JEALOUS. **OVER-JEALOUS**, too *jealous*; *jealous*, envious, suspicious to an excess.

OVER-LADEN.

Genius self-center'd feels alone
That merit he esteems his own,
And cold, *o'er-jealous* and severe,
Hates, like a Turk, a brother near.

Lloyd. *The Whim*.

OVER-JOY, v. } To *joy*, *enjoy*, or rejoice too
OVER-JOY, n. } much; to be pleased, or delighted,
or gladdened, to an excess.

The Naiads and the Nymphs extremely *overjoy'd*,
And on the winding banks all busily employ'd,
Upon this joyful day, some dainty chaplets twine.

Drayton. *Poly-olbion*, song 15.

Boy. They durst not speak,
But blest themselves, and the strange means that had
Made him a Christian in this *over-joy*.

Beaumont and Fletcher, act v. sc. 1.

OVER-JUST, too *just*; *just* to excess, too scrupulously, strictly observant of the law.

Who [God] evermore approves and more accepts
(Best pleas'd with humble and filial submission)
Him who imploring mercy sues for life,
Then who self-rigorous chooses death as due,
Which argues *over-just*, and self-displeas'd
For self-offence, more than for God offended.

Milton. *Samson Agonistes*, l. 515.

OVER-KIND, } Too *kind*; *kind*, benevolent,
OVER-KINDNESS, } beneficent,—to an excess.

CAM. Sicilia cannot shew himself *over-kind* to Bohemia: they were traynd together in their child-hoods; and there rooted betwixt them then such an affection, which cannot chuse but braunch now.

Shakspeare. *Winter's Tale*, fol. 277.

CLAU. O noble sir!
Your *overkindness* doth wring teares from me.

Id. *Much Ado About Nothing*, fol. 119.

OVER-KNOWING, too *knowing* or cunning; too full of *knowledge*, cunning, subtilty.

(To summe up all) the heart of man is wholly set upon cozenage; the understanding *over-knowing*, mis-knowing, dissembling; the will pretending, and inclining contrarily.

Hall. *Works*, vol. i. fol. 464. *The Great Imposter*.

OVER-LA'BOUR, v. } To *labour* too much; to
OVER-LA'BOUR, n. } labour, to work, to toil to
an excess; and, consequentially, to weary or fatigue.

There muste the wycked ceasse from their tyrannye, there suche as are *ourlaboured* be at reste.

Bible, Anno 1551. *Job*, ch. iii.

They must pick me out with shackles tir'd,
And *over-labour'd*, at their publick mill,
To make them sport with blind activity?

Milton. *Samson Agonistes*, l. 1337.

Press'd by fresh forces, her *o'erlabour'd* train
Shall quit the ships, and Greece respire again.

Pope. *Homer. Iliad*, book xvi.

OVER-LADEN, D. *ouer-laeden*, *degravare*, *supra vires onerare*.

Laden or *loaded* too much; having too great a burthen put on or imposed; and, consequentially, weighed down, borne down.

"Alas!" she saith, "that ever I was yshape,
To wed a milksop, or a coward ape,
That wol ben *overladde* with euery wight
Thou darst not stonden by thy wiues right."

Chaucer. *The Monkes Prologue*, v. 13917.

For men may *overlade* a ship or barge.

Id. *The Legend of Good Women*, p. 303.

And Vagao shut the chamber dores and wente hys waye, for they were all *ouerladen* wyth wyne.

Bible, Anno 1551. *Judith*, ch. xiii.

Moreouer they neuer vnderstode that saying of hys death because theyr hartes were all way heauie and *ouerlade* with earthly thoughtes.

Tyndall. *Workes*, fol. 260. *An Answer to Sir Thomas More's Dialogues*.

Straight way the boate did sinke, being *ouerladen* with the great companie that leaped in, and so drowned them all.

Stow. *Henry I.* Anno 1120.

OVER-LARGE, too *large*, too wide, too extensive.

For as for doying our neighbour good, and also the working for our owne necessitie, the necessitie may be suche that the church denyeth it not. But whoso do interprete his necessitie *ouer large*, or differe, &c.

Sir Thomas More. *Workes*, fol. 373. *The first Part of the Confutation of Tyndall*.

OVER-LASH, } To *lash* too much, too far; to
OVER-LA'SHING, n. } let loose, to throw out, to cast
OVER-LA'SHINGLY. } out, to excess; to throw out (*jac-tare*) boastingly, vauntingly, vainly, ostentatiously, arrogantly; to boast, to vaunt, to brag, to arrogate too much.

A nationall church is settled in the orderly regiment of certaine grave overseers, ruling under one acknowledged soveraign, by wholesome and unquestionable laws, and by these laws punishable, if they *over-lash*, &c.

Hall. *Works*, vol. iii. fol. 390. *Answer to the Vindication of Smectymnus*, sec. 1.

In a desire to stand but so right as I am, in all honest iudgements, I haue made this speedy and true apologie: beseeching all readers in the feare of God (before whose barre wee shall once give an account of all our *overlashings*) to judge wisely, and uprightly of what I have written.

Id. *Ib.* vol. iii. part ii. fol. 55. *The Old Religion Advocated. To the Reader*.

Although I be far from their opinion who write too *overlashingly*, that the Arabian tongue is in use in two third parts of the inhabited world, yet I find that it extendeth where the religion of Mahomet is professed.

Brerewood. *Enquiries touching Languages*.

i. If we should say, that we are not accountable for every hyperbolical clash or flourish occurring in the fathers, (it being well known, that they in their encomiastic speeches, as oratours are wont, following the heat and gaiety of fancy, do sometimes *over-lash*) we should have the pattern of their greatest controvertists to warrant us.

Barrow. *Pope's Supremacy, Supposition 1.* sec. 6. p. 1.

OVER-LATEST, much too *late*; very much too *late*; delayed by far too long.

(That) it, is such an act as can scarce be expiated with floods of *overlatest* teares.

Hall. *Works*, vol. iii. fol. 125. *Episcopacy by Divine Right*, sec. 1.

OVER-LAY, } A. S. *ofer-liegan*; D. *ouer-leg-*
OVER-LA'YING. } *ghen*; Ger. *uber-legen*, *superjacere*, *superponere*.

To *lay over*; and consequently, to cover; to *lay* too heavily upon, to oppress, to crush, to smother.

And tokenes schulen be in the sunne and the moone and in the starres; and in the erthe *ouerteinyng* of folkis. (*Pressura gentium*.)

Wiclif. *Luke*, ch. xxi.

Wel the hoter is the fire, that with ashen it is *ouerlein*.

Chaucer. *The Testament of Loue*, book iii. p. 508.

Full ofte er this it hath be seine
The comen people is *ouerleyne*,
And hath the kynges synne abought,
All though the people agilte nought.

Gower. *Conf. Am.* book vii. p. 237.

Cesar perceyuing that thee seuenth legion whyche stode by him was likewise sore *ouerlaide* by the enemy.

Goldyng. *Cæsar. Commentaries*, book ii. fol. 60.

OVER-LAY.
—
OVER-LIVE.

And the sockets for the pillars were of brasse, the hooks of the pillars and their fillets of silver and the *overlaying* of their chapiters of silver, and all the pillars of the court were filleted with silver. *Bible. Modern Version. Exodus, ch. xxxviii. v. 17.*

And then the horse-haire plume, with which he was so *ouerlaid*, Nodded so horribly, he cling'd backe to his nurse and cride.
Chapman. Homer. Iliad, book vi. fol. 94.

The folding gates a dazzling light display'd
With pomp of various architrave *ouerlaid*.
Pope. Homer. Odyssey, book xx.

OVER-LEAP, A. S. ofer hlleapan.
To leap over; to jump or spring over.

For a cat of a court. cam whanne hym lykȳde
And *overleap* hem lykȳliche.
Piers Plouhman. Vision, p. 9.

— And, in contempt,
At one slight bound high *overleap'd* all bound
Of hill or highest wall, and sheer within
Lights on his feet.
Milton. Paradise Lost, book iv. l. 181.

Freed from his keepers, thus, with broken reins,
The wanton courser prances o'er the plains:
Or in the pride of youth *o'erleaps* the mounds.
Dryden. Virgil. Æneid, book xi.

OVER-LEARNEDNESS, excessive learnedness or knowledge.

In which a man may wonder at these learned criticks *overlearnedness*: and what ropes of sand they make with their kinde of intelligencing knowledge.
Chapman. Homer. Iliad, book xiii. Commentarius.

OVER-LEATHER, i. e. the upper leather. Sw. ofwer-laeder.

Nay, sometime more feeble then shooes, or such shooes as my toes
looke through the *ouer-leather*.
Shakspeare. Taming the Shrew, fol. 209.

OVER-LEAVEN, to leaven, or raise, or swell out too much; to intermix too much of a leavening substance, too much of a substance of less purity; to intermix, to imbue too much.

You grow not mad withall: I love your spirit.
You are not *over-leaven'd*, with your fortune.
Ben Jonson. The Fox, act v. sc. 6.

Or by some habit, that too much *o'erleavens*
The form of plausible manners.
Shakspeare. Hamlet, act i. sc. 4.

OVER-LICK, to lick over; to pass the tongue, to rub the tongue over.

The worst [of his verses] he wild in couert scrole to lurke
Untill the beare were *ouerlickt* afresh.
Turbervile. Epilogue to his Booke.

OVERLIGHT, an excessive light, too great a light.

For we see, that an *over-light* maketh the eyes dazell; insomuch as perpetual looking against the sunne would cause blindness.
Bacon. Natural History, Cent. ix. sec. 871.

OVER-LIVE, } A. S. ofer-libban; Ger. uber-
OVER-LI'VER. } leben; Sw. ofwer-lefwa; super-
vivere, superstes esse.

To live more than, more years than, to a greater age than, another; to survive.

And thus they live unto hir lives ende
In parfit joye, and Jesu Crist us sende
Husbondes meke and yonge, and fressh a-bed,
And grace to *overlive* hem that we wed.
Chaucer. The Wif of Bathes Tale, v. 6842.

And Israel served the Lord all the dayes of Josua, and all the daies of the elders that *ouerliued* Josua, and which had seen all the workes of the Lord that he had done to Israel.
Bible, Anno 1551. Joshua, ch. xxiv.

She and her husband thought to leue (Prince Edward her sonne) bothe *ouerlyuer* of their progenye, and also of their kyngdome.
Hall. Edward IV. The tenth Yere.

A fewe of vs onely remain that haue *ouerliued*, as I may say, not only others, but also ourselues.
Savile. Tacitus, fol. 184. The Life of Julius Agricola.

Hereupon a peace was concluded, which was published a little before Christmasse, in the fourteenth yeare of the king's raigne, to continue for both the king's liues, and the *ouer-liuer* of them, and a yeare after.
Bacon. King Henry VII. fol. 191.

And if it chanced anie of them to depart this life, the *ouerliuers* should persist therein, vntill the time that they had brought their purpose to some good effect.
Holinshed. Richard II. Anno 1388. vol. ii. p. 786.

OVER-LOAD, v. to load or lade too much; to put on or impose too great, too heavy a burthen: to overburthen.

And if I have forgotten any arte,
Which hath bene taught, or exercised there,
Pray you to God, the good be not abusde,
With glorious shewe, of *ouerloading* skill.
Gascoigne. The Steele Glas.

OVER-LONG, D. ouer-lang, prolongus.

Too long: lengthened, prolonged, too much, too far.

It resembleth to those flieng flies that we clepen bees, that after that he hath shedde his agreeable honnyes, he flieth away, and stingeth the herts of hem that ben smitten with biting *ouerlonge* holden. (*Nimis tenaci morsu.*)

Chaucer. Boecius, book iii. p. 427.

And all these thynges we haue in holy saintes liues so many examples, that it were *ouer long* to rehearse them.
Sir Thomas More. Workes, fol. 369. The First Part of the Confutation of Tyndall.

Both the parties wallowing *ouerlong* in the stinking puddle of adulterie, suspicion began to creepe in some townesmen's brains.
Holinshed. The Description of Ireland, vol. vi. ch. iii. p. 32.

OVER-LOOK, v. } To look over; to supervise, to
OVER-LO'OKER. } survey, to inspect, to superin-
tend. See OVERSEE.

To look over; to pass over in looking, and, consequently, not to see; and hence, to disregard, to neglect, to omit.

Whan I had red this tale wele,
And *overlooked* it every dele,
Me thought wonder if it were so.
Chaucer. Dreame, p. 321.

Me thinketh by right, soche people should haue no maistrie, ne been *ourlookers*, ouer none of thy seruantes.
Chaucer. The Testament of Loue, book i. p. 471.

Time makes the tender twig
to bousteous tree to grow:
It makes the oake to *overlooke*
the slender shrubs bylow.
Turbervile. That time conquereth all things.

He, having *overlookt* their pass at ease,
Gan at the length them to rebuke againe,
That no good trade of life did entertaine,
But lost their time in wandring loose abroad.
Spenser. Mother Hubbard's Tale.

Our syens, put in wilde and sauage stock,
Spirt vp so suddenly into the clouds,
And *ouer-looke* their grafters?
Shakspeare. Henry V. fol. 79.

Mo. His sole childe my lord, and bequeathed to my *ouer-looking*.
Id. All's Well That Ends Well, fol. 230.

He said no more; but crown'd a bowl, unbid:
The laughing nectar *overlook'd* the lid.
Dryden. Homer. Iliad, book i.

Where the eye is emboldened with the encouraging view of some vast enjoyment pressing close upon the heels of a present suffering, it diffuses such a noble bravery and courage into all the faculties,

OVER-LIVE.
—
OVER-LOOK.

OVER-LOOK. both of soul and body, as makes them *overlook* all dangers; and by *overlooking*, conquer and get above them.
South. Sermons, vol. iv. p. 201.

OVER-MAGNI-FYING. **OVER-LOOP**, spoken contractedly *orlop*. Skinner derives from D. *over-loopen*, (*over-leap*), *percurrere*, *pertransire*, *supercurrere*, to run or pass over by running; and calls it—the flooring (*contabulatio*) between the hold and the hatches.

In extremity we carry our ordnance better than we were wont, because our nether *overloops* are raised commonly from the water; to wit, between the lower part of the port and the sea.

Raleigh.

OVER-LOVE, to *love* too much; to *love*, to delight in, be pleased or gratified with, to an excess.

How should wee scorne to think that an heathen man should laugh either at our ignorance or impotence? ignorance, if we thought too highly of earthly things; impotence, if we *over-loved* them.
Hall. Works, vol. i. decad. 2. epist. 10. fol. 282.

ÆCI. I need no sword, nor friend in this, pray leave me;
And as ye love me, do not *overlove* me.

Beaumont and Fletcher. Valentinian, act iv. sc. 2.

For by nature we are as prone to *over-value* as to *over-love* ourselves.
South. Sermons, vol. x. p. 8.

OVER-LOW, too *low*; too *laid*, dejected, or depressed.

Thou byndest the elements, that the fyre, that is purest, ne fly nat *ouer hie* ne that the heauinesse ne draw not down *ouerlowe* the yerthes that be ploughed in the waters.

Chaucer. Boecius, book iii. p. 429.

OVER-LUSCIOUS, too *luscious*; exceedingly delicious; or sweet to the utmost excess.

Quinces, or apples, &c. if you keep them long, drown them in honey; but because honey (perhaps) will give them a taste *over-lushious*, it were good to make triall in powder of sugar, or in syrrop of wine only boyled to height.

Bacon. Natural History, Cent. vii. sec. 624.

OVER-LUSTY, too *lusty*; *lusty*, licentious, to an excess.

And the third houre of drowsie morning nam'd,
Proud of their numbers, and secure in soule,
The confident and *ouer-lustie* French,
Do the low-rated English play at dice.

Shakspeare. Henry V. fol. 83.

OVER-LY, } A. S. *ofer-lice*, carelessly, super-
O'VERLINESS. } ficially, negligently, *overly*. Somner.
Superficial, careless, neglectful, contemptuous, supercilious.

Thus took he purpose love's craft to sue,
And thought he would worken privily,
First for to hide his desire in mewe
From everie wight iborne, al *overly*.

Chaucer. Troilus and Creseide, p. 231.

So I have seen friends upon neglect of duty grow *overly*; upon *overlinesse* strange; upon strangenesse to utter defiance.

Hall. Works, vol. i. ch. vii. fol. 98. *The Art of Divine Meditation*.

And therefore no marvaile if they abate contrition, by acquiring onely a sufficient and enough, a kinde of *overly* desire to serve God anew.

Mountagu. Appeale to Cæsar, ch. xxxvi. fol. 317.

The life and soule of it [gentility] is in noble and virtuous disposition, in gallantness of spirit without hautinesse, without insolence, without scornfull *overliness*: shortly, in generous qualities, carriage, actions.

Hall. Works, vol. vi. decad. 6. epist. 6. fol. 357.

OVER-MA'GNIFYING, } *Magnifying* too much;
OVER-MU'LTIPLYING. } enlarging, amplifying,
aggrandizing to excess.

Multiplying too much; multiplying, repeating the number too often, too frequently.

Our Romanists exceed this way, in their devotions to the cross; both in *over-multiplying* and in *over-magnifying* of it.

Hall. Sermon 13. Philippians, ch. iii. v. 18, 19.

OVER-MALAPERT, too *malapert*: *pert*, saucy to a great excess.

Some of them may seeme to be *oversharpe* and virulent against players, playes, and play-haunters; others of them may be construed to be *overmalepert* and censorious.

Prynne. Histrio-Mastix. Preface * * 4.

OVER-MANNER, above measure, *supra modum*.

For *ouer maner* we weren greued *ouer-myght*, (*supra virtutem*), so that it anoiede us ghe (*etiam*) to lyue.

Wiclif. 2 Corinthians, ch. i.

OVER-MARCH, to *march* too far: until tired or weary.

The Prince his horse were *over-marcht*, and the foot beaten off their legs by long marches.

Baker. Charles I. Anno 1643.

OVER-MASTER, Ger. *uber-meistern*; Sw. *oofwer-maestra*.

To gain the *mastery*, greater power, superiority over; to overpower.

So shall neuer any mannes tale nor y^e tale of a thousand against one, *ouermaister* that inward mocion of God, as long as the wyll of the man will continue styll wyth God in cleuying to the fayth.

Sir Thomas More. Workes, fol. 696. *The Second Part of the Confutation of Tyndall*.

But sorrow and pity in a weak and *over-master'd* enemy, is look'd upon no otherwise than as the ashes of his revenge burnt out upon itself.

Milton. Works, vol. i. fol. 433. *An Answer to Eikon Basilike*.

Caesar himself doth witnes, that the Gauls complained of their own ignorance in the art of war, and that their own hardiness was *over-mastered* by the skill of their enemies.

Raleigh. History of the World, book v. ch. i. sec. 1. fol. 543.

OVER-MATCH, v. } To be more than a *match*,
OVER-MATCH, n. } more than equal; consequent-
ly, to be superior to, too powerful; to overpower.

That were able in writing to much more thē *ouer matche* them, if they woulde wake and praye and take the penne in hande.

Sir Thomas More. Workes, fol. 356. *The First Part of the Confutation of Tyndall*.

The men of Essex *over-match'd* by none,
Under Queen Helen's image marching down.

Drayton. The Battle of Agincourt.

England, though farre lesse in territory and population [than France] hath beene (neverthelesse) an *overmatch*.

Bacon. Essay on Kingdoms and Estates.

All his party, when the strength of the two champions was judged by the proportion of their limbs, concluded it was *impar pugna*, and that their chief was *over-matched*.

Dryden. Æneid. Dedication.

A writer with a weak head, and a corrupt heart, is an *over-match* for any single pen; like a hireling jade, dull and vicious, hardly able to stir, yet offering at every turn to kick.

Swift. Works, vol. ix. p. 22. *The Public Spirit of the Whigs*.

OVER-ME'ASURE, v. } To *measure* or *mete*;
OVER-ME'ASURE, n. } or calculate or compute
the *measure* too largely, too greatly, too extensively.

To the end, that neither by *over-measuring* their forces, they leese themselves in vaine enterprises, nor on the other side, by undervaluing them, they descend to fearefull and pusillanimous counsell.

Bacon. Essay 29. p. 169.

OVER-MEEK. See **OVER-FIERCE**.

OVER-MERIT, excessive *merit* or desert.

OVER-MAGNI-FYING.

OVER-MERIT.

OVER-MERIT.

First, an *ouer-merit*, (made against him) for conuenient merit, vnto which reward may easily reach, doth best with Kings.

Bacon. *King Henry VII.* fol. 133.

OVER-MUCH.

OVER-MERRY, } Too merry; merry or mirth-
OVER-ME'RRILY. } ful, glad, joyous, careless to excess.

And whan thou seest it is but fantasie,
See that thou sing not *ouermerely*.

Chaucer. *The Court of Loue*, v. 406.

He in to counsell them: haply my presence
May well abate the *ouer-merrie* splene,
Which otherwise would grow into extreames.

Shakspeare. *Taming the Shrew*, fol. 208. Induction

OVER-MICKLE, A. S. *ofer-micel*, *ouer-much*, q. v.
Too much; in too great a degree.

For whan they suffren *ouermuchel* the wronges and vilanies to be don, withouten punishing, they sompne not a man all only for to do newe wrongs, but they commaunden it.

Chaucer. *The Tale of Melibeus*, p. 114.

OVER-MIGHT, *ouer* or above our *might*, strength, or power. See OVER-MANNER.

OVER-MO'DEST, } Too modest; modest, bash-
OVER-MO'DESTLY. } ful, diffident to an excess.

It is the courtier's rule, that *ouermodest* suitors seldome speed. Beloved, we must follow the same rule in the Court of Heaven.

Hales. *Remains*, part i. p. 154.

[The Romans] were doubtful how to order the matter in such wise as they might neither too rudely, like boisterous Gallo Greeks, pretend only the goodness of their swords; nor yet *ouer-modestly*, to retain among the Greeks an opinion of their justice, forbear the occasion of making themselves great.

Ralegh. *History of the World*, book v. ch. v. sec. 4. fol. 749.

OVER-MOIST, } Too moist; moist, wet, or hu-
OVER-MOI'STURE. } mid to an excess.

And that kinde of colligation is not made, either by an *overdry* heat, or an *ouer-moist* heat. For *ouer-moisture* doth somewhat extinguish the heat.

Bacon. *Natural History*, Cent. viii. sec. 706.

OVER-MORE, } More to excess, beyond or in
OVER-MOST. } comparison with something else.
In Chaucer, equivalent to *moreover*, q. v.

Over-most, uppermost, topmost.

And *ouermore* distrayned with sicknesse,
Besides all this he was full greuously,
For vpon him he had an hote accesse,
That day by day him shooke most piteously.

Chaucer. *The Complaint of the Black Knight*, v. 134.

This palle is worne vpon this vestymment, *ouermost* of all, whan an archebysshoppe syngeth his masse.

Fabyan, vol. i. ch. 221. fol. 339.

OVER-MORROW, the day more than, beyond or following, to-morrow.

Vp Sara, let vs make our prayer vnto God to daye, to morrowe, and *ouermorowe*; for these thre nightes wyll we reconcyte our selues with God.

Bible, Anno 1551. *Tobiah*, ch. viii.

OVER-MUCH, *adj.* } Too much; exceeding or
OVER-MUCH, *adv.* } excessive; superfluous, super-
OVER-MU'CHNESS. } abundant.

Thou suest this folc *ouer muche*, that age (against the is,
& thin owe *ouer lute* (*ouer-little*.)

R. Gloucester, p. 525.

But still beware of *ouermuch* resort,

For that perauenture spilleth all thy sport.

Chaucer. *The Court of Loue*, v. 384.

Of this, or other money, none was given to Scipio; neither was he allowed to make press of soldiers for his African voyage; neither did he *ouermuch* labour to obtain it.

Ralegh. *History of the World*, book v. ch. iii. sec. 18. fol. 684.

There are words that doe as much raise a style, as others can de-
presse it. Superlation and *ouer-muchenesse* amplifies. It may be
above faith, but never above a meane.

Ben Jonson. *Discoveries*, fol. 120.

Do thou but thine, and be not diffident
Of Wisdom, she deserts thee not, if thou
Dismiss not her, when most thou need'st her nigh,
By attributing *ouermuch* to things
Less excellent, as thou thyself perceav'st.

Milton. *Paradise Lost*, book viii. l. 565.

Our palates grow into a relish and liking of the seasoning and
cookery which by custom they are set to; an *ouer-much* use of salt,
besides it occasions thirst and *ouer-much* drinking, has other ill
effects upon the body.

Locke. *Of Education*, sec. 14.

OVER-MULTIPLYING. See OVER-MAGNIFYING.

OVER-MULTITUDE, to exceed or surpass in *mul-
titude* or number.

The herds would *ouer-multitude* their lords.

Milton. *Comus*, v. 731.

OVER-NAME, v. to name over; speak, read, or call
the names over.

For. I pray thee *ouer-name* them, and as thou namest them, I
will describe them, and according to my description, leuell at my
affection.

Shakspeare. *Merchant of Venice*, fol. 163.

OVER-NICE, *adj.* too nice; nice, delicate, fastidi-
ous to an excess.

Away with such *ouer-nice* and curious companions (quoth he
again.)

Hall. *Works*, vol. i. fol. 517. *Noah's Dove*.

Poets, I grant, to rise, must fawn;
They know great ears are *ouer-nice*,
And never shock their patron's vice.

Gay. *Fable 4*. part ii.

OVER-NIGHT, *ouer-noon* (A. S. *ofer-non*) is the
part of the day when *noon* is over, or past; *afternoon*,
ofer-tide, is the part of the day when *ofer-non* is past;
the evening; and *ofer-niht*, the time when evening is
past; when night has begun or commenced; while night
is and before dawn begins.

Thou shalt gone *ouernight*, and that blive,
Unto Deiphebus' house, as thee to play
Thy maladie away the bet to driue,
For which thou seemeth sicke.

Chaucer. *Troilus and Creseide*, book iii. p. 249.

Men having quaff
are friendly *ouernight*;
In dawning drie
a man to man a spright.

Turbervile. *Of Drunkenness*.

Then remayned the chapmen and marchautes once or twyce
ouernyghte without Jerusalem with all maner of wares.

Bible, Anno 1551. 2 *Esdras*, ch. xi.

OVER-NIPPING, too nipping; nipping or pinching
to an excess.

And albeit their wether were bitter and *ouernipping*, and no small
parcell of the water were congeled with frost, yet the earle and his
armie waded ouer on foot.

Holinshed. *Ireland*, Anno 1543. vol. vi. p. 317.

OVER-NOISE, v. to make too much noise; to
quell, suppress, or subdue by noise.

No tide of wine would drown your cares,
No mirth or music *ouer-noise* your fears.

Cowley. *Essays*. Horace. Ode 1. book iii.

OVER-NOME, A. S. *ofer-niman*, *abripere*, *abstra-
here*. Overtaken, q. v.

And with that word his speche faille began.
For from his feet up to his brest was come
The cold of deth, that had him *ouernome*.

Chaucer. *The Knightes Tale*, v. 2802.

OVER-MUCH.

OVER-NOME.

OVERNUMEROUS, too numerous; too many, repeated too often or too frequently.

OVER-PAY. These precepts, as they are not *over-numerous*, so neither verbose, but very sentenciously exprest in a few comprehensive words.
Greiv. Cosmo Sacra, vol. iv. ch. viii. sec. 43. fol. 246.

OVER-OFFICE, to act the officer to excess; sc. of domineering.

It might be the pate of a politician which this
Asse o'croffices.

Shakspeare. Hamlet, fol. 277.

OVER-PAINT, to paint too much; to paint or colour too highly.

I shall not need to *over-paint* that which is garnished with better colours already, than I can lay on.

Ralegh. History of the World, book ii. ch. xvi. sec. 1. fol. 264.

OVER-PAMPERED, pampered too much; fed or clothed luxuriously or luxuriantly. (Fr. *pamprer*, to cover with vine leaves.)

And of great Ganges tell,
Which when full India's showers enforceth him to swell,
Gilds with his glistening sands the *over-pamper'd* shore.
Drayton. Poly-olbion, song 15.

OVER-PASS, v. to pass over; to move (come or go) over; to surpass or exceed, to rise above, or move, or be superior to.

And the scyence of hym that *ouerpasseth* al temporal moment,
dwelleth in simplicitie of his presence, and consydereth all the infynite spaces of tymes preterittes, and of tymes future.

Chaucer. Boecius, book v. p. 452.

The shadow maketh her beames merke,
And her hornes to shew derke
That part where she hath lost her light
Of Phœbus fully, and the sight,
Till whan the shadow is *ouerpast*.

Id. The Romant of the Rose, p. 210.

A kynge maie spille, a kynge maie saue,
A kynge maie make a lorde a knaue,
And of a knaue a lorde also,
The power of a king stont so
That he the lawes *ouerpasseth*.

Gower. Conf. Am. book vii. p. 219.

Suffre now the twyncklynge of an eye tyl the wrathe be *ouerpast*.
Bible, Anno 1551. Esaye, ch. xxvi.

In rehearsing the adventures which he hath had in his green and youthful years, the pains that he hath indured, and the perils that he hath *over-passed*, we perceive not how the time passeth away.

Sir Thomas North. Plutarch. Amiot to the Readers.

Stay, Surry, stay, thou may'st to soon be gone;
Pause till this heat be somewhat *overpast*.
Full little know'st thou whither thou dost run.

Drayton. The Barons' Wars, book ii.

He, and his partners in the vision too,
Fell on their faces at its awful view;
Nor durst look up, till Jesus, at the last,
Came to, and rais'd them, when 'twas *overpast*.

Byrom. Remarks on Dr. Middleton's, &c. v. 54.

OVER-PAY, v. to pay over and above; sc. the value; to satisfy or give satisfaction or recompense for over and above; sc. the value of the thing purchased, or bought, or gained.

HEL. Take this purse of gold,
And let me buy your friendly helpe thus farre,
Which I will *over-pay*, and pay againe
When I have found it.
Shakspeare. All's Well That Ends Well, fol. 244.

Great Churchill owns, charm'd with the glorious sight,
His march o'er-paid by such a promis'd fight.
Addison. The Campaign.

OVER-PEER, to peer or appear over or above; to seem, to look, over or above.

Your argosies, with portly saile,
Like signiors and rich burgers on the flood,
Or, as it were, the pageants of the sea,
Do *ouer-peere* the pettie traffiquers
That curtsie to them.

Shakspeare. Merchant of Venice, fol. 163.

The ocean (*ouer-peering* of his list)
Eats not the flats with more impittous haste
Then young Laertes, in a riotous head,
Ore-bears your officers.

Id. Hamlet, fol. 274.

OVER-PERCH, to perch, or rise, or mount (as a bird to its perch) over; to surmount.

Rom. With Loue's light wings
Did I *ore-perch* these walls,
For stony limits cannot hold Loue out.

Shakspeare. Romeo and Juliet, fol. 59.

OVER-PERSUADED, to persuade (so as to get the better) over; to render too agreeable to be refused; to prevail over; sc. unwillingness or dislike.

Like him, who being in good health, lodged himself in a physician's house, and was *over-persuaded* by his landlord to take physic, of which he died, for the benefit of his doctor.

Dryden. Aeneid. Dedication.

OVER-PERTED, having too much pertness, or sauciness; self-conceit, or self-sufficiency.

Which is a thing of dangerous consequence; especially when an unable spirit, being *overperted* with so high authority, is too passionate in the execution of such an office, as cannot be checked but by violence.

Ralegh. History of the World, book ii. ch. xxii. sec. 10. fol. 317.

OVER-PESTER, to pester, be a pest or plague to; to plague to excess.

And it might well be that the camp was *over-pestered* with those who had been abroad, and now were lodged all close together.

Ralegh. History of the World, book ii. ch. xiv. sec. 4. fol. 285.

OVER-PICTURE, picturing or presenting a picture or portrait, exceeding or excelling.

For her owne person,
It beggered all discription, she did lye
In her pauillion, cloth of gold, of tissue,
O're-picturing that Venus, where we see
The fancie out-worke nature.

Shakspeare. Antony and Cleopatra, fol. 347.

OVER-PLANT, to plant over or transplant; it might also be applied—to plant too much, too much for the ground to bear.

And the Lord sayd, if ye han feith as the corn of Seneuey: ye schulen seye to this more tre, be thou drawn up by the roote, and be *ouer-plantid* into the see: and it schal obeye to you.

Wiclif. Luke, ch. xvii.

OVER-PLEASE, v. to please too much; to please, delight, gratify or indulge to excess.

But it may be also joyned with a further cause, which is more subtil; and it is, that the senses love not to be *over-pleased*, but to have a commixture of somewhat that is in itselfe ingrate.

Bacon. Natural History, Cent. viii. sec. 835.

So may I say safely, there can be nothing so advantageous to a secure heart, as to be sin-sick: for hereby, he, who before fell in *overpleasing* himself, begins to displease himself at his fall.

Hall. A Consolatory Letter to one under Censure.

OVER-PLUS, the number or quantity more, or greater than; over and above what is enough, over and above a fixed or settled quantity or number; the surplus or superfluity.

Netheles that that is *ouerpluys*: geue ye almes: & lo al thingis ben clene to you.

Wiclif. Luke, ch. xi.

OVER-PEER.

OVER-PLUS.

OVER-PLUS.

Besides some *ouerplus* (which being kept in store)
Might serue to welcome al their friends, with foison euermore.
Gascoigne. Weeds. The Complaint of the Greene Knight.

OVER-POWER.

Here is to be noted that notwithstandinge the workes which doe
procede of faith, & be neuer so copiose, yet haue we none *ouer-*
plusse to dystribute vnto other.

Bible, Anno 1551. Matthew, ch. xxv. note c.

Hauing assigned vnto them what numbers of the greater and
smaller sorts of cattell they shall spend and inioie for their owne pro-
uision, they send the *ouerplus* yeerlie vnto him to Lewis.

Holinshed. The Description of Britaine, vol. i. ch. x. p. 73.

He has another heart besides his own, both to share and to support
his griefs, and if his joys *overflow*, he can treasure up the *ouerplus*
and redundancy of them in another breast.

South. Sermons, vol. ii. p. 60.

OVER-PLY, to *ply* too much; to *ply* or employ to
excess; to labour too intently, with too great applica-
tion.

— What supports me, dost thou ask?

The conscience, friend, t'have lost them *ouer-ply'd*
In liberty's defence, my noble task,
Of which all Europe talks from side to side.
This thought might lead me through the world's vain mask,
Content, though blind, had I no better guide.

Milton. Sonnet 22. l. 10.

OVER-POISE, *v.* } To *poise* or weigh too much;
OVER-POISE, *n.* } to overbalance, to overweigh.

Whether cripples and mutilated persons, who have lost the great-
est part of their thighs, will not sink but float, their lungs being
abler to waft up their bodies; which are in others *overpoysed* by the
hinder legs; we have not made experiment.

Sir Thomas Brown. Vulgar Errours, book iv. ch. vi. p. 247.

Some *overpoise* of sway, by turns, they share;
In peace the people, and the prince in war.

Dryden. Epistle to his Kinsman J. Dryden.

Horace, in his first and second Book of Odes, was still rising, but
came not to his meridian till the third. After which his judgment
was an *overpoise* to his imagination. He grew too cautious to be
bold enough, for he descended in his fourth by slow degrees.

Id.

OVER-PONDEROUS, too *ponderous*, too weighty,
too heavy, too burdensome.

Neither can I think that so reputed and so valu'd as you are, you
would to the forfeit of your own disearning ability, impose upon
me an unfit and *over-ponderous* argument.

Milton. Works, vol. i. fol. 135. Of Education.

OVER-POSTING, to *post over*; to move *over*
quickly, as the *post* moves or travels.

You may thank the vnquiet time, for your quiet o'reposting that action.
Shakspeare. Henry IV. Second Part, fol. 77.

OVER-POTENT, too *potent* or powerful; too
strong.

— Thou the sooner
Temptation found'st, or *over-potent* charms
To violate the sacred trust of silence
Deposited within thee.

Milton. Samson Agonistes, l. 428.

OVER-PO'WER, *v.* } To act with too much *power*,
OVER-PO'WER, *n.* } with greater *power* or strength;
to be too *powerful* or strong; to subject, to suppress,
to subdue.

O now in danger tri'd, now known in armes
Not to be *overpoured*, companions deare,
Found worthy not of libertie alone,
Too meane pretense, but what we more affect,
Honour, dominion, glorie, and renowne.

Milton. Paradise Lost, book vi. l. 419.

For when a state growes to an *over-power*, it is like a great flood,
that will be sure to overflow.

Bacon. Essay 58. p. 337.

They spoke like men conquered with an *overpowering* force and
evidence of the most concerning truths.

South. Sermons, vol. v. p. 436.

From nature intirely corrupted nothing could proceed but evil;
from *overpowering* grace nothing could proceed but good.

Jortin. Dissertation 1. p. 6.

OVER-PRAISING, to *praise* too much; to bestow
too great *praise* or commendation; to speak of as *prized*
or estimated too highly.

Serpent, thy *overpraising* leaves in doubt
The vertue of the fruit, in thee first prov'd.

Milton. Paradise Lost, book ix. l. 615.

OVER-PRESS, *v.* to *press over*; to *press* or
squeeze too much, too strongly, too heavily.

The cardinals & other prelates fled to the castel of S. Angel, *ouer*
the bridge where many of the comen people were *overpressed* and
drowned.

Hall. Henry VIII. The nineteenth Yere.

If one so great and near were *overprest* with power.

Drayton. Poly-olbion, song 3.

Thus two tall oaks, that Padus' banks adorn,
Lift up to heav'n their leafy heads unshorn;
And *overpress'd* with nature's heavy load,
Dance to the whistling winds, and at each other nod.

Dryden. Virgil. Æneid, book ix.

OVER-PRIZE, to *prize* too much; to set too high
a value upon; to value or estimate too highly.

Shrinke who will shrink, let armors' wayte
Presse downe the burdned earth,
My foes, with wondring eyes, shall see
I *ouer-prize* my death.

Warner. Albion's England, book iv. ch. xxii.

— Blind error
Bids us for ever pains deplore,
Our pleasures *overprize*.

Young. Resignation, part i.

The various ills below content I'll bear;
Grant me, indulgent heav'n! this sole request:
Nor life to *overprize*, nor death to fear!

Boyse. The Wish.

OVER-PROMPTNESS, excessive *promptness*, rea-
diness, or quickness.

Out of this has sprung an *over-promptness* in many young men,
who desire to be counted men of valour and resolution, upon every
sleight occasion, to raise a quarrel and admit of no other means of
composing and ending them but by sword and single combat.

Hales. Remains, part i. fol. 78.

OVER-PROVOKE, *v.* to *provoke* too much; to
provoke or call forth, to an excess, the feelings, (e. g.
the feelings of displeasure, anger, resentment.)

He cannot be worse for our sinnes; we are. It grieues him to
be *overprovoked* to our punishment.

Hall. Works, vol. ii. part ii. fol. 177. Occasional Meditations,
med. 136.

OVER-QUELL, to *quell* or *kill*; to have or gain
power over, to *quell* or subdue; to beat down, to sub-
ject. (The prefixed *over* merely gives emphasis.)

What champion now shal tame the power of hell,
And the unrulie spirits *overquell*?

Hall. Elegy on Dr. Wiltaker.

OVER-RANK, too *rank*; too strong; gross, coarse,
or fulsome; grossly corrupt.

Things *over-rank* do never kindly bear
As in the corn, the fluxure when we see
Fills but the straw, when it should fill the ear,
Rotting that time in ripening it should be,
And being once down, itself can never rear.

Drayton. The Legend of Thomas Cromwell.

Oh great corrector of enormous times,
Shaker of o'er-rank states.

Beaumont and Fletcher. The Two Noble Kinsmen.

OVER-POWER.

OVER-RANK.

OVER-
RATE.
—
OVER-
READ.

OVER-RATE, *v.* to *rate* too highly; to think, deem, or judge to be of too great value; to estimate too highly.

I would not prophesy our house's fate:
But while vain shows and scenes you overrate
Tis to be fear'd —

That as a fire the former house o'rthrew,
Machines and tempests will destroy the new.
Dryden. Epilogue. The Opening of the New House the 26th March, 1674.

But he [Waller] over-rated his own oratory; his vehemence, whether of persuasion or entreaty, was returned with contempt.
Johnson. The Life of Waller.

OVER-REACH, } *Ger. uber-reichen; Sw. ofwer-*
OVER-RAUGHT. } *raska.*

To *reach over*; to stretch or extend *over*; *sc.* the space between; and, consequently, to attain to, to overtake.

Met. to *reach over*, to exceed or surpass in *reach*, *sc.* of thought, in extent of foresight, in sagacity, in craftiness; and thus, to gain a superiority, an advantage, by sagacity or craftiness; to entrap, to beguile, to deceive.

He kyng abaist him nouht, bot stalworthly fauht
Alle to dede he brouht, þat his Galeie ouer-rauht
R. Brunne, p. 170.

Pray—That rhetorick, learne not to ouerreache.
Gascoigne. The Steele Glas.

For that false spright
Which that same witch had in this forme engraft
Was so expert in every subtile slight,
That it could overreach the wisest earthly wight.
Spenser. Faerie Queene, book iv. can. 2.

Her hands were foule and durtie, never washt
In all her life, with long nayles over-raught,
Like puttocks' claws; with th' one of which she scratcht
Her cursed head, although it itched naught.
Id. Ib. book v. can. 12.

So that at length, after long weary chace,
Having by chaunce a close advantage view'd,
He over-raught him.
Id. Ib. book vi. can. 3.

For the number of lunar months reduced to solar years will arise to above 40,000 years, which will over-reach the creation of mankind.
Hale. Origination of Mankind, ch. iii. sec. 2. fol. 144.

But I have it in my head,
And out it shall, that [father] may perhaps
O'rreach you yet.
Beaumont and Fletcher. The Captain, act iv. sc. 4.

To any pastime?
ROSIN. Madam, it so fell out, that certain players
We ore-wrought on the way: of these we told him.
Shakspeare. Hamlet, fol. 265.

ANT. Vpon my life by some deuise or other,
The villaine is ore-wrought of all my monie.
Id. Comedy of Errors, fol. 87.

JUL. Prove it again sir, it may be your sense was set too high,
and so over-wrought it self.
Beaumont and Fletcher. The Woman Hater, act iv. sc. 3.

And do not others report with pleasure and ostentation, how dexterously they have over-reached their well-meaning neighbour? how neatly they have gulled him of his estate, or abused him in his bed?
South. Sermons, vol. iv. p. 156.

If you have two straight strips of wood, for instance, and put the end of one exactly over the end of the other, and turn the upper strip in the direction of the lower, the other end will neither over-reach nor fall short of the other end of the lower, but lie exactly over it.
Beddoes. On Mathematical Evidence, p. 22.

OVER-READ, *A. S. ofer-ræd-an, perlegere.*
To read over, to peruse.

Christe reader (I thinke) now that thou hast ouer-read and diligently pondered in thine inward senses the treatise of John Frith.
Frith. Workes, fol. 60. A Bulwarke against Rastall.

VOL. XXV.

Over the dore thus written she did spy,
Behold: she oft and oft it over-red,
Yet could not find what sence it figured.
Spenser. Faerie Queene, book iii. can. 10.

OVER-RECKON, *v.* to *reckon* too highly; to compute, or calculate, or estimate too highly.

If we will needs over-reckon our condition we do but help to a gravate our own wretchednesse.
Hall. Works, vol. iii. fol. 535. The Balm of Gilead, sec. 9.

OVER-RED, to *redde* over, or cover over with *red*.

MACB. Go pricke thy face, and ouer-red thy feare,
Thou lilly-liuer'd boy.
Shakspeare. Macbeth, fol. 149.

OVER-RENT, to *rent* too highly; to demand or exact too high a *rent*.

The lords and landed ouer-rent,
And cunningly the same.
The parasite doth ouer-reach,
And bears away the game.
Warner. Albion's England, book v. ch. xxii.

OVER-RIDE, *A. S. ofer-rid-an; Ger. uber-reiten, supra-equitare, trans-equitare, equo, sive equitando transire.*

To *ride over*; to *ride* too much or too far; to *ride* beyond, or pass in *riding*.

For alle þat wild abide were ouer riden & ronnen.
R. Brunne, p. 18.

Nouht was foryete by th' infortune of Marte
The carter overriden with his carte;
Under the wheel ful low he lay adoun.
Chaucer. The Knightes Tale, v. 2024.

But in the vale his praucing stede Ascanius swift bestrides,
And somtime these, and sometime those, with swift course ouer-rides.
Phaer. Virgil. Aeneidos, book iv.

L. BAR. My lord, I ouer-rod him on the way,
And he is furnish'd with no certainties,
More then he (haply) may retaile from me.
Shakspeare. Henry IV. Second Part, fol. 741.

OVER-RIGOROUS, too *rigorous* or *rigid*; too stiff, or strict, or austere.

But these perchance are over-rigorous and less proper for our present purpose.
Prynne. Histrio-Mastix, act v. sc. 10.

OVER-RIPE, } Too ripe; ripe or mature to an
OVER-RI'PEN. } excess.

ELEA. Why droops my lord like ouer-ripen'd corn,
Hanging the head at Ceres' plenteous load?
Shakspeare. Henry VI. Second Part, fol. 122.

Thy years are ripe, and over-ripe, the son
Of Macedonian Philip had e're these
Won Asia and the throne of Cyrus held
At his dispose.

Milton. Paradise Regained, book iii. l. 31

OVER-ROAST, *roasted* too much; (and as in *Cymbeline*, over-dressed or prepared.)

Gao. Come sir, are you ready for death?
Post. Ouer-roasted rather: ready long ago.
Shakspeare. Cymbeline, fol. 394.

PET. I tell thee, Kate, 'twas burnt and dried away,
And I expressly am forbid to touch it:
For it engenders choller, planteth anger,
And better 'twere that both of vs did fast,
Since of ourselues, ourselues are chollericke,
Then feede it with such ouer-rosted flesh.

Id. Taming of the Shrew, fol. 122.

OVER-RULE, } To rule over; to exercise rule,
OVER-RU'LER, } dominion, sovereign command or
OVER-RU'LING, n. } authority over; to control.
To rule over, *sc.* an assumed or alleged rule or order,

5 B

OVER-
READ.
—
OVER-
RULE.

OVER-RULE. a claim to *rule*, or right, or authority; and thus, to disallow, to refuse, to reject.

OVER-SEASON. But he [the Devil] was so far *over-ruled*, that he could neither hurt or help them, as Moses did.
Grew. Cosmo Sacra, book iv. ch. v. fol. 197.

God made thee perfect, not immutable;
And good he made thee, but to persevere
He left it in thy power, ordain'd thy will
By nature free, not *over-ruled* by fate
Inextricable, or strict necessity.

Milton. Paradise Lost, book v. l. 527.

Had not the Eternal King Omnipotent
From his strong hold of heav'n high *over-ruled*
And limited their might.

Id. Ib. book vi. l. 228.

Then did proof, the *overruler* of opinions, make manifest that all these are but serving sciences.

Sidney. Defence of Poesy.

And as for the positive words, That hee would not beare armes against King Edward's sonne; though the words seeme calme, yet it was a plaine and direct *over-ruling* of the king's title, either by the line of Lancaster, or by Act of Parliament.

Bacon. King Henry VII. fol. 135.

OVER-RUN, } To run over; to flow or spread
OVER-RUNNER. } over.

To run over, *sc.* as invading enemies; to occupy or take possession of.

To run faster than; to pass in running.

To run over, *sc.* in great numbers; to crowd, to swarm, to cover in crowds or swarms.

So com a tempest wilde, his schip had alle *ouer-ronnen*.
R. Brunne, p. 124.

The chilling cold did *ouerrunne* their bones,
To whom that fate was shapt, whom Phebus wold.
Surrey. Virgil. Æneis, book ii.

Then did her glorious flowre wax dead and wan,
Dispis'd and troden downe of all that *over-rann*.
Spenser. Faerie Queene, book iv. can. 8.

Vandal o'er-runners, Goths in literature,
Ploughmen that would Parnassus new manure;
Ringers of verse that all-in chime,
And toll the changes upon every rhyme.
Lovelace. Lucasta, part ii. p. 85.

OVER-SAY, perhaps *over-said*, *over-talked*; denied, refused; or *over-saying*, *over-talking*; talking unsuitably or unseasonably.

For this I do the welle to witte,
If thou thyn hele wilt purchase,
Thou might not make suite and chace,
Where that the game is not prouable,
It were a thyng unreasonable,
A man to be so *ouersaie*.

Gower. Conf. Am. book viii.

OVER-SEA, transmarine; language used in Countries over or beyond sea.

Some farre iourneyed gentleman at their returne home, like as they loue to goe in foraine apparell, so thei wil powder their talke with *ouer-sea* language.

Wilson. The Arte of Rhetorique, fol. 164.

OVER-SEARCH, to search over; to seek, look, or examine over.

When I had *ouersearched* all my booke and ransacked vp the verie bottom of my brest, I founde in the tone some prety peccadulias.

Sir Thomas More. Workes, fol. 423. *The First Part of the Confutation of Tyndall.*

OVER-SEASON, to season too much; to give too high a relish, savour, or taste to.

Had I been *over-season'd* with base anger,
And suited all occasions to my mischiefs.

Baumont and Fletcher. The Pilgrim, act iv. sc. 2.

OVER-SEE, } A. S. *ofer-seon*; D. *ouer-sien*; Ger. **OVER-SEER,** } *uber-seken*; Sw. *ofwer-se*, *super-specere*, *perlustrare*.

OVER-SIGHT. To *over-see* is equivalent to, to overlook.

To see over; to supervise, to survey, to inspect, to superintend.

To see or look over; to pass over in seeing or looking, and consequently, to disregard, to neglect, to omit; to look over or beyond, and, consequently, not to see or discern; to be blind or blinded, or deceived.

Oversight is now commonly used in this latter application.

And whan she wist how that it stood,
And had her billes *ouerseyne*,
Thei shulden haue answered ageyne.

Gower. Conf. Am. book viii. p. 256.

So that I am partly in doubt whether I were more *ouerseene* in my first deuising, or in my last dyrecting of the same?

Gascoigne. The Fruites of Warre. To the Lorde Greye of Wylton.

For those *ouersears* which we now call byshops after the Greke word, were alway biding in one place to gouerne the congregation there.

Tyndall. Works, fol. 252. *An Answer vnto Syr Thomas More.*

But yet me think that I come to this point by some *ou'rsight* in graunting. Well, quoth I, Mē say sometymewhen they would saye or doo a thyng and cannot well come thereon, but misse and *ouersee* themselfe in the assaye, it maketh no matter they saye. Ye maye beginne agayne and mende it, &c.

Sir Thomas More. Workes, fol. 145. *A Dialogue concerning Heresies.*

And Mathathiah one of the Leuites, the eldest sone of Selum, the Corathite, had the *ouersyght* of the thinges that were baken in y^e fryeng pan.

Bible, Anno 1551. 1 Chronicles, ch. ix.

But ever they who overlook so much,
Will *oversee* themselves, their state is such.

Daniel. History of Civil Wars, book v.

It is also divided into 26 tribes or wards, of the which euerie one hath his seuerall alderman or *ouerseer*.

Holinshed. Richard I. Anno 1189, vol. ii. p. 207.

Give leave a while
To baser wit his power therein to spend,
Whose grosse defaults thy daintie pen may file
And unadvised *oversights* amend.

Spenser. To the Lord of Buckhurst.

Friends with time and fortune, sometimes by vnadvised desires, or *ouersights*, decrease, fall from vs and fade, whereas a man's owne bloud cleaueth fast, and cannot be disioyned.

Savile. Tacitus, book iii. ch. xx. fol. 155.

Having hereby done violence to those apprehensions of modesty, which Nature had placed as guardians and *overseers* to his virtue, he flings off all shame, and wears his sin upon his forehead.

South. Sermons, vol. iv. p. 414.

OVERSEERS of the Poor are appointed by virtue of the Statute 43 Elizabeth, c. 2. on which the system of Poor Laws is principally founded, although it was not the first enactment relating to the subject of the poor. The Statute 43 Elizabeth, c. 2. directs "that the Churchwardens of every Parish, and four, three, or two substantial householders, to be nominated yearly in Easter week, or within one month after Easter, under the hand and seal of two or more Justices of the Peace of the same County, whereof one to be of the Quorum, dwelling in or near the same Parish, or division where the same Parish doth lie, shall be called Overseers of the Poor of the same Parish." The time of appointment is now altered by Statute 54 Geo. III. c. 91. to the 25th day of March, or fourteen days next after.

The office and duty of the Overseers as declared by the Statute 43 Elizabeth, is 1st, to raise competent sums for the relief of the poor, impotent, old, and such

OVER-SEE.

SEER.
—
OVER-
SIZE.

other being poor as are not able to work; and 2dly, to provide work for such as are able, and cannot otherwise obtain employment. For these joint purposes they are empowered to make and levy rates upon the several inhabitants of the same Parish by the same Act of Parliament; which has been further explained and enforced by subsequent Statutes. See Nolan, *On the Poor Laws*, and Burn's *Justice, Poor*.

OVER-SHADE, } A. S. *ofer-scead-ian*, *scead-*
OVER-SHA'DOW, } *wian*; Ger. *uber-schatten*.
OVER-SHA'DOWER, } To *shade over*; to place
OVER-SHA'DOWING, n. } or put *over*, a separation, a
seclusion, a screen or shelter, *sc.* from the sun, &c., and,
consequently, to protect, to cover, to obscure; to throw
a covering over, to hover over.

Anentis whom is noon *ouer-chaungyng* ne *ouer-schadewing* of
reward. Wiclif. *James*, ch. i.

But while he spake these thingis: a cloude was maad and *ouer-*
schadewide hem and thei dredden whanne thei entriden into the
cloude. Id. *Luke*, ch. ix.

The Holy Gost schal come fro above into thee; and the vertu
of the Highest schal *ouerschadowe* thee. Id. *Ib.* ch. i.

The Holye Gooste shall come vpon thee and the power of the
Highest shall *ouer-shaddowe* the. Bible, Anno 1551.

Thou know'st our meaning, look for thy reward
Among the nettles at the elder tree;
Which *ouer-shades* the mouth of that same pit.
Shakspeare. *Titus Andronicus*, fol. 39.

Who now shall curb proud York, when he shall rise?
Or arm our right against his enterprise,
To crop that bastard weed which daily grows
To *ouer-shadow* our vermillion rose?
Drayton. *Queen Margaret to the Duke of Suffolk*.

Your nobility in a right distance between crown and people; no
oppressors of the people, no *overshadows* of the crown.
Bacon. *Letter to the King*, 2 Jan. 1618, p. 9.

Twice in the year luxuriant leaves *o'reshade*
Th' encumber'd vine.
Dryden. *Virgil. Georgics*, book ii.

OVER-SHAKE, to *shake over*; to disperse, to
scatter.

Now welcome summer, with the sunnes soft,
That hast this winter weather's *overshake*,
Saint Valentine, thou art full high on loft,
Which driuest away the long night's blake.
Chaucer. *The Assembly of Fowls*, p. 335.

OVER-SHOOT, } To *shoot over*; to throw or
OVER-SHOT, n. } cast more quickly *over*; to *shoot*,
throw, or cast too far; to hurry or hasten, pass or go
too far; to exceed or go beyond the mark, beyond
bounds.

By like the man hadde there *ouershotte* himself.
Sir Thomas More. *Workes*, fol. 1134. *An Answer to the Poysoned*
Boke, &c.

In what so strangely were ye *ouer-shot*,
Against yourselves that your own frailty spurn'd.
Drayton. *The Barons' Wars*, book v.

An old weak *ouer-shot* I must provide for.
Beaumont and Fletcher. *The Mad Lover*, act iv. sc. 1.

One who is very careful to behave himself so, as not to *ouer-shoot*
his game, but stand right and fair in case a wish'd for change
should bring fanaticism again into fashion.
South. *Sermons*, vol. v. p. 488.

OVER-SIZE, to *size over*, or cover over with *size*;
sc. a glutinous substance to set or fix the other sub-
stances with which it is mixed; *met.* to smear or daub
over.

And thus *o're-sized* with coagulate gore,
With eyes like carbuncles, the hellish Pyrrhus
Old grandsire Priam seekes.

Shakspeare. *Hamlet*, fol. 263.

OVER-SKIP, } To *skip over*; to leap or jump, or
OVER-SKI'PPER. } otherwise pass *over*.

Lord leyve þat þese priestes. leelly seyē here masses
That þei *ouershuppe* nat for haste. as ich hope thei do not.
Piers Plouhman. *Vision*, p. 291.

And *ouer-skippers* also.

Id. *Ib.* p. 221.

But then the mind much sufferance doth *o'reskip*,
When grief hath mates, and bearing fellowship.
Shakspeare. *Lear*, act iii. sc. 6.

But belike, you have not a better faculty in stumbling, then I in
leaping: and talke of huge great blocks that I have *ouer-skipped*
in this whole book.

Hall. *Works*, vol. iii. fol. 389. *Answer to the Vindication of*
Smeectymnus.

OVER-SLIDE, v. to *slide over*, (move over with-
out stepping,) to glide *over*, to glide or slip by.

But it were vain euery cours [at meat] to tell,—
For lacke of time I let *ouerslide*.

Lidgate. *The Story of Thebes*, part ii.

OVER-SLIGHT, too *slight*; too thin, too insubstan-
tial.

Should the ploughman be set to the gentleman's fare, this
chicken, that partridge or pheasant, would (as *ouer-slight* food) be
too soone turned over and leave his empty stomach to quarrell for
stronger provision.

Hall. *Works*, vol. iii. fol. 502. *Of Contentation*, sec. 8.

OVER-SLIP, v. in A. S. *ofer-slip*, is *superius indu-*
mentum, the article of dress *slipped* on *over* others.
Chaucer has *His overest sloppe*. See in v. OVER.

To *slip over*; to pass or suffer to pass, blunderingly,
carelessly, negligently *over*.

They are the dayes of Phurim, which are not to be *ouerslipte*,
amonge the Jewes. Bible, Anno 1551. *Job*, ch. ix.

Godfrey (quoth he) behold the season fit
To war, for which thou waited hast so long,
Now serues the time (if thou *oreslip* not it)
To free Jerusalem from thrall and wrong.
Fairfax. *Godfrey of Boulogne*, book i. stan. 16. fol. 4.

It is notable in the dealings of men, when they make contracts
and bargains, there is some good hour, some advantageous nick of
time, which, if *overslipt* and let go, either the price fails, or the
thing fails. South. *Sermons*, vol. ii. p. 226.

OVER-SLOW, to slacken effectually, *sc.* the speed or
violence; to retard, to stop.

But then to perswade ourselves, that there is no means on earth,
besides the very hand of God, and that out of our reach, able to
trash, or *overslow* this furious driver.

Hammond. *Works*, vol. iv. fol. 563. *Sermon* 1.

OVER-SNOW, Ger. *uber-schnewen*; Sw. *ofwer-*
snoga; to *snow over* or cover with *snow*; to whiten or
become white.

For never resting Time leads Summer on
To hideous Winter and confounds him there;
Sap check'd with frost, and lusty leaves quite gone,
Beauty *o'ersnow'd*, and bareness every where.
Shakspeare. *Sonnet* 5.

And these I wielded while my bloom was warm,
This languish'd frame while better spirits fed,
Ere age unstrung my nerves, or time *o'ersnow'd* my head.
Dryden. *Virgil. Æneid*, book v.

OVER-SOLD, *sold* for too much, too great a
price; more than its value.

The thing call'd life with ease I can disclaim,
And think it *ouer-sold* to purchase fame.

Dryden. *Virgil. Æneid*, book ix.

OVER-SORROW, to *sorrow*, vex, or grieve, too
much, to an excess.

OVER-
SIZE.

OVER-
SORROW.

OVER-SORROW. He who shall be so happy as with success to light the way of such an expedient liberty and truth as this, shall restore the much-wronged and *over-sorrowed* state of matrimony, not only to those merciful and life-giving remedies of Moses, but as much as may be, to that serene and blissful condition it was in at the beginning. *Milton. Works, vol. i. fol. 168. The Doctrine and Discipline of Divorce.*

OVER-SPEAK, } In A. S. ofer-specol, nimis
OVER-WORD. } loquax. To speak too much, to
use too much *speech*.

To *over-word*, to use too many *words*.

Describing a small fly, he extremely *overworded* and *overspake* himself in his expression of it; as if he had spoken of the Nemean Lion. *Hales. Remains, p. 229.*

OVER-SPENT, spent too much; met. having all
his strength gone, exhausted, consumed.

O'er-spent with heat his breath he faintly drew,
Parch'd was his mouth, nor yet the goal in view,
And the first apple on the plain he threw.
Eusden. Ovid. Metamorphoses, book x.

OVER-SPIN, v. to spin too much; to draw out,
protract, lengthen or prolong, to an excess.

Affairs were justly tim'd, nor did he catch
At an affected fame of quick dispatch;
Things were prepar'd, debated, and then done,
Not rashly broke, or vainly *overspun*.
Cartwright. On the Death of Sir Bevil Glenville, Knight.

OVER-SPREAD, to spread or strew over; to
cover over the surface: to *spread* is distinguished from
sprinkle; the thing *spread* is so laid over as to preserve
the continuity of parts, or nearly so; that which is
sprinkled is laid in separate particles, the continuity
being sundered.

Spiritus paraclitus over spradde hem alle.
Piers Plouhman. Vision, p. 376.

And after this, this Theseus hath sent
After a bere, and it all *overspradde*
With cloth of gold, the richest that he hadde;
And of the same suit he cladde Arcite.
Chaucer. The Knightes Tale, v. 2873.

Of Deiphobus, the palace large and great
Fell to the ground, all *ouerspred* with flash.
Surrey. Virgil. Aeneis, book ii.

————— Their commixed arms
Join'd with the German powers, (those nations of the north
Which *overspread* the world,) together issued forth.
Drayton. Poly-olbion, song 6.

Undoubted signs of such a soil are found,
For here wild olive shoots *o'erspread* the ground,
And heaps of berries strew the fields around.
Dryden. Virgil. Georgics, book ii.

OVER-SPRING, D. ouer-springhen; Ger. uber-
springen, transilire, to spring or leap over.
To *spring over*, to rise over.

As preyeth hire so gret a flood to bring
That five fadome at the least it *overspring*
The highest rock in Armorike Bretaigne,
And let this flood endure yeres twaine.
Chaucer. The Frankeleines Tale, v. 11372.

OVER-STAND, A. S. ofer-stand-an; D. ouer-staen,
superstare.

To *stand over*; to *stand* too much, too long, *sc.* till the
season or opportunity is past.

Hers they shall be, since you refuse the price;
What madman would *o'erstand* his market twice.
Dryden. Theocritus, Idyl. 3.

OVER-STARING, staring too much; excessively;
straining the eyes or vision to excess.

Yet some warlike signe must be used, either a slovinglie busking
or an *overstaring* frowncd hed, as though out of everie heares toppe
should suddenlie start out a good big othe, when nede requireth.
Ascham. Works, p. 229. The Schole Master.

OVER-STAY, to stay over; to stay too long.

Now that he onely *over-stayes* the time of our misgrounded ex-
pectation, he doth not slacken his pace, but correct our error.
Hall. Works, vol. iii. fol. 647. Satan's Fiery Darts Quenched,
Dec. 1. Temptation 6.

OVER-STEP, A. S. ofer-steep-pan; to step over;
to transgress.

Sute the action to the word, and the word to the action, with this
speciall obseruance—that you *ore-step* not the modestie of nature.
Shakspeare. Hamlet, fol. 266.

OVER-STOCK, to stock too much, too plenteously;
to supply or furnish with too great, with an excessive
stock; fixed quantity or store.

Some think the fools were most as times went then,
But now the world's *o'erstock'd* with prudent men.
Dryden. The Medal.

Wherever that [the *cæsura*] is used, it gives a roughness to the
verse; of which we can have little need, in a language which is *over-*
stocked with consonants. *Id. Aeneid. Dedication.*

The eye, in surveying a Gothic building, is distracted by the multi-
plicity of ornaments, and loses the whole by its minute attention to
the parts; so the mind, in perusing a work *overstocked* with wit, is
fatigued and disgusted with the constant endeavour to shine and
surprise. *Hume. Essay 20, vol. i. p. 189.*

OVER-STORE, to store too much; to stir, move,
or place together too great a quantity or number; to
accumulate, to furnish or supply, too plentifully.

Fishes are infinitely more numerous or increasing than beasts or
birds, as appears by the numerous spawn of any one fish, though
ordinarily they breed but once a year; and if these should come to
maturity, even the ocean itself would have been long since *over-*
stored with fish.

Hale. Origination of Mankind, ch. ix. sec. 2. fol. 208.

OVER-STRAIN, v. } To strain too much, with
OVER-STRAINING. } too great an effort; to press
after or towards with too great exertion; to exert or
labour to excess.

Confessors were apt to *overstrain* their privileges, in which St.
Cyprian made a notable stand against them. *Ayliffe. Parergon.*

He wished all painters would imprint this lesson deeply in their
memory, that with *overstraining* and earnestness of finishing their
pieces, they often did them more harm than good. *Dryden. Dufresnoy.*

Hence, they always resisted every encroachment on their privi-
leges, and not unfrequently, expelled the papal legates when inclined
to *overstrain* the prerogatives of their office. *Eustace. Italy, vol. i. ch. vii. p. 258.*

OVER-STRAITLY, too straitly or strictly; too
narrowly.

Either for that he found himself *over-straitly* tied up by them
with hard conditions, or rather because he was of an unthankful dis-
position.

Raleigh. History of the World, book v. ch. ii. sec. 1. fol. 607.

OVER-STRAW, to straw or strew, spread or scatter
over.

It shall be fickle, false, and full of fraud,
And shall be blasted in a breathing-while;
The bottom poyson, and the top *o'erstraw'd*
With sweets, that shall the sharpest sight beguile.
Shakspeare. Venus and Adonis.

————— Joyful thou'lt see
The clammy surface all *o'erstrown* with tribes
Of greedy insects, that with fruitless toil
Flap filmy pennons oft, to extricate
Their feet in liquid shackles bound.
Philips. Cider, book i.

OVER-
STAR-
ING.

OVER-
STRAW.

OVER-
STRETCH
—
OVER-
SWAY.

OVER-STRETCH, to *stretch over*, beyond measure.

For we *ouer-stretchen* (*supereextendimus*) not forth as not stretch-ynge (*pertigentes*) to ghou. *Wiclif. 2 Corinthians, ch. x.*

OVER-STRICT, too *strict* or strait; too narrow or confined.

A text [1 Tim. ii. 9.] which our English ladies have long since forgotten, if not recited, as savouring of Puritanisme, and *over-strict* preciseness. *Prynne. Histrio-Mastix, act v. sc. 7.*

OVER-STRIDE, to *stride over*; to stretch (sc. the legs) over.

Self-loving man what sooner doth abuse,
And more than his prosperity doth wound?
Into the deep but fall how can he chuse,
That *over-strides* whereon his foot to ground.
Drayton. The Legend of Thomas Cromwell.

OVER-STRIKE, to *strike over* or too far; to reach the *stroke* or blow too far; beyond the object aimed at.

For as he in his rage him *overstrooke*,
He, ere he could his weapon backe repaire,
His side all bare and naked *overtooke*,
And with his mortal steel quite through the body strooke.
Spenser. Faerie Queene, book v. can. 9.

OVER-STRONG, too *strong*; *strong* or *strung*, able or powerful, to a superior degree.

Of horse he [Leosthenes] brought into the field about two thousand and five hundred; but *over-strong* he was that way also, when once the Thessalians had revolted unto him.
Raleigh. History of the World, book iv. ch. iii. sec. 3. fol. 490.

OVER-SUBTLE, too *subtle*; too finely spun; met. having a mind refining too keenly; too craftily; and hence too crafty, too deceitful.

Son of Iapetus, *o'er-subtle*, go,
And glory in thy artful theft below.
Cook. Hesiod. Works and Days, book i.

OVER-SUM, the *sum over*; the quantity or number over; the surplus.

Good record appeereth, that the bishop there had yearly three or foure tunne at the least giuen him *nomine decimæ*, beside whatsoever *ouer-summe* of the liquor did accrue to him by leases and other excheats, wherof also I haue seene mention.
Holinshed. The Description of Britaine, vol. i. book i. ch. xviii. p. 187.

OVER-SUPERSTITIOUS, too *superstitious*; *superstition* itself is applied to an excess of religious worship; *over-superstitious*, worshipping, reverencing, too strictly.

For in regard of the height and excellency of his profession, these inferiour things, which he cannot do, they are nought else but grammar quirks; and to be ambitious to do them, were but a nice, minute, and *over-superstitious* diligence.
Hale. Remains, part i. p. 136.

OVER-SWAY, to *sway* is,

To guide or regulate the motion; consequentially, to balance, to poise, to weigh; to *over-sway*, to *over-balance*, *over-weigh*; to *over-bear* by superior weight, influence, or authority.

The marshal and the constable about
To second what this sager duke had said,
The youthful lords into a cry brake out
'Gainst their opinions; so that *oversway'd*,
Some seeming of their loyalties to doubt,
Alanzon as an oracle obey'd.
Drayton. The Battle of Agincourt.

But such an *oversway'd* sex is yours,
That all the virtuous actions you can do,
Are but as men will call them.
Beaumont and Fletcher. The Coxcomb, act iv. sc. 1.

The foe elusive of the dire intent,
His force in air th' embarrass'd Pagan spent,
And by his bulk of cumb'rous poise *o'ersway'd*,
Full on his helm receiv'd th' adverse blade.
Brookes. Constantia.

OVER-SWELL, to *swell over*; to rise as a tumour over or above; to be or become swollen or tumid, to an excess; and consequently, to overpass, to overflow.

And thou shalt shortly see
Thy face and hair to grow
All plough'd with furrows, *over-swol'n* with snow.
Daniel. A Description of Beauty.
And with stern Æolus blasts, like Thetis waxing rank,
She only *over-swells* the surface of her bank.
Drayton. Polyolbion, song 9.

Who causeth the waters of the sea to *overswell* their banks, and to drown the face of the earth; the Lord is his name.
Hall. Hard Texts of Scripture. Amos, ch. v. ver. 8.

OVER-SWIFT, too *swift*; too quick, too rapid, with excess of velocity.

Hee wote not why the sterre Bootes passeth, or gathereth his waines, and drencheth his late flambes in the sea, and why that Botes the sterre vnfoldeth his *ouerswifte* arysings.
Chaucer. Boecius, book iv.

On the other side, exercises, which stir up a good strong motion, but not *over-swift*, or to our utmost strength, (such as leaping, shooting, riding, bowling, and the like,) do not hurt, but rather benefit.
Bacon. The History of Life and Death, fol. 33.

O'VERT, } Fr. *ouvert*, from the verb *ouvrir*;
O'VERTLY, } and this corrupted from the Lat. *ape-*
O'VERTURE. } *rire*, to open.
Open, manifest, public.

Overture or *aperture*; an *opening*; met. a disclosure, discovery, a declaration; something laid or proposed *openly*, a proposal. Also, the music, or piece of music played at the *opening* or commencement of the entertainment.

That whatsoever in all these three
Is spoken in priue or apert,
The way therto is so *ouert*,
And stant eke in so just a place,
That euery sowne mote to it pace.
Chaucer. The House of Fame, book ii.

The Englishemen in diuers places persed and brake through the walls and diuers *ouertures* and holes were made under the foundation by the pyoners.
Hall. Henry V. The fifth Yere.

To vouch this is no proof,
Without more wider and more *ouer* [overt] test
Then these thin habits, and poore likely-hoods
Of moderne seeming, do prefer against him.
Shakspeare. Othello, fol. 313.

Against his cruell scorching heate,
Where thou hast coverture,
The wastefull hilles unto his threate
Is a plaine *overture*.
Spenser. Shepherd's Calendar. July.

For if the least imagin'd *overture*
But of conceiv'd revolt men once espy,
Straight shrink the weak; the great will not endure;
Th' impatient run; and the discontented fly.
Daniel. History of Civil Wars, book ii.

He [Richard Cromwell] was always ready to do offices of kindness to persons in distress, apparently disliking of the severity of his father; and not averse to *overtures* for his Majesties restitution.
Baker. Charles II. Anno 1659.

The last Tarquin was expelled justly for *overt-acts* of tyranny and maleadministration.
Dryden. Æneid. Dedication.

Good men are never *overtly* despised, but that they are first calumniated.
Young. Sermon 2. p. 389.

The general rule of law is, that all sales and contracts of any thing vendible, in fairs or markets *overt*, (that is, open,) shall not only be good between the parties, but also be binding on all those that have any right or property therein.

Blackstone. Commentaries, book ii. ch. xxx p. 449.

OVER-
SWAY.
—
OVERT.

OVER-TAKE.
—
OVER-THROW.

OVER-TAKE, to *overtake*; we still say, I was much taken with him, *i. e.* my mind was taken; captured, captivated. I was overtaken, too much taken, captured or captivated. And thus to *overtake* is to capture, (after pursuit,) and, by a remission of some force of the verb, simply to come up with, after pursuit or following,—to come up with, to reach the same place or distance, to attain.

Whan it [the tonge] is reised vp on loft,
Reason is shewed so slowly and soft
That it him never ouertake may,
Lord so these men been trusty in assay.

Chaucer. *The Letter of Cupid.*

So it befel vpon a daie,
This angell, whiche him shuld enforme,
Was clothed in a man's forme,
And ouertoke, I vnderstonde,
Two men, that wenten ouerlonde.

Gower. *Conf. Am.* book ii. p. 47.

And, had he not in his extreamest need
Bene helped through the swiftness of his steed,
He had him overtaken in his flight.

Spenser. *Faerie Queene*, book vi. can. 4.

I fled, but he pursu'd (though more, it seems,
Inflam'd with lust then rage) and swifter far,
Mee overtook his mother all dismaid,
And in embraces forcible and foul
Ingend'ring with me.

Milton. *Paradise Lost*, book ii. l. 792.

Thus inborn broils the factions would engage,
Or wars of exil'd heirs, or foreign rage,
Till halting vengeance overtook our age.

Dryden. *The Medal.*

OVER-TASK, to *task* too much; to impose, require, or demand a performance too great, exceedingly great.

LAD. To find out that, good shepherd, I suppose,
In such a scant allowance of star light,
Would overtask the best land-pilot's art,
Without the sure guess of well-practis'd feet.

Milton. *Comus*, l. 309.

Many a good husband *over-tasks* himselfe, and undertakes more then his eye can *over-looke* or his hand sway, and therefore he is faine to trust to the management of others; and it speeds thereafter.

Hall. *Works*, vol. ii. fol. 309. *Sermon preacht at Westminster*, April 5, 1628.

OVER-TERRIBLE, too *terrible*; *terrible*, frightful, or fearful, to excess.

Why shouldst thou not labour to have thy heart so wrought upon, that this face of death, which seems lovely and desirable to some, may not appear *over-terrible* to thee?

Hall. *Works*, vol. iii. fol. 575. *The Balm of Gilead.*

OVER-THROW, *v.* } To throw, toss, or turn
OVER-THROW, *n.* } over.
OVER-THROWER, } To throw over; and consequently, to destroy, to demolish, to subvert, to prostrate, to subject, to defeat.
OVER-THROWING.

So much have I the more said that you may (gentle reader) see the just hand and plague of God upon these great rich Abbots and their marvellous *overthrowe*, which so lightly and unadvisedly gave their consents to the *overthrowing* of the houses of their poore brethren.

R. Brunne, p. 645.

For doubt to be behind there,
Into the sea withouten fere
Anon I ran, till with a waw
All sodenly I was overthrow.

Chaucer. *Dreame*, p. 387.

But as he rose he overthrow,
Wherefore the queene, yet eft anew
Him in her armes anon tooke,
And pitiously gan on him looke.

Id. *Ib.* p. 383.

And therefore clepeth Cassidore povertie the moder of ruine, that is to sayn, the moder of *overthrowing* or of falling down.

Chaucer. *The Tale of Melibeus*, p. 117.

For euery climat hath his dele
After the tournyng of the whele,
Whiche blinde Fortune overthroweth,
Whereof the certain no man knoweth.

Gower. *Conf. Am.* Prologue, p. 8.

Thrise leaning on her elbow gan she raise
Her self, upward; and thrise she (*revoluta*) overthrow
Upon the bed.

Surrey. *Virgil. Aeneis*, book iv.

Yet by the stroke of this strange overthrowe,
At which conflict in thraldome I was thrust,
The Lord be praised, I am well taught to knowe
From whence man came, and eke whereto he must.

Vncertaine Auctors. *Of Life and Death.*

Sundrye victories hadde bee, and sometime overthrowes.

Sir Thomas More. *Workes*, fol. 37. *Richard III.*

Too well I see and rue the dire event,
That with sad overthrow and foul defeat
Hath lost us heav'n.

Milton. *Paradise Lost*, book i. l. 135.

Sundrie were brought home who were the king's enemies, *overthrowers* of the kingdome, and enemies to religion.

Holinshed. *History of Scotland*. Anno 1578, vol. v. p. 699.

By force the furious lover freed his way:
Himself alone dispers'd the Rhodian crew;
The weak disdain'd, the valiant overthrow.

Dryden. *Cymon and Iphigenia.*

From hence proud cities date their utter falls,
When, insolent in ruin, o'er their walls
The wrathful soldier drags the hostile plough,
That haughty mark of total overthrow.

Francis. *Horace. Ode 16.*

OVER-THWART, *adj.*

OVER-THWART, *prep.*

OVER-THWARTLY,

OVER-THWARTNESS.

verse or perverted, adverse, opposed or opposite.

pei flected þam ouerthwert, justely forto ligge,
Ouer þe water smerte was so ordeyned a brigge.

R. Brunne, p. 241.

Vncontynent, unmylde, withoute benygnyte, traitouris, *overthwert* (*protervi*) bollun with proud thoughtis.

Wiclif. *Titus*, ch. iii.

The dore was all of athamant eterne,
Yclenched *overthwart* and endelong
With yren tough, and for to make it strong,
Every piler the temple to sustene
Was tonne-gret, of yren bright and shene.

Chaucer. *The Knights Tale*, v. 1993.

So whan the saile was sprad; and the shippe gan to moue, the winde and water gan for to rise, and *overthwart* to tourne the welken.

Id. *The Testament of Loue*, book i. p. 471.

Renewing cares upon my sorrowes old,
Such *overthwart* effects in me they make,
Besprent with teares, my bed for to forsake.

Wyat. *The Louer to his Bed, &c.*

A hart well stay'd, in *overthwartes* depe
Hopeth amendes; in swete, doth feare the sowre.

Surrey. *Praise of Meane and Constant Estate.*

News were brought hither, that many of the Turk's galleys were drowned by *overthwarting* the seas.

Ascham. *Works*, p. 390. *Letters.*

Thus haue I finished the discourse of the waters of Deuonshire, whose breadth in this place from hence *overthwart* to the check-stones in the mouth of Ex, on the south side of the Ile, is eight and thirtie miles or vnder fortie.

Holinshed. *The Description of Britaine*, vol. i. ch. xii. p. 113.

Such a witte, I say, if it be, at the first, well handled by the mother, and rightlie smothered and wrought as it should, not over

OVER-THROW.
—
OVER-THWART.

OVER-THWART. *thwartlie*, and against the wood, by the scholemaster, both for learning and hole course of living, proveth alwaies the best.
Ascham. Works, p. 209. The Schole Master.

OVER-TREAT. My younger sister, indeed, might have been married to a far greater fortune, had not the *overthwartness* of some neighbours interrupted it.
Lord Herbert. Life, p. 53.

OVER-TIMELY, *timely*; in *time* or season; fitting or convenient; soon enough, early enough; *over-timely*, more than soon or early enough; too soon or early.

Heeres hore aren shad *ourtimeliche* vpon my head; and the slacke skinnne trembleth of mine empted bodie.
Chaucer. Boecius, book i. p. 407.

Thou being left alone as a withering tree in the middle of a field, call to remembrance (I prai thee) the vaine youthfull fantasie and *ouertimelie* death of fathers and thy brethren.
Holinshed. History of England. Coanus, Anno 546, vol. i. p. 58.

OVER-TIRE, to *tire* too much; to harass, weary, or fatigue to an excess; to wear out with fatigue.

Though he with dart the windy-footed hinde did *overtyer*.
Phaer. Aeneidos, book vi. sig. S.

He it is that can both strike and ease, wound and heal again: which is the next, and must be, for fear of your *overtiring*, the last of our discourse; Heal thou the sores or breaches thereof.
Hall. Sermon 33. Psalm 60. ver. 2.

OVER-TOIL, to *toil* or *till* too much; to labour; (at *tillage*;) generally, to labour or work to an excess, (till tired or weary.)

Where, *over-toil'd*, her heat to cool,
She bathes her in the pleasant pool.
Drayton. Poly-olbion, song 2.

OVER-TOP, *v.* to rise *over* with the *top* or head; to be higher, more lofty by the *top* or head; to surmount, to surpass.

Where her imperious fane her former seat disdains,
And proudly *over-tops* the spacious neighbouring plains.
Drayton. Poly-olbion, song 3.

There is a certain plant which our herbalists call (*Herbam impiam*) or wicked cudweed, whose younger branches still yeeld flowers to *over-top* the elder.
Hall. Works, vol. iii. fol. 78. The Remedy of Prophaneness, book ii. sec. 9.

What they do in present,
Though lesse then yours in past, must *ore top* yours.
Shakspeare. Troylus and Cressida, fol. 93.

While tow'ring o'er our alphabet like Saul,
Stands our digamma, and *o'ertops* them all.
Pope. The Dunciad, book iv. l. 218.

OVER-TRADING, excessive *trading* or traffick.

Whereby the kingdomes stocke of treasure may be sure to be kept from being diminished, by any *ouer trading* of the forrainer.
Bacon. King Henry VII. fol. 60.

OVER-TRAVEL, to *travel over*; to *travel* or labour, to an excess; to oppress or bear down with labour or toil; to weary, to tire.

They shewed hym that the campe was assaulted with a great power, freshe alwayes succeeding in the rouses of the that were weary, and *ouertrauelling* oure men wyth continuall toyle.
Goldyng. Cæsar. Commentaries, book vi. p. 203.

OVER-TREAD, to *tread* or trample *over*; to press or beat, (with the feet,) and consequently, to level or lay prostrate.

By the poore is vnderstande in the scripture, the afflicted, who fele their nede and temptacion, and do sorowe & lamēt that the treueth is *ouertroden* puttynge no truste in any thyng that is in this worlde.
Bible, Anno 1551. Psalm 9. note.

OVER-TREAT, "ears hard to *overtreat*;" simply, *duras aures*; hard, to *treat* or manage; or prevail upon to listen.

Why lettes he not my wordes sinke in his eares
So hard to *ouertreate*? whither whirles he?
Surrey. Virgil. Aeneis, book iv.

OVER-TRIP, to *trip over*; to step lightly *over*.

Jes. In such a night
Did Thisbie fearfully o'er *trip* the dewe,
And saw the lyon's shadow ere himselfe
And ran dismayed away.
Shakspeare. Merchant of Venice, fol. 182.

OVER-TROUBLED, too *troubled*; *troubled* or vexed to an excess.

Why art thou *ouer-troubled* to see the great physician of the world take this course with sinful mankind.
Hall. Works, vol. iii. fol. 554. The Balm of Gilead.

OVER-TROWING, A. S. *ofer-truwian*, *nimum*, *confidere*, to *trust* too much.

Over-trowing, (*consciens*;) knowing within myself, *trowing* of my own knowledge.

For I am no thing *ouer-trowynge* to myself but not in this thing, I am iustified, for he that demeth me is the Lord.
Wiclif. 1 Corinthians, ch. iv.

OVER-TRUST, to *trust* or confide too much.

Thus it shall befall
Him who to worth in women *overtrusting*
Lets her will rule: restraint she will not brook,
And left to her self, if evil thence ensue,
Shee first his weak indulgence will excuse.
Milton. Paradise Lost, book ix. l. 1183.

OVER-TUMBLE, *tumbled*, fallen, thrown *over*.

How that he knew those hot diseases were
Of that contagious force, as he did see
That men were *over-tumbl'd* suddenly.
Daniel. On the Death of the Earl of Devonshire.

OVER-TURN, *v.* } To *turn over*; to *turn* or roll
OVER-TURNER. } *over*; consequentially, to de-
stroy, to demolish, to defeat.

Ne he unordeynede us of sum veyn speche feynynge, that us *overturnde* fro the sothfastnesse of the Gospel that of me is prechid.
Wiclif. Laodisensis.

She can arise that doeth mourne,
And whirle adoune, and *ouertourne*
Who sitteth highest.
Chaucer. The Romant of the Rose.

God made hir *ouertorne*.
Gower. Conf. Am. book iii. p. 79.

And on a heap
Chariot and charioteer lay *overturnd*,
And fierie foaming steeds.
Milton. Paradise Lost, book vi. l. 390.

But pain is perfet miserie, the worst
Of evils, and excessive, *overturnd*
All patience.
Id. Ib. l. 463.

Now those artificial words, by the misapplication and management of which these *overturnders* of all above them have done such mighty execution, are much too many for a present rehearsal.
South. Sermons, vol. vi. p. 54.

Sir W. Petty gave an account of a commodious land-carriage he had lately contrived,—far more secure than any coach; not being *overturable* by any hight on which the wheels can possibly move.
History of the Royal Society, vol. iv. p. 323.

OVER-VA'LUE, *v.* } To *value* too much; to set
OVER-VA'LUING, *n.* } too great a price upon; to
OVER-VALUA'TION. } prize, to estimate too highly.

By humility, I mean not the abjectness of a base mind; but a prudent care, not to *over-value* ourselves upon any account.
Grew. Cosmo Sacra, book ii. ch. vii. fol. 74.

But that which is guilty of the most general debate, is the *over-valuation* of wisdom.
Hall. Works, vol. iii. fol. 563. The Peace Maker, sec. 8.

OVER-TREAT.
—
OVER-VALUE.

OVER-
VALUE.OVER-
WATCH.

Now that which hath made the world conceiue the Roman magnanimity to be vnmatchable, is the partiall *overvaluing* of their manhood by their own historians.

Hakewill. Apologie, book iv. sec. 8. fol. 458.

OVER-VEIL, *v.* to *veil* or *cover over*; to shade or shadow *over*, to obscure.

BEDF. The day begins to breake, and night is fled,
Whose pitchy mantle *ouer-veyld* the earth.
Shakspeare. Henry VI. First Part, fol. 102.

Thou mak'st the night to *over-vail* the day.
Reliquiæ Wottonianæ, p. 386.

But the uncomely absence of an eye,
And larger wants, which ev'ry visage mourn'd,
(Where black did *over-vail* or ill supply,)
Was that which wonder into honour turn'd.

Duvenant. Gondibert, can. 6.

OVER-VOTE, to exceed in *votes* or number of *votes*; to excel, or surpass, or get the better of by a greater number of *votes*.

If these absent members be the greater number, why do they not come and *over-vote* the rest of the House in a peaceable, legall, usual, Parliamentary way, rather then challenge them into the field in a military, illegal, unusuall, bloody manner, unheard of in former Ages?

Prynne. Treachery and Disloyalty, &c. part i. p. 42.

OVER-WALK, *v.* to *walk over*; to pass *over* on foot; at the pace called a *walk*, *q. v.*

And ye saye shee is some where abroade in the wylde world, whych worlde is a place to wyde ye wote wel for a woman to *ouer-walke* well.

*Sir Thomas More. Workes, fol. 770. The Second Part of the Con-
futation of Tyndall.*

OVER-WANTON, *adj.* too *wanton*; too sportive or playful. loose or unconstrained.

But let the Faunes drawne from their groves beware,
Be I their judge, they doe at no time dare
Like men street-borne, and nere the hall reherse
Their youthfull tricks in *over-wanton* verse.

Ben Jonson. Horace. The Art of Poetrie.

OVER-WAR, *v.* to *war over*; or gain a superiority *over* in *war*.

Good Thomas Earle of Lancaster,
On whom the rest relye,
The chiefe and greatest of the peers,
Did, *ouer-warred*, fly
Into the woods.

Warner. Albion's England, book v. ch. xxv.

OVER-WARY, too *wary*, guarded, circumspect, or cautious.

They coupled Nicias and Alcibiades together in Sicily; the one being so *over-wary*, and the other so hasty, as all came to nought that they undertook.

Ralegh. History of the World, book v. ch. ii. sec. 3. fol. 588.

OVER-WASH, *v.* to *wash over*; to flow the waters *over*.

Pirats and robbers by sea are condemned in the Court of Admiraltie, and hanged on the shore at lowe-water marke, where they are left till three tides haue *ouerwashed* them.

Holinshed. The Description of England, vol. i. book ii. ch. xi. p. 313.

OVER-WASTED, too *wasted* or *worne out*, spent or consumed.

When in the tumult, with the sudden fright,
Whilst ev'ry one for safety sought about,
And none regarded to maintain the light,
Which being *over-wasted*, was gone out.

Drayton. The Barons' Wars, book iv.

OVER-WATCH, } To *watch over*; to *watch* or
OVER-WATCHING, *n.* } be wakeful or vigilant to excess;
till wearied or tired, to weary.

He had been guided to that place by his spaniel, where while the dog hunted in the river, he had withdrawn himself to pacify with sleep his *over watched* eyes.

Sidney. Arcadia, book ii. p. 256.

She surceas'd not day nor night
To storm me *over-watcht*, and wearied out,

Milton. Samson Agonistes, l. 406.

LEO. This way I came abroad, but then there was nothing,
One of the maids *o'rewatch'd* belike:

AG. It may be.

LEO. But methinks this is no fit place to sleep in.

Beaumont and Fletcher. The Queen of Corinth, act ii. sc. 1.

The Christian's recreations (are) like unto a sweet nap after an *over-watching*.

Hall. Works, vol. iii. fol. 628. The Christian, sec. 3

OVER-WAX, to *wax* or grow too much, or too large; to exceed.

In a too of his foot the nail groweth ouer to the flesshe, and in harme to the foot hugeliche *ouerwaxeth*.

R. Gloucester, p. 482. note.

For ghoure feith *ouerwerith* and the charite of ech of ghou to othir aboundith.

Wiclif. 2 Tessel, ch. i.

OVER-WEAR, *v.* to *wear* too much; to *wear* or waste away; (*sc.* till unfit for use;) to decay.

Of all the rest that most resembles man,
Was an *o'er worn* ill-favour'd Babian.

Drayton. The Moon-Calf.

And lest they might seeme to haue shaken off the obedience of the empire, they sware to the Senate and people of Rome, a stile long agoe *ouerworne*.

Savile. Tacitus, book i. ch. ix.

See how he lies at random, carelesly diffus'd,
With languisht head unpropt,
As one past hope, abandon'd,
And by himself given over;
In slavish habit, ill-fitted weeds
O're-worn and soiled.

Milton. Samson Agonistes, l. 124.

OVER-WEARY, too *weary*: *wearied* or tired, to excess.

Might not Palinurus fall asleep and drop into the sea having been *overwearied* with watching.

Dryden.

OVER-WEATHER, exposed to, worn or decayed by exposure to, the *weather*.

How like a prodigall doth she returne
With *ouer-wither'd* ribs and ragged sailes
Leane, rent, and begger'd by the strumpet winde.

Shakspeare. Merchant of Venice, fol. 170.

OVER-WEEN, } A. S. *ofer-wenian, nimis opi-*
OVER-WE'ENER, } *nari, presumere*; to *ween* or think
OVER-WE'ENINGLY. } too highly; to have an excess of
self-opinion or self-conceit; to take or assume too much
to opinion; to presume or be presumptuous, to arrogate
or be arrogant.

Als Anselme þe strif pes, of þe duke & þe kyng,
Com Roberd de Beleyse, þorgh his *ouerwenyng*.

R. Brunne, p. 97.

O, were the sweets of man's felicities
Often amongst not temper'd with some gall,
He would forget by his *o'er-weening* skill,
Just Heaven above doth censure good and ill!

Drayton. The Legend of Thomas Cromwell.

What insolent *over-weeners* of their owne workes are these papists, which proclaime the actions which proceed from themselves, worthy of no lesse than Heaven.

Hall. Works, vol. i. sec. 9. fol. 618. No Peace with Rome.

It was but arrogance, therefore, and not charity, to lay such ignorance to others in the sight of God till he himself had been infallible, like him whose peculiar words he *overweeningly* assumes.

Milton. Works, vol. i. fol. 433. An Answer to Eikon Basilike.

OVER-
WATCHOVER-
WEEN.

OVER-
WEEN.
—
OVER-
WING.

If any thing is indeed said against knowledge, it is against that only that is so adored by the world, and falsely called philosophy; and yet more significantly surnam'd by the apostle vain philosophy; and that too, with no other intent than to dash the *over-weening* pride of those that have it.

South. Sermons, vol. ix. p. 263.

OVER-WEIGH, *v.* } To *weigh over*; to *weigh* or
OVER-WEIGHT, *n.* } poise too much, or too hea-
vily; to preponderate.

When I pretend to please, she *ouerthwarts* me still,
When I would faynest part with hir, she *ouerwayes* my will.
Gascoigne. Flowers. The Diuorce of a Louer.

The horse, or other beast, *o'erweigh'd* with his own mass,
Lies wallowing in my fens, hid over head in grass.
Drayton. Poly-olbion, song 21.

One Raynerus, a wicked minister of a more wicked abbot, crossing the seas with his wife, so with his iniquity *overweighed* the ship, that in the midst of the stream it was not able to stir.

Baker. King Stephen, Anno 1154.

Note that silver in gold will be detected by weight, compared with the dimension; but lead in silver (lead being the *weightier* metal) will not be detected, if you take so much the more silver as will countervail the *over-weight* of the lead.

Bacon. Natural History, Cent. viii. sec. 798.

From sheep minute
On Cambria bred · a pound *o'erweighs* a fleece.
Dyer. The Fleece, book ii.

OVER-WET, *n.* excessive *wet*; dampness, moisture, or humidity.

Another ill accident is, *over-wet* at sowing time; which with us breedeth much dearth insomuch as the corne never cometh up.

Bacon. Natural History, Cent. vii. sec. 669.

OVER-WHELM, *v.* } To *whelm* or cover over;
OVER-WHELM, *n.* } to immerge, to submerge;
OVER-WHE'LMINGLY. } to sink, to drown; *sc.* deeply.

pe body he did *ouerwhelm*, his hede touched þe croupe.
R. Brunne, p. 190.

The see may neuer be so still,
That with a little wind at will
Ouerwhelme and tourne also,
As it were wood in wawes go.
Chaucer. The Romant of the Rose, p. 198.

A tremblyng cold of dread clene *ouerwhelmeth* my heart.
Surrey. Psalm 55.

What age is this, where honest men,
Plac'd at the helme,
A sea of some foule mouth or pen
Shall *ouerwhelme*?
Ben Jonson. Chorusses from Cataline, iv.

Men should not tolerate themselves one minute in any known sin, nor impertinently betray their souls to ruin for that which they call light and trivial; which is so indeed in respect of the acquiescent, but *overwhelmingly* ponderous in regard of the pernicious consequences.

Decay of Christian Piety.

Why from yon arch, that infinite of space
With infinite of lucid orbs replete,
Which set the living firmament on fire,
At the first glance, in such an *ouerwhelm*
Of wonderful, on man's astonish'd sight,
Rushes Omnipotence?

Young. The Complaint. Night 9.

OVER-WHELVE, A. S. *ahwylf-an*; *obruere*, to *overwhelm*.

Oft the see is clere and caulme with mouing floodes, and ofte the horrible wind Aquilon moueth boiling tempeste, and *ouerwhelueth* the see; *verso concitat æquore.*

Chaucer. Boecius, book ii. p. 416.

OVER-WING, *v.* to *wing* or spread the *wing*, to an excess; (in Milton;) so as to exceed; *sc.* the *wing* of the enemy.

VOL. XXV.

Agricola doubting to be *over-wing'd*, streaches out his front, though somewhat with the thinnest, insomuch that many advis'd to bring up the legions.

Milton. Works, vol. ii. fol. 29. *The History of England*, book ii.

OVER-WIPE, *v.* to *wipe*, rub, or smear over.

For such deeds dooeth not a Chrysten man that hath a good fayth & a good hope, but those synnes only whiche are with the pen-cell of daily prayer *ouer wyped*.

Sir Thomas More. Workes, fol. 797. *The Second Part of the Confutation of Tyndall.*

OVER-WISE, *adj.* } Too *wise* or knowing;
OVER-WI'SENESS. } knowing or cunning in their own conceit.

Dr. Fear it not, their *overwise* heads will think it but a trick.
Beaumont and Fletcher. Philaster, act iv. sc. 1.

Tell Wit, how much it wrangles
In tickle points of nicenesse;
Tell Wisedome, she entangles
Herself in *over-wisenesse*.

Sir Walter Raleigh. The Lye.

OVER-WITTED, *over-reached* in *wit*, cunning or craftiness.

Yet well they merit to be pitied,
By clients always *over-witted*.
Swift. The Answer to Palus.

OVER-WOODY, too *woody*; or having too much wood.

On to their morning's rural work they haste
Among sweet dewes and flours; where any row
Of fruit-trees *over-woodie* reach'd too farr
Their pamp'rd boughes, and needed hands to check
Fruitless imbraces.

Milton. Paradise Lost, book v. l. 213.

OVER-WORD. See OVER-SPEAK.

OVER-WORK, to *work* to excess; to weary with work or labour.

It is such a pleasure as can never cloy or *overwork* the mind.
South. Sermons.

OVER-WRESTED, too *wrested*, twisted, forced out of its course or direction.

Such to be pittied, and *ore-rested* seeming
He acts thy greatnesse in.
Shakspeare. Troylus and Cressida, fol. 82.

OVER-WRESTLE, *v.* to *wrestle* so as to gain the superiority; to struggle against successfully.

At last, when life recover'd had the raine,
And *over-wrestled* his strong enemy,
With foltring tong, and trembling everie vaine,
"Tell on," quoth she, "the woefull tragedy."
Spenser. Faerie Queene, book i. can. 7.

OVER-ZEALOUS, too *zealous*; *zealous*, anxious; desiring or pursuing ardently, to excess.

And therefore 'tis not of such mighty necessity to determine one way or t'other, as some *over-zealous* for or against the immateriality of the soul, have been forward to make the world believe.

Locke. Works, vol. i. fol. 251. *Of Human Understanding*, book iv. ch. iii. sec. 6.

OUGHT, *n.* also written AUGHT, *q. v.* A. S. *hwit*, a *whit* or *o whit*; one *whit*. *O* was formerly written for the article *a*, or for the numeral *one*. See Tooke; and Tyrrwhitt, *Gloss. in v.*

One thing, a thing, any thing.

DUCT.
—
OVIS.

O V I S.

OVIS, Gmel., Cuv., Desm.; *Sheep*, Penn. In *Zoology*, a genus of animals belonging to the family *Cavicornia*, order *Ruminantia*, class *Mammalia*.

Generic character. Incisive teeth eight in the lower jaw, forming a perfect arc, and touching each other by their sides, none in the upper; molar six on each side in each jaw; forehead more or less arched; horns large, angular, furrowed transversely, spirally twisted and turning outwards; no tear-pits or beard; legs, slender; tail variable in length, pendulous.

The animals forming this genus were included both by Linnæus and Illiger among the Goats, (*Capræ*), from which, however, they are distinguished by their arched forehead, by the variation in direction and greater extent of curve of the horns, and by not having any beard: beyond these there is no great distinction between the two genera, and Cuvier mentions that so closely are they allied, that a mule race between the two is capable of continuing their breed. Their fur is wool, but this varies in texture according to the difference of climate, as in those which live in warm climates it becomes hairy and very fine, and from such fleeces the Cachemere shawls, formerly supposed to be manufactured of goats' hair, are made. Sheep feed on vegetables and live in flocks of greater or less number, on high hills or on the tops of mountains. Corsica, Sardinia, and other of the Mediterranean Islands are the parts in which the species most anciently known exist, and whence it is probable our Domestic Sheep are derived: others also are found on the chain of the Atlas, in the Mountains of Siberia and Kamtschatka, and in America. Whilst in a state of Nature they are very strong and active, leap and run with great agility, and have not the silly character they appear to bear in a state of domestication. The people of the various parts of the World in which Sheep are found derive many of the necessities of life from them. Besides affording its flesh for food, and its fat for tallow, the wool in more civilized Countries is manufactured into cloth, whilst the ruder Northern Asiatics wrap themselves up in skins with the wool remaining on it. After the hide is dressed it is made into leather,

and by a different process into parchment. Even the intestines are brought into use, and of them is manufactured the article catgut, to which we are indebted for the melodious tones poured forth by a cremona.

O. Ammon, Gmel.; *Capra Ammon*, Lin.; *l'Argali*, Buff.; *Siberian Sheep*, Penn.; *Argali*, Shaw. About the size of a small Deer; the horns of the male are very large and strong, measuring two ells in length; they are triangular, flattened in front and wrinkled transversely from their roots to half their length, they spring close to the eyes, are curved outwards, backwards, and forwards, with their points directed rather upwards and outwards; horns of the female not so large, hatchet-shaped, nearly straight, and with but few wrinkles, and nearly resembling those of our Common Goat; ears widish, pointed, and very erect; neck slender; body large; limbs slender but strong; tail very short, and hoofs small. In Summer time the hair is very short and smooth like that of the Deer; the head is grey, the neck and body brownish mingled with ash-colour; on the back of the neck and behind each shoulder a dusky badge; along the back a streak of yellowish or rusty-colour, and a badge of the same on the rump. In the Winter the tip of the nose becomes white, the face ashy, the back ferruginous mingled with grey and inclining to yellow towards the rump; tail and belly white. At that time the coat becomes rough, waved, a little curling, and about an inch and a half in length, about the neck longer, and beneath the throat longest. *Argali* is the name given to this species of Sheep by the Kirgisian Tartars, probably from its frequenting mountainous districts, as in their Language *Arga* signifies a mountain summit, and *Guldsha* a Ram, of which two words it seems to be compounded; and from the same cause the Kuritians call it *Rikundonotsh* or the Upper Rein Deer, whilst the Russians designate it as the *Stepnoi-daran*, or Ram of the Desert, *Kammenoi*, or Rock Ram, and *Dikoi*, or Wild Ram. It is found in the vast Deserts which are called Steppes, and upon the mountainous chains of Asia, especially those which extend across the plains of Tartary towards the North-East. Gmelin says

OVIS. that the Southern part of Siberia is their original Country. They are lively and active animals, and very much resemble the Ibex in their manners, living in small flocks upon the very tops of the highest mountains, which are uncovered with wood and open to the Sun. The Ewes drop their Lambs about the middle of March, separate from the Rams, and are entirely occupied in bringing up their young, which when first dropped are covered with a soft, grey fleece, which late in the Summer is converted into hair. When the Lambs are two months old the horns begin to appear, are broad, and like the face of an axe; they grow to great size, so that in the old Rams they are occasionally found measuring two Russian yards in length along their spires, and weighing fifteen pounds a piece. Father Rubrugius, a traveller of 1253, noticed by Purchas, mentions he had seen some so large that he could scarcely lift a pair of them, and that the Tartars made great drinking cups of them. From Spring to Autumn they feed in the little valleys among the tops of the mountains, on young shoots and Alpine plants, and at that period they grow very fat; as Winter comes on they descend lower and feed on dry grass, perennial plants, and mosses or lichens, but in the Spring they are found very lean, and are purged by the early pulsatillæ and other sharp anemonoid plants of which Domestic Sheep are fond. At all times of the year they frequent the numerous districts in Siberia which abound with salt, similar to the salt-licks of America, and grub up the ground more readily to obtain it. The old Rams are very quarrelsome, attacking each other fiercely with their heads like the Common Sheep and often thrusting their antagonists over the precipices; in these contests the horns of the contending animals frequently become locked in each other, and they are both dashed to pieces. They are extremely fearful of Man, and when closely pursued run from side to side instead of straightforward, towards the rocky mountains, which they ascend with great ease, and tread the narrowest paths over the precipices with perfect safety.

To the Northern Asiatics this species of Sheep is extremely valuable; the flesh and fat are esteemed as the greatest delicacies; the skins in their Winter coat serve for warm raiment and coverlets, and the horns are converted into various necessary articles. The chase of these animals is both difficult and dangerous, for so soon as they perceive the approach of the hunter they ascend to the highest peaks, and a shot at them can only be procured by winding round the rocks and coming on them unperceived. Occasionally they are shot with cross-bows, which are placed in their haunts and discharged by the Sheep treading on a string connected with the trigger; or pit-falls are made in the tracts towards the salt-licks, and in these they are taken together with Stags, Roes, Elks, and other animals. But among the Mongolians and Tungusians the chase is managed on horseback and with dogs. The hunting season extends from the latter part of the Summer to December, and during that period the Kamtschatkans with their families take up their residence among the mountains.

O. Aries, Desm.; *le Mouflon*, Buff.; *Corsican Sheep*, Penn.; *Mouflon*. Height of the male to the top of the wither two feet and a half, and length from the nose to the root of the tail rather more than three feet and a half; forehead rather prominent; horns large, massive, and wrinkled at their base; in a Ram of four years old, mentioned by Pennant as having been exhibited at the Leverian Museum, they measured twenty-two inches in

length, the space between their tips near eleven inches, and the girth near the base the same; but he considers that their growth was stunted by hard usage, as they should have had, at that age, the volutes of a large horned Ram, and have measured fifteen inches round at the base; ears of moderate size, straight, pointed, and movable; tear-pits distinct; neck thickish; body bulky and rounded; legs strong, hoofs short and greyish-yellow; tail about three inches and a half long, bent down and uncovered with wool on its under surface; hair woolly, grey, fine, thick, curling, and mingled with short, coarse, silk-like hair; the head and legs are covered with the latter only unmingled with wool. The general colour of the fleece is tawny mixed with some black hairs on the head, neck, shoulders, back, sides of the body and outsides of the thighs, and a deeper coloured line traversing the length of the back; throat as far as the chest, the upper part of the fore legs, the margins of the flanks, and the tail blackish, as are also the upper part and sides of the face and the line which passes from each corner of the mouth below the eyes to join with its fellow; front of the face, below the eyes, the insides of the ears, the legs, belly, rump, and edges of the tail white; the insides of the limbs dingy-grey; on the middle of each flank a broad, very pale-tawny badge; tongue, interior of the mouth, and nostrils black. During Winter the fleece is thicker, has more black in it; the hairs on the under part of the neck become lengthened and form a kind of muff, and the dorsal line almost black, especially upon the shoulders. The female differs little except in either having the horns smaller or in not having any, and in the fleece being less thick. The young are of a lighter colour, their rump partakes of the general tawny appearance instead of being white, and the upper part of the tail is tawny-brown instead of blackish. They begin to put forth horns soon after birth, which before the expiration of the first year are four or six inches long. The *Mouflon* is the Sardinian *Melampom* of Strabo, which he speaks of as having hair instead of wool; the *Musmon* of Pliny, and probably the *Ophion* of the latter author, and the Wild Ram of Opius, with the horns of which the Wild Boar was often laid prostrate. They are found in the highest parts of mountainous districts amongst the most inaccessible peaks, but always in temperate or Southern latitudes; thus are they met with in Corsica, where the male is called *Mufro*, and the female *Mufra*, nor do they ever descend from their elevated stations but when driven down by the snow. They are also found in Sardinia, where they are named *Mufione*. They are met with in the Isle of Cyprus, and probably exist in others of the Grecian Archipelago, and are found in the Western part of European Turkey. They live in flocks, sometimes of as many as a hundred, under the government and protection of the older and stronger Sheep. Rutting time is in December or January, and at this period the flock separates into smaller parties consisting of one male and several Ewes, and should two of these smaller herds meet, a fierce battle takes place between the Rams, and the vanquished often yields his charge to the victor. The Lambs, generally two, are dropped in April or May, are then covered with hair and capable of walking; they are tended with the greatest care by their dam, who defends them with great courage when in danger. They seem to be fierce, dull, and untamable animals; and M. Fred. Cuvier, who had ample opportunities of seeing this species in the Menagerie of the

OVIS.

OVIS.

King's Garden at Paris, has made the following interesting observations with reference to the state of their intelligence. "Domestication," says he, "has had no influence over this state in such animals of this kind as I have had opportunity of noticing; it merely accustoms them to the presence of new objects; they are no longer affrighted at the sight of Man, but rather seem to acquire more confidence in their own powers as they become more familiarized with us; for instead of avoiding their keeper, they, and especially the males, attack him with fury. Chastisement, instead of correcting, only renders them more stubborn; and although some may be cowed, they are never tamed, and consider only as enemies and not as masters those by whom they have been corrected. On this point they make no difference with mankind; those who have never ill-treated them are in their eyes undistinguished from others, and kindness has no effect in doing away with the notion of enmity with which they view the human race. In a word, they show no attachment, affection, nor docility, and in these respects they differ remarkably from the most carnivorous animals, which are always subdued by kindness and mild treatment.

"If," adds the same Writer, "the Mouflon be the stock of our Sheep, we find in the weakness of intellect which characterises the former, the cause of the extreme stupidity of the latter." And that the Mouflon is very dull of comprehension, M. Cuvier gives a sufficient proof in the following narration. "Such of these animals as have lived in the Menagerie are very fond of bread, and when we approach their enclosure they come to take it. By having recourse to this proceeding the keeper is enabled to attach a collar about their necks so as to be able to enter their pens without danger. Well, although tormented to the utmost degree when thus confined, and although they see the collar which awaits them, never do they avoid the snare into which they are drawn by merely offering something to eat; they are always ready to take it without the least hesitation, without seeming to exhibit the least idea of connection between the food offered and their consequent bondage, without, in fact, appearing to be aware that the one is the sure sign of the other. The disposition to eat is alone excited in them at the sight of the bread. Doubtless we ought not from observing some individuals to draw conclusions regarding the whole species; but we may be assured beyond all doubt, that the Mouflon holds one of the lowest grades as to intellect among the Mammalia, and in this respect justifies the conjectures of Buffon as to the origin of the several races of our Sheep."

Their flesh is well flavoured, but always lean. By the Corsican peasants the horns are used for powder flasks, some of which are large enough to contain fifty or sixty ounces. The Sardinians wear the skins when dressed beneath their clothes, under the idea of being thereby preserved from malaria; and they also employ them as a kind of surtout which, falling below the knees, wraps close round the body, and defends them from thorns and briars in scrambling through thickets. As the skins are very thick and probably arrow-proof, Pennant imagines that "in all probability they are the very same kind of garment as the *Mastruca Sardorum*, (mentioned by Cicero in his Oration for M. Æmilius Scaurus,) which the Commentators on Cicero suppose to have been made of the skins of the *Mufro*; and the *Mastrucati Latrun-culi* the people who wore them. This is in a manner

confirmed, as they are still in use with the *latre* or banditti of the Island; who find the benefit of them in their impetuous sallies out of the brakes of the Country on the objects of their rapine."

VAR. A.—*O. Guineensis*, Gmel.; *le Béliet et Brebis des Indes*, Buffon; *Long-legged Sheep*. This is the largest and tallest of the Domestic Sheep; it has the forehead very strongly arched; the horns forming not complete circles on the sides of the head, and enclosing the ears, which are pendent; legs very long; body covered with hair, that on the neck forming a tolerably strong mane, which, having reached the shoulders, is there lost; the long hair on the under part of the neck sometimes forms a kind of thick beard; the colour varies, it is brown, black, white or pied. This variety most nearly approaches the Mouflon in the vaulted form of its forehead, and in its fur being hairy and not at all woolly. It was first naturalized in Europe by the Dutch, on the Texel and in East Friesland, where being mingled with the common race of the Country, it has produced the Flemish and Texel Sheep, the wool of which is fine and long.

VAR. B.—*O. Hispanicus*, Lin.; *Spanish Sheep* or *Merino*, Shaw. Is of moderate size, and of a plump form; head wide, forehead moderately prominent; horns very large and twisted in regular spires; the forehead always, and the cheeks and lower jaw generally covered with thick wool, similar to that on the hind legs, which is of very inferior quality, and therefore not being mixed with the *refinos* or fine, the *finos* or second best, nor with the *terceros* or inferior kind, is never exported from Spain. The wool is very fine, thick, and soft, full of a greasy exudation, massed together, and consisting of threads twisted like a corkscrew, elastic, shorter but finer than that of our common races, of a dingy-white within and brown on the surface, owing to the greasy substance with which it is imbued retaining the dirt, and the fleece weighs from three to five pounds; insides of the fore legs and thighs, lower part of the legs, and part of the face covered with short hair; tail of moderate length. This variety, which is generally spread over Spain, is believed to have been originally imported from Barbary. The Spanish shepherds keep them moving about continually through the greater part of the year, from which circumstance they are called *Trashumantes*. The Leonese flocks, of which the most esteemed are the *Cavagne* and *Negrete*, having wintered near Merida in Estremadura, on the left bank of the Guadiana, are put in motion about the middle of April in large flocks of two or three thousand, pass the Tagus at Almares, and proceed to Villa Casten, Trescasas, Alfara, Espinar, and other places, in which they are shorn. After that operation they return towards Leon, to be distributed in flocks of five hundred among the pastures of Cervera near Aquilar del Campo. The Sorian flocks, after feeding through the Winter on the confines of Estremadura, Andalusia, and New Castile, proceed, about the latter end of April, across the Tagus at Talavera de la Reyna and at Puente del Arzobispo, to Madrid, whence they return to Soria, and part are herded in the neighbouring mountains, whilst the rest are driven across the Ebro to be grazed in Navarre and the Pyrenees. Among those flocks which are stationary, the *Estantes*, such as are fed on the ridges of the passes of the Guadarama and Somo Sierra, and in the environs of Segovia, are most highly valued.

VAR. C.—*O. Anglicus*, Gmel.; *English Sheep*, Pen.

OVIS.

OVIS. Has the wool fine and very long; the tail long and pendulous; and in the male the scrotum very large. They are classed in two series, one of which has no horns, and is considered by Linnæus as the true English stock, whilst the other is furnished with horns. The number of sub-varieties presented by these vary considerably, one author mentioning fourteen, another sixteen, and a third so many as thirty-seven distinct breeds; all of which are said to be easily distinguishable from each other by their peculiar characters.

I. Of the Hornless English Sheep the following are the principal.

a. Dishley, or New Leicester. Heads clean, straight, and broad; eyes fine and lively; bodies round or barrel-shaped; bones fine and small; pelt thin. The Dishley breed, so denominated from the residence of Mr. Bakewell, the first selector of them, is principally found in Leicestershire and the neighbouring Counties, but is much spread over the Kingdom. It is pretty hardy, and will fatten easily where other sheep will be scarcely able to find subsistence; its wool is long and fine, and the fleece on an average will weigh eight pounds, at two years old.

b. Lincolnshire. Faces white; carcasses long, thin, and weak; legs white, thick, and rough; bones large. These Sheep are delicate and require fine pasturage; their flesh is coarse; but the wool fine, and from ten to eighteen inches in length, will weigh about eleven pounds a fleece at three years. From this stock two varieties are noticed, the *Cotswold*, or *Improved Gloucester*, which nearly resemble the original, except that the wool is shorter, and the flesh finer grained. That these were formerly considered the most valuable there can be no doubt, from a present of Cotswold Ewes and Rams which Edward IV. made to the King of Aragon. The other is the *Teeswater*, chiefly bred in Yorkshire on the banks of the Tees, which is similarly circumstanced as to flesh and wool with the last mentioned, but has the carcass heavier and firmer, the back and sides wider, and the legs longer; the bones also being less large. The females are remarkably prolific, bringing two and sometimes three Lambs at a birth.

c. Devonshire Nots, or Dartmoor. Have white faces and legs, thick necks, narrow backs, and large bones. They are met with principally on Dartmoor, and have long wool, which averages nine pounds a fleece at two years and a half.

d. Herefordshire, or Ryelands, are of small size and well shaped, with white faces and legs; their flesh fine grained; the wool very fine and short, growing close up to the eyes, and weighing not more than two pounds a fleece at four years and a half. This is a very profitable breed, as it does well on the scantiest pasture; but it is very delicate, and requires shelter in the Winter.

e. Southdown. Faces and legs grey; neck long and small; low before, shoulder high; light in the fore quarter; back-bone rather high, sides broad, loins tolerably good; thigh full. These Sheep are principally fed on the chalk downs of Sussex; they are quick-feeders, and of hardy constitution; their flesh is fine grained and of excellent flavour; the wool very fine and short, about two or three inches in length, and weighing about two pounds and a half a fleece at two years old. The *Cannock Heath Sheep*, which belong to Staffordshire, very closely resemble the South Down.

f. Romney Marsh. Face and legs white, the latter rather long; body round or barrel-shaped; bones rather

large. Is met with principally in the rich marsh lands of Kent and Sussex; its flesh excellent; the wool fine, long, and white, weighing about eight pounds each fleece at two years and a half.

g. Hardwick. Faces and legs speckled with black and white; the legs small, fine, and clean. Is found on the mountainous tract at the heads of the Eske and Uddon in Cumberland; it is very hardy, and requires but little hay in the most severe Winters; the wool is short and matted; each fleece weighs about four pounds at four years and a half.

h. Cheviot. Faces and legs chiefly white; jaws of good length; eyes lively and prominent; body long, but deficient in depth at the breast, which is narrow, as is also the chine; pelts thin; bones fine, clean, and small. From the Cheviot Hills these Sheep have been introduced into the most Northern districts of Scotland; they are very hardy, well suited to exposed situations, and fatten easily. Their wool, which is partly long and partly coarse, averages about three pounds a fleece at four years and a half.

i. Dunfaced, or Mugg. Face dun or tawny; this Sheep is of small size, and seldom weighs more than eight or ten pounds a quarter; the wool is variously streaked with red, brown, or tawny, which is short and fine close to the skin, intermingled with long hairs, indicative of its habitation in a Northern climate; the fleece weighs about a pound and a half at four years and a half. It is said to have been imported into Scotland at a very early period from Denmark or Norway, and it is found in small flocks to the North of the Forth and Clyde. Dr. Fleming considers this to be the parent stock of the numerous and most valued Scottish breeds, and includes amongst them the

j. Shetland. It seems, however, that of the Sheep fed in these Islands there are two breeds, one which has a fine cottony fleece, and is thought to be the indigenous breed, but now much diminished; and the other with coarse wool above and fine beneath, intermingled with hairs, which corresponds with Dr. Fleming's notion. They are very hardy, but so wild as to be incapable of confinement; the fleece weighs from one to three pounds. An interesting account of the growth of the wool of these Sheep has been given by Mr. Johnston in Sir John Sinclair's *Work On the different Breeds of Sheep*; he says: "They have three different successions of wool yearly, two of which resemble long hair more than wool, and are termed by the common people *fors* and *scudda*. When the wool begins to loosen in the roots, which generally happens about the month of February, the hairs, or *scudda*, spring up; and when the wool is carefully plucked off,* the tough hairs continue fast until the new wool grows up about a quarter of an inch in length, when they gradually wear off; and when the new fleece has acquired about two months' growth, the rough hairs, termed *fors*, spring up and keep root, until the proper season for pulling it arrives, when it is plucked off along with the wool, and separated from it at dressing by an operation called *forsing*. The *scudda* remains upon the skin of the animal, as if it were a thick coat, a fence against the inclemency of the seasons, which provident Nature has furnished for supplying the want of the fleece. The wool is of various colours. The silver-grey is thought to be the finest; but the black, the white, the

* The fleece is never shorn, but when about to be shed in the Summer is pulled from the body by hand, a process which is technically called *lowing*. Dr. Fleming.

OVIS.

mourat, or brown, is very little inferior; though the pure white is certainly the most valuable for all the finer purposes in which combing wool can be used."

II. Of the Horned English Sheep the following are mentioned.

k. Exmoor. Faces and legs white; head, neck, and bones very delicate; but their carcass is narrow and flat sided. They are found in the Northern part of Devonshire, and have fine and long wool, about four pounds to the fleece.

l. Dorsetshire. Faces and legs white, the latter long and slender; body long and thin. They are mostly confined to Dorsetshire, and are remarkable for producing at any time of year; on this account they are valued, as by management the markets can be supplied with Lamb at Christmas or even earlier. Their wool is fine and short, and averages about three pounds and a half at three years and a half.

m. Norfolk. In this Sheep the horns are large and spiral; face black; neck long; body long, thin, and weak; legs long, black, or grey. The breed belongs to Norfolk and Suffolk, but is fast giving way to the South Downs, as they do not appear to have any peculiarly good property beyond being good travellers. The flesh is well flavoured and fine grained, and the wool short and fine, weighs about two pounds a fleece at three years and a half.

n. Heath, Linton, Short, Forest, or Black-faced. Horns like the Norfolk; faces and legs black; eyes wild and fierce; body short and firm. Are found in the North-Western parts of Yorkshire, the North-Western Counties of England, and thence up to the Western Highlands of Scotland. They are good feeders; are hardy and well adapted for exposed situations; their flesh is excellent; the wool long, open, coarse, and shaggy, weighing about three pounds and a half a fleece at four years and a half.

o. Hebridean. Is the smallest of the Sheep kind, but frequently has four or six horns, which are usually straight and short; the face and legs are white; the tail very short. The wool is of various colours, bluish-grey, brown, or deep russet, and sometimes all these colours are found in the same fleece. If the pasture be good, the fleece is as fine as that of the Shetland Sheep, but if the contrary, the wool becomes coarse and stunted, and the animal puny. The quantity of wool very rarely exceeds a pound, and often not half so much; and the average value of a fleece is from eightpence to a shilling. A fat sheep of this kind does not weigh more than twenty pounds, but more commonly does not exceed fifteen or sixteen.

Such are the principal breeds met with in England and Scotland, and considered as specially belonging to these Countries, but breeders are continually producing new kinds, not only by the crossing of these with each other, but also by the introduction of foreign species, for the purpose of improving some particular point in the race.

The male Sheep is commonly called a *Ram*, and the female a *Ewe*; but those of the former sex, which are only a year old, are called *Wedder*, or *Weatherhogs*, and the females of two years *Theaves*, whilst both are indiscriminately called *Lambs* for some time after having been dropped. The Ewe goes with Lamb about a hundred and forty or fifty days, and produces one, sometimes two, and occasionally three at each lambing. In the first year, the young animal has eight sharp cutting teeth

in the lower jaw; in the second, the middle two are shed, and succeeded by a pair of teeth broader and more obtuse, which are permanent; in the following three years the other milk teeth are shed, and replaced by permanent teeth, which are broader and blunter; in the eighth year the middle two drop out, and the others in pairs successively during the following three years.

The shearing of Sheep is performed generally in June or July, the earlier the better, as the new wool is then considered to *get ahead*, and to be thereby prepared for a better Winter covering; and the sooner the Sheep is sheared the less is the chance of its being teased by the fly. Prior to clipping, it is necessary that the Sheep should be well washed, so as to free the fleece from dust and other filth which it has contracted, and which sticks firmly to it from the unctuous nature of the exudation, freely perspired from the skin. This is commonly performed in a pond or stream, by men standing in the water; but as this mode often produces serious illness, Mr. Young has proposed that a portion of water, about six or seven feet wide, should be railed off, with two sloping approaches, by one of which the Sheep might enter, and by the other leave the water, but having the middle sufficiently deep to compel the animals to swim part of the distance, and the bottom to be paved; at the part in which the water is sufficiently deep to flow over the Sheep's back, a cask is to be sunk, so as to form a kind of caisson, in which the man stands dry, and easily washes the Sheep, after which it is made to swim through the deep water, which rinses the fleece, and to pass out at the other landing place into a clean pen or a dry rick-yard, in which they are to be kept for a few days till completely dry. In Sweden the washing is performed by first putting the Sheep in shallow tubs, where they are washed with staling and warm water, and afterwards washed again with pure water. In Silesia the Sheep are compelled to jump from a high bridge into a stream, which is all the washing considered necessary. In Saxony more attention is paid to this process; on the first day the Sheep are swum across a running stream; on the second day, in the morning, they are swum through again, and at the same time dipped, in order to soak the fleece completely, and then stroaked or pressed down with the hand, beginning at the head, and thence proceeding to the extremities; in the afternoon they are led across the stream again, and the business is concluded. Two days are allowed for drying, and on the third they are shorn. Dr. Parry, however, who has paid much attention to the breeding and management of Sheep, objects to washing the fleece before shearing, as, if the weather turn out wet or cold, the Sheep are much inconvenienced by it, and therefore recommends that the fleeces should be subsequently washed, as is the custom in Spain. Experiments have also been made which tend to show that long-woolled Sheep may be shorn twice, and even thrice in the year without injury to them, but this plan has not been generally adopted.

Sheep are subject to various and serious maladies, but they would require too much space to be treated of here.

VAR. D.—*O. Gallicus*, Buff.; *French Sheep*. Of moderate size; the head narrow, nose long, forehead much arched; horns of moderate length, and curved spirally, but often are wanting; the hair covering the whole head, part of the neck, and legs is short and rough; the wool full and abundant, not twisted into curls, but divided into large hanging flocks; the colour

OVIS.

OVIS. generally white, but in the Southern Provinces black or dark brown is the prevailing colour. The French Agriculturists, from intermingling these with the Spanish and Flemish varieties, have produced several distinct breeds, of which the principal are the Flandrine, the Solognote, the Berichonne, Roussillonnoise, Ardennoise, and Norman, but their peculiarities are little interesting except to the grazier.

VAR. E.—*O. Polyceratus*, Lin.; *Many-horned Sheep*. Pen. Of small size; horns varying in number, generally three, sometimes four or five; they are not curved spirally, but only bent outwards, backwards, or upwards; the hair is of three different kinds, wool is only seen externally, which is very long and thick, a kind of down close to the skin, and an intermediate kind between the two. The head and the tail, which is short, and the lower parts of the legs, covered with short, harsh hair; general colour reddish-brown, with the throat and front of the chest blackish; tail black. This variety is found especially in Iceland and in the Feroe Islands, also in Norway and Gothland: it is also common in Siberia, among the Tartarian flocks about the river Jenesei. Desmarest thinks that the Scottish Sheep, known as the *Schlla Sheep*, belongs to this variety.

VAR. F.—*O. Strepsiceros*, Ray; *Cretan Sheep*, Pen. About the size of our Common Sheep; has very long horns, marked with a longitudinal ridge, those of the male are quite upright, nearly parallel to each other, and twisted like a corkscrew, the first turn being very wide, and resting close to the head, the others more lengthened, those of the female nearly straight, and as it were screwed round upon their axes; the wool is very plentiful, wavy, and thick, and fit for common fur; the tail very bushy. It is very common in Crete, in Wallachia, and Hungary. By the Austrians it is called *Zackl*, and it is almost the only kind used by the butchers.

VAR. G.—*O. Dolichura*, Pall.; *Long-tailed Sheep*. Horns spiral, and on the sides of the head; body covered with thick wool; tail very long, so as to trail on the ground. It is found in Southern Russia, in the neighbourhood of Astracan, and in Bucharina.

VAR. H.—*O. Laticaudata*, Ray; *Broad-tailed Sheep*, Pen. About the size of our Common Sheep; the forehead much arched, ears of moderate length, pendent and little movable; horns strong, inclined outwards and backwards, downwards and forwards; sometimes there are four, at other times none; tail either pointed, square, or rounded, and varying considerably in length and thickness; in some hardly existing at all, in others trailing on the ground, in some wider than the buttocks, and in others not bigger than one's fist. The Broad-tailed and Long-tailed Sheep were both known to the Ancients. Aristotle notices the former, and mentions the tails were a cubit wide; Pliny speaks of the latter, and says they were a cubit in length. The following are considered as belonging to this variety; viz.

a. *O. Steatopygus*, Pall.; *Fat-rumped Sheep*, Pen. The vertebræ of the tail in this are so short, that they seem to have no tail; the rump appears like two hemispheres, quite smooth and bare, and consisting of fat; nose arched; ears pendulous; horns curled like the Common Sheep; wool coarse, long, and hanging in flocks, generally white, sometimes spotted black or reddish; head and ears black. These Sheep grow very large, and weigh even two hundred pounds, forty of which belong to the rump. Their bleating is short and deep, resembling the lowing of a Calf. They abound

in the Deserts of Tartary from the Volga to the Irtis and the Altaic chain; and Fred. Cuvier says, also in Persia and China. They are more or less fat according to the pasture, but most so where the vegetation is impregnated with salt springs and lakes. They are very prolific, bringing two, and sometimes three at a time. It is probably the same variety as Geoffroy's *O. Ecaudatus*.

β. *O. Macrocercus*, Schreber; *Large-tailed Sheep*. Forehead flat; wool but thin; tail very long, and in its upper two-thirds, from its fatness, wider than the body. Originally from Upper Egypt.

γ. *O. Bucharicus*, Pall.; *Astracan Sheep*. This has not always horns; its tail is only slightly thickened at the base to about the size of one's fist; the wool is tolerably long and thick, and beneath it are found black and white hairs; the coat of the Lambs is valuable, it consists of black and white hairs in curling locks and lying closely; together they assume a delicate grey colour. From this animal we have the Astracan furs of the furriers.

δ. *O. Thibetanus*, Fischer; *Thibet Sheep*. In this species, which has also a broad tail, the wool is very delicate and silky. The Cachemirians engross this article, and by their factors buy up all the wool in Thibet, which is forwarded to their own Country to be converted into shawls. This manufacture is of considerable value; and Bernier mentions, that in his time shawls made of this wool, purposely for the great Omrahs or Lords, cost a hundred and fifty rupees, whilst those of the common wool of the Country did not exceed fifty. These Cachemere shawls were long considered to be made of Goats' hair, till Mr. Bogle, who was sent on a mission to the Tayshoo Lama of Thibet by our Indian Government, showed the contrary in a paper he has given in the LXVIIth volume of the *Philosophical Transactions*.

ε. *O. Capensis*, Erxleben; *Cape Sheep*, Pen. Forehead very prominent; horns very small; ears long and pendulous; tail very large and long, so as to trail on the ground, to prevent which the shepherds place it on a small carriage with wheels, which the Sheep draws along as he moves. Some of these tails weigh fifty pounds, are of a substance between marrow and fat, are esteemed great delicacies, and eaten with the lean of the mutton. They are found at the Cape of Good Hope.

O. Montana, Desm.; *le Béliet Sauvage d'Amérique*, Geoffr.; *Rocky Mountain Sheep*, Richardson. Much larger than the largest variety of the Domestic Sheep, and bigger than the Argali. In the male the horns are very large and occupy nearly the whole space between the ears, but do not touch at their base; they curve first back, then downwards, forwards, and upwards, until they form a complete turn, receding, as they curl, in a spiral manner from the side of the head; towards the point they turn up and diminish rapidly in size; from the base upwards through a considerable part of their length they are three-sided, the fore or upper edge being thickened and projecting where it unites with the other two sides, and transversely furrowed, most deeply at the root, but diminishing towards the tip; the furrows are seen also on the other two sides, but less distinct; the tips of the horns rounded. In the female the horns are much smaller, nearly erect, and have but a slight curve, with an inclination backwards and outwards; ears of moderate length; tail very short. Like the Rein Deer its hair, at the first growth in Autumn, is short, fine, and flexible; but as Winter draws on it becomes coarser, dry,

OVIS

OVIS.
OUNDE.

and brittle, though still feeling soft; and at this time is so close at the roots that it is necessarily erect. The hair on the legs is shorter. The head, rump, and hind part of the belly are white; the other parts of the body pale umber, which becomes deeper and more shining on the front of the legs; the tail brown, and sending up a narrow stripe to the back, which separates the two sides of the rump. As the colour resides in the ends of the hair, and these become rubbed off during Winter, the animal becomes paler, and in Spring the old Rams become nearly white. This animal inhabits the lofty chain of the Rocky Mountains, and also the high cragged ridges between these and the Pacific; but they do not seem to extend further Eastward than the declivity of the Rocky Mountains, nor are they found in any of the hilly tracts nearer to Hudson's Bay. The young Rams and the females herd together, and the old Rams by themselves, forming flocks of from three to thirty, except in December, which is rutting time. In June the female lambs, and retires to the most inaccessible heights. When not disturbed, they exhibit the simple character of the Domestic Sheep, but after having been often fired at they are very wild, and give alarm by a hissing noise, immediately upon which they scamper up the rocks with so great speed as to baffle pursuit. They feed on grassy knolls in the neighbourhood of craggy rocks to which they fly when attacked by Wolves or Dogs; and they are accustomed to visit daily certain caves in the mountains for the purpose of licking the salt with which they are encrusted. Many persons think it is the same species as the Argali; and Cuvier thinks it may have crossed Behring's Straits; but Dr. Richardson, although he allows it resembles that animal in its manners, the form of its body, and the nature and colour

of its hair, thinks that there is a constant difference in the form of the curvature of its horns, besides it being a much larger animal.

O. Tragelaphus, Desm.; *le Mouflon d'Afrique*, Cuv.; *Bearded Sheep*, Pen. About the size of the Common Sheep; forehead but little arched; horns twenty-five inches long and eleven in circumference at the thickest part, broadest on the fore part, close at the base, curved, diverging, and bending outwards; the under part of the neck and shoulders covered with coarse hairs fourteen inches in length, and upon each knee a kind of tuft consisting of long lank hairs; tail very short; beneath the hair on all parts a short true wool; general colour pale ferruginous, under parts and insides of the limbs white. It is a native of the Deserts of Barbary, and extends even to Egypt, where it was found by Geoffroy. The Bearded Sheep was brought to England so early as 1561, and was described by Dr. Caius; he says, that in confinement it appeared very gentle, and was full of play and frolicsome like a Goat, and he named it *Herco Cervus*. Pennant considers it to be the same as the *Tragelaphus* of Pliny, not only from its general similarity to his description, but because it has been discovered by Professor Guildenstaedt on the mountains of Caucasus; from the foot of which arises the river Phasis mentioned by Pliny as having been the river on the banks of which the *Tragelaphus* formerly lived.

OURANOGRAPHY, Gr. οὐρανός, the heaven, and γράφειν, to write or describe.

A description or delineation of the face of the heavens.

The ingenious Mr. Hooke, in his animadversions on Hevelius's *ouranography*, had omitted the chief objection Hevelius makes against these kind of sights.

History of the Royal Society, ch. iv. p. 272.

OURAPTERYX. In Zoology, a genus of Lepidopterous insects.

Generic character. Antennæ simple in both sexes, stoutest and obscurely pubescent within in the males; palpi very short, slightly ascending, squamous, triarticulate; the basal joint very pilose, rather stouter than the second, and curved; the second about half the length of the preceding, elongate-ovate, third minute, subglobose; maxillæ nearly as long as the antennæ; head small; forehead broad, densely pilose; thorax rather stout, velvety, rather woolly beneath; wings partially expanded during repose; anterior entire subfalcate, posterior with the middle of the hinder margin truncate-caudate; abdomen slender, stoutest in the females; legs moderate; posterior tibiæ somewhat compressed, armed with short spurs. Larva with ten legs very long, cylindrical, attenuated in front, the hinder segments somewhat knobbed; pupa very elongate, slender, enclosed in a slight web amongst leaves.

VOL. XXV.

Type of the genus *Geom. Sambucaria*, Linnæus; Leach, *Zool. Miscell.* vol. i. pl. xxxv. fig. 2. At least four species are known; of which the type is found in Britain.

OURISIA, in Botany, a genus of the class *Didynamia*, order *Angiospermia*. Generic character: calyx unequally five-lobed, corolla bell-shaped, border five-lobed, lobes rather unequal; stigma capitate; capsule two-celled, two-valved, many-seeded.

Two species, natives of South America.

OUSEL, A. S. *osle*; which Skinner thinks may be from the Fr. *oiseau*; It. *augello*, *uccello*, *avis*, a bird; q. d. *avicellus*, a little bird. In Pliny there is no word to distinguish the *Ousle* from the Blackbird. *Merula, turdi, sturni*.

The trivial name of the *Rallus Aquaticus* (Water-Rail) of Linnæus.

The merry larke hir mattins sings aloft;

The thrush replies; the mavis discant playes;

The *ouzell* shrills; the ruddock warbles soft.

The *woosell* cocke, so blacke of hew,

With orange-tawny bill.

The throstle with his note so true,

The wren and little quill.

Shakspeare. Midsummer Night's Dream, fol. 152.

Ousles, throstles, blackbirds, and stares, after the same manner depart aside from us, but goe not farre.

Holland. Plinie, book x. ch. xxiv.

OUST, v. } To put out, to turn out, expel, eject;
OU'STER. } to out, q. v.

It is stated that Smith the lessee entered, and that the defendant, William Stiles, who is called the casual ejector, *ousted* him; for which *ouster* he brings the action.

Blackstone. Commentaries, book iii. ch. xi.

OUSTER, in Law, is a Civil injury, whereby the rightful owner is amoved and put out of the possession of his lands or hereditaments. There are usually said to be five modes of Ousting a person from his freehold property. 1. Abatement, where a person dies seized of an estate of inheritance, and before his heir or devisee enters, a stranger enters without right and gets possession of the freehold. 2. Intrusion; which is the entry of a stranger after a particular estate of freehold, a life-estate for instance, is determined, whereby the person next entitled is prevented from having possession of his remainder or reversion. 3. Disseisin; which is the wrongful putting out of him that is seized of the freehold. The former two species of Ouster were by a wrongful entry where the possession was vacant, but this is an attack upon him who is in actual possession, and turning him out of it. 4. Discontinuance; which is where tenant in tail makes a feoffment in fee simple, in fee tail, or for the life of a third person; all which are greater estates than he is legally capable of making by that description of conveyance: in this case, if the feoffee continue to hold the estate after the death of the tenant in tail, the right of the issue in tail is not absolutely defeated thereby, but is said to be *discontinued*. 5. Deforcement; which is where the entry of the present occupier was originally lawful, but his detainer has now become unlawful: as, if one leases land to another for a term of seven years, and at the expiration of that time such tenant wrongfully holds over, he is then called a *deforciant*. These distinctions were formerly of more consequence than they are at present; because, formerly, before the Action of Ejectment in its present shape was invented, there was a different remedy for every different

OURAP-
TERYX.

OUSTER.

OUSTER. Ouster; but now though the old remedies are not yet abolished, the only remedy which is ever had recourse to in practice, except in very peculiar cases, is the Action of Ejectment.

OUT.

The Action of Ejectment is properly and originally the remedy for a tenant for years who has been *Ousted* or ejected from his term; but by various fictions, adopted for the purpose of escaping from the difficulties and technicalities of the ancient Law, it has been made applicable as a remedy for those also who have been *Ousted* from their freehold. Upon the face of the pleadings it appears that the real claimant of the land has made a lease thereof to John Doe, the nominal Plaintiff in the Action, for twenty or any other number of years; that John Doe entered on the land by virtue of that lease, and took possession of his term; and that Richard Roe, the nominal Defendant, wrongfully entered during the term, and Ousted John Doe. A copy of these pleadings are given to the tenant in actual possession; and he is at the same time informed, that unless he applies to the Court, and obtains permission to make himself Defendant instead of Richard Roe, judgment will be given against Richard Roe; and by virtue of that judgment, that John Doe, or rather the real claimant, will be put into legal possession of the premises. If the person who is in actual possession wishes to defend, he applies to the Court for permission so to do, and this permission is always granted on condition that he will not take any objection to the fictitious part of the proceedings, but will rely on his title alone. This is in appearance a clumsy contrivance, but without the aid of the Legislature it was perhaps the best that the Courts of Law had the power of adopting. The objects of justice are effectually obtained by it, and it is not productive of more expense to the parties than any other form of Action; but the merits of the invention can only be justly appreciated by those who are acquainted with the huge mass of difficult Law which it has superseded. With a little assistance from the Legislature it may easily be divested of its absurd fictions; and it is expected that this will soon be done, as the Commissioners for inquiring into the state of the Law have the subject under their consideration.

OUT,

OUT, v.

OU'TER,

OU'TERLY,

OU'TERMOST,

OU'TEST,

OU'TFORTH,

OU'TNESS.

Goth. *ut, uta*; A. S. *ut, utan*;

D. *wt, uyl*; Ger. *aus, aussen*; Sw.

ut, utan. Tooke says, there are some

etymological reasons which make it

not improbable that *out* is derived

from a word originally meaning *skin*.

It is opposed to *in*. And in Goth.

and A. S. *inna* means *uterus*,

viscera, venter, or the whole of the interior part of the body.

Out is used after verbs, when it is meant to express position correlative to the exterior or surface, or motion from within, motion beyond, further than, departure or separation; and frequently with a subaudition of the verb expressing the position of rest, or the motion; or of the noun correlating to the *outness*, the externality or extremity; the departure or separation.

All the consequential and metaphorical usages are deducible from these prior applications.

To *out, v.* to move or put out; to eject, to expel.

Out, prefixed in Composition, is used with the same force that it would have if it followed the verb, as to *outhar*, to *outbud*, to *bar out*, to *bud out* or forth; *sc.* from that which holds or contains; exterior to, beyond that which holds or contains; and thus is equivalent to

exceeding, more than, in a greater measure or degree than, &c. **OUT.**

When by the subtilty of Agrippa he was *out-witted* and *outed* of all, and also banished, Josephus himself says that even the Jews ascribed all this to a divine vengeance upon him for the barbarous and unjust murder of John the Baptist.

South. Sermons, vol. xi. p. 51.

From what we have shewn it is a manifest consequence, that the ideas of space, *outness*, and things placed at a distance, are not, strictly speaking, the object of sight; they are not otherwise perceived by the eye than by the ear.

Berkeley. Works, vol. i. p. 257. An Essay towards a new Theory of Vision.

The word *outness*, which has been of late revived by some of Kant's admirers in this Country, was long agoe used by Berkeley in his Principles of Human Knowledge, (sec. 43.) and, at a still earlier period of his life, in his Essay towards a new Theory of Vision, sect. 46.

Stewart. Philosophical Essays, ess. 2. ch. ii. p. 95.

OUTACT, *v.* to *act*, or do, or perform, beyond, more than, (as an actor who *outdoes* his part,) better than; to exceed in *acting* or performing.

And see themselves *out-acted* in their show,
By sucking sprouts that out of them did grow.

Brome. To Dr. S. on his Pious and Learned Book.

With that he fetch'd a groan
And fell again into a swoon,
Shut both his eyes, and stopt his breath,
And to the life *out-acted* death.

Butler. Hudibras, part ii. can. 3.

It is incredible to consider the motion of some minds upon the sudden surprize of danger; and how much in such cases some will even *out-act* themselves.

South. Sermons, vol. iii. p. 462.

OUTBALANCE, *v.* to pass the *balance*; to exceed the equipoise, to poise or weigh more than.

Refuse me now his arms, whose fiery steeds
Were promis'd to the spy for his nocturnal deeds,
And let dull Ajax bear away my right,
When all his days *out-balance* this one night.

Dryden. Ovid. Metamorphoses, book xiii.

OUTBAR, *v.* to *bar out*; to keep or shut out by bars or fortifications.

Whiche to *outbarre*, with painefull poynings
From sea to sea he heapt a mighty mound,
Which from Alcluid to Panwelt did that border bound.

Spenser. Faerie Queene, book ii. can. 10.

OUTBEG, *v.* to *beg* more than; to exceed in *begging*, craving, petitioning.

To the black temple she her sorrow bears;
Where she *outbeg'd* the tardy begging thief.

Davenant. Gondibert, book ii. can. 5.

OUTBELLOW, *v.* } To *bellow* more than, louder
OUTBLEAT, *v.* } than; to exceed in *bellowing*
or making a loud noise.

To *bleat* more than; to exceed in *bleating*.

Thus Saul will lie-out his sacrilege, until the very beasts *out-bleat* and *out-bellow* him.

Hall. Works, vol. i. fol. 465. The Great Imposter.

OUTBID, *v.* to pass or exceed in *bidding*; to *bid* or offer more than.

But if in thy heart since there be, or shall
New love created be by other men,
Which have their stocks entire, and can in teares,
In sighs, in oaths, in letters *out-bid* me.
This new love may beget new fears,
For this love was not vow'd by thee.

Donne. Lover's Infiniteness.

OUTBLAZING, *D. uit-blæsen.*

Blazing more than; exceeding in *blazing* or emitting flame.

If in his love so terrible, what then
His wrath inflam'd? his tenderness on fire?
Like soft, smooth oil, *outblazing* other fires?

Young. The Complaint. Night 4.

OUTBLUSH, to *blush* more than; to exceed in redness or rosiness; in colouring, in blooming with redness or rosiness.

Perhaps not the chaste morne herselfe disclose
Againe, t'*outblush* th' æmulous rose.

Habington. Castara, part ii. To Sir E. P. Knight.

Could you behold me on this mossy bed,
From my pale cheek the lively crimson fled,
Which in my softer hours you oft have sworn,
With rosy beauty far *outblush'd* the morn.

Gay. Elegies. Panthea.

OUTBOUND, *bound out* or *outwards*; *bound* or obliged, or under *bond* or obligation to perform a voyage *out* or *outwards*; or it may be *outfitted*, fitted, prepared, provided for a voyage.

Boun or *bound* is yet a common word in the North for ready, prepared; and which Ray thinks may be from the *D. bouwen*, to build.

Nor was this all: in ports and roads remote,
Destructive fires among whole fleets we send;
Triumphant flames upon the water float,
And *out-bound* ships at home their voyage end.

Dryden. Annus Mirabilis.

OUTBOUNDS, *n.* the exterior or extreme bounds, confines or limits.

Knockfergus, Belfast, Armagh, and Carlingford are now the most *out-bounds* and abandoned places in the English pale.

Spenser. Works, vol. viii. p. 391. View of the State of Ireland.

OUTBOWED, *bowed outwards*, bent, curved *outwards*.

The convex or *out-bowed* side of a vessell will hold nothing; it must be the hollow and depressed part that is capable of any liquor.

Hall. Works, vol. i. fol. 436. An Holy Panegyrike.

OUTBRAG, to *brag* or boast more than; to exceed in *bragging*, or boasting, or braving.

His phenix down began but to appear,
Like unshorn velvet, on that termless skin,
Whose bare *out-brag'd* the web it seem'd to wear.

Shakspeare. A Lover's Complaint.

OUTBRAVE, to exceed or excel in *braving* or setting boastfully at defiance; in daringly defying or challenging.

Proud of this first defeat, then marching forth again,
Towards Livells, a large waste, which other plains *outbraves*.

Drayton. Poly-olbion, song 22.

Yet rather than be thus *outbrav'd*, and by
My drudge, my footstool, one that sued to be so;
Perish both life and honour.

Beaumont and Fletcher. The Lover's Progress, act iv. sc. 1.

Hence to yon mountain which *outbraves* the sky,
And dart from pole to pole thy strengthen'd eye,
Through all that space you shall not view one man,
Not one, who dares to act on such a plan.

Churchill. The Conference.

OUTBID.

OUT-
BRAVE.

OUT-
BREAK.
—
OUT-
CAST.

OUTBREAK, v. } D. uit-breken, erumpere, effrin-
OUTBREAK, n. } gere.
OUTBREAKING, n. } To break or burst out; to
make a rupture or eruption; to rush or sally forth.

But breath his faults so quaintly,
That they may seeme the taints of liberty;
The flash and out-broke of a fiery mind.
Shakspeare. Hamlet, fol. 259.

Disordinate authority, thus gain'd,
Knew not at first, or durst not to proceed
With an out-breaking course, but stood restrain'd
Within the compass of respective heed.
Daniel. History of Civil Wars, book vii.

Instead of subjecting her, he is by the fresh outbreking of her
beauty captivated.
Sir Thomas Herbert. Travels, p. 47.

OUTBREASTED, exceeded or excelled in (the powers
of) the breast.

I have heard
Two emulous Philomels beat the ear o' th' night
With their contentious throats, now one the higher,
Anon the other, then again the first,
And by and by out-breasted, that the sense
Could not be judge between 'em.

Beaumont and Fletcher. The Two Noble Kinsmen, act v. sc. 3.

OUTBREATHE, to breathe out, to expire; to ex-
haust of the breath.

No smoak nor steam, out-breathing from the kitchen?
There's little life i' th' hearth then.
Beaumont and Fletcher. Love's Pilgrimage, act i. sc. 1.

OUTBRING, to bring or bear out.

The lasse wofull of hem bothe nist;
Where that he was, ne might o word outbring,
As I said erst, for wo and for sobbing.
Chaucer. Troilus and Creseide, book iv.

OUTBUD, v. D. uit-botten, geminare, pullulare.
To bud out; to thrust or push out or forth.

Whose many heades out-budding ever new,
Did breed him endlesse labour to subdew.
Spenser. Faerie Queene, book i. can. 7.

OUTBUILD, v. to build more than, better or stronger
than; to exceed or excel in building.

Each man makes his own stature, builds himself:
Virtue alone outbuilds the pyramids:
Her monuments shall last, when Egypt's fall.
Young. The Complaint. Night 6.

OUTCAPER, v. to caper better than, to excel in
capering, leaping, skipping, or dancing.

For sometimes at a ball
The beau show'd his parts, outcaper'd 'em all.
Byrom. Description of a Beau's Head.

OUTCAST, adj. } Cast or thrown out; ejected,
OUTCAST, n. } expelled, banished, exiled.
OUTCASTING.

As clensyngis of this world we ben maad the outcastynge of alle
thingis til ghit.
Wiclif. 1 Corinthians, ch. iv.

For if a wight be in so moche the more outcast (abjectior) that
he is dispised of moste folke, so as dignite ne maye not, &c.
Chaucer. Boecius, book iii.

And why? their comening is not for peace, but they ymagyn
false wordes agaynst the outcastes of the lande.
Bible, Anno 1551. Psalm 35.

For which both thou
And the outcast from God, are here condemn'd
To waste eternal daies in woe and pain.
Milton. Paradise Lost, book ii. l. 694.

Frown but the monarch, all his glories fade,
He mingles with the throng, outcast, undone,
The pageant of a day.
Somerville. The Chase.

Hence him, in iustice God's high doom assign'd,
Naked to rove, an outcast of mankind.
Hoole. Orlando Furioso, book xxxiv. l. 501.

OUTCEPT, the English preposition prefixed to the
Latin past participle.

Out-taken, or taken out; except.

Except or out-take Kent, or Kent being excepted or
out-taken.

I'd play hun 'gaine a knight, or a good squire,
Or gentleman of any other countie
I' the kingdome.

PAN. Out-cept Kent, for there they landed
All gentlemen.

Ben Jonson. The Tale of a Tub, act i. sc. 3.

OUTCLIMB, to climb more than, higher than; to
exceed in climbing, mounting, or ascending.

They must be sever'd or like palms will grow,
Which, planted near, out-climb their native height.
Davenant. Gondibert, book iii. can. 1.

OUTCOMPASS, to compass (passibus circuire)
beyond, to stretch or extend beyond, to reach to a larger
circuit.

If then such be the capacity and receipt of the mind of man it is
manifest that there is no danger at all in the proportion or quantity
of knowledge, how large soever, lest it should make it swell or out-
compass itself.

*Bacon. Works, vol. i. p. 4. Of the Advancement of Learning,
book i.*

OUTCOURT, the exterior or outer court.

Such persons who, like Agrippa, were almost Christians, and have
been (as it were) in the skirts and out-courts of Heaven, (may)
chance to apostatise finally, and to perish.

South. Sermons, vol. vii. p. 231.

OUTCRAFT, v. to exceed or excel in craft, art, or
cunning, to outwit.

My husband's hand?
That drug damn'd Italy, hath out-crafted him,
And hees at some hard point.

Shakspeare. Cymbeline, fol. 383.

OUTCRY, v. } To cry out, more than, louder
OUTCRY, n. } than; to exceed, excel, or get the
OUTCRYER, n. } better of by crying.

Cry out, sc. shouted out to a distance; exclamation,
clamour.

Out-cry; (in Ben Jonson and Massinger;) a sale pro-
claimed by the cryer or outcryer. See the Quotation
from Baker.

He shall not be an outcryer, nor an hye mynded person. His
voyce shall not be hearde in the stretes.

Bible, Anno 1551. Esaye, ch. xlii.

With outcries every where
The clamours, drums, and fifes to the rough charge do sound,
Together horse and man come tumbling to the ground.

Drayton. Poly-obion, song 22.

(That all citizens) should first cause the same to be cryed thro'
the city, by a man with a bell, and then to be sold by the common
out-cryer appointed for that purpose.

Baker. Queen Elizabeth. Anno 1602.

LUKE. Can you think, sir,
In your unquestion'd wisdom, I beseech you
The goods of this poor man at an outcry,
His wife turn'd out of doors, his children forced
To beg their bread; this gentleman's estate,
By wrong extorted can advantage you?

Massinger. The City Madam, act i. sc. 2.

My lords the senators
Are sold for slaves, their wives for bond-women,
Their houses and fine gardens given away,
And all their goods, under the speare, at out-cry.
Ben Jonson. Catiline, act ii. fol. 615.

OUT.
CAST.
—
OUTCRY.

OUTCRY. Let both the judgment and the will be for Christ, yet the tumult of the affections will carry it; when they cannot *out-reason* the conscience, they will *out-cry* it.

South. Sermons, vol. viii. p. 169.

OUT-DRINK.

OUTCURSE, *v.* to curse more than; to exceed or excel in cursing or execrating.

For if it be a she,
Nature before hand hath *out-cursed* me.

Donne. The Curse.

OUTDARE, to dare beyond; to exceed or excel in or by daring, braving, or defying.

Give me instructions, and put action on me:
A glorious cause upon my sword's point, gentlemen,
And let my wit and valour work: you will raise me,
And make me *out-dare* all my miseries.

Beaumont and Fletcher. The False One, act iv. sc. 4.

OUTDATED, out of date; out of or at a period beyond any given time; and, consequently, antiquated.

Works and deeds of the law, in those places, signify legal obedience, or circumcision, and the like judaical *outdated* ceremonies; faith, the evangelical grace of giving up the whole heart to Christ, without any such judaical observancies.

Hammond.

OUTDAZZLE, to dazzle more than, more brightly or brilliantly; to exceed in confusing brightness or brilliancy.

To leave unconquer'd Hercules behind
Was a base project, and by thee design'd;
Lest, when to Greece we steer the sailing pine,
His brighter glories should *out-dazzle* thine.

Fawkes. Apollonius Rhodius, book i. l. 1657.

OUTDO, *D. uit-doen; delere, demere, extinguere.*

To do out, to put out; to do out, beyond, or more than; to pass, to exceed.

Yet this boy
For my sake (if a man may judge by looks
And speech) would *out-do* story.

Beaumont and Fletcher. Philaster, act i. sc. 1.

Whose pow'r was there so much diminished,
That he his foe not able to withstand,
Was ta'en in battle and his eyes *out-done*.

Drayton. The Barons' Wars, book v.

To all relations their just rights he pays,
And worth's reward above its claim does raise;
The tenderest husband, master, father, son,
And all those parts by his friendship far *outdone*.

Cowley. The Davideis, book iv.

For this is such a disposition, as strips the father of the man; as makes him sacrifice his children to Moloch; and as much *out-do* the cruelty of a cannibal, or a Saturn, as it is more barbarous and inhuman to damn a child than to devour him.

South. Sermons, vol. ii. p. 189.

OUTDRAW, to draw out; to extract, to educe.

And there vpon he als blive
The serpent, with suche strength assaile
That he maie slein hym by bataile,
Of whiche he must the teeth *out-drawe*.

Gower. Conf. Am. book v. p. 150.

OUTDREAM, to dream beyond; *sc.* dangers; *i. e.* till they are passed.

I am no flatterer,
To promise infinitely, and *out-dream* dangers.

Beaumont and Fletcher. The Island Princess, act iii. sc. 1.

OUTDRINK, *D. uit-drinken, ebibere, epotare.*

To drink out; to drink more than; or exceed or excel in drinking.

Nor they which use
To *out-drinke* the sea.

Donne. Satire 2.

OUTDURE, to *dure* or *endure*, beyond, to exceed or excel in or by enduring, abiding, or suffering.

And I feel myself
With this refreshing, able once again
To *out-dure* danger

Beaumont and Fletcher. The Two Noble Kinsmen, act iii. sc. 6.

OUTDWELL, *v.* to dwell, remain, or abide beyond.

GRA. And it is maruaile he *out-dwells* his houre,
For louers euer run before the clocke.

Shakspeare. Merchant of Venice, fol. 170.

OUTEA, in *Botany*, a genus of the class *Triandria*, order *Monogynia*, natural order *Leguminosæ*. Generic character: calyx five-toothed, bibracteate; corolla, petals five, the superior petal large; pod pedicellate; stamens very long.

One species, *O. Guianensis*, a tree, native of Guiana.

OUTFA'CE, *v.* } To face out; to outdo, exceed or
OUTFA'CING, *n.* } excel in or by facing or fronting; or
putting on and keeping a confident or bold face; front or countenance.

Firste pycke a quarell and fall out with him then
And so *outface* hym with a carde of ten.

Skelton. The Bouge of Court.

I grieve, and vex too
The insolent licentious carriage
Of this *out-facing* fellow, Mirabell.

Beaumont and Fletcher. The Wild Goose Chase, act iii. sc. 1.

Behold I have given thee boldness and courage, to bear up against their strong oppositions; so as thou shalt not be daunted with their *outfacings*.

Hall. Hard Texts of Scripture. Ezekiel, ch. iii. ver. 8.

When he tells me his heart is right with God, while his hand is in my pocket, he upbraids my reason and *outfaces* the common principles of natural discourse with an impudence equal to the absurdity.

South. Sermons, vol. iii. p. 149.

OUTFEAST, *v.* to feast more than; to exceed or excel in feasting.

He hath knock'd down Damalis with the 25th bottle, and hath *out-feasted* Anthony or Cleopatra's luxury.

Taylor. Sermon 15. part i. fol. 148.

OUTFLA'TTER, } To flatter more than, better
OUTL'E. } than; to exceed or excel in
flattery, in soothing, or gratifying by praise, or pleasing words or actions.

Outlie, to excel in lying or falsehood.

In which he can win widows, and pay scores,
Make men speak treason, cozen subtlest whores,
Out-flatter favourites, or *outlie* either
Jovius or Surlus, or both together.

Donne. Satire 4.

OUTFLOW, flow out; efflux.

It may well be expected that the influx of foreigners, and the *out-flow* of natives, which the present peace will occasion, will not suffer the pretensions of our ladies to lose ground in this particular.

Observer, No. 13.

OUTFLY, *D. uit-vlieghe, evolare, to fly out.*

To fly beyond, further or faster than; to exceed or excel in flying.

But his evasion winged thus swift with scorne,
Cannot *out-flye* our apprehensions.

Shakspeare. Troilus and Cressida, fol. 88.

But if their cry
Invades again his trembling ear,
He strait resumes his wanted care;
Leaves the untasted spring behind,
And, wing'd with fear, *outflies* the wind.

Waller. Of Love.

**OUT-
DURE.**

OUTFLY.

OUT-
FOOL.OUT-
GUARD.

OUTFOOL, *v.* to *fool* or act the *fool* more than ;
to exceed or excel in *folly*, or silliness.

In life's decline, when men relapse
Into the sports of youth,
The second child *outfools* the first,
And tempts the lash of truth.

Young. Resignation, part ii.

OUTFORM, *n.* the external *form* or frame, shape
or countenance.

For Cupid, who (at first) tooke vaine delight,
In mere *out-formes*, until he lost his sight,
Hath chang'd his soule, and made his object you.

Ben Jonson. Epigramme 114. fol. 37.

OUTFROWN, *v.* to *frown* more than ; to exceed or
excel in or by *frowning*, or contracting the forehead.

For the oppressed king I am cast downe,
Myselfe could else *out-frowne* false Fortune's frowne.

Shakspeare. Lear, fol. 306.

OUTFUNERAL, *funerals out* or at a distance.

And certainly much (*sc.* out of matter of wholesomnesse) might be
said to this purpose for the convenience of *out-funerals*, without
respect of those Jewish grounds, who held a kind of impurity in the
corpses of the dead.

*Hall. Works, vol. iii. fol. 101. Sermon Preached at Exeter, Aug.
24, 1637.*

OUTGATE, *gate out* ; way, road, path, or passage
out ; by which to go *out*.

For those places are fit for trade and trafficke, having most con-
venient *out-gates* by divers to the sea, and in-gates to the richest
parts of the land, that they would soone be enriched, and mightily
enlarged for the very seating of the garrisons by them.

Spenser. Works, vol. viii. p. 460. The State of Ireland.

OUTG'O, *v.* } *D. uit-gaen, exire, egredi.*

OUTGO'ING, *n.* } *To go out, (exire,) to go beyond,*
(*transire,*) to exceed, to excel. See **OUTWEND**.

Come, shall we in,
And taste Lord Timon's bountie : he *out-goes*
The verie heart of kindness.

Shakspeare. Timon of Athens, fol. 82.

Theron to no man gives place
Is first in Pisa's and in Virtue's race,
Theron there and he alone,
Ev'n his own swift forefathers has *outgone*.

Cowley. The Second Olympic Ode of Pindar.

Or (if I shoulde aske thee) whiche are the *out-goings* of Para-
dyse ?

Bible, Anno 1551. Esdras, ch. iv.

Some aged man, who lives this act to see
And who in former times remembred me,
May say, the son in fortitude and fame
Outgoes the mark and drowns his father's name.

Dryden. Homer. Iliad, book vi.

To edify upon the ruins
Of John of Leyden's old *outgoings*.

Butler. Hudibras, part iii. can. 2.

OUT-GROW, *v.* to *grow* beyond, greater than ; to
exceed or excel in *growth* or increase, in magnifying or
enlarging.

O my lord,
You said, that idle weeds are fast in growth ;
The prince, my brother, hath *out-growne* me farre.

Shakspeare. Richard III. fol. 186.

Then commune how that day they best may ply
This growing work : for much their work *out-grew*
The hands dispatch of two gard'ning so wide.

Milton. Paradise Lost, book ix. l. 202.

OUTGUARD, *n.* external *guard*, *guard* or watch
placed *out*, beyond, at a distance from that which is
guarded or watched.

These *out-guards* of the mind are sent abroad
And still patrolling beat the neighbouring road.

Blackmore. Creation, book vi.

OUTGUSH, *v.* to *gush out*, to flow, pour, or rush,
suddenly *out*.

Till from repeated strokes *out-gush'd* a flood,
And the waves redden'd with the streaming blood.

Eusden. Ovid. Metamorphoses, book v.

OUTHEES, Mr. Tyrrwhitt calls it barbarous Latin ;
and explains it *outcry*. *Hee*, or *hey*, seems merely to
be *hue*, *hue* and cry, *hutesium et clamorem*. See **HUE**.

& born to London brigge fulle hie with *outhesjs*.

R. Brunne, p. 339.

Yet saw I woodnesse laughing in his rage.

Armed complaint, *outhees*, and fiers outrage.

Chaucer. The Knightes Tale, v. 2014.

OUTHISS, *v.* to *hiss* more than ; to exceed in *hiss-*
ing.

For ye may
When this is hist to ashes, have a play.
And here, to *out-hiss* this.

Beaumont and Fletcher. The Captain.

OUTHOUSE, *n.* a building *out* or exterior to,
separate or detached, from the dwelling-house or man-
sion.

SER. Faith I have found at length, by chance, where he has
been.

WIFE. Where ?

SER. In a blind *outhouse* in the suburbs, pray God all be well
with him.

Beaumont and Fletcher. The Coxcombe, act iii. sc. 1.

Conven'd at midnight in *outhouses*.

Butler. Hudibras, part iii. can. 2.

OUTJEST, to *jest* more than, better than ; to ex-
ceed or excel in *jesting* or playing merry or laughable
tricks, or in uttering laughable sayings.

KENT. But who is with him ?

GENT. None but the foole who labours to *out-iest*
His heart-strooke iniuries.

Shakspeare. Lear, fol. 296.

OUTJUGGLE, to *juggle* better than, more cun-
ningly than, to exceed or excel in *juggling*, or be-
guiling.

A reader would wonder by what art I could couch so many of the
in so small a roome ; and might verily thinke that I could *out-ly*
the legends, and *out-juggle* a Jesuit.

Hall. Works, vol. i. fol. 691. The Honour of the Married Clergie.

OUT-LABOUR, to *labour*, more than ; to exceed in
labouring, working, or toiling ; in enduring or suf-
fering.

Still I have fought, as if in beauty's sight,

Out-suffer'd patience, bred in captives' breasts ;

Taught fasts, till bodys like our souls grew light ;

Out-watch'd the jealous, and *outlabour'd* beasts.

Davenant. Gondibert, book ii. can. 2.

OUTLANCE, *lanced* or thrown *out*.

Therein two deadly weapons fix'd be bore,

Strongly *outlanced* towards either side

Like two sharpe speares, his enemies to gore.

Spenser. Muirpotmos.

OUTLAND, } *D. uit-lander, uitlandsch ; Ger.*

OUTLA'NDER, } *auslandisch ; externus, peregrinus.*

OUTLA'NDISH. } The exterior *land* ; lands separate
from, of or belonging to another Country, foreign.

In pat ilk tyme, as he to Wales went,

Tuo *outlandes* kynges on his lond heauens hent.

R. Brunne, p. 39.

OUT-
GUARD.OUT-
LAND.

OUT-
LAND.

OUTLAW.

Also such things as are to be carried out of their land, they think it more wisdom to carry that geer forth themselves, than that other should come thither to fetch it, to the intent they may the better know the outlands on every side of them and keep in use the feat and knowledge of sailing.

More. Utopia, vol. ii. book ii. ch. vii. p. 131.

And you shall knowe the cause wherefore these robes are worne
And why I goe outlandishe lyke, yet being Englishe borne.
Gascoigne. Flowers. A Deuice of a Masque for the Viscount Mountacute.

S. Jerome writeth to Demetrius the Virgin; let a maid auoid, as a mischief or poyson of chastity, young men with braides bushed and trimmed, and sweete smelling skins of outlandish myse.

Vives. Instruction of a Christian Woman.

Of such outlandish horses as are dailie brought ouer vnto vs I speake not, as the genet of Spaine, the courser of Naples, the hobbie of Ireland, the Flemish roile, and Scottish nag.

Holinshed. The Description of England, vol. i. book ii. ch. i. p. 271.

William Twisse written and called by some outlanders and others Twissius and Tuissius, was born at Speenhamlands.

Wood. Athenæ Oxonienses, vol. ii. fol. 80.

Outlandish persons calling themselves Egyptians or gypsies, are another object of the severity of some of our unrepealed statutes.

Blackstone. Commentaries, book iv. ch. xiii.

OUTLAST, *v.* to last out, beyond, longer than; to exceed or excel in staying, remaining, continuing, or enduring.

Men, whose intellectuals were of so great a making, as perhaps they will, in worthy memory outlast, even makers of laws and founders of empires.

Davenant. Preface to Gondibert.

You have provided nobly, bounteous sir,
For my disgrace, to make me live for ever,
Outlasting brass or marble.

Beaumont and Fletcher. The Passionate Madman, act iv. sc. 1.

When first young Maro in his boundless mind
A work t' outlast immortal Rome design'd,
Perhaps he seem'd above the critic's law,
And but from Nature's fountains scorn'd to draw.

Pope. Essay on Criticism, l. 131.

OUTLAUGH, to laugh more than, longer or louder than; to exceed in laughing.

Each lady striving to out-laugh the rest;
To make it seem they understood the jest.

Dryden. Prologue to Arviragus and Philicia.

OUTLAW, *v.* } *A. S. utlagian; D. utlaegen,*
OUTLAW, *n.* } *omni legis patrocinio excludere.*
OUTLAWING, *n.* } To put out of the law or pro-
OUTLAWRY. } tection of the law; to exclude,
expel, deprive of the protection of the law.

A thefe of his courte was outlawed late,
þe kynge knew him fulle wele, he mette him in þe gate.

R. Brunne, p. 33.

For while he was holdun in outlawrie of Domycian ine the yle Patmos, in the chirchis that he hadde gouerned ther weren sprungun manye vices and dyuerse eresies.

Wiclif. Prologue on the Apocalips.

And, for the outlaw hath but small meinie,
And may not do so gret an harme as he,
Ne bring a contree to so gret mischiefe,
Men clepen him an outlaue or a thefe.

Chaucer. The Manciples Tale, v. 17181.

During the time of the outlawrie of Godwin, William bastard Duke of Normandie came with a goodlie companie into England to see King Edward, and was honourable received.

For. Martyrs, fol. 148. Edward the Confessor, Anno 1043.

The queene, the bishop, and others, that their tyrannie might be hid, outlawed and banished the Matreuers, and Thomas Gourney, who flieng vnto Marceus, three yeares after being knowne, taken and brought toward England was beheaded on the sea, least he should accuse the chiefe dooers, as the bishop and other.

Holinshed. Edward II. Anno 1327, vol. ii. p. 587.

But the greatest difficulty and difference that fell out between them, was about the out-lawing of Cicero.

Sir Thomas North. Plutarch, fol. 728. Cicero.

Let us look upon man, not only as created, and brought into the world, with all these great advantages superadded to his being; but also as depraved, and faine from them; as an out-law, and a rebel, and one that could plead a title to nothing but to the highest severities of a sin revenging justice.

South. Sermons, vol. ii. p. 46.

My spouse long out-law'd, and expos'd to want,
(His throne usurp'd) to my entreaties grant,
Nor linger thou in Pluto's grisly dome,
If ought of form subsist, and phantoms roam.

Lewis. Statius, book xii. l. 385.

OUTLAWRY, in Civil Actions, is putting a man out of the protection of the Law so that he is incapable of suing for the redress of injuries, and forfeits to the Crown all his goods and chattels, and the profits of his lands. If a woman be the subject of the Outlawry the proceeding is then called a *waiver*, and she is said to be *waived*, that is, *derelicta*, put out and not regarded by the Law. In Civil Actions, Outlawry happens in two cases: first, upon mesne process; and secondly, upon final process after judgment.

Outlawry upon mesne process occurs, when the Defendant will not appear in the Court in which he is sued to answer the charge to be brought against him by the Plaintiff. It is an established rule, that the Court cannot take cognizance of a suit until the Defendant has appeared, as it will not proceed against him on the ex-parte statements of the Plaintiff. If then process is sued out to require the Defendant's appearance, and he cannot be found, or being found, and served with the process, he will not appear, judgment of Outlawry is given against him. It is needless to recount all the formalities which must be performed before judgment of Outlawry can be obtained; it suffices to say, that the object of them all, is to give the Defendant notice of the proceedings which are being instituted against him; for this purpose it is necessary, amongst other things, that he should be solemnly cited to appear at several successive County Courts. After the Outlawry, the Sheriff is by Writ commanded to appraise the real and personal property of the Defendant, and take them into the King's hands. When this Writ is returned by the Sheriff, a transcript is sent to the Court of Exchequer, and thereupon other Writs are issued from the Exchequer desiring the Sheriff to sell the goods of the Defendant, to recover his debts, and to levy the profits of his lands. The money raised by the Sheriff under these Writs belongs to the Crown, but it is the constant practice of the Crown, on a proper application being made either to the Exchequer or to the Treasury, to permit the Plaintiff in the Action to satisfy himself for the debt for which he brought the Action, and for his costs and expenses incurred therein. Upon the death of the Outlaw the Outlawry is determined, and the representatives of the Outlaw may have the land restored to them, and the personal effects also, if they still remain unsold in the hands of the Sheriff.

The necessity of Outlawry is in many cases obviated by the Statute which enables a Plaintiff, upon making affidavit that the Defendant has been properly served with the process of the Court, to enter an appearance for him. This seems to be a fictitious proceeding, but it is consistent with justice, as the Court will only permit the appearance to be entered and the cause to proceed, on proof that the Defendant has notice of the proceedings. The Court will also take care that the process of Outlawry is not used for the purpose of oppression.

OUTLAW
—
OUT-
LEARN.

Outlawry on final process after judgment is very similar, and it occurs when the Plaintiff cannot find the Defendant to arrest him in satisfaction of the judgment. This is very unusual, as the Plaintiff can always take out execution against the lands and goods of the Defendant, which renders Outlawry unnecessary.

Outlawry, in Criminal cases, is where a bill of indictment, for a misdemeanour, felony, or treason, has been found by the Grand Jury, and the party accused cannot be apprehended and brought before the Court. All the proceeds, as in Civil Actions, are intended to give the Defendant full notice that he may appear and answer the charge, and, as the consequences of the Outlawry are highly penal, the proceedings must be conducted with the greatest nicety and exactness.

In capital offences, Outlawry amounts to a conviction of the crime, as much as if the party had been found guilty by the verdict of a Jury. If he be subsequently taken and committed to prison, the Justices of Gaol Delivery may award execution against him. Attainder, corruption of blood, and forfeiture of all estates real and personal accrue, at once, from the judgment of Outlawry being pronounced against him. He is not, however, liable to any severer punishment than he would have been, if he had been regularly convicted. Formerly, it was thought that he was so far out of the protection of the Law that any man might slay him with impunity. He was considered as bearing a *caput lupinum*, a wolf's head, and was regarded as a species of vermin; but this barbarous doctrine has been long exploded. Any person, however, may arrest him to bring him to execution.

In misdemeanours inferior to felony, the Outlawry does not operate as a conviction, for the party may afterwards be tried and acquitted. However, it subjects the party to forfeiture of his goods and chattels, the loss of the profits of his real estate, and restraint of liberty.

See Chitty, *Criminal Law*, vol. i.; Blackstone, *Commentaries*, vol. iii. and iv.; Tidd, *Practice*, vol. i. cap. 7.

OUTLA'Y, v. } D. *uitlegghen, exponere, expandere.*
OUTLA'Y, n. } To lay out; to expose, to expand, to extend.

Outlay, the noun, is now commonly applied to the laying out of money, of capital; the expenditure.

She in her crooked course to seaward softly slides,
Where Pellin's mighty moss and Merton's, on her sides,
Their boggy breasts outlay.

Drayton. *Poly-olbion*, song 27.

Whereas the rocky pile
Of Foundra is at hand, to guard the out-laid isle
Of Walney.

Id. 1b.

Urge me no more, I know her and her haunts,
Her layes, leaps, and out layes, and will discover all.

Beaumont and Fletcher. *Philaster*, act ii. sc. 1.

OUTLEAP, n. *leap out*; met. spring or bound, flight or sally, arising from exultant vivacity.

All that you can wish is, that since youth must have some liberty, some *out-leaps*, they might be with the ingenuity of a son, and under the eye of a father, and then no very great harm can come of it.

Locke. *Works*, vol. iii. fol. 42. *Of Education*, sec. 97.

OUTLEARN, v. D. *uit-leeren*; *ediscere, perdiscere*.

To learn out; sc. of those from whom knowledge was sought.

But when as nought according to his mind
He could out-learne, he them from ground did reare,
(No service lothsome to a gentle kind)
And on his warlike breast them both did bear.

Spenser. *Faerie Queene*, book iv. can. 7.

OUTLET, D. *uit-læeten, emittere, efferre*.
The place where, the mean whereby, egress, departure, or escape is given or granted.

Then it can handle things, in such manner, as no evil shall appear so peremptory, but that it hath but some *out-let* of hope.

Bacon. *Essays*, p. 87.

So scapes th' insulting fire his narrow jail,
And makes small outlets into open air.

Dryden. *Annus Mirabilis*.

The troops,
Already glittering down the dewy vale,
File through its narrow'd outlet.

Glover. *Leonidas*, book ii.

OUTLIE. See OUTFLATTER, and OUTJUGGLE.

OUTLIER. See OUTLYING.

OUTLINE, exterior line; *delineation* or description of principal parts, (afterwards to be filled in.)

Pen the contours and outlines with a more even and acute touch.

Evelyn. *Miscellaneous Writings*. *Sculptura*, book i. ch. v. p. 315.

He only takes the outlines of a picture and fills them up with masterly traits of his own fancy, which give it an air of originality, and do not less honour to his genius than judgment.

Lewis. *Statius*, book ix. note 263.

How great soever the variety of municipal laws, it must be confessed, that their chief outlines pretty regularly concur; because the purposes to which they tend are every where exactly similar.

Hume. *Essays*, vol. ii. p. 240. *Of Justice*, sec. 3. part i.

OUTLIVE, to live beyond, longer than; to exceed in duration or continuance of life.

When she saw
The fortune of the day unto the Roman draw,
The queen (t'outlive her friends who highly did disdain,
And lastly, for proud Rome a triumph to remain)
By poison ends her days, unto that end prepar'd.

Drayton. *Poly-olbion*, song 8.

But headlong joy is ever on the wing,
In wint'ry solstice like the short'ned light,
Soon swallow'd up in dark and long out-living night.

Milton. *Odes*. *The Passion*, l. 7.

It [conscience] accompanies man to his grave: he never *outlives* it, and that for this cause only, because he cannot outlive himself.

South. *Sermons*, vol. i. p. 36.

OUTLO'OK, v. } To look out; to exceed or excel
OUTLO'OK, n. } in or by looking; by putting on a bold or confident look.

Outlook, n. *prospedition, providence*.

I will not returne
Till my attempt so much be glorified,
As to my ample hope was promised,
Before I drew this gallant head of warre,
And cull'd these fiery spirits from the world
To out-looke conquest, and to winne renowne
Even in the iawes of danger and of death.

Shakspeare. *King John*, fol. 19.

Away to the brook,
All your tackle outlook,
Here's a day that is worth a year's wishing.

Cotton. *The Angler's Ballad*.

From magnanimity, all fear above;
From nobler recompence, above applause;
Which owes to man's short out-look all its charmes.

Young. *The Complaint*. Night 8.

OUTLUSTRE, to exceed or excel in lustre, brightness, or brilliancy.

If she went before others, I have seene as that diamond of yours out-lusters many I have beheld, I could not beleue she excelled many: but I have not seene the most precious diamond that is, nor you the lady.

Shakspeare. *Cymbeline*, fol. 372.

OUT-
LYING.OUT-
POST.OUTLY'ING, } *Lying out*, sc. of a fixed design,
OUTLI'ER. } or classification.The last survey I proposed of the four *outlying* (or, if the learned so please to call them, barbarous) empires, was that of the Arabians. *Sir Wm. Temple. Works*, vol. iii. p. 378. *Cf Heroic Virtue*, sec. 5.The party—sent messengers to all their *outliers* within twenty miles of Cambridge to come to their election. *Bentley. Letters*, p. 59.The garden in its turn was to be set free from its prim regularity, that it might assort with the wilder country without. The sunk fence ascertained the specific garden, but that it might not draw too obvious a line of distinction between the neat and the rude, the contiguous *out-lying* parts came to be included in a kind of general design.*Walpole. Anecdotes of Poetry*, vol. iv. ch. vii. p. 289.OUTMANTLE, to *mantle* more than ; to exceed or excel in *mantling*.Be most sublimely good, verbosely grand,
And with poetic trappings grace thy prose,
Till it *outmantle* all the pride of verse.*Cowper. The Task*, book v.OUTMEASURE, to *measure* more than ; to exceed in *measure* or dimension.Whose ingenuity hath been so bold not only to proceed below the account of minutes ; but to attempt perpetually motions, and engines whose revolutions (could their substance answer the design) might *out-last* the exemplary mobility, and *out-measure* time itself.*Sir Thomas Brown. Vulgar Errours*, book v. ch. xviii. p. 316.OUTNAME, to have a greater *name*, a worse *name* ; to exceed in its (bad) *name*.Why? thou hast rais'd mischief to this height,
And found out one to *out-name* thy other faults.*Beaumont and Fletcher. The Maid's Tragedy*OUTPACE, v. to *pace out* ; to pass or go *out*.

Then all with one accord

We fell againe on knees to pray apace
And therewithall euen at the second blowe,(The number cannot from my minde *outpace*)

Our helme strake of, and we must fleete and flowe,

Where winde and waues would guide vs by their grace.

*Gascoigne. Hearbes. Voyage to Holland, Anno 1572.*OUTPARAMOUR, v. to have more *paramours* than ; to love more ; to exceed in love (of women.)Wine lou'd I deerly, dice deerly ; and in women, *out-paramour'd* the Turke.*Shakspeare. Lear*, fol. 298.OUTPARISH, *parish out* of or exterior to ; sc. the walls of the city.

The whole amounts to a hundred and forty-six ; viz.

97 within the walls.

16 without the walls.

23 *out-parishes* in Middlesex and Surry.

10 in the city and liberties of Westminster.

Pennant. London, p. 432.OUTPART, the exterior *part* ; the extreme *part*.

In hope to hew out of his bole

The fell'ffs, or *out-parts* of a wheel that compasse in the whole ;
To serve some goodly chariot.*Chapman. Homer. Iliad*, book iv. fol. 61.OUTPOISE, to *poise* or weigh more than ; to exceed the balance, to exceed in weight.If your parts of vertue and your infirmities were cast into a ballance, I know the first would much *out-poise* the other.*Howell. Letter 11*, book i. sec. 5.OUTPORCH, the exterior *porch* ; portico or portal.The good emperor never ceas'd by prayers and teares, till he was absolv'd ; for which coming to the bishop with supplication into the salutatory, some *out-porch* of the church, he was charged by him of tyrannical madness against God, for coming into holy ground.*Milton. Works*, vol. i. fol. 26. *Of Reformation in England.*OUTPOST, *post*, fixed place or station *out* of or exterior to, sc. the camp or fortification.

VOL. XXV,

Saltsburgh, a subalpine city, is placed as if to guard the entrance into the grand defile which traverses the Rhetian Alps, and it may be considered for that reason, as forming one of the *out-posts* of Italy.*Eustace. Italy*, vol. i. ch. i. p. 74.OUTPOUR, to *pour out* ; to effuse ; to *pour out*, sc. in great numbers or quantities, as a flood or stream.

He lookt and saw what numbers numberless

The city gates *out-pour'd*, light armed troops

In coats of mail and military pride.

Milton. Paradise Regained, book iii. l. 310.

Nor did the dancing ruby

Sparkling, *out-pour'd*, the flavour or the smell,

Or taste that cheers the hearts of Gods and men,

Allure thee from the cool chrystalline stream.

Id. Samson Agonistes, l. 545.OUTPRA'Y, } To *pray* more than, more fervently,
OUTWE'EP. } more piously ; to exceed or excel in
prayer or supplication.—To *outweep*,
To exceed in *weeping* or shedding tears.Our prayers do *out-pray* his, then let them haue

That mercy, which true prayers ought to haue.

Shakspeare. Richard II. fol. 42.

Meantime he sadly suffers in their grief,

Outweeps an hermit, and *outprays* a saint.*Dryden. Annus Mirabilis.*OUTPRIZE, v. to *prize* more than ; to exceed in price, value, or estimation.IACH. Either your vnparagon'd mistress is dead or she's *out-priz'd* by a trifle.*Shakspeare. Cymbeline*, fol. 372.OUTQUENCHED, a-cwenc-an, *extinguere*.
Extinguished.

Who [Death] in the horror of the grisly night,

In thousand dreadful shapes doth 'mongst them stalke,

And makes huge havocke ; whiles the candle light

Out-quenched leaves no skill nor difference of wight.*Spenser. Faerie Queene*, book xi. can. 6.OU'TRAGE, v. or } Fr. *outrager*, *outrage*, *ou-*
OU'TRAIE, } *trage* ; It. *oltraggiare*, *oltrag-*

— Thou art false and double of intent
Of thy promes atteint, and eke *outraied*.
Lidgate. The Story of Thebes, part ii. fol. 382.
For which this miller stale both mele and corn
An hundred times more than befor,
For there befor he stale but courteislie,
But now he was a theefe *outragiously*.
Chaucer. The Reves Tale, v. 3997.

Great *outrages* & temporal harmes that suche hereticks haue been
alway wont to doe & sedicious commosions that thei ben wõt to
make.

Sir Thomas More. Workes, fol. 285. *A Dialogue concerning
Heresies, &c.*

The cause why Demosthenes so famously is bruted
Onely proceeded, for that he did *outray*
Eschines.

Skelton. The Crown of Laurel.

Kyng Phylippe made light therof, and sayd how his nephue
was but an *outraous* fole, and howe that he was a marchat to haue
his cõtrey brēt.

Lord Berners. Froissart. Cronycle, vol. i. ch. xlv. p. 61.

And sawe how *outragiously* they had slayne the bayly he thought
the mater shulde be yuell at length.

Id. Ib. vol. i. ch. 350. p. 561.

Ah heavens! that doe this hideous act behold,
And heavenly virgin thus *outraged* see,
How can ye vengeance iust so long withhold
And hurle not flashing flames upon that Paynim hold.

Spenser. Faerie Queene, book i. can. 6.

A false infamous faitour late befel
Me for to meet that semed ill bested,
And played of grievous *outrage* which he red,
A knight had wrought against a lady gent.

Id. Ib. book ii. can. 1.

— Therewith upon his crest
With rigor so *outrageous* he smitt,
That a large share it hew'd out of the rest,
And glauncing downe his shield from blame him fairly blest.

Id. Ib. book i. can. 2.

With his owne swerd he fierce at him did flye,
And strooke, and foynd, and lasht *outrageously*.
Withouten reason or regard.

Id. Ib. book ii. can. 8.

There being nothing so extravagant and *outrageously* wild, which
a mind once infected with atheistical sottishness and disbelief, will
not rather greedily swallow down, than admit a Deity.

Cudworth. Intellectual System, book i. ch. iii. fol. 106.

I do not mean *outrageousness*, for he would discourse rationally
enough, and be facetious in company, but a deep conceit and fancy
that his perspiration turned into flies, and sometimes bees.

Wood. Athenæ Oxonienses, vol. ii. fol. 592.

Virgil (more discreet than Homer in that last particular) has con-
tented himself with the partiality of his deities, their favours, their
counsels, or commands, to those whose cause they had espoused,
without bringing them to the *outrageousness* of blows.

Dryden. Juvenal. Dedication.

In Ceylon, the common soldiers robbed the natives at pleasure,
and the commanders added rapes and adulteries, "till the people,"
says Faria, "sought refuge among the wild beasts of the mountains
to shun the more brutal *outrage* of men."

Mickle. History of the Portuguese Empire in Asia.

OUTREACH, v. D. *uit-reycken*, *extendere*, *porri-
gere*.

To *reach* beyond; further than; to exceed or excel in
reach or extent. See OVER-REACH.

For then me thought a thousand graces met
To make you lovely, and ten thousand stories
Of constant virtue, which you ther *out-reach'd*,
In one example did proclaim you rich.

Beaumont and Fletcher. Love's Pilgrimage, act v. sc. 4.

OUTREASON, v. to *reason* more than, better than,
to exceed or excel in *reasoning*, argument, or disputa-
tion.

Like Saul upon his being anointed king they step forth men of
another spirit, great linguists, powerful disputants, able to cope with
the Jewish Sanhedrim, to baffle their profoundest rabbies, and to
out-reason the very Athenians.

South. Sermons, vol. vii. p. 35.

OUTRECKON, v. to *reckon* beyond, more than;
to exceed in *reckoning*, counting, or numbering.

— If there can be vertue, if that name
Be any thing but name and empty title,
If it be so as fools have been pleas'd to feign it,
A power that can preserve us after ashes,
And make the names of men *out-reckon* ages,
This woman has a God of vertue in her.

Beaumont and Fletcher. Valentinian, act i. sc. 1.

OUTREDE, v. to *read* better than, more wisely; to
excel or exceed in *reading* or counselling; in giving
read, (A. S. *ræd*.) or counsel.

As sooth is sayd, elde hath gret advantage,
In elde is bothe wisdom and usage:
Men may the old *out-runne* but not *out-rede*.

Chaucer. The Knightes Tale, v. 2451.

OUTREIGN, to *reign* beyond, more than, longer
than; to exceed in the duration of the *reign* or rule.

In wretched prison long he did remaine,
Till they *out-raigned* had their utmost date,
And then therein reseized was againe.

Spenser. Faerie Queene, book ii. can. 10.

OUTRI'DE, v. } To *ride out*; to *ride* beyond,
OUTRI'DE, n. } further than, faster than; to *ride*
OUTRI'DER, } out, or at a distance from, sc. as
OU'TROAD, n. } guard or attendant; also as tra-
veller.

Outroad, road or *ride out*; sc. from one place or
country to another; excursion.

A monk there was, a fayre for the maisterie,
An *out rider*, that loved venerie.

Chaucer. Prologue to the Canterbury Tales, v. 166.

TRA. My lord, Sir John Vmfrenill turn'd me backe
With joyful tidings; and (being better hors'd)
Out-rode me.

Shakspeare. Henry IV. Second Part, fol. 75.

And he buylte vp Cedron, where he set horsemen and garisons,
that they might make *out-rides* by the waies of Judea, as the king
had commanded him.

Geneva Bible, Anno 1561. 1 Maccabees, ch. xv. ver. 41.

For this advantage age from youth has won,
As not to be *outridden*, though *outrun*.

Dryden. Palamon and Arcite.

Your province is the town; leaye me a small *outride* in the coun-
try, and I shall be content.

Somerville. To Mr. Hogarth.

OUTRIGHT, *right out*, straight, directly *out*; with-
out deviation, or delay, or hinderance; without any
qualifying circumstances; utterly, entirely, completely.

For as he [Troilus] felt both sorrow and care:
Euen so doe I most miser wight,
That am a Troilus *outright*.

Turbervile. The Louer in vtter despaire, &c.

Within a while after (as he that is falling is soone put ouer) the
frere made the foole madde *outright*, and broughte him blyndfielde
downe into the deipest doungeon of that deuellish heresy.

Sir Thomas More. Workes, fol. 483. *The First Part of the Con-
futation of Tyndall*.

"Is thys a king's a brother's part," quoth she,
"And to this end did I my grief unfold?"
Came I to heal my wounded heart to thee,
Where slain *outright* I now the same behold?"

Drayton. The Barons' Wars, book iii.

— When I had store of money,
I simper'd sometime, and spoke wondrous wise,
But never laught *outright*.

Beaumont and Fletcher. The Honest Man's Fortune, act v. sc. 1.

OUT-
REASON.OUT-
RIGHT.

OUT-
RIGHT.
—
OUT-
SELL.

In which some hundreds on the place
Were slain *outright*, and many a face
Retrench'd of nose, and eyes, and beard,
To maintain what their sect averr'd.
Butler. Hudibras, part ii. can. 2.

OUTRING, to *ring* more than, louder than; to exceed in (the noise of) *ringing*.

Be dumb, ye infant-chimes, thump not your mettle,
That ne're *out-ring* a tinker and his kettle.
Corbet. On the Great Tom of Christ Church.

OUTRIVAL, *v.* to exceed in *rivalry*, emulation, or trial for supereminence.

Tho' there have been finer things spoken of Augustus than of any other man, all the wits of his age having tried to *outrival* one another on that subject, he never received a compliment, which in my opinion, can be compared for sublimity of thought, to that which the poet here makes him.
Guardian, No. 138.

OUTROAR, *v.* to *roar* more than, louder than.

O that I were
Vpon the hill of Basin, to *out roare*
The horned heard.
Shakspeare. Antony and Cleopatra, fol. 357.

OUTROOT, *v.* to *root out*; to eradicate.

I trust also your wisdom will not only consider the causes of this late most sharpe visitation, but also to your vttermost power endeavour to *outroote* them.
Fox. Martyrs, fol. 1918. Anno 1558.

OUTRUN, to *run out*, to *run* beyond, further or faster than; to exceed or excel in *running*; generally, to go or pass beyond, to exceed. See **OUTREDE** for an Example from Chaucer.

Th' expedition of my violent loue
Out-run the pawser, Reason.
Shakspeare. Macbeth, fol. 138.

Quoth Hudibras, friend Ralph, thou hast
Out-run the constable at last.
Grey. Hudibras, vol. i. part i. can. 3. p. 283.

To *outrun* the constable,
To spend more than one's allowance or income.
Ray. Proverbs, p. 125.

OUTRUSH, *v.* to *rush out*; to run forcibly *out*.

Forthwith *out-rush'd* a gust, which backwards bore
Our gallies to the Læstrigonian shore,
Whose crown Antiphates the tyrant wore.
Garth. Ovid. Metamorphoses, book xiv.

OUTSAIL, *v.* to *sail out* or beyond, further or faster than.

She may spare me her misen, and her bonnets, strike her main petticoat, and yet *outsail* me.
Beaumont and Fletcher. Wit without Money, act i. sc. 1.

OUTSCAPE, *n.* *scape* or *escape out*; means of *escape* or flight, (from danger,) of evasion.

For there we all had perisht since it past
Our powres to lift aside a log so vast,
As barr'd all *outscape*.
Chapman. Homer. Odyssey, book ix. fol. 136.

OUTSCOLD, *v.* to *scold* more than; louder, or longer.

DOL. There end thy braue, and turn thy face in peace,
We grant thou canst *out-scold* vs.
Shakspeare. King John, fol. 20.

OUTSELL, to *sell* for more, for a higher price than; to exceed in *sale*, or in gaining or obtaining a price.

He had his presses for 'em, and his wines
Were held the best, and *out-sold* other men's.
Beaumont and Fletcher. The Noble Gentleman, act ii. sc. 1.

Take notice, she has my commission
To add them in the next edition;
They may *out-sell* a better thing:
So halloo, boys; God save the king!
Swift. The Furniture of a Woman's Mind. (1727.)

OUT-
SKIP.

OUTSET, *n.* *D. uit-setten, exponere.*

Set or *setting out*; first step to proceed; beginning, commencement.

These masters, at least in the *outset* of their strains, were careful to preserve air.
Mason. On Church Musick, p. 140.

OUTSHINE, *v.* to *shine out*, beyond, more than; to exceed in brightness or brilliancy.

And all their tops bright glistening with gold,
That seemed to *out-shine* the dimmed skye,
And with their brightnesse daz'd the straunge beholder's eye.
Spenser. Faerie Queene, book v. can. 9.

And he, all him before that clearly did *outshine*.
Drayton. Poly-olbion, song 18.

I am a queen, a goddess, I know not what,
And no constellation in all Heaven, but I *out-shine* it.
Beaumont and Fletcher. The Humorous Lieutenant, act iv. sc. 1.

This done, whate'er a warrior's use requires,
He forg'd the cuirass that *outshines* the fires.
Pope. Homer. Iliad, book xviii.

OUTSHOOT, *D. uit-schieten, ejicere, ejaculari.*

To *shoot out*, to *shoot*, throw, or cast *out*, or beyond, further than.

Let a man contend to excell any competitors of his in honour, in *out-shooting* them if he can in their owne bowe.
Bacon. Essay 55. p. 313.

OUTSHUT, *D. uit-schutten; excludere.*

To *shut out*; to exclude or close (met. the ears) against.

7. He hath hedg'd me, lest I scape and added more
To my steel fetters, heavier than before.
8. When I cry out, he *outshuts* my prayer.
Donne. The Lamentations of Jeremy, ch. iii.

OUTSIDE, the external or exterior *side* or part; opposed to *inside* or internal part; external face or appearance; surface; extremity.

There where you may *over-see*
This rolling world, and view it as it is;
And apprehend how th' *outsides* do agree
With the inward; being of the things we deem
And hold in our ill-cast accounts, to be
Of highest value, and of the best esteem.
Daniel. To the Countess of Bedford.

In that case, indeed, there may be great need of an *outside*, where there is little or nothing within.

South. Sermons, vol. v. p. 435.

This impotent pride can do no more than regulate the *outside*, and with infinite pains and attention compose the language and countenance to a philosophical dignity in order to deceive the ignorant vulgar.

Hume. Essay 15. vol. i. p. 133.

OUTSKIN, the external *skin*.

And those who cannot penetrate beyond
The bark and *out skin* of a commonwealth,
Or state.
Beaumont and Fletcher. The Coronation, act v. sc. 1.

OUTSKIP, *v.* to *skip* or jump *out* or beyond; *out* of the reach of.

Thou lost thyselfe, child Drucus, when thou thought'st
Thou could'st *out-skip* my vengeance: or out-stand
The power I had to crush thee into ayre.
Ben Jonson. Sejanus, act ii. fol. 331

OUT-
SKIRT.**OUTSKIRT**, external *skirt* or division, (A. S. *scir-an*, to sheer, to separate or divide.)OUT-
STRETCHThey might keepe both the O'Relies, and also the O'Ferrals, and all that *out-skirt* of Meath, in awe.
Spenser. Works, vol. viii. p. 469. *View of the State of Ireland*.**OUTSLEEP**, *uit-slapen*, *edormire*.

To sleep beyond, longer than.

Louers to bed, 'tis almost fairy time.

I fear we shall *out sleepe* the comming morne,As much as we this night haue *ouer-watcht*.*Shakspeare. Midsummer Night's Dream*, fol. 162.**OUTSOUND**, to sound more than, louder than; to exceed in sound or noise.

For to scold is ill,

For every tongue's the clapper of a mill,

And can *out-sound* Homer's *Gradius*.*Cowley. A Poetical Revenge*.**OUTSPEAK**, *v. D. uit-spreken*, *eloqui*, *effari*.

To speak out or beyond, more than; to exceed in speech or language.

The seuerall parcels of his plate, his treasure,
Rich stuffes, and ornaments of household, which
I finde at such proud rate, that it *out-speakes*
Possession of a subject.*Shakspeare. Henry VIII*, fol. 220.**OUTSPIN**, *v. to spin out*; to exhaust.

Oft times when Giles doth finde

Harsh sights at home, Giles wisheth he were blind.

All this doth Jone. Or that his long-yearn'd life

Were quite *out-spun*. The like wish hath his wife.*Ben Jonson. Epigramme 42*.**OUTSPORT**, *v. to sport more than*; to exceed in sport or play.**OTHEL.** Good Michael, looke you to the guard to night.

Let's teach ourselues that honourable stop,

Not to *out-sport* discretion.*Shakspeare. Othello*, fol. 391.**OUTSPRING**, *v. to spring out*, to rise or issue out.Duntes þer were strong ynou, þat þe fur *out sprong*
Of þe helmes al about, & somme velle among.*R. Gloucester*, p. 460.As that there comen is to Tyrians court
Æneas one *outsprong* of Troyan blood,
To whom fair Dido wold her self be wed.*Surrey. Virgil. Æneis*, book iv.**OUTSTARE**, *v. to stare out*; more than; to exceed in, or by staring, or looking with strained eyes.**THEOD.** These truths are no man's tales, but all men's troubles,They are, though your strange greatness wold *out-stare* um.*Beaumont and Fletcher. Thierry and Theodoret*.**OUTSTAND**, *D. uit-staen*, *ex-stare*.To stand out; beyond, longer than; to stand out;
sc. in opposition or resistance, to resist. (See **OUTSKIP**, for an Example from Ben Jonson.)Therefore, I shall beseech you, if you please
To greet your lord with writing, doo't to night,
I haue *out-stood* my time, which is materiall
To th' tender of your present.*Shakspeare. Cymbeline*, fol. 375.**OUTSTRETCH**, *v. D. uit-strecken*; *Ger. austrecten*, *ex-porrigere*.

To stretch out or beyond; to expand, to extend.

And doune on knees he gan to fall
And forth his necke and heed *out-strought*
To drinke of that well a draught.*Chaucer. The Romant of the Rose*, v. 1515.The silken downe with which his backe is dight,
His broad *outstretched* hernes, his hayrre thies,
His glorious colours, and his glistening eies.*Spenser. Muirpotmos*.We that have liv'd free in despite of fortune,
Laught at the *out-stretch'd* arm of tyranny,
As still too short to reach us, shall we faint now?*Beaumont and Fletcher. The Double Marriage*, act iv. sc. 1.**OUTSTRIKE**, to strike out.This sentence serves and that my hand *out-strikes*;

That pleaseth well, and this as much mislikes.

Drayton. England's Heroical Epistles. Matilda to King John.**OUTSTRIP**, *Ger. streiffen*, is *excurrere*, to run out: which (Wachter) seems to differ from *streichen*, to stretch, only in convertible letters. The same change takes place in *streichen* and *streiffen*, to strike.

To stretch or reach beyond; to excel or exceed in stretching or extending; to excel or exceed, to pass by.

Which nourish'd and bred up at her most plenteous pap,
No sooner taught to dade, but from their mothers trip,
And in their speedy course strive others to *outstrip*.*Drayton. Poly-olbion*, song 1.With such array Harpalice bestrode
Her Thracian courser, and *outstripp'd* the rapid flood.*Dryden. Virgil. Æneid*, book i.**OUTSUBTLE**, *v. to be more subtle than*; to exceed in subtilty or craft.**DEL.** The devil I thinkCannot *out-subtle* thee.*Beaumont and Fletcher. Monsieur Thomas*, act iv. sc. 2.**OUTSUFFER.** See **OUTLABOUR** for the Example.

To suffer more than; to exceed in suffering, bearing, or enduring.

OUTSWEAR, *v. to swear more than*, to exceed in swearing.**POR.** Thou maist—I warrant, we shall have old swearing

That they did give the rings away to men;

But weele *out-face* them, and *out-sweare* them too.*Shakspeare. Merchant of Venice*, fol. 189.**OUTSWEAT**, *v. to sweat it out*; labour, toil it out.Out upon't, caveat emptor, let the fool *out-sweat* it, that thinks he has got a catch on't.*Beaumont and Fletcher. Wit without Money*, act i. sc. 1.**OUTSWEETEN**, *v. to be sweeter than*; to exceed or excel in sweetness or fragrance.

No, nor

The leafe of eglantine, whom not to slander,

Out-sweet'ned not thy breath.*Shakspeare. Cymbeline*, fol. 389.**OUTTA'KE**, } *Outtake: take out*, except; *out-*
OUTTA'KEN. } *taken*, being taken out or excepted.

In alle Breteyn was nouht; siþen Criste was born,

A fest so noble wrought aftere no biforn,

Out tak Carleon, þat in Arthure tyme,

þare he bare þe coroune, þereof git men ryme.

R. Brunne, p. 332.And Poul seide, I desire anentis God bothe in litil and in greet
not oonli thee but alle these that heeren to dai to be maad such as I
am, *outakun* these boondis.*Wiclif. The Dedis of Apostlis*, ch. xxvi.

And ye, my moder, my souveraine plesance

Over all thing, (*outtaken* Christ on loft,)

Custance your child hire recommendeth oft

Unto your grace.

Chaucer. The Man of Lawes Tale, v. 4697.Cōmaunde y^e streyghtlye, y^t no markettes nor seruile warkys be
holden vpon y^e Sondag, in ye londys of thy lordeshyp, *outtake* that
longeth to dressynge of mete.*Fabyan*, vol. i. ch. 238. p. 276.OUT-

TAKE

OUT-
TAKE.
—
OUTVIE.

But now and then *outtakingly*,
he wil be ouer seene;
And bring such stuffe, wherof the most
omitted might haue bene.

Drant. *Horace. Satyre 10.*

OUTTALK, to *talk* more than; to exceed in *talk*ing
or speaking.

GRE. What, this gentleman will *out-talke* vs all.
Shakspeare. Taming the Shrew, fol. 212.

OUTTELL, to *tell* or count beyond, more than; to
exceed the reckoning.

VIOLA. This is the place, I have *out-told* the clock,
For haste, he is not here.
Beaumont and Fletcher. The Coxcomb, act i. sc. 1.

OUTTHROW, to *throw* or cast out.

Firebrand of hell first tynd in Phlegeton
By thousand furies, and from thence *outthrown*,
Into this world to worke confusion
And set it all on fire by force unknowen,
Is wicked discord.

Spenser. *Faerie Queene, book iv. can. 2.*

OUTTOP, to rise beyond with the *top* or head; to
exceed by the *top* or head: to become more elevated.

The treasurer began then to *out-top* me, and appeared to my
thoughts, likely enough by his daring and boldnesse, (two virtues
very powerful and active upon our royal master,) in time to do as
much to your grace.

Cabbala, p. 94. The Lord Keeper to the Duke, May 24, 1624.

OUTVALUE, to *value* beyond, or more than; to
exceed in *value*, estimation, or price.

As for spiritual goods, he gives us in this life so rich an earnest
of expected joys, that even the earnest is a stock large enough to
subsist with comfort on, and really *out-values* and transcends all
those momentary pleasures it requires us to forsake, to keep up a
title to eternal ones.

Boyle. *Works, vol. i. p. 281. Seraphic Love.*

OUTVENOM, to *envenom* more than; to exceed in
venom or poison.

No, 'tis Slander,
Whose edge is sharper than the sword, whose tongue
Out-venomes all the wormes of Nyle.

Shakspeare. Cymbeline, fol. 382.

OUTVIE, *v.* to exceed or excel in *envious* strife or
contest; (Fr. *renvier, re-envier*, to revy. See REVIE,
and VIE.) To exceed in rivalry or emulation, in trial for
supereminence.

Hurd found this word in Addison's *Italy*, and did
not know that Addison had any authority for the use of
it: he deems it a word of an ill-composition.

TRA. Why then the maid is mine from all the world
By your firme promise, Gremio is *out-vied*.

Shakspeare. Taming of the Shrew, fol. 217.

Thou all the Grecian dames dost far *outvie*.

Sherburne. The Rape of Helen.

Now I appeal to all wise men, that an extensive waste of treasure
hath been within these few years in this land, not in the expedient,
but in the idolatrous erection of temples beautified exquisitely to
out-vie the papists.

Milton. Works, vol. i. fol. 20. Reformation in England.

The signs hang thinner in the strand,
The Dutch scarce more infest the land,
Though Egypt's locusts they *outvie*,
In number and voracity.

Dorset. The Antiquated Coquet.

I believe, it would put Lucifer himself hard to it, to *out-vye* the
pride of one of those fellows, pouring out his extempore stuff
amongst his ignorant, factious followers, listning to and applauding
his copious flow of cant with the ridiculous accents of their imper-
tinent groans.

South. Sermons, vol. ii. p. 116.

Those nothing will satisfy, but such a faith as shall *out-vie* Omni-
potence itself, by believing more than even Omnipotence can do, I

mean contradictions; and especially that grand astonishing one to
all human reason, called transubstantiation.

South. Sermons, vol. v. p. 198.

Living, great Nature fear'd he might *outvie*
Her works; and, dying, fears herself may die.

Pope. On Sir Godfrey Kneller.

Ere vanity had so far conquer'd sense
To make us all wild rivals in expense,
To make one fool *strive* to *outvie* another,
And ev'ry coxcomb dress against his brother.

Churchill. The Times.

OUTVILLAIN, *v.* to exceed in *villainy*, or rascality.

CAP. G. He hath *out-villain'd* villanie so farre, that the raritie re-
deemes him.

Shakspeare. All's Well That Ends Well, fol. 248.

OUTVOICE, *v.* to exceed in *voice*, loudness of *voice*
or clamour.

Men, wyues, and boyes,
Whose shouts and claps *out-voice* the deep-mouthed sea.

Shakspeare. Henry V. fol. 91.

OUTVOTE, *v.* to *vote out*; beyond or more than;
to exceed by *voting*.

Sense and appetite *outvote* reason, in which thing alone is sum-
med up all the misery of our nature, and the very cause that so
few are saved.

South. Sermons, vol. viii. p. 166.

OUTWAIL, *n.* Skinner infers from the context
that Chaucer means

A subject for lamentation or much moaning.

Ye gave me ones a divine responsaile,
That I should be the floure of love in Troy,
Now am I made an unworthy *outwaile*,
And al in care translated is my joy.

Chaucer. The Testament of Creseide.

OUTWALK, to *walk* more than, longer, further, or
faster than.

Yes and out-watcht,
Yea, and *out-walked* any ghost alive
In solitarie circle.

Ben Jonson. The Fortunate Isles. Masque for the Court, 1626.

OUTWALL, external *wall*; that which surrounds
or encloses as a *wall*; any exterior covering.

For confirmation that I am much more
Then my *out-wall*; open this purse and take
What it containes.

Shakspeare. Lear, fol. 296.

OUTWARD, *adj.* } Out and ward, in the A. S.

OUTWARD, *n.* } ward or weard, the imperative

OUTWARDLY. } of the verb ward-ian or weard-

ian, to look at, or to direct the view. See INWARD.

Thus *outward* will mean, with the view directed out,
without. And generally,

External or exterior.

An ladde hyre *outward* of þe chyrche.

R. Gloucester, p. 339.

Thus [Walter] lowly, nay but really
Wedded with fortunat honestete,
In Goddes pees liveth ful easily,
At home, and grace ynough *outward* had he.

Chaucer. The Clerkes Tale, v. 8300.

The idol of a thing in case may be
So depe enprinted in the fantasie,
That it deludeth the wittes *outwardly*

Id. The Complaint of Creseide, p. 298.

And for that he is suche one holde
Dame Auarice hym hath with holde,
As he whiche is the principall,
Outwarde for he is ouer all
A purueour, and an espie.

Gower. Conf. Am. book v. p. 138.

And how to hide my harmes with soft dessembling chere,
Whan in my face the painted thoughts would *outwardly* apere.
I know how that the blood forsakes the face for dred;
And how by shame it stains again the chekes with flaming red.
Surrey. Description of the Fickle Affections, &c.

OUTVIE.
—
OUT-
WARD.

OUT-
WARD.OUT-
WEEP.

But vertue's seat is deepe within the mynde,
And not in *outward* shows but *inward* thoughts defynd.
Spenser. Faerie Queene, book vi. can. 1.

To keepe her constancie in plight and youth,
Out-living beauties *out-ward*, with a minde
That doth renew swifter than blood decaies.
Shakspeare. Troylus and Cressida, fol. 91.

And though his limbs could not his bodie beare,
Ne former strength returne so suddenly,
Yet chearful signes he shewed *outwardly*.
Spenser. Faerie Queene, book iv. can. 11.

For what almost could be *outwardly* done which these men did
not do, with great advantage, pomp and solemnity of performance?
South. Sermons, vol. viii. p. 4.

Lo! from the *outward* cave they rush'd to view,
And thickening, round the sacred circle drew.
Hoole. Orlando Furioso, book iii. l. 148.

To them the windows are drawn up, and clear
Nothing that does not *outwardly* appear.
Byrom. Thoughts on the Constitution of Human Nature.

OUTWATCH, *v.* to watch more than; to exceed in
watchfulness or vigilance. See **OUTLABOUR**, an Example
from **Davenant**, and **OUTWALK**, one from **Ben Jonson**.

Or let my lamp at midnight hour
Be seen in some high lonely tow'r,
Where I may oft *out-watch* the Bear,
With thrice-great *Hermes*.
Milton. Il Penseroso, l. 87.

OUTWAY, *way*, path, or passage *out*.

Itself of larger size, distended wide,
In divers streets, and *outways* multiply'd.
P. Fletcher. The Purple Island, can. 5.

OUTWEAR, to wear *out*, to decay.

To wear *out*, longer than; to last (in wearing)
longer than; to outlast.

Loe! I have made a calender for every yeare,
That steele in strength, and time in durance shall *outweare*.
Spenser. Shepherd's Calendar. December.

But so great joy our life at once *outweares*.
Donne. The Prohibition.

————— Their knot of loue
Ti'd, weav'd, intangl'd with so true, so long,
And with a finger of so deep a cunning
May be *out-worn*, never undone.
Beaumont and Fletcher. The Two Noble Kinsmen.

MAN. Wilt thou then serve the Philistines with that gift
Which was expressly given thee to annoy them?
Better at home lie bedrid, not only idle,
Inglorious, unemploy'd, with age *out-worn*.
Milton. Samson Agonistes, l. 581.

The Lord shall write it in a scroll
That ne'er shall be *out-worn*. *Id. Psalm 87. l. 22.*

OUTWEARY, to weary *out*; to tire or fatigue *out*.

Five hundred rolling years hath this stiff nation strove
T'exhaust the boundless stores of our unfathom'd love.
Be't so then.—Yet once more are we resolv'd to try
T' *outweary* them through all their sins' variety.
Cowley. The Davideis, book iv.

OUTWEED, to weed *out*; to pull *out*, throw *out*,
as weeds.

Wrath is a fire, and jealousy a weed;
The sparks soon quench, the springing weed *outweed*.
Spenser.

OUTWEEP, to weep more than; to exceed in weep-
ing or shedding, *sc.* tears or other liquid, See in **OUT-
PRAY** an Example from **Dryden**.

This said, his eies *outwep'd* his widest wound.
Davenant. Gondibert, can. 5.

Oppos'd to him the childless mother raves,
And far *out-weep*s her lord.
Lewis. Statius, book vi. l. 44.

OUTWEIGH, *D. uit-weghen, expendere.*
To weigh *out*; to weigh more than, heavier than; to
exceed in *weight*, in value; met. in importance.

————— She shortly hopes,
By her acquaintance with the friends she hath,
To get a place shall many times *outweigh*
Our great expences.
Beaumont and Fletcher. The Noble Gentleman, act ii. sc. 1.

Since evil *outweighs* good, and sways mankind,
True fortitude assumes the patient mind.
Savage. The Wanderer, can. 2.

OUTWELL, to well *out*; to rise, spring, issue *out*.

When Teucrian soyle with bloodie rivers swelde,
And wide Stigæan shores were spread with corse,
And Simois and Xanthus blood *out-welde*.
Spenser. Virgil. Gnat.

OUTWENT, to wend or go beyond, further or faster
than; to outgo, *q. v.*

Yet fled she fast and both them farre *out-went*,
Carried with wings of feare, like fowle aghast,
With locks all loose, and rayment all to rent;
And ever as she rode her eye was backward bent.
Spenser. Faerie Queene, book v. can. 8.

And the people saw them departing, and many knew him, and
ran a foot thither out of all cities, and *outwent* them, and came to-
gether unto him.

Bible. Modern Version. Mark, ch. vi. ver. 33.

OUTWHIRL, to whirl faster than; to exceed in
whirling, or flying round.

O Cynthia! why so pale? Dost thou lament
Thy wretched neighbour? Grieve to see thy wheel
Of ceaseless change *outwhirl'd* in human life.
Young. The Complaint. Night 1.

OUTWIN, *v.* to win, gain, or get, *out*.

It is a darksome delve farre under ground
With thornes and barren brakes environ'd round,
That none the same may easily *out-win*.
Spenser. Faerie Queene, book iv. can. 1.

OUTWIND, *v.* to wind *out*; to twist or twine *out*.

————— When shalt thou once *outwind*
Thy self from this sad yoke.
More. Life of the Soul, vol. ii. p. 71.

OUTWING, to exceed in swiftness of wing; to ex-
ceed in swiftness or flight.

As she attempts at words his courser springs
O'er hills and lawns, and ev'n a wish *outwings*.
Garth. Ovid. Metamorphoses, book xiv.

OUTWIT, to wit or to wis, better than; to exceed
or excel in wit or wisdom, in craft or subtilty. Chaucer
uses *in-wit*, *i. e.* ingenuity.

Such [men] as with all these advantages of parts and study, had
been toiling and plodding many years to *out-wit* and deceive them-
selves.
South. Sermons, vol. ii. p. 143.

For if this [after repentance] shall interpose between the com-
mission of sin and the punishment of it, he concludes, upon the
stock of all God's promises to the penitent, that he is past danger;
and consequently has *outwitted* the law and the curse, and so stands
rectus in curia, in spite of all the threatenings of death and damna-
tion.
Id. Ib. vol. iv. p. 159.

No—fled from these, the sons of fortune find
What poor respect to wealth remains behind.
The mock regard alone of menial slaves,
The worship'd calves of their *outwitting* knaves.
Langhorn. The Country Justice, part ii.

OUTWORK, *v.* } To exceed or excel in *work* or
OUTWORK. } labour. See *ante*, **OVER-PICTURE**,
for an Example from **Shakspeare**. External or exterior

OUT-
WEIGH.
—
OUT-
WORK.

OUT-
WORK.

work; *work* raised or standing *outerly* or exterior to, *sc.* as a fortification.

OWE.

I will recommend unto you the care of our *outworks*, the navy royal and shipping of our kingdom, which are the walls therof.

Bacon. Works, vol. ii. p. 270. *Advice to Sir George Villers.*

Meanwhile the foe beat up his quarters
And storm'd the *outworks* of his fortress.

Butler. Hudibras, part iii. can. 1.

'Tis good to take these *outworks* to his pelf,
But best to storm the citadel itself.

Francis. Horace. Satire 5, book ii.

OUTWORTH, to exceed in *worth*, value, or price.

A beggar's booke,
Outworths a noble's blood.

Shakspeare. Henry VIII. fol. 206.

OUTWREST, to *wrest out*; to draw or drag out by force, *sc.* of the *wrist*.

Let coarse bold hands from slimy nest
The bedded fish in banks *out-wrest*,
Or, curious traitors, sleeve-silk flies
Bewitch poor fishes' wand'ring eyes.

Donne. The Bait.

OUTWROUGHT, perhaps *out-raught*, *i. e.* *out-reached*; *reached*, stretched, beyond, further than; exceeded.

But, in your violent acts,
The fall of torrents, and the noyse of tempests,
The boyling of Charybdis, the seas wilderness,
The eating force of flames, and wings of windes,
Be all *out-wrought*, by your transcendent furies.

Ben Jonson. Catiline, act iii. fol. 631.

OUTZANY, to exceed or excel as a *zany* or simpleton.

Thou dost *out-zany* Cokely, Pod; nay, Gue:
And thine owne Coriat too. But (would'st thou see)
Men love thee not for this; they laugh at thee.

Ben Jonson. Epigramme 130.

OVULA, in *Zoology*, a genus of *Gasteropodous Mollusca*.

Generic character. Shell turgid, attenuated at each end; the margins convolute; aperture longitudinal, narrow, effuse at the extremities, the left margin toothless; body spirally convolute posteriorly; enveloped by the shell; foot free, flattened, attached to the lower base of the neck.

Type of the genus, *Bulla ovum*, Linnæus; Lister, pl. 711, fig. 65. Inhabits the Indian Seas.

OVULITES, in *Zoology*, a genus of *Polypi*.

Generic character. Stony, polypiferous mass, free, egg-formed, or cylindrical, hollow interiorly, often pierced at both ends; cells simple; pores very small, regularly disposed on the surface.

This genus is known only in a fossil state.

OWE, *v.* } Goth. *aigan*; A. S. *agan*, *agnian*;
OWN, *adj.* } Ger. *eigen*; D. *eigenen*; Sw. *æga*; *ha-*
OWN, *v.* } *bere*, *possidere*; *proprium esse vel habere*,
OUGHT, *v.* } *tenere*, *retinere*. *Owe* is formed from

the A. S. *ag-an* by softening the guttural *g* into *w*, *aw*, *owe*. The regular past participle is *owen*, *own*; also *owed*, *owt*, *ought*.

To *owe* is to possess, or hold, or have, or keep in possession. In Beaumont and Fletcher, I know not how long I shall *owe* it; *i. e.* keep it, have it; also to have, keep, or retain (*de-habere*, *debere*) what belongs to, is *due* to, another. In Wiclif, How much *owist* thou my Lord? how much hast thou, holdest or retainest thou, that belongs to, is the property of, is *due* to my Lord, which *ought* at some time to be delivered or paid to him.

To *own*; formed upon the past participle, *owen*, and meaning *possessed*. The carle that *owned* the good: who had or possessed them, or the property or right to property in them; who claimed or *declared* them to be his. And hence, to *own* is generally,

To declare, to avow, to profess, to confess, acknowledge.

Ought, also the preterperfect and past participle of *owe*, and used likewise in the present tense, as a verb formed upon them;

The one *ought* five hundred pence; *i. e.* *owed*.

The man that *ought* the dog; *i. e.* *owned*.

Neither sones *owen* to treasure; *i. e.* *ought*.

That keep'st me from the house I *owe*; *i. e.* *own*.

Ought, (as now used.) The children *ought* not to lay up for the fathers; that is, *owe* it not, it is not their duty; are not bound or obliged, or required by *duty* on their own part; by right of others. And thus *ought*,

To be bound or obliged; to behove or be behoveful, to be needful or necessary.

Own, (contr. *owen*.) Goth. *aigin*, *aihn*; A. S. *agen*; D. *eygen*; Ger. *eigen*; Sw. *egen*, *proprium*.

Possessed, *sub.* property; and hence used substantively; property; any thing appropriated to, or peculiarly and exclusively belonging to, due to, or thought of. Used adjectively, it is emphatical, as my child, my *own* child.

Thrice shriek'd the fun'ral *owl*, yet on she went,
Secure of shame, because secure of sight.
Dryden. Ib. book x.

The Church-history making an important part of our theologic studies, the antiquarian, who delights to solace himself in the benighted days of monkish *owl-light*, sometimes passes for the divine. *Warburton. Works*, vol. ix. p. 376. *Charge to the Clergy of the Diocese of Worcester.*

Though thou, vile cynic, art the age's shame,
Hope not to damn all living fame;
True wit is armed in scales so bright,
It dazzles thy dull *owlish* sight.

Observer, No. 102.

OW'LER, } Blackstone (book iv. ch. xii.) seems to
OW'LING. } intimate that *owling* (the offence of transporting wool) received its name from the time when it was usually committed, viz. the night, when *owls* fly; by others it is thought to be a corruption of *woolling*, *ooling*, *owling*.

We understand, by some *owlers*, old people die in France.

Tatler.

OWLING, in *Law*, was the offence of transporting wool or sheep out of the Country. This was forbidden by the Statute 11 Edward III. c. 1. when the importance of our woollen manufacture was first attended to; and various Statutes were passed from time to time for the purpose of enforcing the prohibition. The Statute 8 Elizabeth, c. 3. which Blackstone calls the most useful and principal one on the subject, enacted, that for the first offence the offender should forfeit the goods, be imprisoned for a year, and at the end of the year have his left hand cut off in some public market, and there nailed up in the openest place; and that the second offence should be felony. By later Statutes the punishment was made transportation for seven years. But by 5 George IV. c. 47. all these Acts were repealed, and the exportation of wool, of woollen manufactures, of live sheep and lambs, of hare and rabbit skins, and wool was permitted upon payment of certain duties. Whether the old prohibition was productive of advantage to the community cannot now be precisely ascertained. It would seem, however, that by prohibiting the exportation of its own wool, England encouraged the wool growers of other Countries; and it is a curious fact that in later years there has been a great struggle on the part of those who are fond of putting restrictions upon commerce, to prevent the importation of foreign wool, which seems to show that the superiority of the English wools has been lost by some means or the other. If the importation of foreign wool had been successfully resisted it is possible that the superiority of English woollen manufactures also might have been endangered; because the manufacturers would have been prevented from obtaining the raw material of the best quality, and the

English wool growers would not have had the stimulus of competition to induce them to improve their wools, so that the foreign manufacturers would have gained a great advantage over the English.

OX, } Goth. *auhs*; A. S. *oxa*; D. *osse*; Ger. *ochs*; Sw. *ore*. Junius derives from *avǵav-eiv*, *augere*, (Ger. *auchen*, *augere*, *multiplicare*, Wachter; Goth. *aukan*, A. S. *eac-an*, to eke,) because the *ox*, *pater armenti*, increases the herd and the wealth of his owner. Ihre rather believes from *ok*, a yoke, the *ox* being *animal subjugale*. His difficulty is to deduce *juk*, *jug-um*, and *auhsn*, *bos*, from the same root; in the latter word we may suppose the guttural *k* softened into *g*, and then entirely suppressed. If Ihre were right, a *bullock* would be a bull *yoked* or used for the *yoke*. Yoke itself is derived by Tooke from the same A. S. verb *eac-an*, *ican* to add, to join; *ge-ican*, to yoke. *Ox* is not now applied to the *pater armenti*, but to the bull after he is incapacitated from being so.

An pretty pound of seluer fram gere to gere,
And twenty þousend oxen.

R. Gloucester, p. 275.

For scripture seith thou schalt not bridele the mouth of the *oxe* threischinge.
Wiclif. 1 Timothy, ch. v.

For y^e scripture saith: thou shalt not mosell the mouth of the *oxe* y^t treadeth out the corne.
Bible, Anno 1551.

I have a wif parde as well as thou,
Yet n'olde I for the *oxen* in my plough
Taken upon me more than ynough
As demen of myself that I am on;
I wol beleven wel that I am non.

Chaucer. The Milleres Prologue, v. 3159.

But euery lust he shall forbere
Of man and like an *oxe* his mete
Of graspe he shall purchace and ete.

Gower. Conf. Am. book i. p. 39.

He toke a plough, where that it stood
Wherein anone in stede of *oxes*
He let do yoken great foxes,
And with great salt the londe he sewe.

Id. Ib. book iv. p. 108.

And the rebel king
Doubt'd that sin in Bethel and in Dan,
Lik'ning his Maker to the grazed *ox*.

Milton. Paradise Lost, book i. l. 491.

One way a band select from forage drives
A herd of beeves, faire *oxen* and faire kine
From a fat meddow ground.

Id. Ib. book xi. l. 647.

The Greek is *βοῶπις ὀρνίς* "Βῆν, which is commonly translated the venerable *ox-ey'd Juno*.

Pope. Homer. Iliad, book i. p. 45. note.

OXALIS, in *Botany*, a genus of the class *Decandria*, order *Pentagynia*. Generic character: calyx five-leaved; corolla petals connected at the base; stamens unequal, five being short, the exterior connected at the base; capsule bursting elastically at the angles, five-angled.

A numerous genus of elegant bulbous plants, natives of both hemispheres, a large proportion of the species are natives of the South of Africa, the flowers and foliage are beautiful, and the plants are well deserving of cultivation, as they occupy but a small space in the green-house. The *O. acetosella*, Wood Sorrel, is a native of England; frequent in woods. The leaves are agreeably acid, but should be eaten with caution, as the acid they contain is the oxalic.

OXFORDSHIRE.

OXFORDSHIRE.

Boundaries and extent.

OXFORDSHIRE, one of the central Counties of England, is bounded on the North by Northamptonshire, from which it is separated by the river Cherwell; and on the North-West by Warwickshire; on the East by Buckinghamshire; on the South, South-West, and South-East by Berkshire, from which it is divided by the rivers Isis and Thames; and on the West by Gloucestershire. Its figure is very irregular, since, at Oxford, in the centre of the County, its width does not exceed seven miles; while the diameter of its Southern division is about 12 miles; and in its Northern part it varies from little more than a mile to 38 miles across. As it stretches Northward from the centre, it diminishes like a cone until it terminates in a point or apex at a stone denominated the Three-Shire Stone. From North-West to South-West its extreme length is 50 miles; and its circumference is 130. The total area of the County is estimated at 742 square miles, or 450,000 acres; but the number of acres is computed to be 474,880 in the Table of Poor-rates which was drawn up under the inspection of the Right Honourable George Rose.

Surface.

The general aspect of this County is pleasingly diversified, exhibiting, in its Southern division more particularly, an agreeable alternation of hill and dale, which not unfrequently displays scenery of a highly picturesque order. This character is especially due to the Chiltern elevations, which, crowned in part with dense and rich forests of beech, and partly disclosing to the view tracts of arable ground, which serve to set off the woodland to great advantage, afford throughout their range many pleasing and pictorial effects. Its central portion consists of a level champaign, but the monotony usually attendant on a flat country is relieved by extensive woods and coppices, intersecting rich and fertile meadows; while the numerous and elegant country-seats which are scattered in every direction diversify and animate the scene. The Northern division is equally flat with the preceding, and is destitute of the relief of forest scenery. The fields in that part are also enclosed by stone fences; and its appearance is thus sterile and uninviting.

Soil.

Mr. Young, in his Agricultural Survey, divides the soils of this County into four classes: the Redland, the Stonebrash, the Chiltern, and the miscellaneous loams. "Three of these," the same acute observer says, "are so marked by nature, as to leave little doubt respecting them." The best of these soils is the Redland, met with for the most part in the Northern division of the County, and which being sound and friable, yet tenacious, is fitted for every agricultural purpose which the cultivators can require. This first and most fertile class of soil occupies about 79,635 acres. The second class, or the Stonebrash, forms by far the larger moiety of the central division of the County; and is considerably more extended than the first-named soil, being computed to cover a surface of 164,023 acres. This tract appears to be formed of abraded stone, and consists of a loose, dry, friable sand, or loam, which is in general well adapted to the culture of wheat and turnips. However, the quality of the land throughout this division differs greatly, yielding in some places a rich and deep soil, in others a poor and light one. The Southern, or Chiltern district, presents a sandy loam, varying considerably in depth, which is intermixed with

flints, and rests on a bed of chalk. This chalk is in some places very pure and white, but imperfect in others; and in all it contains a considerable portion of calcareous earth. The range of land occupied by this soil is estimated at 64,778 acres. The miscellaneous loams, under which head the remaining varieties of soil are included, from loose sand to heavy clay, occupy 166,400 acres.

Climate.

The climate of this County, considering its situation and latitude, is cold, and more particularly in the Western part of its Northern division, where the fences being for the most part stone walls, consequently afford but little shelter. From the same cause, the heat in the summer months is more than commonly oppressive. On the Chiltern hills, and the poor, white lands which skirt their base, the frosts take effect sooner, and continue longer than in the other parts of the County. In the Southern extremity of the Chiltern district the climate is usually moist, owing to the fogs which prevail more on the hills and woods than in the vales.

Agriculture.

On the arable lands, which form the greater portion of the County, the courses of cropping, even on similar soils, are very irregular. The Norfolk husbandry is generally followed; and the inclosures there have been very extensive. Wheat, barley, and oats are the corn crops usually sown, the first of which averages three quarters per acre, the second four, and oats five quarters. The common and the Swedish turnip are much cultivated, as well as clover, trefoil, and, on proper soils, sainfoin. Tares are grown to some extent; lentils and rape in but small quantities; and, as occasional crops, peas, beans, cabbages, carrots, and potatoes. The farmers are in the habit of sowing peas and beans mixed, which crop they call *poulse*. The system of cropping varies in the different districts. The usual course on the red lands is 1. turnips; 2. barley, or Spring wheat; 3. clover; 4. wheat; 5. beans or peas; and 6. oats. But, on the lighter lands of the Stonebrash district, the customary rotation is 1. turnips; 2. barley, with clover, rye grass, or trefoil, or mixed; 3. and 4. clover for one or two years; 5. wheat; 6. oats, peas, or beans. Of the grass land, the chief part is situated on the level tracts adjoining the rivers, the overflow of which in rainy seasons is sometimes destructive; although, in general, the land is enriched by the muddy deposit left behind. In the central part of the County calves are reared in great numbers for the supply of the London market; and in parts of that district, cattle and sheep also are fattened for the same purpose. It supplies butter likewise in considerable quantities; which article is also produced in great abundance in other parts of Oxfordshire, particularly in the vicinity of Bicester. Little cheese is made here, and the produce of hay per acre is estimated to average nearly two tons. Lime, peat, and coal-ashes are extensively used as manure; and rags, in great quantities, are purchased in London for that purpose. The breeds of cattle most commonly seen in this County are the long-horned Leicestershire, the Alderney, and the Devon; and oxen of the Herefordshire breed are frequently employed in agricultural labour. Of sheep the South Down are the most common; and of hogs considerable numbers are fed for the making of brawn and sausages, for which, indeed, Oxford is noted. The farms are, generally

OXFORD-SHIRE. speaking, smaller than in most parts of England, the rents seldom exceeding £500, and being as low as £20 per annum. The average annual value of a square mile may be computed at £710; and the estates here are usually large, one rental producing £20,000, another £12,000, and several varying from £7000 to £3000.

Forests.

Few Counties in England are so well wooded as this; and it is said by Camden, to have been celebrated for its vast forests. The woodlands may be divided into the following classes: 1. groves on spring-woods; 2. woods, consisting of timber trees and underwood; 3. coppices of underwood alone. The waste lands, excepting the large tract of Whichwood Forest, are inconsiderable. This forest, with its thirty-four coppices, contains 6720 acres, and is subject to right of commonage for horses and sheep only. It belongs chiefly to the King and the Duke of Marlborough, and contains a quantity of thriving young oak timber, with ash, beech, and some elm. After the coppices have been cut, which takes place every eighteen or twenty-one years, they are fenced for seven years to the exclusion of all cattle except deer. The yearly worth of these coppices is about six shillings per acre. In the Chiltern district are very extensive, natural beech-woods, consisting, for the most part, of young trees, which spring up from the falling of the beech mast; and in several places, particularly at Blenheim, are large artificial plantations. The extensive Common of Otmoor, near Islip, six miles North of Oxford, which contains about 4000 acres, was enclosed by an Act obtained in 1815; and being commonable to eight adjoining townships, the poor inhabitants, who had been deprived of their rights of Common, after repeated acts of violence, met in so great numbers in 1830, that the military were called in. Most of the unenclosed parishes have tracts of waste, or down land, appropriated to pasturage; and at Kidlington is an extensive Common, which, from May 16 till Michaelmas, feeds 300 cows.

Rivers.

The chief rivers are the Thames, (or Isis,) the Cherwell, the Thame, the Evenlode, and the Windrush. Indeed, so well watered is this County, that seventy streams which have their course in it, are enumerated by some Topographers. The Thames rises in Gloucestershire, and uniting with several small streams near Lechdale, enters Oxfordshire at Elmscot, where it takes the name of Isis; and, after flowing hence in an Easterly and North-Easterly direction, until it has received the Windrush and the Evenlode, it turns to the South-East, and is joined by the Cherwell a little below Oxford. Running then through an extensive tract of rich, low meadow, it is joined by the Thame near Dorchester. It has been supposed that, from its junction with this small stream, it derives its name of Thames; but in various Grants and Charters, both during the Saxon sway and since the Conquest, it is denominated by the latter title in the higher parts of its course. Passing through Wallingford bridge, it begins to make an extensive sweep by the East to the North, enclosing the Southern extremity of the County, which it wholly quits below Henley, when it turns Eastward, and begins to form the boundary between Berkshire and Buckinghamshire. The principal fish contained by it in that part of its course which borders on Oxfordshire, are pike, chub, barbel, perch, eels, roach, dace, gudgeons, and sometimes salmon. The Cherwell enters this County at its Northern extremity, and soon after, in the vicinity of Banbury, becomes its Eastern boundary. On entering finally into Oxfordshire, it receives numerous smaller

streams; and, running Southward, joins the Isis at Oxford. The other rivers require no particular mention; yet it may be added, that the Windrush, which passes through Witney, is of great service, and essentially subservient to the manufactories of that town.

Oxfordshire, at the period of the Roman Conquest, was inhabited by the British Tribe of the *Dobuni*; who, to free themselves from the yoke of the *Cattiuchlani*, offered no resistance to the invaders, but embracing their protection, were immediately received as tributary allies of the Roman people. From this voluntary submission their Prince, Cogidumnus, was continued not only in possession of his lawful dominions, but had other territories also annexed to them; and these privileges were secured to his successors. Notwithstanding, however, that the Romans had, from peculiar circumstances, met with so easy a conquest, the *Dobuni* resisted the attacks of the treacherous Saxons with well-directed and long-continued resolution, being among the last of the Britons who succumbed to the Saxon yoke. On the establishment of the Heptarchy this County was annexed to the powerful Kingdom of Mercia; and during this era Dorchester became the seat of a Bishop's See; which, in the reign of William the Conqueror, was removed to Lincoln. At the same time the name *Dobuni* was merged in that of *Wiccii*. In the early period of the Norman Conquest, Oxford was stormed and burned by the Conqueror; and, in 1142, the Empress Matilda was besieged by King Stephen in the Castle of that place, for three months; at the expiration of which period, she found means to escape, accompanied by three Knights only. Several persons of consequence lost both their lives and properties here in the Civil Wars between the Houses of York and Lancaster; but, in comparison with other districts, it suffered but little from those sanguinary contests. Indeed, the only action of note which occurred within its limits was the battle of Danesmoor, near Banbury, when the Yorkists, under the Earl of Pembroke, were defeated by Sir John Conyers with a loss of more than 5000 men, and the Earl himself was made prisoner. This battle was fought July 26, 1469. Oxfordshire, however, during the next great Civil contests, was the scene of many memorable actions, and was a prey to all the miseries of that eventful and dreadful struggle. It was on Chalgrove Field in this County that the Parliamentarians were defeated by Prince Rupert, and John Hampden was mortally wounded, on June 18, 1642.

One of the most interesting remains of antiquity found in this County is the circle of high stones called *Roll-rich Stones*, in the vicinity of Chipping-Norton. These stones were originally sixty in number, of which twenty-two only are now standing, and they formed a circle nearly equal in diameter to the outer one at Stonehenge. Their size, however, since few of them exceed four feet in height and sixteen inches in breadth, dwindles into insignificance when compared with the huge masses of the Wiltshire Temple. One of the largest, which measures eight feet in height, and seven in breadth, is denominated the *King-stone*, from a tradition that an ancient Monarch and his Court were converted into stones on this spot. Several curious British coins have been found in the County, as well as Roman coins and tessellated pavements. Many *barrows* too are met with here; one of the most remarkable of which is termed *Asal Barrow*, in the vicinity of *Akeman Street*. There are but few relics of Roman military works in Oxfordshire, owing to the constant friendship maintained betwixt that people

History.

Antiquities.

OXFORD-
SHIRE.

and the ancient inhabitants. The traces of a Roman station may be observed at Alcester, or Aldchester, the *Alauna* of the Itinerary; and Dorchester and Swalcliff are believed to have been posts of some consequence. Of the four Roman roads, or Consular ways the *Ikenield Street* traverses the Southern part of Oxfordshire, from North-East to South-West; and its course may still be traced with tolerable accuracy. It enters from Buckinghamshire at the Parish of Chinnor, and proceeding along the base of the Chiltern Hills, leaves Lewknor, Shirburn, and Watlington to the North-West; and, passing Ipsden, may be followed within three miles of Goring. There are many vicinal ways in the County, of which the chief is the *Akeman Street*. This road enters Oxfordshire from Bucks, in the Parish of Ambrosden, and, stretching through the broadest part of the County, passes through Blenheim Park, and thence to Broadwell Grove, whence it continues in nearly a straight line towards Gloucestershire. Many minor roads branch off from it during its course; and a *vallum*, or long earth-work, called *Grime's Dike*, or *Devil's Ditch* runs between Mongewell and Nuffield. The principal places in the County, during the Saxon and Danish sway, were Banbury, Bensington, Birencester, or Bicester, Burford, Thame, Chipping-Norton, Bampton, Woodstock, and Islip. At this last-mentioned place King Edward the Confessor was born, and Woodstock was afterwards the residence of many monarchs of the Norman Dynasty. At Castleton, Adwell, Chipping-Norton, and some other places, may be traced the remains of Saxon and Danish encampments. Numerous fortresses were erected after the Conquest by the express mandate of William, in order to overawe his new subjects. The principal of these in Oxfordshire were the Castles of Oxford, Bampton, Banbury, Deddington, Ardley, and Middleton; all places of considerable strength, and still retaining marks of their former consequence as military positions. At the period of the Dissolution, the number of Religious houses in this County amounted to about forty. In this computation the Colleges of Oxford are of course not taken into the account. There are numerous fine specimens of Saxon or early Norman architecture throughout the Shire, and among these may be particularly instanced the Parochial Church of Iffley. Its private mansions likewise are numerous and magnificent. Blenheim House is well known as one of the most sumptuous residences in the Kingdom; and Ditchley Park, belonging to Lord Viscount Dillon, Nuneham-Courtney to the late Earl of Harcourt, and Wroxton Priory to the Earl of Guildford, may be instanced as a few, out of many, possessing both beauty and grandeur of appearance.

Ecclesiastical and Civil
Divisions.

This County lies in the Diocese of Oxford, and in the Province of Canterbury. It forms an Archdeaconry, comprising nine Deaneries and 212 Parishes; of which 99 are Rectories, 72 Vicarages, and the remainder Perpetual Curacies. Three Knights are returned to Parliament for the Shire; two Representatives for the City; two for the University of Oxford; and one for Banbury. Woodstock, which used to return two, was disfranchised by the Reform Bill. The Assizes are held at Oxford, where is the County Gaol, and the Quarter Sessions at the same City.

Geology
and Mineralogy.

This County does not present any object of interest to the Mineralogist. No metal of any kind is found here; and although Dr. Plot asserts that a silver mine was for-

merly worked in the Chiltern district, there appears to be no foundation for the report. Ochre of excellent quality and in considerable quantities is met with near Shotover, and a variety of clays is found in the vicinity of Oxford, which, however, from the superiority of those of Staffordshire for the purposes of pottery, have fallen into disuse. Quarries of freestone are numerous; limestone is plentiful; and slate, fit for roofing, is obtained in various parts. In the extensive bed of gravel on which Oxford stands, many curious fossils are found, such as fragments of the teeth, tusks, and bones of elephants, bones of the hippopotamus, horses' teeth, and horns of a species of stag, sometimes in a state of entire preservation. The medicinal springs (being chiefly chalybeate) are very abundant. The chief manufactures are the weaving of blankets at Witney, and those of gloves and articles of polished steel at Woodstock. The glove manufacture was begun about the middle of last century, and furnishes employment to numerous poor for many miles around. At Banbury is made a coarse kind of velvet called Shag; and large quantities of malt are sent from Henley to the London market. In the Southern part of the County the female poor derive a subsistence from lace-making.

Manufac-
tures.

Population, in 1801, 109,620; in 1811, 119,191; in 1821, 136,971; in 1831, 152,100. Population.

The rates raised in the County, for the year ending March 25, 1827, amounted to £139,005; the expenditure to £135,886, of which £119,738. 19s. were applied for the relief of the poor.

OXFORD, the capital City of the County, is situated at the junction of the Cherwell and the Thames, 54 miles West North-West of London. It is a Bishop's See, having been made so by King Henry VIII., and has been the seat of a University ever since the reign of Alfred, who once resided there. According to Camden, even in the times of the Britons, "the wisdom of our ancestors had consecrated this City to the Muses, translating them from Cricklade hither, as to a more fruitful nursery." Afterwards, in the days of their successors, the Saxons, a Monastery was founded here by St. Frideswide, whose shrine is now preserved in Christ Church Cathedral, which Monastery was burnt down, and rebuilt by King Ethelred. In the year 866, Alfred founded three Colleges for the study of Philosophy, Grammar, and Divinity. During the struggles with the Danes, Oxford suffered very severely; four times was it partly burned and plundered by them, viz. in the years 979, 1009, 1013, and 1032. Harold Harefoot, who was crowned here A. D. 1036, so cruelly revenged the death of some of his followers, who were slain in a quarrel, that the University remained almost in a ruined state until the invasion of William the Conqueror. The tradition that this Prince laid siege to Oxford A. D. 1067, and that it was deserted until A. D. 1129, is most probably erroneous; as we find that Ingulphus, who lived between these periods, was sent there to study, which proves that it must have had some character at that time, and that it was frequented as a University. It is certain, however, that he gave great part of it to a Norman, named Robert D'Oyley, who built the Castle A. D. 1071. Part of this fortress remains now, and is converted into a gaol. On the North of a street which bears the same name stood till very lately the remains of Beaumont Castle, which was built by Henry I., and in which Richard Cœur de Lion was born. The affrays between the University and the citizens, which have gradually

OXFORD-
SHIRE.

OXFORD. become less frequent, and have of late years ceased altogether, were in the reign of John so serious that many of the former quitted the town for a time. A Parliament was held here by Henry III. when he confirmed the privileges of the University, which at that time contained 30,000 students, and it was assembled here again, A. D. 1665, in consequence of the Plague raging in London. During the Civil War, Charles I. held his Court here, and the loyalty and attachment of many of the Colleges replenished his exhausted coffers by melting down their plate for his use. In the earlier days of the University, the students resided in the houses of Burghers, called Halls or Inns, which were consequently so numerous, that in the reign of Edward I., when only three Colleges had been founded, they are said to have amounted to 300, and Sir John Peshell enumerates from Wood's MSS. 200. As the number of Colleges increased, that of the Halls diminished, and in the reign of Elizabeth only eight remained, of which three were converted into Colleges, and consequently their number is now reduced to five.

Constitu-
tion of the
University.

Congrega-
tion.

The following is the Constitution of the University. It is a Corporate Body, known by the title of "the Chancellor, Masters, and Scholars of the University of Oxford," which style was confirmed by the 13th of Eliz. c. 29. It is governed by Statutes of its own forming, which were for a long time confused and undigested, until Archbishop Laud compiled his code, called *Corpus Statutorum Universitatis Oxoniensis*. The business of the University is transacted in two Houses, the House of Congregation and the House of Convocation; in both of which preside the Chancellor, Vice Chancellor, or one of his four deputies, and the two Proctors or their deputies. The House of Congregation consists wholly of Regents, either necessary or *ad placitum*. By necessary Regents is meant all Doctors and Masters of Arts during the year which commences with the first Act (the first Tuesday in July) after their respective degrees. Regents *ad placitum* are all Masters of Arts during the second year of their Regency, all Heads of Colleges and Halls, and in their absence their deputies, the Professors and Public Examiners, and the Deans of Colleges. The business of this House is principally confined to passing Graces and Dispensations, and granting Degrees, in which the Vice-Chancellor has an absolute negative singly, and the two Proctors jointly. Every Regent also has a suspending negative on each Grace three times, but before the fourth time he must state his reasons privately, and submit them to the decision of the House.

Convoca-
tion.

The House of Convocation consists both of Regents and Non-Regents, and its business extends to every thing connected with the welfare of the University. But if it be deemed necessary to enact any new Statute, the proposition must be referred first to the hebdomadal meeting of Heads of Houses.

University
Court.

The University Court, of which the Vice Chancellor, his deputy, or assessor, is Judge, has power over all Civil Actions in which a member of the University is one of the parties, except in cases wherein the right of freehold is concerned. From its sentence there is an appeal to delegates appointed by Congregation, thence to Convocation, and if all three agree, the decision is final, if not, the last resort is to Judges appointed by the Crown under the Great Seal in Chancery. In criminal matters, its jurisdiction extends to all offences under treason and felony, which are tried by the Court of the Lord High Steward of the University.

The University Officers are, 1. the Chancellor, who is elected by Convocation; this office was formerly triennial, and sometimes annual; the first Chancellor who was elected for life was John Russell, Bishop of London, A. D. 1484. He does not attend the meetings of the University, except at his Installation and at Royal visits. 2. The High Steward, who is appointed by the Chancellor, subject to the approval of Convocation. 3. The Vice Chancellor, who is annually nominated by the Chancellor from the Heads of Houses, with the approbation of Convocation; he chooses four deputies, called Pro-Vice-Chancellors, and generally holds his office for four years by annual nomination. He is a Magistrate of the University and the County of the City of Oxford, and of the County of Berks. 4. The Proctors are two Masters of Arts of at least four, and not more than ten years from their Regency; they were originally elected by vote, but in consequence of the disturbance this occasioned, they have been since the year 1629 chosen according to a cycle of the several Colleges. Their duty with their four deputies, who are four Masters of Arts chosen by themselves, is to enforce the discipline of the University. 5. The two Burgesses are elected by the Members of Convocation, and when once chosen generally are allowed to retain their seats for life. 6. The Public Orator is chosen by Convocation, and must be at least either B. C. L. or M. A.: he writes Letters and Addresses, presents those on whom the Honorary Degree of M. A. is conferred, and delivers the Creweian Oration alternately with the Professor of Poetry. This office was established by Queen Elizabeth in 1564. 7. The Registrar is elected by Convocation, and registers all Acts, Decrees, Statutes, Admissions to Degrees, &c., and is the only person authorized to give a certificate of graduation at the University. 8. The Clerks of the Market are appointed annually to take care of the assize of bread, the weights and measures, and to punish offenders, &c.

Professors.

There are five Regius Professorships, Divinity, Civil Law, Medicine, Hebrew, and Greek, founded by Henry VIII.; one Professorship of Divinity founded by Margaret, Countess of Richmond, mother of Henry VII.; one of Natural Philosophy founded by Sir William Sedley, in 1618; of Geometry and Astronomy by Sir Henry Saville in 1619; of Moral Philosophy by Dr. White, 1621; Ancient History by W. Camden, 1622; Music by Dr. Heather, 1626; Arabic by Archbishop Laud, 1636; Regius Professorship of Botany, 1793; Poetry by H. Birkhead, D.C.L., which is held for five years; Regius Professorship of Modern History and Languages by George I., 1724; Anglo-Saxon by Dr. Richard Rawlinson, 1750, held for five years, and every fifth turn to be given to St. John's College, in which the founder was educated; Common Law by Charles Viner, 1755; Clinical Medicine by the Earl of Litchfield, 1772; Lord Almoner's Reader in Arabic, appointed by the Lord Almoner and paid out of the Almonry bounty; Anatomy, Practice of Medicine, and Chemistry by Dr. George Aldrich, 1803; Political Economy by Henry Drummond, Esq., 1825, held for five years; Sanscrit by Colonel Boden, H. E. I. S., 1830; a Lectureship in Anatomy also was founded about the year 1750 by Dr. Matthew Lee, and Readers in Experimental Philosophy, Mineralogy, and Geology are supported by an annual grant from the Crown.

There are, likewise, for the encouragement of Students Public Fellowships, Scholarships, and Prizes, open to the University. In 1714, according to the Will of Dr.

OXFORD. Radcliffe, two travelling Fellowships of the value of £300 per annum for ten years were founded for Masters of Arts who had entered on the study of Physic, and University Fellowships and Scholarships.

who were to pass half the term of years abroad; two Fellowships and five Scholarships likewise were founded by Mr. Viner for the study of the Civil Law; three by Lord Craven in 1647; four by Dr. Ireland, Dean of Westminster, in 1825; two by Colonel Boden for the study of Sanscrit; some for Hebrew students by Mrs. Kennicott, by Dr. Pusey, his brother Mr. Pusey, and Dr. Ellerton; four for the encouragement of Mathematics by Public Subscription, and one for the Study of the Law, founded in commemoration of the services of the Earl of Eldon. There are three Chancellor's Prizes for the best Latin and English Essays, and the best copy of Latin Verses; one founded by Sir Roger Newdigate for English Verse, and one by Dr. Ellerton for the best Theological Essay. The Essays are to be written for by Bachelors of Arts, the Poems by Undergraduates.

The number of Collegiate Establishments in Oxford is twenty-four, viz. nineteen Colleges and five Halls. The oldest is Merton, which was founded originally at Maldon in Surrey, by Walter de Merton, Bishop of Rochester, and Lord High Chancellor in 1264, and removed to Oxford in 1274. The old foundation was increased at different times, and consists of a Warden, twenty-four Fellows, fourteen Portionistæ or Post-Masters, four Scholars, two Chaplains, and two Clerks. Natives of the following Dioceses are not eligible to Fellowships: St. Asaph, Bangor, St. David's, Llandaff, Hereford, Chichester, Exeter, Rochester, Litchfield and Coventry, Chester, and Carlisle. The Chapel of this College is likewise the Parish Church. University College was first established by Alfred in 872, but was restored in 1249 by William of Durham, and its first Statutes are dated 1249. The foundation is for a Master, twelve Fellows, eighteen Scholars, and Exhibitioners. The Fellowships, except four, which are open to any part of England, are confined to the County of Durham and the Dioceses of York, Durham, and Carlisle. Dr. Radcliffe's travelling Fellows have chambers assigned them in this College. Balliol was founded by John Balliol, father of the King of Scotland, and Devorguilla his wife, sometime between 1263 and 1268, for a Master, nine Fellows, and ten Scholars. To these were added one Fellowship and two Scholarships by Lady E. Periam, and two Fellowships and two Scholarships by Mr. Blundell confined to Tiverton School. The rest are entirely open. There are, likewise, some valuable Exhibitions, especially those founded by John Snell for the support of Episcopacy in Scotland. This College possesses the singular privilege of electing its own Visitor. Exeter College was founded in 1314 by Walter de Stapledon, Bishop of Exeter, who removed his Scholars hither from Hart Hall, and made a foundation for a Rector and twelve Fellows called Stapledon Hall. The Fellows were to be elected from Devonshire and Cornwall. The present name was given by Edmund Strafford, Bishop of Exeter, who in 1404 added two Fellowships for the Diocese of Salisbury. Others were added at different times, and there are now twenty-five Fellows, besides Scholars and Exhibitioners. Oriel was founded by Edward II. in 1326, at the suggestion of Adam de Brome his Almoner, for a Provost and ten Fellows. This number has since been increased to eighteen, all of which are open, except four confined

to the Counties of Somerset, Dorset, Wilts, and Devon. **OXFORD** Queen's College was founded in 1340 by Robert Eggesfield, Confessor to Philippa, Queen of Edward III., for a Provost and twelve Fellows, (since increased to sixteen,) to be chosen from Cumberland and Westmoreland. To these he intended to add seventy poor Scholars, but died before his design was perfected. Eight Fellowships and four Scholarships entirely open, and four Exhibitions for the Province of Canterbury have been since founded by John Michel, Esq. There are, likewise, many Exhibitions. New College was founded in 1386, by William of Wykeham, Bishop of Winchester, the founder of Winchester College, for a Warden, seventy Fellows and Scholars, ten Chaplains, an Organist, three Clerks, and sixteen Choristers. All the Fellows and Scholars are elected from Winchester College. Lincoln was founded by Richard Fleming, Bishop of Lincoln, in 1427, for a Rector and seven Fellows. Five more were added in 1479 by Thomas Rotherham, who limited the election of Fellows to the old Dioceses of Lincoln and York, except one for the Diocese of Wells. There are, likewise, eight Scholars, twelve Exhibitioners, and a Bible Clerk. All Souls, founded in 1437 by Henry Chichele, Archbishop of Canterbury, for a Warden, forty Fellows, two Chaplains, and Clerks. Magdalen College was founded in 1456 by William of Waynfleet, Bishop of Winchester, for a President, forty Fellows, thirty Demies, a Schoolmaster, an Usher, four Chaplains, an Organist, eight Clerks, and sixteen Choristers. The Fellows and Demies are elected from certain Counties and Dioceses exclusively. Brazen-nose College, formerly called the King's Hall, was founded in 1509 by William Smith, Bishop of Lincoln, and Sir Richard Sutton, Knight, for the old Diocese of Litchfield and Coventry, if any born there are eligible, if not the Society must choose out of the Diocese of Lincoln, and if none there are found competent the Fellowship is open to the University. Eight Fellowships have since been added, besides Scholarships and Exhibitions, so that the present foundation consists of a Principal, twenty Fellows, thirty two Scholars, and fifteen Exhibitioners. Corpus Christi College was founded 1516, by Richard Fox, Bishop of Winchester, for a President, twenty Fellows, twenty Scholars, and two Chaplains. The Fellows are elected from the Scholars, and the latter from certain Counties and Dioceses exclusively. There are also four Exhibitioners not confined to Counties. Christ Church was originally founded by Cardinal Wolsey, but before his foundation was complete Henry VIII. seized on and reestablished it in 1532 under his own name. This foundation was suppressed in 1545, and in the year following the present establishment was constituted for a Dean, eight Canons, eight Chaplains, a Schoolmaster, an Organist, eight Clerks, eight Choristers, and one hundred Students, to which one more was added by W. Thurstone, Esq., in 1664. Some of the Students are elected from Westminster School, the rest are in the patronage of the Dean and Canons. Trinity College was originally founded by Edward III., Richard II., and the Priors and Bishops of Durham, but was suppressed at the Reformation. In 1554 Sir Thomas Pope, Knight, endowed the present foundation for a President, twelve Fellows, and twelve Scholars. To these R. Blount, Esq., added one more, and Exhibitions have been also given by other benefactors. St. John's College was founded in 1557 by Sir Thomas White, Knight, for a President, fifty Fellows and Scho-

OXFORD Queen's.

OXFORD. lars, a Chaplain, an Organist, two Bible Clerks, six Singing Men, six Choristers, and two Sextons. All the Fellows, except six of the founder's kindred, two from Coventry, two from Reading, and one from Tunbridge Schools, are elected from Merchant Taylors' School.

Jesus. Jesus College was founded by Queen Elizabeth in 1571, and endowed by Hugh Price, D.C.L., for a Principal, eight Fellows, and eight Scholars; having been increased by different benefactors it now consists of nineteen Fellows and eighteen Scholars besides Exhibitioners.

Wadham. Wadham College was founded in 1613 by Nicholas and Dorothy Wadham, for a Warden, fifteen Fellows, fifteen Scholars, two Chaplains, and two Clerks. The Fellows, who are superannuated eighteen years after the expiration of their Regency, are elected from the Scholars, of whom three are chosen from Somersetshire, three from Essex, and the remainder from any part of Great Britain.

Pembroke. Pembroke College, originally Broad-Gate Hall, was founded 1624, by Thomas Tesdale, Esq., and Richard Wightwick, for a Master, ten Fellows, and ten Scholars chosen from the founder's kindred and Abingdon School. Four Fellowships and twenty Scholarships have since been added by different benefactors. The College obtained its name from the Earl of Pembroke, who was Chancellor of the University when it was founded.

Worcester. Worcester College, formerly Gloucester Hall, was founded in 1714 by Sir Thomas Cookes, Bart., for a Provost, six Fellows, and six Scholars to be elected from certain Schools in Worcestershire. The number of Fellows have been since increased to twenty-one, that of the Scholars to sixteen. There are also three Exhibitioners and two Bible Clerks.

Halls. The Halls differ from Colleges in not being incorporated, and therefore whatever property they possess is held in trust by the University. The Principals are appointed by the Chancellor, which is not the case in any College except Worcester. The Headship of St. Edmund Hall is vested in the Provost and Fellows of Queen's College. With respect to all privileges, Members of Halls stand on exactly the same footing with those of Colleges. St. Mary Hall was the Parsonage-house of St. Mary's until Edward II. gave it to Oriel College in 1325, and in 1333 it was converted into a Hall. Magdalen Hall, which formerly was attached to Magdalen College, became an independent Hall in 1602, and in 1822 was removed to Hertford College which had lapsed to the Crown. New Inn Hall was formerly called Trilleck's Inn. In the Civil war it was used as a Mint in which the plate of the Colleges was melted down for Charles I. St. Alban Hall was so called after Robert De St. Alban, who conveyed the tenement to the Nuns at Littlemore; on their Dissolution it became private property, but in 1547 it was transferred to Merton College, and sometime after established as a Hall. St. Edmund Hall, named after an Archbishop of Canterbury in the reign of Henry III., is the most ancient of the Halls; in 1269 it was purchased by the Canons of Osney. After the Dissolution of Monasteries it was purchased by a Provost of Queen's, and bequeathed by him in 1537 to that Society.

Members. The number of Members of the University is now (1832) 5274. They may be divided into Foundation and Independent Members. The former are the Heads of Colleges, the Fellows, the Scholars, who are sometimes Probationary Fellows, the Chaplains, Clerks, and Choristers. The latter are the Students, Noblemen, Gentlemen Commoners and Commoners. Every Mem-

ber, when matriculated, subscribes the Thirty-nine Articles, and if sixteen years of age, takes the oaths of allegiance and supremacy, and swears to observe the Oath. Statutes and Privileges of the University.

The principal University Buildings are, 1. The Bodleian Library, which was founded by Sir Thomas Bodley, Knight. To this Library is sent a copy of every book printed in this Country. It is under the care of Curators, a Librarian, two under Librarians, and two Assistants. There is likewise a Picture Gallery attached. The rest of the quadrangle in which it is situated is occupied by Public Schools and Lecture Rooms, in one of which is deposited the valuable collection of Marbles presented by the Earl of Arundel. 2. The Theatre, which was built by Gilbert Sheldon, Archbishop of Canterbury, in 1669, at the expense of £15,000. The Commemoration of benefactors is annually held here, the Prize Compositions are recited, and some Honorary Degrees conferred. Two Curators, appointed by Convocation, have the care of the building. 3. The Ashmolean Museum was built at the charge of the University, in 1683, and furnished by Elias Ashmole, Esq., whose Collection has been since increased by other donations. The MSS. of Dugdale and Wood are kept here. The building, which also contains a Chemical Laboratory and Lecture Rooms, is under the care of Visitors, who appoint a Keeper. 4. The Clarendon building was completed in 1715, from the profits of Clarendon's *History of the Rebellion*; till lately it was used for the University Printing Press, but is now converted into offices and Lecture Rooms. 5. The University Press is now transferred to a new splendid building to the North of Worcester College; it is under the management of eleven Delegates, including the Vice-Chancellor and Proctors. 6. The Radcliffe Library, founded by John Radcliffe in 1714, who appropriated £40,000, for the building, besides an endowment for the purchase of books, and a salary for the Librarian; it was completed in 1749. The Books contained in it are principally Medicine and Natural Philosophy. 7. The Observatory was erected by Dr. Radcliffe's trustees, at the cost of £30,000, after an adaptation of the Temple of the Winds. It contains a house for the Observer, and rooms for his Assistant. Astronomical observations are daily made and regularly recorded. 8. The Botanic Garden was founded by Danvers, Earl of Danby, in 1632, to which, in 1728, W. Sherard, D.C.L., Fellow of St. John's, bequeathed his Herbarium, and an endowment for a Professorship. 9. St. Mary's Church, besides being a Parish Church, is used also for the University Sermon, and Bampton Lectures. Oxford contains also twelve other Parish Churches, a Music Room, at which terminal concerts are held, and two handsome Bridges, one of which has been lately erected.

The Citizens of Oxford have nearly the same privileges as those of London. The Corporation consists of a Mayor, High-Steward, Recorder, four Aldermen, eight Assistants, two Bailiffs, Town Clerk, two Chamberlains, and twenty-four Common Councilmen. The Mayor officiates at a Coronation in the but-tery, and receives as his perquisite a silver-gilt bowl. On all public ceremonies he ranks next to the Chancellor or Vice-Chancellor, who administers, on his entry into office, an oath to him to maintain the Privileges of the University. In the Town Hall the Assizes and Petty Sessions are held. The Markets are on Wednesdays

OXFORD. and Saturdays. Distant from London 54 miles West by North. Population, in 1831, 20,434.

Of the chief towns in this County, BANBURY, BURNFORD, and CHIPPING NORTON have been separately described.

Bicester. *Bicester*, a Market Town of considerable antiquity, stands on a flat near the Eastern borders of the County. It is divided into two townships, the King's end and the Market end; the town is well built, and contains a handsome pointed Church with a lofty tower. The rivulet Bure, which runs by it, enters the Cherwell at Islip. A Roman Station, Alchester, stands about a mile and a half South-West from Bicester. Some lace-making is carried on in the town, which is celebrated for its malt-liquor, and manufactures leather slippers very largely. Distant $11\frac{1}{2}$ miles N. E. from Oxford, $54\frac{1}{2}$ from London. Population, in 1831, 2868.

Deddington. *Deddington*, on the Northern border of the County, was once a Corporate Town, and returned two Members to Parliament in 30 Edward I. and 32 and 33 of Edward III., but was afterwards relieved by its own Petition from that burden. It is a mean town, without any staple manufacture, but the Ale here is so good as to have obtained for it the characteristic Provincial *sobriquet* of *Drunkened Deddington*. The Church is a handsome pointed building, with a tower which probably was loftier before it was rebuilt in 1634. Piers Gaveston, the Favourite of Edward II., was dragged to execution from this town. Dr. Plot, who wrote at the close of the XVIIth Century, mentions that even in his time the ancient Game of Quintin was much practised in it. Distant from Oxford 17 miles N., from London 69. Population, in 1831, 2078.

Henley upon Thames. *Henley upon Thames* is picturesquely situated on the banks of the River from which it takes its name, with the Chiltern hills as its background. It is a clean, well-built town, approached by a stone bridge of five arches. The Church is a handsome, spacious, irregular, pointed structure, and its Vestry contains a good Library bequeathed by Dr. Aldrich, Dean of Christ Church, and at one time Rector of this Parish. Corn, flour, malt, and beech-wood form the chief trade with London by water-carriage; but the town has not any peculiar staple manufacture. Distant 7 miles S. E. from Marlow, 35 N. W. from London. Population, in 1831, 3618. It is the birth-place of Lenthall, Speaker of the Long Parliament.

Thame. *Thame*, pleasantly situated on an eminence on the banks of the Thames, as its name implies, stands at the North-Eastern extremity of the County, and consists of one long street with a capacious market-place in its centre. It is of great antiquity, and is reasonably believed to have been a Roman Station. Till the dismemberment of the huge See of Lincoln, in the reign of Edward VI., it formed part of the possessions of the Bishop of that Diocese. It suffered much during the Great Rebellion, and was the scene of more than one bloody skirmish. The Church is a large, handsome, cruciform building, with a fine, embattled, central tower bearing on it the date 1138; but the interior is miserably deformed by inappropriate pews and galleries. Near it on the South-West are the remains of the once goodly Prebendal House, (belonging, till the suppression of the Prebend, to the Church of Lincoln,) now used as the Glebe Farm. The Cistercian Abbey of Otterley stood about a mile from Thame, and

large remains of it are still to be seen in Thame Park, OXFORD. once the property of the noble Family of Wenman. Thame is the birth-place of Chief Justice Holt, and gave the title of Baron to Sir John Williams, Lord Chamberlain to Queen Mary, who died without issue. The river is navigable for barges, but the town has little trade, and, except a small portion of indifferent lace, no manufacture. Distant 10 miles E. from Oxford, 46 N. W. from London. Population, in 1831, 2885.

Witney. *Witney*, a respectable, well-built Market town on the river Windrush, consists for the most part of two streets, the principal of which is terminated by a large and handsome cruciform Church, a Rectory in the gift of the Bishop of Winchester. Blankets are the chief manufacture of the town; their weavers were incorporated by Queen Anne, and have a Hall in the High Street. Distant $11\frac{1}{2}$ miles W. from Oxford, 69 from London. Population, in 1831, 5336.

Woodstock. *Woodstock*, a Market Town, and a recently disfranchised Borough, stands on an eminence near the rivulet Glyme, on the banks of which *Old Woodstock*, of which only a few houses now remain, formerly stood. The Church is for the most part modern, and the town is respectably built. Its manufacture of gloves and of polished steel are in high estimation. The old town is of much note in History. Ethelred is said to have held a great Council in it so early as 886, and Alfred to have written in it his translation of Boethius. The Park is believed to have been the earliest formed in England, and the attractions which Henry II. found in it as an abode are familiar to every reader. The site of the Palace, or Manor House, was near the Glyme, where it is expanded into the present Lake in Blenheim Park, near the Bridge so celebrated in Epigram. Some foundations of a building, supposed to have been Rosamond's Bower, have been discovered at a short distance from it, and an adjoining stone basin in a very romantic dell bears the name of her Bath. The story of her Labyrinth is exploded as fictitious. Edward the Black Prince was born in the Palace. It was the place selected for Elizabeth's confinement when the jealousy of her sister Mary committed her to imprisonment under the care of Sir Harry Beddingfield. After maintaining a siege during the Great Rebellion, it became the scene of those fantastic tricks which have been immortalized by the pen of the late Sir Walter Scott; and notwithstanding the terror which the Parliamentary Commissioners endured within its walls, it was granted to various tools of the Regicide Faction, pulled down and sold piecemeal. Woodstock is distant from Oxford $7\frac{1}{2}$ miles, from London 62. Population, in 1831, 1060. It gives the title of Viscount to the Duke of Portland. The Honour of Woodstock was granted, with the concurrence of Parliament, in the 4th of Queen Anne, to John Duke of Marlborough, and £500,000 were at the same time voted for the erection of the Palace of Blenheim, the *chef-d'œuvre* of Vanbrugh. Near the Triumphal gate by which the Park is entered, some remains of a house, once the abode of Chaucer, may be traced.

Camden's *Britannia*, by Gough, 3 vols. fol.; *Beauties of England and Wales*, vol. ix. by J. N. Brewer; Janner, *Notitia*; *Natural History of Oxfordshire*, by R. Plot; Young, *View of the Agriculture of Oxfordshire*. Various Guides to the City of Oxford.

OXLIP.

OXLIP, so called from some likeness in the flowers to the lips of the Ox, or from the grateful scent of the flowers. Skinner.

OXYGNATHUS.

The trivial name of the *Prunula elatior* of Linnæus.

I know a banke where the wild time blowes,
Where ox-lips and the nodding violet growes.

Shakspeare. *Midsummer Night's Dream*, fol. 150.

OXYBAPHUS, in *Botany*, a genus of the class *Triandria*, order *Monogynia*. Generic character: calyx five-cleft, bell-shaped; corolla funnel-shaped; nut five-angled, one-seeded, surrounded by the expanded, persisting calyx.

One species, *O. viscosus*, native of Peru.

OXYBELUS, in *Zoology*, a genus of *Hymenopterous* insects.

Generic character. *Antennæ* approximating, geniculated, inserted at the base of the clypeus, near the mouth, convoluted, distinctly incrassated at the tip, scarcely longer than the head, the second and following joints of equal length; mandibles not bidentate at the apex, but obtusely waved, the apex acute: head transverse; *thorax* short, subglobose; *scutellum* spinose; wings not folded during repose; the anterior with a single, complete, submarginal areolet; legs stout; *tibiæ* with the outer edge dentate or spinose.

Type of the genus, *O. uniglumis*. Latreille; Panzer, *Faun. Ins. Germ. Init.* pl. lxiv. fig. 14. An extensive and very elegant genus, of which at least eight species are found in Britain, frequenting dry, hard, gravelly, or sandy walks.

OXYCARPUS, in *Botany*, a genus of the class *Polygamia*, order *Monoecia*. Generic character: hermaphrodite flower; calyx four-parted; corolla four-parted; stamens united in bundles; stigmas six; berry six-celled, one-seeded: male flower, calyx and corolla as the hermaphrodite; stamens forty to fifty, free.

One species, *O. Cochinchinensis*, a large tree, native of Cochinchina; it bears a large, acid, eatable berry. Loureiro.

OXYCERA, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* porrect, approximating at the base, triarticulate; the first and second joints of equal length, the third fusiform, four-ringed, with an apical, simple, setiform style; *ocelli* three; *scutellum* bispinose; *abdomen* very short, quadrate, suborbiculate, with five segments.

Type of the genus, *O. hydoleon*, Meigen; *Klassif. und. Besch.* vol. i. pl. viii. fig. 3. An extensive and beautiful genus, of which seven species have been detected in Britain.

OXYCEROS, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*. Generic character: calyx five-toothed, erect; corolla salver-shaped, superior: anthers filiform; berry two-celled, many-seeded.

Two species, shrubs, natives of China, Loureiro.

OXYCOCCUS, in *Botany*, a genus of the class *Oc-tandria*, order *Monogynia*, natural order *Ericæ*. Generic character: calyx superior, four-cleft; corolla four-parted, segments narrow, revolute; filaments conniving; anthers tubular, two-parted; berry many-seeded. A genus allied to *Vaccinium*, containing three species, natives of Europe and North America.

OXYGNATHUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* moniliform, the basal joint long, the remainder smaller, rounded, gradually

VOL. XXV.

thickened towards the extremity; *labrum* short, indistinct, mandibles porrected, bent, very acute, not dentated internally; *palpi* six, labial with the last joint nearly cylindrical; *mentum* trilobed; *thorax* elongated; *elytra* linear; anterior *tibiæ* tridentate exteriorly, and bidentate within; *tarsi* pentamerous.

Type of the genus, *O. Anglicanus*; Stephens, *Brit. Entomol. (Mandibulata)*, vol. i. pl. iii. fig. 2. Two species, of which the one referred to was found in a mutilated state in Britain, near London. It is supposed to have been introduced, as the genus belongs to a group that appears peculiar to South America.

OXYLOBIUM, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Leguminosæ*. Generic character: calyx deeply five-cleft, slightly two-lipped; corolla pea-flowered, keel compressed, the same length as the wings, standard spreading; style ascending, stigma simple; pod many-seeded, ventricose, ovate, acute.

Three species, natives of New South Wales and Van Diemen's Island. Hort. Kew.

OXYMERIS, in *Botany*, a genus of the class *Decandria*, order *Monogynia*, natural order *Melastomaceæ*. Generic character: calyx shining, tubular, with five short teeth; petals lanceolate, acuminate; style filiform, acute; capsule, a berry, three to five celled.

Two species, natives of Brazil.

OXYOPE, in *Zoology*, a genus of *Arachnida*.

Generic character. *Palpi* pediform, terminated by a small hook; *maxillæ* straight, much longer than the labrum, longitudinal, and elongate, of equal breadth, and obliquely truncated internally; *labrum* oblong-quadrate; eyes eight, disposed in four transverse lines, forming an elongate hexagon, the second pair largest; legs long and slender, the first pair the longest, then the fourth and second; *tarsi* short.

Type of the genus, *O. variegatus*, Latreille, *Gen. Crust. et Ins.* vol. i. p. 116. Two species, one of which has been found, but very rarely, in England.

OXYOPS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* not geniculated, rather long, and slender; twelve-jointed, the scape a little incrassated, and reaching to the middle of the eyes; the basal joint of the funiculus very short, the second to the seventh longer, all obconic: club oblong, oval; head produced anteriorly into a rounded rostrum; eyes rounded, moderately prominent; *thorax* narrowed in front, and truncate, posteriorly terminated; *sternum* porrected, with the apex acuminate; *elytra* oblong-ovate, each anteriorly rounded, and slightly covering the base of the thorax; legs moderate, anterior approximating at the base; *tarsi* tetramerous.

Type of the genus, *O. clathratus*, Dalman; Schönherr, *Curcu. Diss. Meth.* 62. One species only, a native of Brazil.

OXYPORUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* very short, moniliform, compressed, the terminal joint small, obtuse; *palpi* unequal; maxillary filiform; labial terminated by a reniform joint; mandibles simple, arcuated, entire; eyes prominent; head very large; *thorax* transverse; *scutellum* simple; *elytra* abbreviated; *abdomen* short, broad; legs moderate; *tarsi* pentamerous.

Type of the genus, *Staphylinus rufus*, Linnæus; Panzer, *Faun. Ins. Germ. Init.* pl. xvi. fig. 19. Three species, two of which are indigenous.

5 G

*

OXYGNATHUS.

OXYPORUS.

OXYPTERUM.

OXYTELUS.

OXYPTERUM, in *Zoology*, a genus of *Dipterous* insects.

Generic character. *Antennæ* dentiform, hirsute, inserted in the sides of the clypeus between the eyes; *labium* somewhat concave, with the anterior margin rounded; head narrower than the thorax, the latter with a notch in front; wings two, acute at the apex; eyes minute, ovate, lateral; *ocelli* wanting; legs short; *tarsi* with tridentate claws.

Type of the genus, *Ornithomyia pallida*, Olivier, *Ency. Meth. Ins.* vol. viii. p. 544; Leach, in *Wern. Trans.* vol. iii. pl. xxv. Two species, both found in Britain.

OXYRHYNCHUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* not geniculated, porrect, nine-jointed, rather short and stout; the seven basal joints short, obconic, subequal; the remaining two forming a club, of which the first joint is oblong-cylindric, the other minute, spongy, retractile, obtuse; head produced anteriorly with an elongate, subfiliform, bent rostrum; eyes lateral, subdepressed; *thorax* oblong-ovate, bisinuated at the base; *scutellum* elongate; *elytra* oblong-ovate, convex, with a callus towards the apex; legs slender; anterior longer than the rest, approximating at the base; *tarsi* tetramerous.

Type of the genus, *Calandria discors*, Fabricius. One species only, an inhabitant of Sumatra.

OXYSTELMA, in *Botany*, a genus of the class *Pentandria*, order *Monogynia*, natural order *Asclepiadeæ*. *Generic character:* tube of the corolla short; column exerted; crown of stamens five-leaved, leaflets compressed, acute; anthers terminated by a membrane; masses of pollen compressed; stigma awnless; seeds comose.

One species, *O. carnosum*, native of New South Wales.

OXYSTOMA, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* not geniculated, eleven-jointed, inserted at the base and beneath the rostrum, the basal joint rather long and stout, the two following subglobose, the five next smaller, subnodose, the remainder forming a compact, ovate-subacute club; head broad, produced anteriorly into an elongate, slender, slightly-curved, deflexed rostrum; eyes large; *thorax* subglobose, convex, broadest at the base, densely pubescent; *elytra* rather elongate, convex, pubescent; legs long, unarmed; *tibiæ* shorter than the femora, attenuated at the base; *tarsi* short, rather broad, with the terminal joint deeply bilobed.

Type of the genus, *Attelabus fuscirostris*, Fabricius; *Ap. melanopus*, Kirby, in *Linnæan Transactions*, vol. ix. pl. i. fig. 1. Four indigenous species.

OXYTELUS, in *Zoology*, a genus of *Coleopterous* insects.

Generic character. *Antennæ* short, inserted before the eyes, under the margin of the clypeus, thickened towards the extremity; *palpi* short, maxillary with the terminal joint small, subulated; labial filiform; mandibles slender, curved, acute, unidentate within; *thorax*

short; body linear, depressed; *tibiæ* thickened exteriorly, with the edge of the two first spinose; *tarsi* pentamerous.

Type of the genus, *Staphylinus morsilans*, Paykul, *Faun. Sue. (Ins.)* vol. iii. p. 383. An extensive genus, of which about thirty species are found in Britain, frequenting dung, the roots of grass, &c.

O'YER, } Fr. *ouir*, *audire*, to hear. *O yes*, the Oye'z. } word of the crier requiring silence, from the Fr. *oyes*, *audite*, hear ye; which corresponds with the proclamation of the Athenian crier, ἀκούε, σίγα. Skinner.

And there with all commaunded his heraude to make an oyes.
Hall. Henry VIII. The first Yere.

He may crave *oyer* of the writ or of the bond or other specialty upon which the action is brought: that is to *hear* it read to him; the generality of defendants in the times of antient simplicity being supposed incapable to read it themselves.

Blackstone. Commentaries, book iii. ch. xx.

Sometimes also, upon urgent occasions, the king issues a special or extraordinary commission of *oyer* and terminer, and gaol delivery confined to those offences which stand in need of immediate inquiry and punishment.

Id. Ib. book iv. ch. xix.

Of this ignorance we may see daily instances of the abuse of two legal terms of ancient French; one, the prologue to all proclamations, "*oyez*," or hear ye, which is generally pronounced most unmeaningly, "*O yes*."

Id. Ib. book iv. ch. ii.

OYSTER, A. S. *ostra*; D. *æster*; Ger. *auster*; Sw. *ostra*; Fr. *huistre*; It. *ostria*, *ostrica*; Sp. *ostia*; Lat. *ostrea*; Gr. ὀστρεόν. All supposed to be of Greek origin either from ὀστρεόν, a bone, or ὀστρακον, a shell.

For many a muscle and many an oistre
Whan other men han ben ful wel at ese
Hath been our food.

Chaucer. The Sompnoure's Tale, v. 7682.

Therefore hys similitude of gramer likened vnto fayth is no more lyke than an aple to an oyster.

Sir Thomas More. Workes, fol. 724. The Second Part of the Confutation of Tyndall.

The *oysters* (quoth he) [Mutianus] of Cyzicum taken about the streights of Callipolis, be fairest of all other, and bigger than those which are fed or bred in the lake Lucrinus, sweeter than those of Britaine, more pleasant in the mouth than the Edulian, quicker in fast than those of Leptis, fuller than the Lucensian, drier than those of Coryphanta, more tender than the Istrian, and last of all whiter than the *oister* of Circey.

Holland. Plinie, book xxii. ch. vi.

— The fair Nereides
They came on shore, and slily as they fell
Convai'd each teare into an oyster-shell.

Browne. Britannia's Pastorals, book ii. song 1.

The man had sure a palate cover'd o'er
With brass or steel, that, on the rocky shore,
First broke the oozy oyster's pearly coat,
And risqu'd the living morsel down his throat.

Gay. Trivia, book iii.

The oyster-women lock'd their fish up,
And trudg'd away to cry No bishop.

Butler. Hudibras, part i. can. 2.

OZOPHYLLUM, in *Botany*, a genus of the class *Monadelphia*, order *Pentandria*. *Generic character:* calyx five-toothed; corolla, petals five, funnel-shaped; one style; capsule five-celled.

One species, *O. trifoliatum*, native of Guiana.

The first of these is the fact that the population of the United States has increased from 3,929,214 in 1790 to 62,946,719 in 1900. This increase has been the result of a number of causes, the most important of which are the immigration of foreign-born persons and the natural increase of the native-born population. The immigration of foreign-born persons has been the result of a number of causes, the most important of which are the desire for better living conditions, the desire for better educational opportunities, and the desire for better economic opportunities. The natural increase of the native-born population has been the result of a number of causes, the most important of which are the high birth rate and the low death rate. The high birth rate has been the result of a number of causes, the most important of which are the desire for a large family, the desire for a large family, and the desire for a large family. The low death rate has been the result of a number of causes, the most important of which are the improvement in medical science, the improvement in medical science, and the improvement in medical science.

The second of these is the fact that the population of the United States has become more diverse in race and ethnicity. In 1790, the population of the United States was almost entirely white. By 1900, the population of the United States was composed of a number of different races and ethnicities, including white, black, and Chinese. This increase in diversity has been the result of a number of causes, the most important of which are the immigration of foreign-born persons and the natural increase of the native-born population. The immigration of foreign-born persons has been the result of a number of causes, the most important of which are the desire for better living conditions, the desire for better educational opportunities, and the desire for better economic opportunities. The natural increase of the native-born population has been the result of a number of causes, the most important of which are the high birth rate and the low death rate. The high birth rate has been the result of a number of causes, the most important of which are the desire for a large family, the desire for a large family, and the desire for a large family. The low death rate has been the result of a number of causes, the most important of which are the improvement in medical science, the improvement in medical science, and the improvement in medical science.
